Another class of citizens have been attracted to our shores by the excellent fishing. They also fish for food, but enjoy the incidental excitement of the capture. Millions of dollars are invested in hotel property and private residences along our shores. This means grateful relief in taxes to every one, and constant and remunerative employment to our carpenters, masons, painters and others in building trades; good markets to our farmers for their provisions and our tradesmen for their supplies; good wages for boatmen, gardeners, caretakers, coachmen, etc., to say nothing of more intangible benefits from bringing wealth, education, refinement and social position into our farming communities. We regard the experiment as a complete success.

A signal tribute to this success is the bitterness with which we are annually attacked. Crows never flock where there is no carrion. Our principal antagonist has been and is the United States Menhaden Oil and Guano Association. In 1889 they openly violated the law of 1856, and suffered smartly for so doing at Boston and Washington. But they strained out all the fish in Buzzards Bay and carried them off to

Tiverton for oil and manure. In 1892 they tried for the Lapham bill to prevent our defending ourselves any further, and again they failed. At present, having failed to defy or annul our law, they think we have preserved fish enough by our experiment to induce them to try and repeal our laws, so that they may again carry them off. But if we can judge by the results in 1889 this would mean unparalleled calamity to our property and our people.

If there be any question about the propriety of the use of a purse net, there can be no question of its terribly destructive energy when used in a spawning ground where the depth of the seine is greater than the depth of the water. If there is any regulation of its use ever made, it certainly ought to include their use in spawning grounds and in waters like Buzzards Bay, where the depth of the water is less than the depth of the net.

When these parties came into Buzzards Bay in 1889 for the purpose of putting purse seines 100ft. deep into water 70ft. deep, they took, as I have said, everything we had, and however many statements may be made to the contrary, we know that they simply took out all the fish that were in Buzzards Bay, a result from the disastrous effects of which we have not yet recovered. From this we can judge fairly well the consequences of repealing our law which for years has enjoyed the enthusiastic support of all our people.

Mr. I. W. ADAMS—Q. Do you not know as a matter of fact, Mr. Chamberlayne, that there was a very large body of menhaden in Buzzards Bay last season? A. Yes, sir, I think it was so understood.

Q. Do you not know as a matter of fact that there were very few, if any, bluefish caught or seen in Buzzards Bay last season? A. There were very few taken.

Q. Now, as a matter of fact was there not in Vineyard Sound and all along the Massachusetts water outside of Buzzards Bay a large body of bluefish? A. It was so reported.

Q. Now, would not this prove most conclusively that bluefish do not necessarily feed upon menhaden? If it were so, is it not fair to suppose that they would have been present in Buzzards Bay in large numbers where the menhaden were so plentiful? A. My only personal knowledge in the matter is that the fact would prove nothing if it were established. Menhaden are not simply preserved because they are the natural food of the bluefish, and the facts that you refer to have no appreciable tendency to prove that they are not the food of the bluefish.

Mr. N. B. CHURCH—Q. He makes the statement broad and very decisive that he knows, notwithstanding the testimony of the people on the other side, that he knows they robbed the bay of all fish. I would like to ask him how he knows it? A. I am a lawyer, and the fishermen of our coast in negotiating loans to make up the deficiency in the season's work; my employment in 1889 in foreclosing mortgages on their boats when they were unable to pay interest on their mortgages; the practical experience of myself and friends going down there; the common report of everybody in that section of the country and the inherent impossibility of putting a net 100ft. deep into waters always less than 70ft. deep, buoyed at the top and sinking to the bottom without taking everything large enough to be restrained by the net—all these things enable me to say I know that your nets take other fish than menhaden.

Q. Now, will you please tell these gentlemen *how you know* that the purse net fishermen catch food fish while fishing for menhaden? A. There is no question about it.

Q. How do you know it? A. I know it, among other things, from the sworn evidence of Mr. S. B. Miller, who bought 70,000 lbs. of weakfish from one of your steamers in a day, and half a dozen other reputable gentlemen who have been placed on record to the same effect.

Mr. CHURCH—Mr. Chairman, I submit from the gentleman's answers that he knows nothing about it.

ROBERT B. ROOSEVELT—I am surprised at a great deal that I have heard to-day, and I am still more surprised that gentlemen who are interested in a pecuniary way and for a livelihood in the handling of fish, should object to and oppose all measures taken to increase the supply of fish and to protect them from destruction. Reflections have been cast on the hook and line fishermen, but remember that the hook and line fishermen have interests identical with those of the men who fish for the markets.

When it was stated that certain things don't take place which we know do take place and which we have seen take place, is it any wonder that we are surprised? Gentlemen say, for instance, that food fish are never intentionally taken in purse nets, or if so taken are always sent to market. I remember distinctly lying with my yacht in the South Bay of Long Island in the evening, after having fished during the day for bluefish, and seeing a menhaden vessel sail in from the ocean, send out his small boats with the nets, take a turn right through the channel around the school of bluefish close under the stern of the yacht and in one haul land more fish than all the hand-line fishermen who would come there for the next two weeks could have caught, and in those few minutes destroy what would help support every man in that bay who had a small boat. I saw them with my own eyes do this, and take the captured fish into their boats and sail off to the factory, which was not over 200 yds. from me. Of course, gentlemen, you may say they did not put them into the nets. They were only intended to send them to the New York market. As this occurred in the middle of the summer, the weather was hot for that purpose. I soon noticed a suspicious smoke coming from the top of the factory chimney, and you may judge "by the smoke that gracefully curled," what became of the poor bluefish. Mr. Sammis, who for so many years kept the hotel at Fire Island, often complained bitterly to me of the menhaden fishermen who drew their purse seines in the channels in the evenings, clearing them of the schools of bluefish which had been attracted by the "chumming" of the hook and line brigade during the day. He said if this could be stopped it would make a difference of \$10,000 a year to him.

Speakers have claimed that the number of fish has not diminished on our coast. I bought a place on Long Island 21 years ago, near the Great South Bay. At that time it was my habit to go out from the shore in the morning and after a short sail of 15 minutes come to anchor and catch 60 weakfish with rod and reel. To-day, gentlemen, you may fish the Great South Bay from one end to the other, and if you catch a weakfish in a week you will be doing well. You would not catch 60 in one day if you were to keep fishing for 60 years. Yet the fish, we have been told, have not diminished on our coast. At that time, 20 years ago, the market fishermen were placing pound nets in the channel that led from the inlet into the bay. The experience of the Fishery Commission of the State of New York, acquired from its many investigations, had satisfied the members that wherever you place a pound net you destroy the fishing. That had been tried in the Great Lakes, which were once regarded as inexhaustible, but wherever the pounds were placed the fishing was destroyed, until the whitefish, which were then abundant, even in the waters of the State of New York, cannot be caught in any large numbers this side of Michigan, and would have been exhausted there except for artificial propagation. When I noticed these pounds I said, "If you keep this up you will not catch a weakfish in this bay, in ten years." My predictions came true, the old experience was renewed. Selfish folly had its way. Spawning fish with countless eggs were served on my table, and to-day there is scarcely a weakfish anywhere about the bay, yet it has been said in this meeting that pounds do no produce any injurious effect. At that time there were twelve menhaden factories within twelve miles of my house. Now not a single one is working, unless you except one

which is making manure out of horsefoot crabs. Then the fishing fleet were all sailing vessels and consequently on cold days they could not catch any fish. Now all "bunker boats" are steamers and there is no rest for the menhaden, indeed the calmer the day the more easily the schools are seen and captured. Often in those times when walking along the shore I noticed masses of menhaden or mossbunkers or bony fish—we on Long Island call them indiscriminately by any of these names—that stretched as far as the eye could reach, miles wide and miles long. Now you might stand there and look till you were blind and never see such a collection of fish. It would be a long time before you would see any considerable school. I was seated once upon one of the sand hills of the beach when I noticed a small school of menhaden; that was some five or six years ago, after the new methods of destruction got well into working order and the results had fairly well developed themselves; at the moment there was not a steamer in the neighborhood; soon, however, one of the latter appeared coming for the prey like a shot. It stopped outside of them and lowered its boats, but hardly had these touched the water before another hove in sight, rushing along to take part in the warfare. The school had separated, and there was work for the latter also, but another of the birds of prey loomed up, and before the fish were all captured, a fate that befel every one of them, there must have been five or six of the vultures around the carcass. They came like birds of prey. The first must have seen the school by the look-out at the mast-head. The second, twenty miles away perhaps, had its attention attracted by the actions of the first and followed. The third must in the same manner have seen the second, and so on, the last having possibly been fifty miles away before the slaughter began. And mind you, hardly ever does a fish escape; the operation cleans up the entire lot no matter how large they may be. And we have been assured that purse seine fishing does not exhaust the supply of fish! What queer statements all of these; what foolish ones as well. The gentlemen who called this meeting had no wish to injure the menhaden fishermen; indeed they want to injure no one interested in any way in fishing; on the contrary they want to help them all. The present method of fishing must be stopped; there must be an end to this wanton and often wasteful destruction, or even the sea will not hold out. One gentleman has told us the supply of fish from the pounds on the Jersey coast has not diminished, and at the same time he acknowledged that a number of these destructive agencies had been increased within ten years from one to twenty-four. That statement is its own answer; you cannot go on multiplying in that ratio for the next ten years; twenty-four times twenty-four is even too much for a pound net fisherman to propose. This has got to stop, and the sooner you, our opponents, who have come here to oppose whatever the hook and line fishermen may propose, and now have your money invested in the business through factories, steamers, pounds or purse nets, recognize this, the better for you. Your entire investments are at stake. The hook and line men may lose their sport—you will lose all you have invested. You have asked me why the price of fish, the wholesale price—for no one denies that the retail price has increased enormously—has been so low for the last year. I reply that I presume it is by the formation of a syndicate of the fish dealers, the same that keeps Pacific halibut and Pacific shad, that I myself helped to plant, out of New York market. But why should we be trying evasions, why should we not meet this matter fairly and frankly. You know that fish are diminishing, that the supply is being exhausted, that it must soon give out, that in five years all sea fish which cannot be artificially propagated will be so nearly extinct in our waters, that they will be above the reach of the poor who now consume them largely and who used to consume them still more largely. Why not unite with those who are endeavoring to find out the best ways of protecting, preserving and increasing what we have left while there is still time. In a few more years you may be too late. When the fishing is exhausted in one stretch of waters it is a long time before it recovers, the fish are slow in returning. The true interests of all who are present here are identical. Why should we not heartily unite in our endeavors?

At the close of Mr. Roosevelt's remarks further discussion was suspended for the present, and an adjournment was taken to the supper room.

Thursday, Dec. 14, 1893.

On reassembling at 10:30 A. M., Mr. ROBERT B. CHALKER, of Connecticut, addressed the conference as follows:

I represent the President of the Connecticut Fishing Association. It is an association of pound and trap net fishermen on the south shore of Connecticut. Last spring, a bill was brought into our Legislature to prohibit that kind of fishing. After the hearing of the committee of fisheries before the Legislature, we had the bill reported adversely to the application for the annihilation of the industry. In that investigation we brought out a good many facts, which I wish I could more clearly state than I can. There had been for quite a time a feeling that pound nets, trap nets, etc., were destroying the fishing on the shore of Connecticut. On a full investigation of the causes of the depletion of the waters, it was found and satisfactorily shown to the committee, that there were other causes operating to a greater extent than over-fishing, causing that destruction. More particularly I would refer at this time to the pollution of the water. As was said here yesterday, the shad fishing of Connecticut is a thing of the past, comparatively. It was shown before that committee that the date of its downfall commenced with the damming of the Connecticut River. The last thing we could observe was the dam at Holyoke. Gentlemen, in connection with that, all of the small streams and tributaries along the Connecticut at the lowest point possible, are used for manufacturing purposes, and the quantities of deleterious matter coming into the river from those factories, the effects of which can be seen by dead fish floating at various times on the water, especially in the spring and summer season, show that it depletes the water very rapidly. It was also shown, aside from the shad fishery, that the comparative falling off in other fish, the free swimming fishes, was very small. As to shad fishery, up to the time of the building of the Holyoke dam, and subsequently, we had statistics from one trap net. It was placed there in 1854 at this one position, and kept the same position up to the time of the building of the jetty and of the dam, showing an average catch for the first five years, for the next ten years, and the succeeding five. The first five years the catch in that net was smaller than the next ten, and the last five was greater than the catch of the first five.

We have come together, as I understand it, to look for the cause, as it is claimed, of the depletion of the waters of food fish. I think in my observation, which has been in connection with the Board of Commissioners of Fisheries in Connecticut for quite a number of years, also being conversant since 1876 in the propagation of shad, that one of the great obstacles we have to contend with is the pollution of the stream. We find it everywhere. You are aware that even in the Hudson River and at Sandy Hook the refuse of this large city is dumped in unlimited quantity. We know that the shad particularly like the purest water they can possibly find. We think that these obstructions turn them off. It is a fact that the Commission have passed by the idea of putting shad into the Connecticut River on account of that. We think the young fry do not live to grow up on account of the pollution. As you are well aware, there now has been adopted a method of retaining these fish in pounds. I think we should look

into this matter seriously and consider the methods of reproduction of the water.

If you destroy this industry, you take away from the State of Connecticut about \$1,000,000 invested. This is in every one's hands. It is not in large corporations. There are some 200 licenses granted for the larger class of pounds. There are numerous traps in all directions. Men who are owning a small tract of land procure their cash only by what few fish they get. They procure the fertilizer for their small farms by taking the worthless fish from these nets. If we destroy that industry, we deprive a great class of our citizens in Connecticut of all the money which they procure in the course of the year; that is, the ready money. In connection with the farms they are making a comfortable living, and deprive them of that, they know not which way to turn. I will not detain the meeting, but would be pleased to answer any questions that might be asked.

Remarks of ALBERT E. COCHRAN (N. Y.):

Raritan Bay.

MR. CHAIRMAN—The fish for which I will speak is weakfish, and the territory is Raritan Bay, popularly known as Prince's Bay. Twenty years ago that bay swarmed with weakfish, and that of which we complain is not an occasional scarcity arising from nomadic habits, but a continued annual decrease steadily going on since 1879 to 1881, markedly noticeable since 1886, until this present year, when there has been practically no fish, and as to small fish, school fish, for the last three years they have almost literally disappeared, and such fish as were caught have been large fish close to shore. In this connection I will say that a Washington Market wholesale fish dealer told me within a year that he notices a larger proportion now than heretofore of large fish; and I will say that he told me a few days ago that he is in sympathy with this inquiry, and that he thinks weakfish are becoming scarcer because he pays more for them now than ever before. The other fishes to which I may allude will be the anadromous salmon and shad, and I will refer to them only for the reason that I assume that whatever applies to them, the better known of the species that run from the sea into the shallow waters of our shores, the sounds, the bays, the estuaries, with reference to the nets and methods employed in their capture, will apply to that other fish which runs from the sea into our shore indentations for the similar purpose of spawning, the weakfish.

There is no question that the markets must be supplied by means of nets, and nobody advocates the disuse of nets. We are not here to make war upon any vested interest, and we are sorry to note a feeling of irritation upon the part of the net men, as though they deemed this a movement idle in character and not dignified by facts. It is we who are on the defensive. We want the net men to make money, but we want some fish ourselves. Why should the net men have a proprietary feeling in that common heritage of man, the produce of the sea? Why should they sneeringly remark that the hotel men wish to fill their hotels? Have not the hotel men as much right to fill their hotels as the pound net men have to fill their pounds? And, if it is deemed that fish are essential to any portion of our communities, shall some other portion say that fish shall be denied them? It is the extreme thoroughness with which net operations are carried on that produces this strife.

Mr. Githen, at the close of the session last evening, made the first admission that has ever been made upon the part of the net men that there may be another side to the question, that they may have gone too far in certain localities. This shows how a soft answer turneth away wrath, for his icy front softened under the genial breath of Mr. Roosevelt. The net interest seems perfectly honest in pointing at the ample supply in the markets as proof that fish are as plenty as ever, and they take no account of the increase of nets as a factor in producing that result, for it will be remembered that it was stated yesterday that in one short section of our coast there are now twenty-four pound nets where a few years ago there was but one. It is Raritan Bay that shows the effect, and not the markets. I care little for prices as an exhibit. We know how that is arranged. We know that a certain amount of money must be received in order to handle the fish, and with prices we have no contention. It is the fact as to the absence of fish in Raritan Bay, continually becoming more marked, until last summer its waters were denuded, and yet Mr. N. B. Church in a letter recently published said that the menhaden men during the past season had found plenty of food fish on the Atlantic coast. It is the concurrent and unsought testimony of disinterested and detached observers, it is the conclusions of officially appointed investigators, that certain food fishes whose habit by instinct it is to come from the sea yearly to the shallow waters of our shores are being gradually obliterated from their accustomed shore localities by the indiscriminate and extraordinary use of nets. And now the winter haunts of the weakfish have been found on the Carolina coast. They are taken up in a dormant state, and last February fresh weakfish were sold in the retail market in Harlem for two cents a pound.

We are not alone in our alarm at what is going on. Mr. Jex, a member of the Corporation of London, and a fish handler on a large scale, in two letters recently published, has warned us that we are killing the fish that lays the golden egg, and that if our methods are continued our experience will be the same as theirs. Shall the uniform testimony of disinterested people and those officially charged with the study of the subject, all tending in one direction, be overthrown by the necessarily self-interested statements of the gentlemen in the net business who would have us believe that there is no diminution of our fish supply, because they have found on occasions, as was stated by them last night, pound nets packed so full of weakfish that they looked like a solid red rock in the water? What one pound net will do another can do, and such a statement shows the great waste that is going on by reason of the thousands of pound nets that are in operation. Mr. Fitzgerald, who keeps a boat house and hotel at Gifford's, on Staten Island, stated before a committee of the Legislature of this State during the session of 1889, that having asked a menhaden captain who was in his place whether he had any weakfish on board, he received for an answer, "I have got 30,000 on board, taken from the deep hole under Prince's Bay light." Captain Peter Polworth, a well-known oyster planter in Raritan Bay, testified before the same committee that he had seen chunks of iron in the menhaden nets, dragged from the bottom of the Bay. Mr. Gonzalo Poe, in a letter published in FOREST AND STREAM, July 21, 1893, stated that with some friends he started from Canarsie on a bluefishing trip; wanting menhaden bait, they went to the steamer John A. Moore, at Fairchild's Landing, but could not get a bunker, because the steamer was unloading weakfish. Twenty years ago the anglers were so numerous at Prince's Bay beach that they would scamper out of the wagons in their hurry lest there should not be boats enough, and in the idle season of the oystermen and clammers, local population, their boats were rented at from \$3 to \$4 a day, and sometimes hired out a second time. There is no more of this. The instances of this devastation are many, but I will not multiply them, and witnesses freely offer themselves. The following from the *Fishing Gazette* of Sept. 21, 1893, well states this matter:

Many places in this country which would be nearly worthless for other purposes have become of great value, for no other reason than that they are the favorite resorts to which the angler makes his annual pilgrimage with the zeal and with much more delight than characterizes the pilgrimage of the Mohammedan devotee to Mecca.

Prof. Lyman, in "Transactions of the American Fish Culturists Association," 1876-77, says:

When we attempt to make any laws for the protection of those of

the fishes that seem to need protection, we are always met by an immense amount of sworn testimony from the owners of pounds and other interests in that branch of industry to show that those pounds are not destructive and do not tend to lessen the number of fish.

Mr. Blackford, speaking as a Commissioner of Fisheries, said before the same association:

I think that in New York if the laws were more stringent in regard to our shad we should find a very much more marked increase in the supply.

And he quotes approvingly from Mr. Mowat, in regard to salmon, who said:

I think that it was the protective laws that were entitled to the greatest share of credit; that although the fish hatching and propagating supplied to a great degree the waste, yet the protective laws were more efficacious in increasing the supply.

These are anadromous fishes of great fertility, and it may well be assumed that whatever has been found necessary for their protection will be found necessary for the protection of weakfish, a fish which runs from the ocean into our shallow waters to spawn, as to which habit our statement is confirmed by Mr. Daniel T. Church.

Prof. Baird, in U. S. Reports, 1878, speaking of anadromous fishes, says:

The rapid increase in the size and number of the nets, whether pounds, seines, drift or gill nets, that has manifested itself within the last twenty years has doubtless had a similar effect with the dams in producing a decrease. The fish are harassed and worried by them, and hindered in an equal degree from reaching their spawning ground, and thus another drain on the supply is added to the many already in operation. The present perfection of fishing apparatus and the skill of the fisherman is likely to prevent any apparent diminution in the yearly returns of the fisheries, even though the species be gradually approaching extinction.

How well this applies to the statements of the net men as to the market returns and the statements of the hand-line men that they find no fish!

By reason of the prominence of its chief editor, the *Fishing Gazette* may be taken as a reliable authority when it states in its issue of Sept. 7, 1893, that according to official statistics there were in Chesapeake Bay, in 1888, 1,421 pound nets; and that now there are 2,000 pound nets in operation in Chesapeake Bay and its tributaries, and that the sounds of Carolina are lined with them. Weakfish spawn in May and June and some in July, according to locality; and as this vast array of stationary traps is in incessant, merciless operation, with only such interruptions as natural causes compel, such as storms, and as without the spawning of fish and the subsequent run of small fish the supply of weakfish of all sizes cannot be continued, this statement needs no additional words to exhibit how important must be the effect upon weakfish which, however difficult to locate upon the broad sea, become subject, in the greatest certainty, to destruction in these traps when they enter the shallow waters in obedience to their spawning instinct. Prof. Huxley has become quite a harbor of refuge for the net interest when the adverse airs of criticism beat upon them strongly; but Mr. Jex is as competent an authority as these gentlemen of the net interest, for he is engaged in the same business and has had twenty or more years of experience, and he contradicts them and does not agree with Prof. Huxley. Prof. Baird in the Report of 1887 says:

It is doubtless true that the fisheries in a given locality may deplete the waters of the immediate region in which they are prosecuted. The cod and the halibut may be fished for upon a single bank until the local supply is exhausted. This depletion does not, however, necessarily affect the aggregate numbers upon the entire coast.

I now come to a subject upon which I touch with delicacy. But as the gentlemen on the other side have mentioned it I may be pardoned for my allusions to it. In an interview printed in the *Sun* on Dec. 4, 1893, Mr. Blackford states that there are in Fulton Market and its vicinity thirty-eight firms engaged in fish catching with a capital of \$1,435,000, being more men and more capital employed than ever before; he says that this is evidence that there is no scarcity of fish in the ocean waters and depreciates any interference with this investment. We beg him to be assured that there is no wish upon the part of any one to interfere with this interest; but what we ask is co-operation over the question of protecting the fish in the inshore waters. Having this statement of the rapid and great increase of net operations, it would seem that a change has come over the minds of the net gentlemen, for Mr. D. T. Church said before the National Rod and Reel Association in 1888: "I do not think you need apply for restrictive legislation, as the business is declining of itself. My firm has voted to sell out and this is the general tendency, because it costs more to get the fish than the oil will bring; and this last season there was a decline of \$4,000,000 in the value of the business;" and he gave as a reason for the decline the fact that the curriers had begun to use cheap grease, while dried blood from the slaughter houses of the West had taken the place of menhaden as a fertilizer.

It is to be remarked that co-ordinately with the great increase of net operations is the great decrease in the local fish supply of Raritan Bay. Mr. Daniel T. Church, in 1873, according to U. S. Report, testified as follows, page 88, report of 1877:

The fishermen usually steam square out to sea, and for the last ten years have found immense beds of them (menhaden), and apparently inexhaustible amounts three to four miles off shore; and generally after about the middle of May they get fat.

But now the menhaden boats come into the shallow water, and Captain Church stated before a committee of the Legislature of this State in 1889 that Raritan Bay is their favorite place. In Raritan Bay, with an average depth of 18ft., except in the narrow ship channels, the fish cannot escape, and the nets do not capsize as in deep water.

With all the destructiveness of the menhaden nets, I must say that I feel that the pound nets are still more disastrous, being stationary traps, at work every minute of the 24 hours, from the time they are set at one period of the year until they are taken up months later. In reference to the destructiveness, the criminal waste, of stationary machines, I quote the following from a letter publicly written to Commissioner McDonald by a writer signing himself "Alexis," on the Pacific coast: "We know that salmon cannot last five years at the present rate of catching them." And from the *Washington Herald*, of Aberdeen, Wash., I quote: "So large has been the catch of salmon for the past week that the canneries only took 100 fish from each boat daily, being unable to handle the full amount offered." This is necessarily the result of the reckless methods of fishing, and is paralleled by the "solid red rock of weakfish" so graphically described last evening.

An article in the *New York Sun* this last summer under the subject of "Wasteful Pound Nets" says:

The cruellest waste is that of good food fish which are caught when there is already a glut in the market. An intelligent observer says that on several occasions owners of big pounds along the coast telegraphed to New York for tug boats to come down and take out the fish which crowded the pound. The tugs came, emptied the pounds, and took the fish to market, but the wholesale dealers had no use for them and they were consigned to Barren Island. One day last year Mr. Walter Brown, of Newark, saw several tons of weakfish taken from the pounds and brought ashore near Point Pleasant. The current price in New York would not warrant loing the fish, and when they threatened to become unpleasant they were buried on the beach to be subsequently dug up and sold to farmers for manure. There is considerable money invested in pound nets along the Jersey shore, but employment is given to only few persons, less than 300 in all. Six men can handle a string of pounds and the boats used in the fishing. A. H. Van Brunt, who is a line fisherman, owning several boats at Seabright, remarked to the writer that everybody along the coast who did not have money invested in pound nets would concede that these nets were a great detriment to the people. The fish going into the rivers to spawn had been steadily becoming fewer since the

pounds had been in operation, he says, and moreover, the off-shore fishing for weakfish had been seriously affected.

And now, Mr. Chairman and gentlemen, thanking you for the patience with which I have been treated I close by saying that it seems impossible that all the complaints, all the experiences that are coming before us, all that which induces the appointment of committees of investigation, and that which moves for legislative relief, can be idle and unfounded talk.

\*NOTE. The statement of Mr. Walling that in 1892 the pound nets between Sandy Hook and a point twelve miles north of Barnegat Inlet took 7,000,000lbs. of fish, and 10,000,000lbs. of fish in 1893 is in direct consonance with the fact that the season of 1892 was the worst known for hand line fishing in Raritan Bay up to that time, while the season of 1893 was still worse and there were almost no fish.

The statement from Philadelphia that these gigantic net operations produce much cheaper food, and that the average price of weakfish last year wholesale was 2½ cents per pound, does not seem to be verified by the wholesale market quotations except for a short time in July.

As published in the *Fishing Gazette* the wholesale prices were as follows:

	Lowest, cents.	Highest, cents.
For week ending Aug. 21—Philadelphia.....	3½	6
New York.....	3	7
For week ending Sept. 7—Philadelphia.....	5	8
New York.....	5½	9
For week ending Sept. 14—Philadelphia.....	7	10
New York.....	6	10
For week ending Aug. 10—Philadelphia.....	4½	5
New York.....	5½	8
For week ending Aug. 17—Philadelphia.....	2½	4
New York.....	4	6
For week ending Aug. 31—Philadelphia.....	8	9
New York.....	5	6

The statement of Capt. Church that "free fishing" means prosperity, and that restriction of fishing apparatus is against public policy, is attractive but unsound as applied in this case. That is not free which is monopolized by a few; and the object and duty of the State is to see that the equities prevail, and that a privilege inherited by all in common shall not become usurped as being within the domain and right of a class.

MR. C. H. AUGUR, of New York, then addressed the meeting:

I am connected with an industry which employs a capital of two and one-half million dollars, and gives employment to 2,500 people, and which is absolutely dependent for support upon the commercial fisheries. It is a business which brings us in close and continuous contact with the fishermen and fishery interests of the whole country, enabling us to acquire more general information concerning the business, and more particular information regarding some of its features than is readily obtained through other channels. I hope a very few words from me, a representative of the Net Manufacturers, will not be considered out of place in this discussion.

A gentleman who is among the most active opponents of the pound and purse seine fishermen has put himself on record as favoring no sort of legislation short of an entire sweeping away or wiping out of the whole industry, root and branch.

The net manufacturers are, of course, a branch of this industry, and the fact that the unfortunate nets have their origin in our factories may argue that we are the root of the matter also; so that, representing root and branch, it looks as though we were in for it.

It seems to be taken for granted that anyone whose interests are allied to the interests of the fishermen must necessarily take their side in such controversies as this. Mr. Blackford's weighty arguments for the fishermen are commented upon in the newspapers, and by the anglers, in a way calculated to lessen their importance in the estimation of the people on the ground that he is largely interested in the commercial fisheries, and I suppose that our efforts in the same line will be received in the same way.

We don't object to this charge of self-interest, but we should like to have it understood where our real interest lies. If it is true that the pound nets and purse seines along the Atlantic coast are depleting the waters at anywhere near the rate alleged by those who are responsible for this agitation, it is inevitable that the whole fishing industry must in a short time sweep itself out of existence, root and branch, without the intervention of legislatures; and when that happens, our business, representing fifty years of growth and development, with its large investment of capital in machines for making netting, and its ability to support hundreds of families, will be destroyed. If the trend of things is in this direction, this self-interest, which you talk about, would impel us to take your side of the case, and to do all in our power to secure restrictive legislation. Not only that: self-interest would give us eyes to see the coming disaster a little more quickly than disinterested persons see it, and we should be the leaders in such a movement. To say that self-interest would impel us to uphold such a wanton destruction of fish as you say is going on, is equivalent to saying that the instinct of self-preservation would impel a man to commit suicide.

The rating accorded by the commercial agencies to the six or seven net manufacturing companies indicates that this is a stable, permanent industry, in the hands of men possessing at least ordinary judgment and business sagacity. Give us credit for these qualities, and admit that we may possibly speak for the fishermen, and in behalf of our own business, for reasons entitled to respectful consideration. Let it be understood that our business is absolutely dependent upon the permanent productiveness of the fishing grounds.

A great many evils are laid to the purse seines and pound nets, but they are all summed up in the one allegation frequently made in the newspapers, that they have caused a steady diminution in the supply of edible fish, and the proof cited to support this assertion is the alleged fact that the prices of fish are very much higher than they were ten, fifteen, or twenty years ago. If the prices are higher it does not follow that the seines and pounds are responsible for it, but if it can be shown that there has been no such advance in prices, it seems to me that the proof of the assertion is wanting, and that the whole argument has nothing left to stand on.

That there are periods of alternate abundance and scarcity of all kinds of fish we all know; that the prices of fish in this market vary greatly is, of course, a fact; but is it true that the average prices the season through are higher now than they used to be? In order to get at the truth we ask our customers, some of these old fishermen who have been in the business for twenty or thirty years, about it, and they show us conclusively from their records that they don't get any more for fish now than they did ten or twenty years ago. We ask the wholesale fish dealers about it, and their testimony corroborates that of the fishermen; and this evidence accords also with what we are able to remember from our long experience and intimate connection with the fisheries.

A prominent gentleman is reported to have said recently in a newspaper interview that he was on the side of the anglers in this matter, and he repeated the assertion referred to—that there is a growing scarcity of fish as evidenced by a great increase in prices, and as an illustration he said that he paid twelve cents a pound a few days before for codfish. Of course he told the truth. I'll bet that the fish dealer he bought it of would have charged him twelve cents if the first cost of the fish had been two cents. Your accommodating retail fish dealer will send a horse and wagon and a boy ten blocks to deliver a dozen Blue Points on the half shell, and he will make the round trip over again immediately if you give him an order for a codfish. About 50 per cent. of his charge is for waiting on you, but it goes in the bill as fish. I have myself paid twelve cents a pound for bluefish when I knew positively that they were selling at Fulton wholesale

market for two cents; and the dealer smilingly defended the apparent extortion on the ground that he could not afford to sell any fish at any time for less than twelve cents, but he said that he paid no attention to a fluctuation of a few cents in the wholesale price. He charged twelve cents whether the fish cost two, four, six or eight cents.

On the same day that this interview appeared in the paper (where the gentleman said he paid twelve cents a pound for codfish) I chanced to meet two cod-fishermen. They were not pound netters, nor purse seiners; they knew nothing of this agitation about nets, and I told them nothing about it, but I did ask them what they were getting for codfish. They said that the lowest returns they had netted them \$2 for two boxes of fish, but that early in the season the price had been high; they had received \$15 a box for a few shipments. I asked them how many pounds went to the box and they said about three hundred. These were cod gill netters from Long Island. They had received prices for the season varying from one-third of a cent a pound to five cents. It is only fair to say that this extreme low price was obtained for fish sent into the market about Thanksgiving time, when the butchers are doing more business than the fish dealers. But the average price for cod had not been over three or four cents.

I only want to show that the price of fish at the best retail markets is not to be taken as evidence bearing on this question in any way whatever. In the poorer quarters of the city the markets and peddler's wagons offer immediate evidence of fluctuations in wholesale prices, but I am inclined to think from the statement of the gentleman referred to, and also from the position he occupies in polite society that his fish dealer isn't located in Ludlow street.

Fishermen in distant parts of the country address us frequently on the subject of prices, asking whether it will pay to ship to New York. Sometimes we are able to report that prices are fair, but oftener that they are low, and that fish from distant points would not sell at profitable prices in competition with the local supply.

From all these things we come to the conclusion that the proof offered to support the assertion that the supply of fish is rapidly decreasing doesn't exist, and that therefore the relative scarcity of fish doesn't exist either, and we keep on making pound nets and purse seines in the tranquil belief that we are contributing to the permanent prosperity of the fishing industry in all its roots and branches by so doing.

Another word about that codfish. If it could be proved that there had been a great increase in the price of cod, I don't see how it would affect the question at issue, which is, whether pounds and purse seines are responsible for diminution of supply. A few codfish are caught in gill nets, and a few more, I believe, come from off-shore traps in extreme Eastern waters; but the greater bulk of the supply is taken with hooks and lines. The purse seines and pounds along this coast have nothing whatever to do with it.

Another peculiar thing in connection with this part of the subject is that the Jersey pounds are often charged by the newspaper writers who angle, or the anglers who write for the papers, with catching large numbers of striped bass. They don't. When striped bass run along the coast they are in the surf close up to the beach, and they pass between the beach and the shore end of the pound leaders. The market men say that nearly all of the striped bass received here are taken in shore seines.

Professor Goode, in his book on American fishes, refers to agitation on the subject of striped bass fishing in this State in 1753. It was thought that seining for them must be restricted, as that kind of fish was becoming extinct. That was one hundred and thirty-five years ago and here is the same old fish still about to become extinct.

This unaccountable variation in the fish supply goes back more than one hundred and thirty-five years, however. It is more than eighteen hundred years since a fisherman of Genesart, in answer to a request from the Master, said hopelessly: "Master, we have toiled all the night and have taken nothing; nevertheless, at thy word I will let down the net." And when they had this done they inclosed a great multitude of fishes and their net broke. And when their partners had come to help them they filled both the ships so that they began to sink.

You will say that these are not the days of miracles, yet the story of these two fishermen is told over again, year by year, all along the coast. What has stirred up this crusade against the nets? It is the observation of catches of miraculous proportions; pound nets filled solidly with fish, and boats loaded to the point of sinking. But the fishermen can tell how, at other times, the nets are lifted day by day for the merest handful of fish. There are times of over-abundance, and times when it seems a hopeless waste of labor to let down the nets or lift them up. But all literature which deals with fishermen in all times, in all countries, tells this same story. It was so before the pound nets and purse seines existed; it is so now in places where they are not operated, and to the best of our knowledge and belief, it is no more so along the Atlantic coast, where both methods of fishing are carried on.

It is not my purpose to refer to all of the minor charges that are made against these fishermen, but I will speak of one. I have seen it written that the pound netters along the coast are men of so much wealth and influence that to oppose them successfully in matters of legislation is a very difficult thing. The impression is created that they are a band of grasping monopolists conducting a nefarious business in defiance of public opinion and of all principles of right and wrong; and they are so thoroughly organized as to make it well nigh hopeless for such obscure citizens of moderate means as signed the call for this meeting, for instance, to contend against them.

We know something about the pecuniary resources of these men, many of them our customers. Some of them might be called well off. I think these made their money before they went into the fish business. Others, practical, hard working fishermen, have managed, after years of industry and economy, to lay by what might be called a snug sum from the profits of fishing. Still others have grown old and gray and bent with incessant toil and exposure, and they are poor men. As for their organization, I know that in New York, and in New Jersey, the only organization they have has been effected since the call for this meeting was issued, and if they are organized at all in the States further south haven't heard of it. Taken altogether, I hardly think they are such a formidable body of wealthy monopolists that any gentleman who merely owns a few railroads need sail to Europe for fear of meeting them.

Pound nets, purse seines, gill nets and sweep seines are the methods used in the important fisheries of the country. To legislate against two of these methods is to disturb a very great part of the whole fishing industry. The bitterest opponent of the pounds and purse seines must see that it is only just and fair to move deliberately and slowly. All of the evils alleged against them are disputed by high authority. I never have talked with a pound-net man or purse-seine man who did not express a willingness to have all the details of his business investigated. Their chief complaint is that it is not investigated, and that absurd statements respecting it are continually made by people who would not make them if they were at all informed on the matters they talk and write about. I think we would all like to see an investigation made by a body of men representing all the sea coast States, composed of anglers, fishermen and men whose interests are neither with one side or the other—an impartial investigation whose one object should be to get at all the facts, and not to make merely a collection of opinions. I have been among fishermen a great deal. I know that they are about as divided in their opinions as to the causes of certain effects as the rest of us are. I have even known fisher-

men operating one kind of nets to have a poor opinion of fishermen who use another kind of nets, and I have known hook and line fishermen to speak disrespectfully of all kinds of nets. If you stand on shore and ask the shore fishermen what is going on in the off-shore vessel fisheries they will tell you what they think is going on, but if you go out with the boats yourself you will not need to depend upon what other people think, you will know. If you believe the menhaden steamers destroy great numbers of edible fish, go aboard the steamers and cruise about with them. The captains will give you a good place to sleep and treat you well. Go to the factories and see what the steamers bring in; go to the pound nets and see what they catch, and how their fish are disposed of; go to the markets from day to day and get the prices, and above all things, go into the matter with a correct idea of the size of the whole question. It is said of the nets (and it is said of all kinds of nets at various times) that they "slaughter fish by wholesale." Well, fish have got to be slaughtered by wholesale to supply the wholesale markets. That ought to be understood. The only thing to find out is whether there is a diminution in the fish supply which can properly be attributed to the nets, or whether the agitation is not all a mistake. A thorough investigation must take place in the summer and under the same conditions that have existed heretofore. To legislate against the nets in any way previous to such an investigation would be oppression, pure and simple, and without excuse, for there is no need of such haste. Such action too would naturally arouse bitter and desperate opposition, whereas, an inquiry such as I have referred to would receive the cordial support and aid of the fishery owners.

Already this agitation is injuring the fishermen to some extent. It is time now that they were making preparations for next season's work, yet they are disturbed by the uncertainty as to what will be the result of this organized crusade against them. The whole business remains in an unsettled state. They don't know what to do. As a matter of justice to them, and to the net manufacturers, and to all other fishing interests, this meeting should express in unmistakable terms its intention to recommend no hasty action, but to take all the time for preliminary inquiry which should be accorded to a question of such vast proportions.

[TO BE CONTINUED.]

## The Kennel.

### FIXTURES. DOG SHOWS.

Feb. 20 to 23.—Westminster Kennel Club, at New York. James Mortimer, Superintendent.  
Feb. 27 to March 2.—Columbus Fanciers' Club, at Columbus, O. G. F. Moorey, Sec'y. Entries close Feb. 20.  
March 7 to 10.—City of Straits Kennel Club, at Detroit, Mich. Guy D. Welton, Sec'y. Entries close Feb. 21.  
March 13 to 16.—Mascoutah Kennel Club, at Chicago, Ill. J. L. Lincoln, Sec'y. Entries close Feb. 24.  
March 20 to 23.—St. Louis Kennel Club, at St. Louis, Mo. Dr. G. G. Darby, Sec'y.  
April 3 to 6.—New England Kennel Club, at Boston, Mass. D. E. Loveland, Sec'y.  
April 18 to 21.—Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.  
May 2 to 5.—Pacific Kennel Club, at San Francisco, Cal. H. W. Orser, Sec'y.  
May 15.—Portland Kennel Club, at Portland, Ore. D. L. Williams, Sec'y.

### FIELD TRIALS.

Feb. 12.—United States Field Trials Club's Spring Trials, Grand Junction, Tenn. P. T. Madison, Sec'y, Indianapolis, Ind.  
Sept. 5.—Manitoba Field Trials Club, at Morris, Man. R. J. Gallagher, Winnipeg, Sec'y.

### BLUE RIDGE FUTURITY STAKE.

OUT of fifty-three nominations in the Futurity Stake of the Blue Ridge Kennels, there were but ten starters, a most unaccountable apathy on the part of owners in respect to it and their own interest, considering the importance of the stake and its monetary value, \$1,500, divided into five prizes, namely, \$500 to first, \$400 to second, \$200 to third and \$100 to fourth, the remaining \$800 being divided equally between the breeders respectively of the winners of first, second and third. I have an opinion that had the stake been advertised better, the results would have been better, for in these days when competitive events are so numerous, and rapid changes occur in short periods of time, the public cannot keep posted nor can its interest be maintained without the aid of the press.

As a whole, the work of the dogs in the competition was commendably good and some of it excellent; the heat between Bessie Shoupe and Allene rating with the best high class work seen at field trials.

The stake was run on Feb. 1, at New Albany, Miss. A raw, stiff wind blew from the north in the forenoon, veering later to the west. The sky was heavily overcast in the morning, but soon after the start was made, the clouds gradually broke away, the light fog was dissipated and clear weather prevailed. Birds were not moving much, and required diligent search to find them. They, however, were in sufficient numbers for a good working test of the dogs.

The judges were Major J. M. Taylor, one of the judges originally appointed, and Mr. N. B. Nesbitt, of Chesterville, Miss., and Mr. B. Waters.

Col. P. H. O'Bannon and Mr. H. Hulman, of the Blue Ridge Kennels, were present and gave the management of the stake their personal attention. The competition passed off smoothly, and so far as I know, satisfactorily. It was, however, one stake on record in which there were no "rushing," no undignified and useless scrambling, and none of the consequent unpleasant features which sometimes occur. It progressed from start to finish without a hitch.

There were present Messrs. C. F. Joyce, Greensboro, N. C.; F. R. King, Leighton, Ala.; A. M. Young, Manchester, Tenn.; T. Beggs and A. Baker, Terre Haute, Ind.; J. W. Shriver, Wartrace, Tenn.; P. H. Bryson, Memphis; Dr. M. F. Rogers, Mr. and Mrs. W. G. Bias and Miss Wray, of New Albany, Miss., and a number of gentlemen whose names I do not know, from the latter town and the surrounding country, forming altogether quite a group of spectators.

E. F. T. C.'s rules governed. Following is the order of running:

C. P. Stokes's b. w. & t. bitch Bessie Shoupe (Gath's Hope—Countess Rush), D. Rose, handler, with Capt. Patrick Henry's lem. & v. bitch May Early (Gath's Hope—Gladstone's Girl), Geo. Gray, handler.

Bob Cooper's b. w. & t. bitch Sadie Ross (Gath's Hope—Tempest), D. Rose, handler, with J. W. Shriver's b. w. & t. dog Monitor, formerly Tea Tray (Gath's Hope—Cleo S.), owner, handler.

Manchester Kennel Co.'s b. & w. bitch Callie White (Gath's Mark—Georgia Belle), A. P. Gilliam, handler, with C. P. Hartmetz's liv. & v. bitch Columbia (Gath's Mark—Queen Blade), Geo. Gray, handler.

Greensboro Field Trial Kennels' b. & w. bitch Hope's Queen (Gath's Hope—Queen Noble), F. Bevan, handler, with Manchester Kennel Co.'s b. & w. bitch Nellie Gladstone (Dan Gladstone—Queen Novice), A. P. Gilliam, handler.

J. W. Shriver's b. w. & t. dog Livingston (Gath's Mark—Cosette), owner, handler, with C. P. Stokes's b. w. & t. bitch Allene (Gath's Mark—Ruby's Girl), D. Rose, handler.

### The Running.

BESSIE SHOUBE AND MARY EARLY started at 8:17 what proved

to be a very one-sided heat, Bessie far outclassing her competitor in every respect. She ranged fast and with judgment in beating out her ground, at the same time looking well to the gun. She first found and pointed a bevy well, in the open near edge of woods. Mary backed and both were steady to shot. Each made a good point on singles. Sent on, Bessie soon found and pointed a bevy in the open sedge. While Gray was whistling Mary in to back, she on the way pointed a bevy well and was steady to shot. It did not have much merit in itself as a find as she was then being brought in to back, but as a piece of work it was well done. They were cast off together then on scattered birds. Bess pointed and Mary stole the point. Bess next made a good point on scattered birds. Her work was sharp and accurate. Mary needed encouragement betimes to keep her at her work, and she came in frequently to her handler to get orders; in short she did not remain out at her work as she should, and her range in consequence was irregular. Up at 8:48.

SADIE ROSS AND MONITOR were cast off at 8:54. Sadie was rousing a bevy in sedge and it was accidentally flushed. Sadie flushed a bird excusably. She next in woods pointed a bird which flushed wild. Monitor flushed a single in woods. Up at 9:51. Monitor had a limited range and was slow. Sadie was much the wider and faster ranger and showed greater skill on birds, yet she handled a bit hard, it requiring more noise and effort to keep her working to the gun than the other dogs Mr. Rose handled.

CALLIE WHITE AND COLUMBIA ran 58m., beginning at 9:53. It was a most thorough heat, with plenty of opportunities in it for each, and Columbia came out of it the victor most decisively. Callie was first to point and was promptly backed. There was nothing found, though a snipe had a few moments before flushed a few yards away. Columbia made a bad error in flushing a bevy up wind in the open, but she redeemed herself shortly afterward by pointing another bevy skillfully. Callie backing; both were steady to shot. The next work on birds was on a bevy. Columbia up wind of it flushed two birds excusably. Callie took a short cast to the left and pointed the bevy across wind. At the same time Columbia, a few yards away was making game on the trail toward the bevy. Next Callie flushed a single down wind. Columbia pointed a single well. Callie pointed a single, but moved on her point, and the bird flushed. Next she made two bad flushes up wind on birds she ought to have pointed or at least drawn on. Columbia pointed a bird and next pointed a bevy well. On the scattered birds in woods Columbia flushed twice and made two good points on singles, while Callie pointed once, to which nothing was found, and made an indecisive point on a single bird.

HOPE'S QUEEN AND NELLIE GLADSTONE began at 11:00 and ran 1h. 4m. The heat was ordinary and without much incident, though both dogs showed that they would point and back and were trained well.

The running was suspended while the party went to lunch at the house of Mr. W. G. Bias, where a good lunch and friendly greetings made the incident most happy. A long table, set at fresco, with good hot coffee and plenty of eatables, made each one feel that field trials are not all drudgery.

ALLENE AND LIVINGSTON.—At 1:35, began in the open their heat. Livingston made a good point on a bevy in woods. Next, Allene made a most skillful exhibition in drawing on a bevy to a point in open ground, doing the work quickly and accurately with a high nose. It was a very pretty piece of high class work. On the scattered birds, Allene dropped to a point on a single and Livingston refused to back, though it did not seem against him as the bitch was not standing. In thick cover, Allene pointed a single nicely, at the same time, Livingston making a similar point. Up at 2:20, Allene was wider, swifter and sharper in her work.

For further running, the judges selected Columbia, Sadie Ross, Bessie Shoupe, Allene and Callie White, the latter more as a reserve to run with Sadie Ross in the event that she was beaten by Columbia.

SADIE ROSS AND COLUMBIA began 2:32. Sadie pointed a bevy in open sedge and was steady to shot. In woods, working on the scattered birds, both pointed at the same time, but nothing was found. Sadie flushed a single in woods, next she pointed where a bird was flushed and was backed, and next she pointed a single in thick sedge. Columbia made three more points on singles, the last one lying so close that her handler failed to flush it, the horsemen flushing it after she had moved on. Sadie added to her work three points and a flush. She appeared to be somewhat unreliable in backing, having refused an opportunity, but the class of her work rated her a slight degree higher than Columbia, though the heat was very close. Both showed good ability.

ALLENE AND BESSIE SHOUBE were started at 3:19. Both started fast and ranged wide. Bessie pointed a bevy nicely. Some larks flew up about her, and it was thought she was pointing them. Rose ordered her on. She took a few steps and steadied again. The bevy flushed. The bitch was blameless for it. Sent on after the scattered birds, Allene dropped to a point on the birds and Bessie a few yards away backed prettily. Next, they backed each other. Sent on both dogs ranged wide and fast, Bessie showing the better judgment. Bessie about 250yds. away, made game and drew quickly and accurately to a point on a bevy. Rose flushed it. It was an excellent piece of work. Allene in the meantime was out of sight, and Bess was taken up till Allene was found. She soon came in sight. The heat ended at 3:50.

CALLIE WHITE AND COLUMBIA were started next at 4:02, and ran 16m. It was hardly necessary to run them together again, but it in no wise changed the opinion of the judges. After a short consultation, the judges announced their decision as follows: First prize, Bessie Shoupe; second, Allene; third, Sadie Ross; fourth, Columbia.

The competition of the two latter was very close, and decided on a very small margin. As a whole, those interested said the stake was skillfully handled and well judged.

B. WATERS.

### United States Field Trials.

Editor Forest and Stream:

The U. S. field trials will commence at Grand Junction, Tenn., on Feb. 12. Arrangements have been made with the I. C. R. R. and E. V. & G. R. R. to carry five crates of dogs free in baggage car in charge of one person. It will be necessary for those wanting passes over I. C. R. R. to apply to A. H. Hanson, general passenger agent, Chicago, Ill. Orders have been issued to baggagemen over E. T. V. & G. R. R. to carry dogs free to the trials; all that will be necessary is to show something to the baggageman proving that you intend visiting the U. S. trials. Grand Junction is located at the crossing of the I. C. and E. T. V. & G. R. R. railroads. The grounds are well known as being the best field trial grounds in America. There are two good hotels with reasonable rates. Plenty of saddle horses can be had at \$1.25 per day, hacks \$3. It would be advisable for those who have them to bring their saddles and bridles, as it is impossible to furnish so many good outfits for saddle horses. If any one desires to I can engage rooms, saddle horses and hacks for them before they reach Grand Junction. From the very fine selection of dogs that are entered and now in reach of the trials, and with three such competent judges as Dr. N. Rowe, W. W. Titus and Royal Robinson, the public may expect one of the largest and most successful field trials ever held in America.

J. M. AVENT.

HICKORY VALLEY, Tenn.

A meeting of the New England Beagle Club will be held at Young's Hotel, Boston, Feb. 18, at 2 P. M. Members are earnestly requested to attend.

# POINTS AND FLUSHES.

[By a Staff Correspondent.]

## A Trainer's Opportunity.

THE following paragraph from a letter of Mr. R. J. Gallagher, secretary of the Manitoba Field Trials Club, among other matters, contains something of interest to field trial trainers. He says:

"I am very much pleased with the new set of officials, as every one of them are dog owners, and have promised to take an active interest in the affairs of the club. We surely will make a success of it this season. \* \* \* There have been about a half dozen young dogs imported during the fall and winter, and some more are likely to arrive shortly, so that we will be in a better position to enter the lists with outside competitors than last year. Our trouble is a trainer. You know what we lack in that respect. Could you not devise some scheme by which we could get a good man to come here and do the work for us? I will be glad to hear from you on this subject and to receive any suggestions you may see fit to make. I think that we could safely guarantee a good trainer ten or twelve very good young dogs and possibly a few all-aged ones. I do not believe there would be the least difficulty in getting him all he would want to handle."

The business inducements are greater than one trainer could handle properly. Ten dogs are about as many as any one trainer can do justice to in one season, particularly if it is understood between him and his employers that the dogs are to have a thorough training, and if the price, \$100 or more for each dog, is the consideration.

A rather common fault is for trainers to overload themselves with work, with the result that the dogs are not properly finished in training or experience. There is the collateral result that the owners are dissatisfied and lose all faith in professional trainers. When a gentleman pays a first-class price for training he is entitled to first-class work in return, and to a truthful account of the dog's qualities and progress. The same principles of justice and integrity should govern a dog transaction as any other business transaction. There are a whole lot of particulars worthy of consideration by trainers in these matters, as perhaps many of them may suspect. But this is digressing from the subject.

I do not know which trainers, if any, in the States would consider inducements to go to Manitoba, so I thought the best way was to present the matter through the columns of FOREST AND STREAM, so that it would come to the knowledge of all. Personally, I consider the chance an excellent one for any trainer who can fill the requirements. There are abundance of birds, good grounds, a growing interest, and last and best, plenty of sportsmen. It would be a mistake—a disastrous mistake—for any trainer to go there with any idea of becoming successfully prominent as a competitor by jockeying or unfair sharpness of any kind. Any unfairness would terminate abruptly his business career. Good, thorough work, and skillful but fair competition will be insisted upon, as it should be insisted upon here. The signs of the times, however, denote that there will be more consideration of these matters by owners and field trial clubs in the future.

## Dogs' Practical Field Qualities.

So far as I have heard from trainers they frankly admit that a field trial dog should be a field dog as well. The fact is so apparent that, in the light of common sense, it is useless by any sophism to make a distinction between a field trial dog and a field dog. I note that some writers make an analogy between the field trial dog and the field dog on the one hand and the racehorse and roadster on the other. This analogy is in appearance only. Such reasoning is fallacious. When a horse is broken there are mechanical appliances which keep him in control, and he cannot loaf in his work. If a dog is disposed to loaf when working for his master there is no means to make him work. Moreover, the fact that a horse is a racehorse does not imply the absence or need of thorough training. The efforts of a horse, too, are exerted in but one direction, namely, to go ahead. If he be a bit wild it does little harm. If a dog is wild it may spoil all the pleasure of the shooter.

From an eminent field trial handler I have received a letter from which I quote the following:

I am too busy at present to write anything fit for publication, but will scribble down a few of the ideas that last year's field trials have suggested. After thinking over the remarks I have read and heard about dogs, I am forced to come to the conclusion that only a few men (judges included) understand the reasons why some dogs always do clean work (your own name for it, I think), and others, sometimes only or never. Perhaps it is too much to expect from any man who has not had the experience of a professional, but a man who cannot is not fit to judge a trial—unless the ground is more open and better stocked with birds than usual. If this is the case then he can see the clean work, and if he appreciates it, it matters little whether he knows the cause of it or not.

What would you call a high-class dog? Is it not one that does clean work, ranges intelligently and as wide and fast as the ground requires?

Of course there are no end of less important points that go toward the making up of one, but these are the chief, I think.

I am afraid that field trials will go to the bad unless some radical changes are made in the management of them. Of course I always read "Points and Flushes." Trials seem nearly all business and little pleasure now. Gentlemen are getting disgusted with them. Mr. Thomas Johnson is another really good judge of a dog, who is driven away. Dog dealers will have it all to themselves; that is, if anything is left worth having.

I really think it is better to have professionals as judges than to have to trust to the small chances there are of getting three amateurs fit for the work.

Why could not one judge (with an assistant of his own choosing to help him) do as well as three? If judging is to decide which are the three best dogs in a stake, one can do it as well as more; but if the object (as it is) is to decide which dogs made the most points, etc., then three judges are none too many.

Suppose you were told that you had to have the three best dogs in a stake—would you want two other men to help you? I don't think you would, nor would it take you so very long to decide.

I had just closed this when the last FOREST AND STREAM was handed to me, and I must say that I was more than usually pleased with your "Points and Flushes." You have made a string of clean points. I only wish that judges and others connected with field trials would study the full meaning of your criticisms, but suppose they only take in a little at a time, and you must hammer away till you get them to digest it all. Ever since I took to making a business of training, I have thought a great deal about ranging, and have experimented on it, too. That is really where nine-tenths of a handler's time ought to be put in. A dog points, backs and hauls his birds more or less naturally, but few range to suit the gun. The best puppies range fast and wide, and learn by experience where to look for birds.

## Game Protection.

No more healthful sign for the preservation of game can be imagined, than a sentiment on the part of handlers against market shooting and slaughter. The following, under date of Jan. 25, from Mr. J. H. Johnson, of Carlisle, Indiana, at present located at Pontotoc, Miss., is a case in point, and the first of the kind, so far as I have any knowledge.

What will be the best way in your opinion to go about getting a law enacted by the Indiana Legislature to prohibit the sale of quail? I am very much interested in the matter, and believe it can be done if got at in the proper way. I am confident I can get every farmer in our township to sign a petition praying the Legislature to enact such a law. Do you think this would be a good plan, or try to get our representative to introduce a bill as above, and then let him back his bill up by long petitions?

The more I read FOREST AND STREAM the better I like it. Mayfield and I are located close together, and we are doing some good work, although quail are not as plentiful as I would like. We are having a cold time of it now, the ground is frozen and the wind is in the north.

Your ideas as to field trial dogs are correct. If we don't have working dogs, we might as well run greyhounds.

The most effective method of procedure, is to get all the property owners to sign such a petition, and then have the representative of that district use his best endeavor to have a law passed accordingly. Of course, the more friendly the representatives interested or appealed to by their constituents, the better the chances of success. I thought that, by publishing Mr. Johnson's letter, he might thereby obtain more explicit information as a stronger support in his endeavors. B. WATERS.

909 SECURITY BUILDING, Chicago.

## Nicholls vs. Mills.

Editor Forest and Stream:

As the accounts of this case published in the Toronto Mail, and being copied into other papers, is such a mesh of falsehoods, a true account of the affair is called for.

I wrote Mr. Nicholls that I was desirous of breeding my great Dane bitch to his dog, and asked him to state the stud fee. He wrote in very few words that I was welcome to do so for a dog and a bitch puppy of the resulting litter. This was the entire agreement. The dogs were duly mated, and the bitch gave birth to a litter of 13 puppies. At the outset 4 of these were laid upon and killed. No sooner were the remainder weaned, than they showed very pronounced symptoms of being infested with worms. In spite of the best treatment I could give them, some of them died and all were in wretched condition, so that when they were seized with distemper soon after, others died and the now remaining 4 were miserable objects. I never took so much pains with any litter of puppies and never had poorer results. I felt all the more anxious, as I never forgot my responsibility to the owner of the stud dog. I wrote Mr. Nicholls soon after the pups were born and had a brief reply from him stating that he would prefer two dog puppies if I were agreeable, instead of a dog and a bitch. One Sunday morning considerably later, a Mr. Goodman called at my residence and presented a letter from Mr. Nicholls, stating that he was authorized to select two puppies. I declined to allow selection, and told Mr. Goodman I was desirous of communicating directly with Mr. Nicholls and would be answerable as to sending on the puppies myself. He would not allow me this opportunity, and next day I received a most peremptory lawyer's letter.

On the day following, Mr. Goodman came to my place in the company of a man who had been disqualified by the A. K. C. for fraud. I declined to be bullied and Mr. Goodman left the city. Later there came another order from Mr. Nicholls by a detective, this also for choice; in fact, at no time did I ever decline to give the two pups I agreed to give and at no time was I ever asked for them except with this condition of choice, which was never agreed to in any way.

I wrote Mr. Nicholls that I was surprised that he should sanction such unjust and offensive procedure, as I had taken him for a gentleman and had shown him some courtesies. I suggested that a court of law was not the place in which two gentlemen should settle a matter of this kind. I offered as a way out of the difficulty, simply for the sake of peace, to pay a large stud fee in cash—in fact, larger than any Dane has ever earned, so far as I know, in America. I also offered to submit the whole case to arbitration. To these proposals I never got so much as a reply.

When the puppies were so sick I had written those concerned and cancelled all orders for them, and had refused even to put a price on them. As I saw that the policy of Mr. Nicholls and his agent was an arbitrary brow-beating one, there was only one course left open to me, or any man of spirit, and that was to defend myself in a court of justice.

All the above statements of mine were proven before the court by evidence—chiefly the letters between the parties to the action. My kennelman gave evidence as to the sickness, etc., of the puppies.

In rendering judgment the court held that I was not bound to give plaintiff choice of the puppies, as he had always demanded, but only my own fair choice or their value in cash, the court placing the value as I had myself stated it. It will thus be seen that the plaintiff lost his case and he has to pay costs as well.

It was expensive to me to have to keep the puppies so long, but I will never consent to allow myself to be bullied, especially when, as I believe in this case, certain persons were egging the matter on through personal feeling against me.

It is somewhat remarkable that I have within a year been grossly libeled in three of the Toronto newspapers. Two of those have been successfully called to account, and I think the Mail will have occasion to learn to be more careful in future of what it publishes. I intend if possible to ascertain who are the real authors of that tissue of falsehoods the Mail publishes, and to follow them up. It is in the public interest to do so.

Since I have learned how seriously the Mail's article has been taken I have instructed my counsel to increase the damages already claimed to \$20,000, and I intend to push the case.

I regret that I must take up your valuable space with explanations that should never have been necessary.

WESLEY MILLS, M.D.

COTE ST. ANTOINE, Montreal, Feb. 3.

P. S.—As showing the spirit of the plaintiff's agents, if not himself, I may mention a course has been pursued since the judgment was given that has laid the plaintiff open to an action for damages. W. M.

## Southern Field Trials.

NEW ALBANY, Miss., Feb. 5.—[Special to the Forest and Stream.] There were twenty starters in the Derby. Competition is very even, though no brilliant work has been done as yet. Birds are not quite plentiful enough. The judges are T. M. Brumby, Marietta, Ga.; W. Murnan, Stanton, Tenn.; F. P. McCargo, Olive Branch, Miss. Weather very favorable and pleasant. The dogs were drawn in order named: Earl Palmer and Beryl, fair rangiers, Beryl better in point work. Lightfield Rosalie and Thaid, the former's heat all through, she doing some good point work. Antoinette and Topaz, all in favor of Antoinette. Amethyst and Bessie Shoupe, the former ranged well but found nothing. Nellie Gladstone and Rod's Mark, only moderate work. Dame Durden and Sadie Ross, an indifferent heat. Major Thomas and Lady Rush, both did good on birds but their ranging was at times erratic. Leona and Callie White ran a fairly good heat throughout, Leona doing the most point work. Blue Ridge Mark and Miss Hattie, both did good point work and showed fair speed; heat in favor of Mark. Topsy Rod and Allene ran an excellent heat, going fast and wide, but Allene found the only birds. Probably half or more will be kept in second series. There is a good attendance of sporting men. B. WATERS.

## Chicago Show.

THE Mascontah Kennel Club have decided to make the following additional classes for competition at the coming bench show, to be held in Battery D and the Second Regiment armory, March 13 to 16:

Bulldogs—Class 125A, dog puppies 6 to 12 months, prizes \$10 and \$5. Class 125B, bitch puppies 6 to 12 months, prizes \$10 and \$5.

Black pugs—Class 196C, open dogs and bitches, prizes \$10 and \$5.

Italian greyhounds—Class 209D will be made, thus dividing the challenge classes by sex, prizes \$10 and \$5. Class 211E, puppies 6 to 12 months, dogs and bitches, prizes \$5 and \$3.

Entries will close at the office of the club, 953 Monadnock building, Chicago, Feb. 24.

# DOG CHAT.

## Canadian Registrations and A. K. C. Shows.

The revocation of reciprocity between the A. K. C. and the C. K. C. will be apt to hurt some American shows as well as it did the Toronto show of last year. Detroit, probably more than any other show, will feel its effect, as this city is right in the midst of Canadian breeders and owners on whom they depend for a good entry. These may understand the circumstances, but the local people will not. They look upon Detroit as a home show. In fact, a large number of the C. K. C. members live in Windsor, Can., or near by. Their dogs are registered in the C. K. C. and the present ruling grinds hard. People who live say seventy-five miles back from Detroit expect to exhibit at that show, and when they have to re-register or re-list they seem to think it is the Detroit Club's fault, and they don't like it. This fact should become well known, for as Mr. Welton, the secretary, says, "As you know almost every one waits until the last day before entering at a dog show. Now, if on Feb. 22 I received a lot of Canadian entries with Canadian registrations I would have to refuse them and it would be too late to get them in." The show people are, however, depending on the publicity given to the subject in the local papers and that the entries will be in proper order. Outside of this everything promises well for a good show and another success.

We understand that Mr. Ogden Golet, so well known in yachting circles and society, has become interested in bulldogs, has already some dogs of this good old breed and will build some fine kennels at Newport, R. I., very shortly. A well known and competent dogman is to have the management of them. This is good news for this particular fancy. FOREST AND STREAM has continually urged the strong claims for popular recognition that the bulldog possesses, and its endeavors in this direction have not altogether been without reward.

A. H. Gilmore, proprietor of Ruby Kennels, heretofore located at Winthrop Beach, Mass., has resigned his position on the editorial staff of the Boston Globe, and with his numerous family of handsome toy spaniels has moved to Worcester, Mass., where he, in company with C. Fred Crosby, also an experienced newspaper man, has purchased the Worcester Dispatch, the leading paper of Worcester county. Last week Mr. Gilmore sold a promising King Charles pup to Miss F. Shell of Richmond, Va.

Ansino Locco, a ragpicker, was held for trial by Justice Ryan in Jefferson Market Court, New York city, Jan. 19, on a charge of cruelty to animals. Locco was emptying an ash barrel when a pointer pup owned by William B. Leddy barked at him. Locco struck the dog with his iron hook, blinding him in the right eye. Locco attempted to escape but a passerby who witnessed the cruel act seized him and turned him over to a policeman. He was fined \$25.

The owner of the Swiss Mountain Kennels speaks very enthusiastically about a litter of St. Bernards she has now by Eboracum out of Harmony, litter sister to Sunray. Mrs. Smyth has bred a number of St. Bernards, but she never saw such size as these have at their age. Their sire has the type and quality that should produce some good stock, and it is a pity the dog does not appear oftener in public.

## Los Angeles Show.

Preparations are now being made to carry this show through with success. It will take place April 18 to 21. The entry fee for the large dogs is \$3, medium-sized \$2.50, and for the smaller dogs \$2. Cash prizes of \$5 and \$3 will be given in the large breeds and in the others \$3 and \$2, when five entries are made; \$5 kennel prizes are also given, and novice classes will be made for all the principal breeds. It is also expected that a good money prize will be given for the handler showing the largest number of dogs not owned in the State.

In regard to the above statement that certain prizes will be given if a certain number of entries are made, it will not be out of place to call the attention of clubs giving shows under A. K. C. rules, to the addition that was made to Rule VIII, in the last revision of the A. K. C. rules: *All prizes in a given class shall be awarded regardless of the number of entries.* This rule was made to deter shows from publishing a reservation to the effect that if only one entry was received in a class half the first prize money would be withheld, and we believe that this rule will be found to apply in the same sense to the announcement made by the Southern California Kennel Club as stated above. An exhibitor should know before making his entry exactly what to expect if he wins and not be made, as we remarked once before, to take chances in a lottery.

## Eastern Field Trials Club.

A meeting of the Eastern Field Trials Club will be held at New York city during the Westminster Kennel Club show in Madison Square Garden, on Thursday, Feb. 23, at 3 P. M. The attendance of members in person is cordially requested to insure a working quorum and further business of general importance to the club. In view of the fact that a meeting of the club was not held during the recent field trials, it is to be hoped that the members will put in an appearance at the New York show. Field trial men should do all in their power to aid this club in assuming its old position. Some of the best sportsmen in the country are among its members, and the president, Pierre Lorillard, Jr., and Secretary Coster are well known to have the best interests of field dogs and sports at heart and may be counted upon to do their share.

The death of the Duchess of Argyle is a blow to the Skye terrier fancy in Scotland. She was the patroness of the Skye Terrier Club of Scotland, and besides owning a kennel of these terriers herself, took a great interest in the advancement of the breed generally.

## Columbus Dog Show.

The Columbus Fanciers' Club have provided a class for Gordon setter puppies, to be numbered 454, dogs and bitches to compete together, prize \$5. The American Hotel offers \$10 for the largest collection of Gordons entered and owned by one person or kennel. The prospects for a good show are promising, and exhibitors should not forget that, as this show comes directly after New York and before Detroit, there is no excuse for their not scoring a good entry.

Col. Rupert, Jr., is retiring from the fancy and most of his St. Bernards are for sale. Mr. Booth, his kennel manager, has purchased a farm on the James River, Va., and will sever his connection with the kennel after the New York show. He will spend a month in the South and then sail for England, where he will stay during the summer.

A special meeting of the National Greyhound Club was held Tuesday evening at Mr. Drake's residence, New York city.

There are few of our readers who have not heard of the sad accident that occurred on the Delaware & Lackawanna Railroad recently whereby several people lost their lives. In the smoker, which bore the brunt of the collision, Mr. Walter K.

Purinton, of Short Hills, N. J., was seated with three other gentlemen playing whist; Mr. Purinton and another gentleman were instantly killed. Mr. Purinton was the owner of a very good English setter and his widow is now compelled to dispose of it. The dog Jeremy (23,069) is by Bow Bonduhu (Gus Bonduhu—Bo-Peep) out of Lou (4,930), by Gen. Ely's Breeze out of Bessie Dale, breeding that cannot be excelled. The dog is an evenly-marked blue belton and is exceptionally well trained for field work, and a perfect retriever from land and water. Mr. E. A. Carrier of North Westchester, Conn., bred and raised and trained the dog, and Mr. Purinton thought him the best dog for private shooting in the State of New Jersey. Mr. Gardiner, of 284 Pearl street, New York, can give any information required about the dog. Jeremy is now at Short Hills, N. J., and can be seen at any time. This seems an opportunity for any sportsman to secure a good dog and at the same time be conferring a favor on its present owner.

We note the fact that the Mascotah Kennel Club has made a class for black pugs. We believe that one or two of this breed have been imported, but do not remember by whom. We should like to know, as we had an inquiry about them not long since. This reminds us that Mrs. R. Mortivals, who is the principal breeder of these dogs in England, has had occasion to write to the papers warning the public against buying black pugs said to be sired by her dogs, without referring the pedigree to her. Some dealers have been using both the names of the "Mortivals" stud dogs and the brood bitches, and thus selling stock under a false pretence.

#### Heavy Mastiffs.

We have another letter on the subject of "Heavy Mastiffs" that must lie over till next week. Mr. Winchell also sends a long letter in answer to some remarks made in a contemporary derogatory to his Beaufort's Black Prince and Boss's Princess. He raises the point that the old breeder in England, quoted by this writer as saying that Prince is as full of bad points as Minting was of good ones, is rather amusing in view of the fact that this "old breeder" has not seen the dog, and Mr. Winchell is quite content to let his dog stand on his public record. He has not yet been defeated, is within one win of being a champion, and, moreover, has defeated such an acknowledged good bitch as Lady Colens. As to Boss's Princess's head being of "a spiky-headed sheep dog type," Mr. Winchell would like a picture taken of such a dog and compared with a picture of Princess, which he will provide. As to her being overshoot, as this writer claims, it is just the other way. Mr. Winchell believes in showing his dogs and not keeping them at home and then telling every one how good they are. In regard to the accusation that he can see no faults in his own dogs he aptly remarks that he knows of no reason why he should publish the faults of his own dogs, that are not for sale. These are the main points of the letter, which we cannot at present find space for, especially as it is simply a personal argument between himself and the writer in our contemporary.

Mr. Sidney W. Smith, of Leeds, England, has received an invitation to judge St. Bernards at Boston show. If he does it will be a pleasant change from the monotony that exists at present.

#### A New Bull-Terrier.

Mr. F. L. Dever, of Peoria, Ill., has purchased from Mr. James Lowrie, of Newcastle, England, the bull-terrier Bellerby King, who has won a number of prizes. The dog is now on the way over in charge of Spratts Co. in the steamship America.

#### Yonkers Fanciers' Club.

The annual meeting of the Yonkers Fanciers' Club was held Thursday night, Jan. 25. President Lynde occupied the chair. The officers elected for the ensuing year were: President, James H. Young; Vice-President, William Rowland; Secretary, Emil Garnjost; Treasurer, George Langran. The executive committee for this year will be Wm. Rowland, E. A. Lynde, R. Lamb, Charles Piggott and H. H. Thompson. There were three applications for membership.

The Liverpool show, which opened Jan. 23, was a success, with 1,530 entries. Rufford Ormoude, the crack collie, and the crack St. Bernard Lady Mignon were defeated in their respective classes, but in neither case is the decision upheld by the critics.

We are positive that the lovers of the St. Bernard in this country will experience a qualm of regret when they read the following news. Mr. W. C. Reick's Princess Florence, Marvel and Young Bute returned to England, on the S. S. Gallia, on Tuesday last, sailing at 2 P. M. in charge of Mr. A. M. Hughes. Mr. Thos. Shillock, of Birmingham, England, is the purchaser. Such an exodus is a distinct loss to the fancy on this side and will place the New York St. Bernard Kennels at a great disadvantage from a show point of view. Mr. Reick is now in Egypt, but it is stated that he does not intend giving up the breed, as he still has a few dogs and some puppies by Young Bute out of Rustic Beauty, and with the aid of one or two more bitches will try and breed something good instead of buying cracks. Young Bute imported during the past summer has not been seen on the bench in America, but had made his record both as a sire and show dog before he came over here. Marvel has not been beaten in regular competition since his importation in November, 1892, and Princess Florence, imported Nov. 1, 1891, achieved additional glory by twice winning over the great Sir Bedivere under different judges. As a breeder, she has been a disappointment in this country; still we are sorry to lose her. During his short visit to England, Mr. Hughes will be the guest of the Hon. and Rev. Philip Yorke Saville, rector of Methley near Leeds, and one month after his return will sever his connection with the New York St. Bernard Kennels and be open for another engagement. The fact that these dogs will not be seen on our show benches at New York, this year at any rate, will leave the competition more open, and had this been known earlier it might have influenced a greater entry at New York. That the peerless Sir Bedivere is likely to remain with us for good and all is some consolation.

The English Stock-Keeper began the new year by abandoning the distinctive yellow-tinted paper, which we have so been accustomed to see, and appeared with the new year in a white dress. It matters little what color the paper is as long as the reading matter is bright and clear, and this the Stock-Keeper always is.

We have been asked several times lately, both editorially and privately, to give some particulars about the best smooth fox-terriers now on the bench in England, and we cannot do better than quote from Mr. Vicary's interesting article in the English Kennel Gazette describing and commenting upon the best dogs of the past year. Although no particularly good one was brought out in 1893, the general average was a distinct advance on former years. There has been more consistency in type and a levelling up to a higher standard.

As the shows generally cater well for this popular breed, the entries are commensurately large and this, with the repetition of classes, has made the judges' task at the large show, as Mr. Vicary remarks, one of great difficulty and labor. In speaking generally of the breed he gives some good advice when he says: "The scale of points adopted by the Fox-terrier Club years since is still to the fore, and I trust will never be altered; the great bulk of exhibitors know what

is wanted, and are surely making progress. The breed is popular all the world over. Let breeders keep pegging away, bearing in mind that the greatest point of all in building up a kennel is only to use the best materials, as well as the best bred. A really ugly, ill-formed dog of good breeding may get some good winners, but sure as fate his characteristics will come out sooner or later to create difficulties that might be avoided. Future as well as immediate success is what all breeders must have an eye to, to really advance the breed on a sound basis."

In dogs D'Orsay still holds the pride of place, having at the best fox-terrier shows been continually placed over Vice Regal and Venio. About the merits of the two last named there seems to be a difference of opinion, as both have in turn been placed one over the other, Deputy coming next in order. These are challenge class dogs. In open dogs those whose names we find well to the front are Despoiler, Vengo, Hunton Justice and Charlton Verdict; following these are Staron's Stung, Charlton Vincit and the youngster High Spirits, that did so well under Mr. Redmont at Crystal Palace show, winning in the limit, novice and puppy classes, in the former, beating Charlton Vincit. Prisoner (late Rowton Rusty), is another young one that seems to be well up. Apology is another that did well at Cruft's show, winning in novice and puppy classes, beating Prisoner. Among the bitches the best seemed to be Pamphlet, Brockenhurst Dainty II, and Brockenhurst Lottery, and of course the crack Vesuvienne, who has not been seen out much lately. In the other classes we find Lyon's Sting, a consistent winner, followed by such terriers as the young Vere de Vere, Valteline, First Arrival and Chulmleigh Topsy, also a young one. Beacon Tartress is a terrier that has won in puppy classes and limit classes during the year. The Smew showed up well in Cruft's show, winning in novice and puppy classes and second to First Arrival in open bitches under Mr. Vicary. These seem to be about the best and most frequent winners and afford a choice to any one wishing to make up a kennel—if they can be bought. Fox-terrier men on this side would have been better pleased if Mr. Vicary had dipped into comparisons and descriptions of some of these terriers, but we must be content with the records he gives of the winners at the principal shows.

In this country the fox-terrier fancy is not allowed to languish, for in addition to the old enthusiasts such as Messrs. Belmont, L. and W. Rutherford, John E. Thayer and Clarence Rathbone, a number of new names are continually cropping up in the catalogues.

Once a terrier man always such, seems to hold good, for although Mr. C. D. Bernheimer let fox-terriers go to have a fling at great Danes, the fever is returning and he intends to build up another kennel. He is already in communication with the principal breeders on the other side, his intention being to secure a couple of good dogs and about ten bitches. A couple of weeks since he lost his great Dane Maloch.

Mr. H. A. Lawrence, owner of the Kennel Lawrence, Columbus, O., by careful selection had got together a rattling good team of great Danes, in fact he had at Chicago the best and most typical team of this breed yet shown by an American. The loss of Senta directly after the late Chicago show and the serious illness of Earl of Wurtemberg was bad enough, but since then the death of Hepern Flora, first at Newark, in whelping to Hepern Hero, must have been very discouraging, and he has our sincere sympathy. At the same time it is a warning not to show bitches when heavy in whelp. A bit of bench show glory is not of sufficient importance for a breeder to take such risks.

It will be remembered that we spoke rather enthusiastically about the litter of seven-months-old bull pups that the Woodlawn Park Kennels had on exhibition at the Saratoga show and the credit due to Mr. Robinson in raising them so well. We also remarked that their dam, Rock Rose, was again in whelp to Rustic Sovereign. Mr. Robinson was in hopes of repeating his good work with her next litter, but all bulldog breeders will regret to hear that this will never be, for Rock Rose died during parturition on the Sunday night following the show. She gave birth to five live pups and one dead one; another dead one, despite the efforts of the veterinarian, could not be taken away, and mortification setting in the bitch succumbed. Rock Rose was by Rabagas out of Roseleaf. The bulldog is Mr. Robinson's favorite breed, and he knows that in breeding these dogs the bitter and the sweet are not evenly adjusted by any means, and the experience of English breeders during the past year has not been all *couleur du rose*. The other pups did not suffer by their little jaunt to the Saratoga show and will be shown at New York.

#### The W. K. C. Show.

At the hour of our going to press on Tuesday, Mr. Mortimer, the superintendent of the W. K. C. show, was unable to give any information regarding the exact number of dogs entered. Entries are still coming in fast, and Mr. Mortimer assures us that the entries will fully equal, if they do not exceed, those of last year. The full number by breeds will be given in our next issue.

We regret very much to hear that Mr. Chas. E. Bunn has sustained a severe loss in the death of his well-known stud mastiff and winner, Ormoude. Many fanciers would feel discouraged after losing five such animals as Edric, Ilford Cameo, Miss Caution, Caution's Own Daughter and Ormoude within one year. Mr. Bunn is made of the right stuff, however, and will hold on as long as he can keep a mastiff.

#### Another Railroad Dog.

Another noted railroad dog is dead. This is Ponto, a small white and brindle dog that for nearly nineteen years has been owned by Mr. Canfield, an employee of the Pennsylvania Railroad. His death was due to old age hastened by an attack of pneumonia. Ponto was a most intelligent dog and through long years of association with his master had become perfectly familiar with train and railroad men. He accompanied his owner, who was a master carpenter on the New Brunswick, N. J., section of the road, on his daily trip up and down the road. He knew the up from the down track and when walking on the ties would always select the one where the train would approach him in front. It is also said that he knew the signals and would calmly observe them before crossing the railroad bridge if he did not hear a train coming, and if, when crossing he heard a train approaching he would make for the draw tender's house and wait till it passed, or if this was not possible he would lie down between the two tracks and thus escape injury. He was known to all the railroad men from Jersey City to Philadelphia, and many tales are told of his smartness, and how he would jump on a train, getting off where he wanted to, and after spending some time there would board the next train home.

#### A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

#### American Kennel Club Affairs.

THE American Kennel Club commences a new year in one sense under the most favorable auspices. There are no grave questions of policy to consider or errors to correct, unless we except its policy toward the Canadian Kennel Club. There is much to be said on both sides for and against the conduct of the C. K. C. in this matter and FOREST AND STREAM has already brought out the salient points of difference, and nothing further can now be said until the two committees appointed by the clubs have decided upon some definite action. We trust, as do all dogmen, that no friction may arise and that everything may be amicably arranged so that neither the clubs nor the dogmen shall suffer.

The club starts the year with a nominal balance of \$2,815.82 against \$5,004.30 in January 1893. This balance of \$2,815.82 is, however, merely nominal, as the club owes \$2,018.37 for printing accounts, deposits received for charges (now pending) and the balance of the legal expenses incurred in 1891-92, which amounted to \$3,802.53, of which \$1,952.53 was paid in 1893. There is a balance due the club for advertising contracts, dues from active members and petty accounts amounting to \$1,027.60. If the club can depend on receiving this money it leaves the club really with a balance only of \$1,197.11. If it does not receive it \$796.95 represents the actual amount the club can claim at the present time. The legitimate or working account of the club for 1893, which excludes the legal expense account of \$1,952.53, shows that the receipts were \$7,488.30 and the actual working disbursements \$7,724.15, an apparent loss of \$235.85.

For the year 1894 the club has assumed an extra expense of \$225 for additional office room and \$215 for materials and labor necessary to properly index the registrations, which latter item may be still further increased to \$550, as noted at the last meeting of the executive committee. This means a probable extra outlay of \$775 during the year.

The amount received for registrations during the past year was \$3,581, and the "quarters" for listing made up a sum of \$601. The annual dues from active members foot up \$540, and the sum derived from Associate membership was \$1,215. The "breeders' certificate" revenue was only \$14, and the cash sales of and subscriptions to the *Kennel Gazette* amount to \$264. The sales of Stud Books increased the receipts by \$235. The Stud Book for 1893 will be issued about March 1.

#### Antidotes for Poison.

##### Editor Forest and Stream:

From time to time the meanest men on earth indulge in the indiscriminate poisoning of dogs, and many lives more valuable than their own are lost. The poison generally used is strychnine, and its characteristic symptoms are convulsions, which resemble those of tetanus.

On one occasion; when a number of dogs were destroyed, a prize terrier owned in Newton was found with convulsions fully developed. Her life was saved by the following treatment: Pour a pint of boiling water on 4oz. of chewing tobacco. Express the juice by squeezing the tobacco with the hands. Give a teaspoonful of the decoction every five minutes until the convulsions are stopped. No time must be lost, as the action of the poison is very rapid. An experiment on a second dog was successful—and not long afterward the life of a human patient, who had taken strychnine and was in convulsions, was saved by the same treatment.

In the spasms produced by strychnine all the muscles, including those of the stomach, are very rigid. It would be well to relax them by the use of ether. Make a cone by turning a newspaper on its corner, place in it a handkerchief, then pour in three ounces of sulphuric ether, and hold to the dog's nose, allowing some air to mix with the vapor, until the spasms cease, but not long enough to produce insensibility. Then give the tobacco. When the effect of the poison is overcome, small but frequent doses of brandy, or other stimulant, should be given. I hope that this may aid in saving some of our canine friends. DOG BERRY.

NEWTON, N. J., Dec. 19.

#### Death of Nick.

OGDENSBURG, N. Y., Jan. 30.—The famous red Irish setter Nick, a son of Nick out of Rosebud, both imported, died of pneumonia at Ogdensburg, N. Y., on the 29th inst. Very many of your readers knew and valued the noble fellow and will be interested to hear about him. J. MACNAUGHTON.

#### ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

W. H. S., Chillicothe, Mo.—B. Alton Smith, North Attleboro, Mass., is the owner of the Chesapeake you mention.

C. C. H., Macon, Ga.—You can buy the American Kennel Club Stud Book for 1893 from the American Kennel Club, 44 Broadway, New York. Price \$2. It will be issued about March 1.

O. H. H., Indianapolis, Ind.—We do not know where you can find a market for live jack rabbits, unless it be with some of the clubs in the West that have inclosed coursing. A card in our business columns would probably bring you customers.

H. E. S., Detroit, Mich.—It is difficult to advise in this case without knowing the dog. However, perseverance alone will overcome his timidity; he is young yet, let him run and gradually make him understand that correction does not necessarily mean the whip.

Owing to pressure on our space this week the following veterinary queries have been answered by mail: L. R., Providence, R. I.; C. G. V. and E. G. H., Hackensack, N. J.; H. W. B., Syracuse, N. Y.; H. P., Newburyport, Mass.; J. N. B., Needham, Mass., and F. S. L., Olferton Springs, N. Y.

W. H. M., Middletown, N. Y.—Young Wagg, by champion Varg out of Damsel Belle; Wagg, by Francis's Sancho out of Sappho, by Co-ham's Bang out of Vesta, by Brocklin's Bounce out of Francis's Belle; champion Sancho by Brocklin's Bounce out of Belle; Belle by Sancho out of Dido; Sancho by Meator out of Juno. Damsel Belle we cannot trace. Trust the above will be sufficient.

W. E. J., Marion, O.—Have a four-year-old pug dog that seems to have some skin trouble. The hair falls out, leaving the skin black and scaly. The tail is almost bare of hair and spots commencing on fore shoulder. His general health seems good. Can you suggest a remedy? I use linseed oil to wash him. Is that good? Aus. Apply the following ointment all over the dog every other day for two weeks. Then wash off, and repeat in a few days if necessary:

R. Ichthyol. .... 3i  
Vaseline. .... 3i  
Mix. A little to be well rubbed all over the dog every other day.

G. E. J., New York City.—For your beagle to whelp in, a large dry goods box with open front will do, or better, a platform made of smooth boards raised a couple of inches from the floor and covered with clean old straw. After the bitch has whelped clean up and put fresh straw down. Have your beagle whelp in a warm room, temperature about 75°, or even a little warmer. For the first day after whelping feed the bitch every four or five hours with broth or milk thickened with stale bread or boiled rice. Second day give three meals; for breakfast milk and crackers; midday broth and stale bread, or rice and some of the meat chopped up fine mixed with it. Use lean meat, or if the broth is made from bones, etc., skim off the fat before giving to the bitch. The last meal should be more solid, one-half chopped meat and the rest soaked bread, boiled rice, oatmeal or crushed dog biscuits, if accustomed to them, as all dogs should be. Twice a week give raw meat at night chopped up fine. When puppies are three weeks old teach them to lap diluted scalded milk or broth; use little at a time; gradually increase quantity and strength as they grow older, and till weaned at four or five weeks old. Then they should be fed very early in the morning with scalded milk; about 8 o'clock milk and crackers; 11 and 2 with broth and crackers—stale bread if baked hard first will be better; at 5 P. M. give some more milk or broth, and at night mix broth and crackers, stale bread, boiled rice, barley, etc., and feed heartily, but never so much that the abdomen becomes distended. After the sixth week more substantial

food can be given, Spratts puppy meal with broth, boiled rice, bread or oatmeal mixed with the vegetables and meat the broth is made from, and feed four times a day, adding a little raw meat chopped up fine every other day. At three months old feed three times a day crushed biscuits and a variety of the foods quoted above that will be most convenient to prepare. Don't miss a meal and never feed too much, and when the puppies have had enough remove the remainder. Give water fresh and often, and allow them plenty of room to run about in. Keep them warm during this season.

## Hunting and Coursing.

### The Foxhound Standard.

**Editor Forest and Stream:**  
In a recent issue of your paper Mr. Clute asks what "drops" mean in the Brunswick Fur Club's standard for American foxhounds. It is simply a typographical error and should have been "chaps" or "chops," as the upper lips are variously called. See article on the foxhound in *Vero Shaw's* "Book of the Dog." A. C. HEFFINGER.

PORTSMOUTH, N. H., Feb. 2.

### Editor Forest and Stream:

The standard for American foxhounds as arranged at the B. F. C. meet is good to my notion excepting in regard to neck—slim is not the correct thing. I should make it: "Neck should be strong and clean, rather long and tapering from head to shoulder, and no trace of throatiness should exist." In other respects I am pleased to say the standard is about the best thing for a good field hound. R. H. POOLER.

SERENA, Ill., Jan. 29.

## HUNTING AND COURSING NOTES.

The coming Merced coursing meeting is attracting great attention among the lovers of the leash in California. Mr. Grace has finally decided to judge the meeting.

Mr. John Egan, of San Francisco, has sustained a great loss in the death of his greyhound bitch Sly Girl. Both in open and inclosed coursing she was a wonderful performer and few ever lowered her colors.

The Call, San Francisco, says that a gentleman from Livermore well known in coursing circles recently visited Ireland and returned with three choice greyhounds, two of which he left in the East and took the other two to California. Unfortunately, this one was killed the other day by being spiked while in the act of jumping a fence.

The San Francisco Coursing Club was to tender a complimentary benefit last Sunday to Mr. J. R. Dickson, the well-known sporting writer. All the crack dogs were to be entered for the meeting at Newark Park and we trust that the affair will have passed off with the success its promoters anticipated.

## Pachting.

Those of our readers who are unacquainted with the circumstances attending the death of Mr. McMullen may draw an incorrect inference from the allusion of our correspondent, "Podgers," Mr. McMullen began his sailing alone, or with one companion, in 1851, and continued it regularly for forty years; his work being done in craft, that, whatever their size, were carefully designed for it, of seagoing model, safely ballasted and under-rigged, usually as yawls or lugers, and not cutters.

We would not recommend any young sailor to attempt to emulate the examples of Mr. McMullen and our correspondent Nomad; few men are fitted for such work, but between the Procyon and Perseus and the over-rigged, half-ballasted catboat there is a wide range of safe, seaworthy and comfortable little "singlehanders" in which life afloat may be enjoyed to the fullest degree by the owner and one or two congenial companions.

## AMERICAN YACHT CLUBS.

We are desirous of obtaining a complete list of American yacht clubs and will be indebted to any of our readers who will aid us in correcting the following list. Though prepared with special care, it doubtless contains many errors. We will be glad to know of any clubs omitted, or of any included which are no longer in existence, or which are not regularly organized clubs for the promotion of yachting. Some organizations on the list are fishing clubs, or social clubs which make an annual excursion afloat, and these we wish to exclude. The names and addresses of secretaries are revised up to the end of 1893, and we will be glad to know of all errors and changes:

Albany.....Thos. Wilkinson, 62 State street, Albany, N. Y.  
American.....Thos. L. Scovill, 25 Park place, New York.  
American (Mass.).....E. N. Folandsee, 53 State street, Newburyport.

Yale Corinthian.....Harold W. Bush, New Haven, Conn.  
Yonkers.....Yonkers Yacht Club, which always finds time to go over to the island. And in doing this a winter home has been provided equal to every requirement for the enjoyment of a quiet hour of leisure or an evening's social entertainment.  
The front of the club-house, facing directly on the bay, is very imposing, and a conspicuous object viewed from an incoming steamer in any part of the harbor. The design of the balcony and towers is of the colonial style, which lends itself to the original building, and is in keeping with the age and dignity of the club, and is particularly suitable to a building so situated as to be most often viewed from some distance. Large round pillars support the balcony and its gabled roof, the square towers rising behind, adding to the solid effect, each having a large area on top suitably rolled in to afford commodious look-out stations. There is no jimmie-work, woodwork or other odds and ends to detract from the effect of the general design. A flag pole is yet to be erected, and this will be in ship shape style, rigged with a yardarm, which can be used for signalling purposes.  
The ground floor is given over to lockers and dressing-rooms, and a bath-room, together with the furnace and stowage for heavy stores. This is the full size of the building—50x63ft.—and affords ample accommodation for all these purposes. A ladies' parlor was also furnished on the second floor, which lends itself to the general design, this situation being chosen as it will be convenient for the lady friends of the members when waiting for the club launch.  
A staircase leads to a landing from which wide sliding doors open into the assembly-room, 24ft. wide, by 63ft. long, and its length may be augmented by opening the doors and windows leading to the balcony in front, which is 14x50. This gives ample accommodation for smoking and other social functions. The balcony is of the colonial style, and contains a large old-fashioned fire-place at the upper end. Light comes through a skylight and the windows facing the bay, a system of ventilation being arranged through the former. The walls are furnished in dark crimson and gold, and the ceiling is in a light color. On either side of the assembly-room are six smaller rooms in all, to be used as committee-rooms, card-rooms, and the secretary's office.  
Further up in the towers are the janitor's rooms and access to the roofs for observation purposes.  
Shortly after eight o'clock the assembly-room was crowded with the members and their friends. Commodore Boswell occupied the seat of honor in the centre of the room, having with him his Honor Lieutenant-Governor Kirkpatrick, Lieut.-Col. Uiter, and other distinguished guests. The curtains were hung up at 8.30, and seldom if ever have yachtsmen been treated to so good an amateur minstrel performance.  
Mr. A. Bethune personated King Lobengula and with Mr. Brem Forsyth held down the two end chairs in a manner that was most acceptable. The club chorus was a huge success and ought to be secured for the "Lake meet" this summer. The jokes were in the main good, including several yachting hits, and all held up above reproach. At the conclusion of the programme, Vice-Commodore Brown made a few remarks, congratulating the commodore on the excellent standing of the club, and, after commenting on the esteem in which that gentleman is held by the members, presenting him with an excellent portrait of himself, which has been provided by subscriptions by the members. The commodore, as taken by surprise, out-replied feelings, asking that the picture should be allowed to adorn the walls of the club-house. After this pleasant incident, refreshments were served, and a smoking concert followed. TORONTO MAIL.

**Challengers for 1895.**  
(From the Boston Globe.)  
When in a recent issue the London Field confidently announced that, if all went well, two English noblemen would associate in issuing a challenge for the America cup with races in August or September 1895, many American yachtsmen were at a loss to account for the Field's confidence in view of the fact that Lord Dunraven had already expressed his intention of not entering the contest himself.  
A clue to the identity of the noblemen which the paper had in mind was however held by the few yachtsmen who knew that Lord Wolverton, who was one of Lord Dunraven's party in this country last autumn, was associated with the latter gentleman in the ownership of the Valkyrie, and now these yachtsmen believe that it is Lord Dunraven and Lord Wolverton who will be associated in the challenge of 1895 as they were in that of 1893.  
Such an association would be a most natural one, and at the same time would account for Lord Dunraven's declared intention to have another try for the international trophy. That at the same time he did not say that Lord Wolverton would be his associate in the challenge is not strange, for he made no public mention of the fact that the latter was part owner of the Valkyrie, nor does the correspondence with the New York yacht club disclose the fact.  
The joint ownership was, however, known on both sides of the water. That it did not become more widely known on this side of the water at the time of the races is doubtless due to the fact that Dunraven himself was silent in the matter. There was, however, no secret made of it, and therefore it seems in no way inappropriate to call it to mind or to make it more widely public, in view of the challenge which seems likely to come out of that of 1893.  
Lord Wolverton's object in remaining quietly in the background was not known, but it was doubtless a good one and since the New York yacht club's cup committee had no formal notice of his interest in the challenger they probably saw no reason for making it public. It is notable, however, in this connection that at the dinner given Lord Dunraven and his party by the New York Yacht Club, Mr. James C. Smith, cup committee, and Lord Wolverton were seated above the Marquis of Ormonde, a man of higher rank and title, which placing of the guests was due to nothing except the recognition of Lord Wolverton's association with Dunraven.  
Lord Wolverton, though apparently an enthusiastic yachtsman, has made no public reputation in that direction, and is not known to American yachtsmen as having owned any racing yacht. That he has the true spirit of the sport, however, shown by his association with Dunraven, and he will undoubtedly be cordially welcomed as a joint challenger with the latter in 1895. He is a member of one of London's best-known banking firms and a man of wealth.

## Single-Handed Yachting.

THERE has been a great deal of gush and talk about single-handed cruising, and much written, mostly I imagine by those who have never given it a practical trial, except under very favorable circumstances. I am not alluding now to canoe cruising on smooth waters and rivers, but in rough water under sail.

I recently read an English book in advocacy of the fad, and an account of a long cruise around the coast of England single-handed. It was a plucky undertaking, and the man came out of it safely, but it was a mere summing up of much and continuous hard work, and great difficulty in making harbor for the night, as the English coast is proverbial for tide harbors, and he was obliged in almost every instance, to call on the local watermen for assistance in getting in and out, and had to pay in the aggregate as much as would have hired an assistant permanently, to say nothing of the immense amount of fatigue and hard work involved personally, for as we all know, the English rig is proverbially hard to handle (always the outer rig of course). By the way, the same man eventually lost his life in a subsequent cruise, being found dead in his boat, dying it was thought, from fatigue and exhaustion.

While enjoying a holiday not long since down at Sag Harbor, I had a day's experience of the delights of this single-handed business, which I will give as an example, from which any young gentleman with an ambition the way, may draw a moral of the beauties of the practice. I was, as I say stopping at Sag Harbor, and with a view to hiring a small yacht, applied to the owners of several lying in the harbor, but they all demanded such extravagant terms, that I concluded to go over to Greenport and try my luck; where I succeeded in chartering a 26ft. craft, rather a good looking boat, but bearing evidence of rather hard usage, and the owner admitted that some amateurs had run her on the rocks recently, but he guessed she was all right. I had some misgivings, as my experience led me to believe that running a boat on the rocks was not a particularly good thing for the boat. However, I took the craft, and going on board, and as it was blowing fresh, put in a reef, and sailed for Sag Harbor. Boats, horses and women are very much alike, that is to say, you can't tell much about them until you get acquainted.

After getting down the bay, where the wind had full sweep, I discovered that my craft was deficient in ballast and that I had more sail than was healthy, so I had to heave to and put in a second reef, in a nasty sea and roll. This being accomplished, I hoisted sail again and went along, but even with this short sail I found that the craft had a disposition to luff around and look me in the face, in other words, steered badly. Like most catboats she was over-sparred, and her mast too far aft, and her boom was as long as the moral law, a nasty stick to manage, and with a disposition to take the water every time she rolled (the wind was free and she was a roller from way back); every time she rolled to leeward she took in a barrel of water in the leach of the sail, which I had not been able to secure properly, for want of the necessary material, then, when she rolled to windward, the water came pouring on to my head, completely drenching me.

I had all I could do to keep her from jibing, which would have been a risky move in the heavy sea that was now getting up. I wanted to drop the peak, but how was I to leave the helm to do it? I could not luff and run forward, as a long, sandy point made out on the port bow that would have brought me up all standing, so I had to let her go and take the chances. As she rolled, I noticed that she was taking in a good deal of water; in fact, her increasing loginess gave evidence that she was leaking badly. I finally got across the bay and into the reach between Shelter Island and the mainland, where the ebb tide against the wind was kicking up a bobbery and nasty tide rip; and the antics that boat did kick up. She bounced, plunged and rolled, taking water across decks from both sides, baptizing me pretty thoroughly, and I was not prepared for it, not being in sea togs, in fact, had on a swell suit not adapted to swells of that sort, and which was by that time sadly demoralized.

I managed to wallow through the reach, and rounding the point, where I had a lee, luffed up into calm water, intending to anchor, and get the water out of her, but before I could get the anchor ready she drifted back again into the eddy and into the tide rip stern foremost where, catching the breeze, she would shoot up into the calm streak. I finally by keeping out into the breeze, got clear, and continued on my course, and reached port, running up under the lee of the wharf, lowered sail after a fight with jamming hoops and kinky halliards, dropped anchor and the voyage was up. I sat down in the stern sheets to do a little blowing myself, thinking it was my turn, and lighting my pipe, that refuge and comfort to the yachtsman under difficulties, proceeded to take it easy.

A good smoke, as every smoker knows, restores serenity, smooths a ruffled temper, and gives time to reflect on what to do next, which was of course to stow sails, clear up decks, and under present conditions to see about getting that water out of her, which by this time was over the cabin floor.

In a badly rigged boat—I may say half-rigged in this case—it is no fool of a job to clear up decks and restore order, where every rope insists on kinking and coiling the wrong way. In this instance the throat halliards having gone well up the mast in fustions, the peak halliard jammed in the block, the mainsheet overboard, and when it came to furling the sail not a stop to be found, no boat hook to rescue the halliards in the air, obliging shinning up the recently slushed mast, giving the final *coup de grace* to that suit of swell clothes.

It was a good hour's work to get things in shipshape, during which time the captains of the boats I had not hired constituted themselves a standing committee to criticise my labors; but my work was not ended, for there was the water to be got out of her, and that was a serious question, for on searching I could find no pump, and only a leaky old bucket and an oyster can. My first idea was to leave her to her fate until I could charter some boy to do the job, but I saw that unless that was soon done she would sink; and, contrary to all precedent, there was not the usual small boy to be seen, so there was but one thing to do, and that was to tackle it myself.

It took two hours steady work to get the water down to her timbers, by which time it was dark. Hailing a passing boat, I got ashore and wended my way up to my boarding house. Mentally I determined that if Sag Harbor afforded a man or boy that would work, he would get a fine chance on the morrow, as the office of bailer was one I did not care to add to the duty of single-handed sailing, and something I had not included in my calculations; and I beg to remark that if there is any one greater nuisance than another it is a leaky boat, and one to promote an extreme degree of profanity and complimentary mention of the builder.

My landlady held up her hands in astonishment at the change in my appearance from the morning, when in all the pride of swell togs I had set forth. However, a good wash and change of clothes restored me to favor. A good dinner and smoke served to soothe the troubled spirit, which, followed by a refreshing night's rest, prepared me for the morrow and anything that might turn up; in which amiable frame of mind I wended my way down to the boat. There she lay, looking very innocent and as if the last thing she thought of was to give a moment's annoyance; but on closer inspection she seemed low in the water. I immediately had, as the Dutchman said, my "suspections."

Going on board, I found the water well over the cabin floor. It was high water mark with her again, and all loose things were afloat. Here was a pretty how-d'y-do, for a party of ladies at the house had invited me to invite them for a sail and picnic, and here was this cussed boat full of water that must be gotten rid of, and no time to lose. There were a lot of seedy chaps loafing on the wharf as I came on board, and thinking some of them might be induced to take the job of getting the water out, I hailed and asked the question, to which I got as an answer a request to go to a locality that I certainly am in no great hurry to reach. It was evident that labor was an occupation they scorned and despised. They were of the class that believed that the world owed them a living, and came under the head of what the politicians term the "poor down trodden." It would have given me infinite pleasure to have done a little treading on their lazy carcasses at that moment, and in my indignation I threw off my coat and went to work with a will, and if one of the band had then and there come aboard and offered to do the job, I should have kicked him ashore. There's nothing like getting one's "mad" up, to arouse the energies. I had that boat cleared of water and in good shape by the time my party appeared with lunch baskets.

Having hauled in to the wharf, we got up sail, under the critical observation of the gentlemen composing the standing committee, as we call them, who were enjoying the satisfaction of having it to say that, for once, they had snubbed the bloated capitalist.

They had enjoyed seeing me do the work unaided, but thought I would have to give in when it came to getting the anchor up, and they were not far wrong, for it was, in the words of the poet, "a devil of a pull," and I had to hook on the jib halliards to break it out, there being no windlass, and just here I want to say to amateurs and owners of small boats, don't be ridiculed out of having a windlass on your craft no matter how small you are, for the time comes, sooner or later, when you will wish you had it, and those times are when your anchor gets foul of a rock, or buries in sticky, heavy holding ground. It will save your back and much profanity, either the windlass or a winch on your mast, for anchors enjoy hugely sticking and hanging on like grim death, when they know you have no windlass. I did get mine up finally, but had no time to stow it, as it was necessary to jump aft and haul in main sheet, as she was rapidly drifting down on an old hulk under her lee. A sudden puff of wind filled the mainsail, heeling her over, when away went the anchor off deck and overboard, running out the full scope, and bringing up all standing, and parting the rope, which meant good-bye to that anchor and a \$5 bill to replace it; but I was glad it did not bring me up for the committee on shore, had it done so, would have gone frantic in their delight. Fortunately the gentlemen did not see the anchor catastrophe, and I escaped com-

MILWAUKEE AND AVIS—RACING CANOES DESIGNED FOR THE ST. LAWRENCE RIVER SKIFF, CANOE AND STEAM LAUNCH CO., BY WILLIAM GARDNER, 1892.

MILWAUKEE—SAIL PLAN.

ment: There was by some mistake, evidently, another anchor on board, an unprecedented piece of good luck.

At last we were under way (weigh?) and I wiped the perspiration from my face and put up a prayer of thankfulness, which I fear was not very well received, after what I am afraid had been some questionable ejaculations during the getting under way. I was congratulating myself that for the present, at least, my troubles were ended, when away went the hook of the throat halliard block, and the sail and hoops settled down as far as the peak would let it, and there it hung, a charming object to a sailor's eye. What was to be done? Just nothing, of course, for there was no man or boy aboard to relieve me at the tiller to go forward, lower away, and repair damages; not one of the callow youths aboard knew the stem from the stern.

It always seemed to me that a boat took a malicious pleasure in taking advantage of your being short-handed to cut up and mortify you in sight of the critics, and especially when you were particularly anxious to have things go smoothly. It is at such times that every rope is seized with a diabolical determination to kink and tangle, or get overboard, and every halliard to get a turn, and if you have a jib sheet it is bound to get foul of the fluke of the anchor or bitts and hold to windward when you are coming about; then if there is a sandbar under your lee and you have to do some close steering some woman is sure to get in front of you, or in case you are steering with a tiller she will plump herself down alongside so you can't put your helm down.

To take a party out single-handed is to offer a premium for all the petty annoyances that sailing is heir to and generally results in disaster. Your guests not understanding such liabilities, land with a poor opinion of your skill as a sailor and proceed to criticise thereafter in all the superior confidence ignorance gives. Meanwhile you are in a savage mood at the way things are going and enter a mental resolve never to do it again, or if so never to leave your anchorage without a man or boy to assist in getting under way or coming to; it is imperative, for it is an undisputed fact that every boat has two ends and at times both need attention at the same moment, especially if she is a boat of any decent size.

The amateur yachtsman is ever under the fire of criticism of the standing committee, the gentlemen who stand on the wharf with their hands in their pockets, and their greatest pleasure is to see the owner of a boat get her under way and pass judgment on his methods. It is these gentlemen that make and mar the reputation of boats; they have their favorites, and such a boat is a tub and such a one a daisy, the favorites generally belonging to some chap of their own ilk.

In getting under way under the eye of the committee, if things are a little difficult, some craft close under your lee, a strong tide, a baffling wind, too much or too little, or you are trying to make a creditable landing calling for a little extra skill, the committee at once shows great interest, with a running fire of commentaries on your methods. They exchange conjectures as to "What is he trying to do?" "Goin' to run down that ar' schooner, I guess." If you are so fortunate as to accomplish your landing without a smash-up, they look grieyed and injured.

There is ever an uncompromising feud between those gentlemen and amateur yachtsmen, especially in our town (San Francisco), where every owner sails his own boat, and that superannuated luxury, a sailing master, is an unknown quantity, as are also large crews; consequently the most the committee can hope for is an occasional job or a day's work on a regatta day. They look upon Oarinthians as enemies to the "profesh," and such enemies as a great grievance; but pardon this digression.

Having sailed out of sight of the committee, with a consciousness that my stock was way down, but still thankful for being saved the mortification of their seeing what a plight I was in, with the sail half up, I managed with a free wind to make my port, a charming sandy beach under a high bluff with a glorious shade of oaks. Nothing could be more lovely for the picnic, and after landing the party in the small boat, having run the craft as far on the beach as I could, as the sail would not come down I turned my attention to repairing damages. Letting the craft drop back to the small anchor that now came in play, I had to take a turn at bailing, as she was keeping up her habit of leaking, so my time was pretty well occupied while the others were having a good time, and were calling out to me to come ashore before all the chicken salad was gone. I had just sat down to a dish of good things with an appetite born of salt water, which every yachtsman and boarding-house keeper knows (to their sorrow) is ravenous, when appealing to look seaward I discovered the craft walking off with the oil (anchor) in her teeth, drifting to leeward. I dropped the sustenance and jumped into the boat and gave chase, overhauling her, and got sail on to her to get her back to anchorage, by which time it was getting well along in the afternoon, and the chaperones began to gather their chickens under their wings, and the debris of the lunch

was returned to the baskets, I in the meantime having run the craft on shore and got the anchor bedded on dry land, determined she should not get adrift a second time, but in the excitement of gathering up and getting the people aboard my lunch was a thing of the past, and had to be postponed to a future occasion.

The weather began to look dubious and the sky to cloud over, and I saw trouble ahead, so with great difficulty I got a reef in. I say difficulty as bearing on the absence of reef points or gear.

At the start the wind was fair, but our trip involved hauling up close on the starboard tack before going far, and it began to get very squally, forcing me to luff up and shake her, which operation lost all headway and she lay like a log, so I had to take the other alternative and let the sheet go by the run and haul in when the worst had passed, a condition of things that any yachtsman will appreciate as being by no means pleasant and certainly not calculated to gain much to windward.

It grew blacker, and it was evident that we were in for a heavy shower; I looked at the finery in fancy headgear of the female contingent and saw a catastrophe ahead, thinking how soon all that exhibition of art would lose its loveliness and look like the tail feathers of the drenched chanticleer. I had not much time, however, to give to coming damages, for I had my hands full to keep the confounded boat from foundering when the squalls knocked her down, the water in her swashing to and fro, gave evidence that she needed bailing badly, but this was impossible with a cockpit full of girls, who were doing the usual amount of screaming whenever she took in water, which she did much too often to please me.

Several times I thought she would get the cockpit full, and if so I knew she would go down like a log; meantime it came on as dark as Erebus and began to thunder, and the lightning was very lively, which latter I was glad of, as it enabled me to get my bearings.

Presently down came the rain in torrents, the female contingent had meantime all crawled below and were stowed like sardines in a box and sweltering with the heat, some came out and braved the elements (those presumably wearing their old bonnets). For fifteen minutes it poured down so hard that it forgot to blow, and then it cleared up suddenly and brought a fair wind, and if ever there was a grateful man it was I, for with a free sheet we made good speed, and in the course of half an hour ran alongside the wharf and landed my somewhat bedraggled party.

The next move was to get the craft out to an anchorage, as she could not be left at the wharf on account of the berth being required for the steamboat early in the morning, so I cast loose, and giving her a good shove with the oar, shot her out to a good drifting and cast anchor, only to find that I was exactly over an old hulk full of spikes, and when the tide fell she would be on top of them, so I had to haul up that anchor and get clear, which being at last accomplished, I rolled up the sail in what would not have passed for ship shape, and going below shed my oil tugs, filled my consoling pipe, and sitting down in the cockpit in the then bright moonlight, reviewed the events of the day, and gave the subject of single-handed yachting serious thought, and the verdict I handed in to the court was this, that for the want of an assistant I had made a slave of myself, endangered the lives of a dozen people, had made a toil of what should have been a pleasure, and that the day had been little else than a series of mishaps and annoyances, and all and every one of them would never have happened, or if so, made trifles by the presence of even a boy, who could haul a rope or steer; in fact, the veriest dunce would have saved me most of the annoyances of the day.

It is sheer folly for any person to go out in any decent sized boat alone anyway, for there are so many possibilities of unanticipated accidents, and even a small boy may be a saving clause. How often do we read of the solitary man being knocked overboard by the boom of a small boat, for, as we who have had a crack over the head by a small boom often, know how hard the little spar can rap. The best man may be knocked over by a jibe, or change of wind, when his attention is called away, and even though a good swimmer, his boat getting away from him, and he may sink in sight of it, whereas, if another party is in the boat, how easy to seize the tiller and keep the boat for the swimming man and pick him up.

Again, the sized boat one can handle without much labor is not large enough to be safe in outside or rough waters, and sooner or later (generally sooner) the man comes to grief.

I have noticed that these enthusiastic singlehanders that write up their cruises in the FOREST AND STREAM one season are not heard from the next. One trial seems to fill the bill and satisfy them.

It is all very fine and jolly for once for the novelty, and the young and enthusiastic amateur thinks he has had a glorious time; but if he goes again, and writes it up, it will be noticed that it is not in the first person, but generally reads "Bob and I." Again, this single fad is a very lonesome business, especially when night comes on; for then it seems as if every living thing was out for your benefit. If on a river, every old owl within five miles will call around and get himself in a

tree close at hand, and make night hideous until you have cold chills; muskrats will swash around your boat and the crickets will open business in a concert for your benefit, and very likely some farmer's dog will locate himself on the bank and howl his views of a man who goes poking about in such a cockle shell, getting cramps and rheumatism, and calling it fun. It may do for an afternoon cruise around a harbor, where your chances are good for being picked up in case of an upset; but all this talk of singlehanded cruising outside is simply bosh, and to do it is tempting Providence and risking life that may be too valuable to be thrown away so foolishly.

"And that's what I say and I mean when I sing,  
Oh, bother the preachers of any such thing."

PODGERS.

The story that "Podgers" doth sing, tra-la,  
Has nothing to do with the case.  
The man who leaves bailer and ballast ashore,  
And loads a crank catboat with damself galore,  
As a yachtsman cannot claim a place.

Such "singlehand" cruising may be very fine.  
But I want no dudes, damselfs nor catboats in mine.  
Let him take a snug cutter,  
A leaden-keeled cutter,  
That will not bring him into disgrace.

And then, like the others, he'll say and he'll sing,  
This singlehand sailing is quite the right thing.  
Sing tra-la-la-la-la,  
Sing tra-la-la-la-la,  
Sing tra-la-la-la-la-la-la-la-la-la-la.

Ed.

### Aquarium Exhibition.

The yachting exhibition which opens at the Aquarium on Feb. 1 next promises to be of far greater value than that held last year. First attempts are invariably experiments, and, though there was much of interest in the 1893 display, it seems that the 1894 will be of much more use to those concerned. To start with, the loan collection will be a serious attempt to show the development of shipbuilding, especially in the smaller craft which more closely approximate to yachts, and here we are asked to state that the Aquarium Company will welcome models of every kind which will bear on this point. If any of our readers who know of such models, paintings, engravings, or even early photos which bear upon this subject will put themselves in communication with Mr. du Plat at the Aquarium they will receive prompt attention.

The races between the Brit. du Plat and the Navahoe will be amply illustrated, both by a model of the English cutter loaned by the Prince of Wales and by contemporary original sketches and photos taken by eminent artists, which are being loaned by the illustrated papers and others. The Valkyrie and the Vigilant will be treated in the same way, so that the galleries will present a résumé of the past year in yachting. Another feature will be models sent by the great ocean firms, so that the relative proportions of the vessels of competing companies may be compared.

Altogether a most interesting display appears to have been arranged, and one which will attract and please every yachtsman worthy of the name. Among the trade exhibitors will be found names of eminence, and the embryo yachtsman who desires to make a start may walk in at one Aquarium door and emerge at the other fully equipped.—Field.

### The Rig on Scarecrow.

BROOKLYN, N. Y., Feb. 2.—Editor Forest and Stream: The rig on Scarecrow mentioned by my friend Thomas Clapham as having been illustrated by you in his sketch of my Flying Pontoon (precursor in regular progression of Bouncers, Gloriana, Whalebacks and Vigilant), is fully described in Robinson Crusoe in connection with his famous periagua *voyage autour de son île*. Defoe alludes to it as a well known oldtime sailorman's rig, and no doubt it was transferred to the West Indies and the Spanish Main by the buccaneers. I first saw it in British Honduras in 1860, on the splendid dug-out "dories," and built-up-on-dug-out-foundations "creers," a sort of leg-of-mutton ketch, and illustrated and described it in a paper on "Quaint Craft" in Lippincott's Magazine of August, 1875. Having but one halliard with center of effort low, it is admirable where white squalls abound, especially for single-handed cruising. For racing, with a trained crew, I agree with Capt. Fitzgerald, R. N., that no rig can equal the dipping lug. . . . W. L. D. O'GRADY, Capt., late 88th N. Y. Vet. Vols., formerly Royal Marines.

## YACHT NEWS NOTES.

The annual meeting of the New York Y. C. was held at the club house, 87 Madison avenue, on Feb. 1, with Com. Morgan in the chair. The following officers were elected: Com., Edwin D. Morgan; Vice Com., Edward M. Brown; Rear-Com., Royal Phelps Carroll; Sec'y, J. V. S. Oddie; Treas., F. W. J. Hurst; Fleet Surgeon, Dr. Morris J. Asch; Mess., John H. C. Regatta Committee, S. Nicholson Kane, Chester Griswold and Irving Grinnell; House Committee, E. A. Houghton, Alonzo B. Jones, Frank M. Cronise and F. T. Adams. Committee on Admissions, Frank T. Robinson, James C. Bergen, Robert Center, Daniel T. Worden and Henry C. Ward; Library Committee, Dr. J. M. Woodbury, William Gardner and Fordham Morris. Mrs. Lucy C. Carnegie's application for membership was presented, and after some discussion it was decided that the constitution does not permit of women members, and the subject was laid over until the next meeting, a committee being appointed to consider it further in the meanwhile. Thirteen active members were elected, and Lord Dunraven was elected an honorary member. The club regatta will be held on June 7, but the usual annual dinner will be omitted. The secretary's report showed a membership roll of 1,005 members and 297 vessels, a gain of 17 vessels in the year. The present club house has been leased again for one year, but the committee on new club house and site was continued. The cup to be presented to the owners of the Vigilant for her success in keeping the America's Cup here is still in the hands of the silversmiths. A committee consisting of J. V. S. Oddie, William F. Douglas and G. C. McCormack was appointed to draft resolutions in memory of ex-Vice-Com. Caldwell H. Colt, who died recently in Florida.

The collision case between the once famous yacht Yosemite and the steamboat Charlotte Vanderbilt, by which the latter was sunk July 14, 1882, after dragging along through the different courts of appeal, has been decided by the Supreme Court of the United States, the court of last resort, in favor of the Yosemite, although the decision of the Court of Appeals of the State of New York had to be reversed. The point at issue was that of proper lights. The Vanderbilt's owners contended that the Yosemite carried no central range lights as provided for river navigation, although engaged and documented as an ocean-going vessel. The Supreme Court decided that the Yosemite was not required to carry central range lights. This decision being final, it is well for river steamboat navigators to bear in mind that a masthead and the regulation side lights are all the lights that sea-going vessels are obliged to carry when navigating rivers.

The Racine Boat Manufacturing Co. has begun work in its new shops, and reports plenty of orders to start with, two 30ft. l.w. sailing yachts, the Nella, lately illustrated in the FOREST AND STREAM, and another for Berriman Bros. of Chicago; two racing 18-footers, one 18ft. over all by 8ft. 6in. beam, the other 20ft. over all; a 25ft. steam launch and a 22ft. 6in. vapor launch with sectional rowboats. The firm is prepared to build all classes of yachts and boats.

The first number of Vol. V. of the *Rudder, Sail and Paddle* for January, 1894, comes to us with a new cover and a marked improvement in its contents. Mr. H. Woodward Rogers, of New York, will henceforth be associated with the management of the paper, and it will take up rowing as well as yachting and canoeing.

A musical entertainment will be given at the town house of the Seawanhaka Corinthian Y. C. on Feb. 13.

## Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc. of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

THE work of revising and preparing the year book of the A. C. A. for publication is now in hand, and the Sec'y-Treas., Mr. George P. Douglass, 136 Liberty st., New York, requests that members will notify him of all errors or changes in their addresses, names of canoes, etc. Members may also aid in eliminating a great many errors which now exist in the lists, by calling attention to any which they may know of the addresses of their friends.

WHATEVER ground there may be for the complaint of our correspondent, it will be plain to those more fortunate members who have been present at several meets that his ideas are based on anything but such facts as would have been forced upon him had his view of the case been other than a purely local one. If he had visited among canoe clubs a dozen years ago and seen the rude and primitive canoes and rigs, and then had made another round of the same clubs a couple of years later, after one or two of their members had attended an A. C. A. meet, he would understand better how this same annual gathering has been the parent of improvement in canoes in this country. When the A. C. A. was first formed, we were indebted to England for our models, sailplans and fittings, but so rapid was the advance under the stimulus of the meets, that in four or five years we had left British canoeing so far astern, that it has never since caught up. The part taken by clubs and individuals in this work is only worth notice as these clubs and individuals become a part of the A. C. A. by attending the meets.

THE average attendance at the meets is about 250, and only some twenty men at most go there with a "machine." If the meets are of no use or interest to others, how does our correspondent account for the odd 200 who are present each year? It is true that Mr. Burns' remarks as to the cruisers refer only to this year, but there has hardly been a meet for the last half-dozen years that some special programme has not been arranged for the non-machine men in the way of races for general-purpose canoes, cruising races and short cruises. In every case the men who have done the most talking about racing machines have kept carefully out of the way when these cruising events were called; and they are responsible for the failure of all efforts to provide sport for the class of canoes they pretend to use. Our correspondent's ideas are so strongly expressed and firmly fixed that we have no hope of changing them by any argument; but we venture to predict that if he will make an effort to get over the thirty miles between New York and Croton Point this summer and spend a few days in camp, he will come away without some of his ideas as to A. C. A. ball rooms, racing machines and ill-treated cruisers, and will be able to discuss this same question next year in the light of actual experience, and not of second-hand and inaccurate information.

## The Racing Canoes, Milwaukee and Avis.

So far as model is concerned, canoe designing has been at a standstill for a very long time, the winning canoes of the last two years, such as Wasp, Bee and Glenwood, being merely improved in detail from such older canoes as Fly and Eclipse. But little change has been attempted for a long time in dimensions or lines from the latter two standard boats, all advances in speed being due to improvement of rigging and fittings and greater power through longer and stronger sliding seats. The design which we here publish, through the courtesy of the St. Lawrence River Skiff, Canoe and Steam Launch Co., of Clayton, N. Y., is notable as a departure, and a very successful one, from the two typical canoes which have monopolized the prizes in the A. C. A. and in canoeing generally for so long a time.

The company, with its accustomed enterprise, desiring to add to its large line of boats a really fast racing canoe, early in 1892 entrusted the task to Mr. Wm. Gardner, the designer of the fast sailing yachts Liris and Kathleen, and the high speed steam yachts Feisen and Nada. The resulting design, here illustrated, is not only pleasing in its fairness and symmetry, but is an excellent example of the latest theories of yacht designers in the cutting away of unnecessary surface, and in the fullest utilization of the length. As shown by the bow and buttock lines in the sheer plan, the floor of the boat is carried to an extreme length fore and aft, giving a maximum of size and power on a limited waterline; and then, in deference to the limit of over-all length, the deck and topsides are rounded in sharply. The design is very much like that made for Mr. Wm. Whitlock, from which the canoe Demoselle was built.

The dimensions are up to the limit, 16x30x10, the freeboard being 5 1/2 in. From the design the canoe Avis was built in 1893, for Mr. Emil J. Hansen, of the Mahan-Awauk C. C., of Milwaukee, a very handsome specimen of canoe building. Mr. Hansen, who is a member of the

Western Canoe Association, sailed Avis at the meet of 1893, and in her won the Gardner cup. Last year the same design was used for the canoe Milwaukee, built for Mr. F. B. Huntington, also of the M. C. C., the Sec'y-Treas. of the W. C. A. At the 1893 meet of the W. C. A., these two canoes were present, being pitted against the well-known Glenwood, originally owned and sailed by Mr. T. S. Osholm; though entered by a new owner and under a new name.

In the first heat of the Gardner cup race Milwaukee was first, with Avis fourth and Glenwood fifth. In the second heat for the same cup only Avis and Dorothy were eligible, Milwaukee having in the meanwhile won the trophy, but Milwaukee, Nereid and Glenwood sailed with them, the latter canoe handled by Mr. Nat. Cook, the crack sailor of Western canoeists. Glenwood won easily in this race, Milwaukee

being second and Avis fourth, but winning the leg from her opponent. This time Avis, Dorothy and Milwaukee started the late sailing for a special prize for second place. Milwaukee finished first, but Avis beat Dorothy and won the Gardner cup for the second time in succession. In the trophy race first heat the finish was, Milwaukee, Glenwood, Avis, and in the second heat, Glenwood not entering, but sailing over with the others, it was Milwaukee first and Avis third, Glenwood capsizing when in second place.

In the FOREST AND STREAM reports of these races, and in other papers, these two canoes have been described as "fin-keels," but this term is hardly correct, the keel being too shallow to be properly called a fin, while it carries no ballast. Milwaukee is sailed with a mainsail of 97 sq. ft. and a mizen of 71, a total area of 168 sq. ft. The large displacement of the model will call for a heavy board and some inside ballast, dependent on the weight of the crew and the construction of the hull and rig.

## Reforming the A. C. A.

Editor Forest and Stream: I am glad to see that my letter of two weeks ago has stirred up one man at least to take enough interest in the subject to discuss it in print over his own signature, even though he does differ from me in opinion. His criticisms of my letter make interesting reading, but I cannot for the life of me see wherein he has either contradicted my statements (except to say they are "partly true") or disproved any of them.

In the first place, Mr. Burns starts out with a wrong assumption of my complaint. He says I blame the ladies' camp and the racing contingent. In this he is in error, and consequently his whole line of argument is based on false premises. I did not say one word against either of the two "camps," for I do not think that Squaw Point can ever hurt the meets, rather it should introduce a good influence; while the racing contingent have been of great benefit to canoeing in the past and will be in the future, but chiefly because the racers of the past were cruisers first and racers afterward.

I said that the changes in rig and ideas in fittings had been fostered by the clubs and their members, and not by the A. C. A. Will Mr. Burns deny this, or assert that these things would not have been accomplished if there never had been an A. C. A.? Canoeing has had its growth and development chiefly in the last ten or twelve years, and, as is the case in every new sport, improvement has been rapid. To illustrate: The first idea of a sail was, for example merely, something like the mutton leg or lateen, with small area and long spars in proportion. One day an enthusiast was bothering with the awkward sticks when an idea struck him. At once it was put into practice, and canoeing was given a Mohican settee. Some one else suggested some changes, and the first thing we knew the sail used by Storer, Stephens, Douglas and others under the title of "new" was among us. But the A. C. A. did nothing toward this. The Zerega sail competition of a few years ago was the most practical action in the way of improvement of rigs, etc., we ever had; but the A. C. A. had nothing to do with it. As a matter of fact, some prominent A. C. A. men took it upon themselves to sneer at it. And so I might quote indefinitely.

The first growth is always rapid, but now we are at a stage when some fast growth is necessary from a national organization, or canoeing will be dead compared to what it was. Is the A. C. A. ready to give it? I said that the FOREST AND STREAM had done more toward circulating maps, stories of cruises, etc., than any other agency. Mr. Burns has not disputed that. Some years ago we had a little paper, the *American Canoeist*, but that went under.

Finally I said that the meets benefited only those that were present, and that the A. C. A. was of no apparent use to any one but the man who had a "machine" and could go and race it there. Mr. Burns does not even definitely dispute that, but instead treats me to some history of what cruising races were had and how little good they did, being careful, however, to confine himself to the last meet, and entering no further into the why and wherefore. If he will consult the reports of most races he will find other races with as few starters, I think.

He also joins with yourself in a jab at my non-attendance. Does he not see that by so doing he strengthens my case? I have claimed that no one gets anything unless he comes to the meet, and Mr. Burns contradicts me by saying that the reason is because I don't come. I am sorry not to have been there, but simply could not. Has the A. C. A. any right to ask me or any one else, under similar conditions, to pay a share in its support and not receive a share of its benefits? In other words, is it a charity scheme? For a number of years I have talked these meets over with men who have been there, and I have found the opinion of the majority of those I have been able to meet to be in the same direction, namely, that the interest was dying out because so much attention was being given to racing pure and simple and none in other directions. There is where I got my authority for the "hotel-ballroom" statements. This evil has been growing slowly but surely, and has lately been apparent in the few cruisers present to enter in the one or two races thrown to them as a bone to a dog. Mr. Burns illustrates this sentiment by his sneer at the "laziness of the general-purpose-built-by-himself canoe man." Shame on you, Mr. Burns! Have you forgotten or are you too young in the sport to know that the men who have done the most in the past to advance canoeing, such men as Cox, Gibson, Scott, Douglas, Barney, Stephens, Palmer, Coe, "Nessmuk" and a host of others, all built and designed the bulk of their own boats and fittings. Are you willing to enjoy a sport which rests on the efforts of such men, to whose ideas so many of the good points of your own boat are due, and yet sneer at them? I think the idea that cruisers are not much wanted at the meet will not be dissipated by such sneers, nor will such a course help the A. C. A. retain their membership.

Mr. Burns winds up with some very good suggestions, however, notably that "what we want is an increased membership." Now, nine men out of every ten want some return for their money and they are not going to join the A. C. A. if they cannot see something in sight for their dollar, and the A. C. A. has no right to ask that dollar without giving some return. What return is it going to offer this year? I cannot see that my ideas are so absurd as Mr. Burns would have them. I suggested that the officers of the A. C. A. make some arrangement whereby A. C. A. members would get some good paper which catered to their interests for a reduced price, say FOREST AND STREAM for \$3 or \$2.50 instead of \$4. Outing is furnished to L. A. V. men for \$2.50, and it would be only applying the principle of that agent or dealer getting a discount on a certain number of subscriptions. Is there any thing absurd in this?

Then as to supplies, fittings, charts, etc., I suggested that some arrangement be made with dealers whereby any one presenting an A. C. A. membership card would receive a discount. Can Mr. Burns show me the absurdity of this suggestion?

No man remained long in any club which was not giving him some return, however slight, for his dues, and no one can ever induce good men to join any organization which is not going to render some return to them in some way. You must have something to show as an inducement to membership. What is that going to be? I heartily join with Mr. Burns and the editor in asking for further discussion of the matter.

RUTHERFORD, N. J., Jan. 31.

## A. C. A. Membership.

ATLANTIC DIVISION: Dr. James A. Extor, Alberton, N. J.; C. O. Brinkerhoff, Brooklyn, N. Y.; C. J. Field, Alhambra, N. Y.; C. O. Rinkerhoff, Brooklyn, N. Y.; C. J. Field, Alhambra, N. Y.; C. O. Rinkerhoff, Brooklyn, N. Y.

## The Newton Boat Club War Canoe.

The crew of the Wawbaw entertained about thirty of the local canoe men at the Newton Boat Club house on the Charles on Thursday evening, Jan. 25, the occasion being the second smoker of the season, held under the auspices of two owners of Newton's new war canoe.

The boat house offers excellent opportunities for a good time, and every one has a chance to indulge in the popular sport of bowling on two regulation alleys. The first part of the evening's programme was an exciting match between two picked teams of local canoeists. The game proved to be intensely interesting, and the scores were very good considering the length of the alleys, Messrs. Raymond Apollonio and the Smith brothers doing particularly fine work.

Music and refreshments helped to complete the evening's entertainment, and the merry party reluctantly broke up at about midnight. Among the canoeists present were Messrs. Raymond Apollonio, Shushgab C. C., Fred P. Smith, Delham B. C.; A. F. Mitchell, Boston C. C. and Louis S. Drake, Francis J. Burrage, Geo. B. Smith, Chester A. Howe, Wm. V. Forsythe, Edw. G. Blaisdell, Fred H. Loveland, Louis A. Hall, Waldo L. Plimpton, Chas. W. Knapp, Julius B. Waterbury of the Newton B. C.

Hearty thanks for the good time were extended to the crew, which is made up as follows: Louis S. Drake, Capt.; Francis J. Burrage, Lieut.; Geo. B. Smith, Russell A. Ballou, Wm. V. Forsythe, Claster, Howe, Quincy Pond, John F. Linder, Chas. W. Knapp, Julius B. Waterbury and James H. Lowe.

## CANOE NEWS NOTES.

We have received an invitation to the second camp-fire of the Connecticut River Canoeists' Club, to be held at Holyoke on Feb. 10:

"Bring voice and song, and numbers strong,  
Come, and hungry surely,  
We'll fill up with fun, grub and a cup,  
And let you go home early (P)"

The Innitout C. C., of Woburn, Mass., has elected the following officers: Com., Homer B. Grant; Vice-Com., Wm. W. Crosby; Sec., Willard K. Fowle; Treas., J. Winn Brown; House Committee, Edward T. Brigham, J. W. Waters, Willard K. Fowle; Regatta Committee, Wm. W. Crosby, Arthur C. Weyer, Homer B. Grant; Membership Committee, Arthur C. Weyer, William W. Wade, Homer B. Grant; Auditing Committee, Homer B. Grant, Edward F. Weyer.

## Rifle Range and Gallery.

## Schlicht Rifle Club.

At the weekly shoot of the Schlicht Club at its headquarters on Jan. 29, 18 members were present to compete for the club medals. Geo. Dorr won the champion medal on the good score of 240. Jacob Diehl the first class with 231, Jacob Schlicht the second class with 223, and Chas. Meyer the third class with 222. Scores: Geo. Schlicht 244, Geo. Dorr 240, Jacob Diehl 231, E. O. B. Alenstine 231, Jacob Schlicht 223, Charley Meyer 222, Geo. Rickert 220, Henry Harder 210, Geo. Lautenberger 217, Fred. Lambert 216, Aug. Tribout 216, Conrad Schlicht 213, Aug. Meyer 212, Andrew Dubline 203, Luc. Dorr 201, Peter Matie 200, Geo. Goehrig 183.

## New York Rifle Club.

New York.—The New York Rifle Club held its regular weekly shoot at Zettler's Gallery, 12 St. Marks place, on the 3d inst. The following members were present and made:

Isbell	243 210	Hamilton	237 223
Gensch	242 238	H. Duane	233 229
Young	241 239	Barker	232 232
Chadbourne	239 239	Crocker	225 233

E. R. CHADBOURNE, Sec'y.

## Greenville Rifle Club.

The weekly gallery shoot of the Greenville Club on Friday night showed a slight falling off from the usual attendance. Only fifteen members were present to participate in the competition. The best score of the night was shot by Wm. C. Collins, who made 240. Collins Boag was second with 238. The club has a team selected to enter the Zettler Club tournament of Feb. 23. Scores: Collins 240, C. Boag 235, J. Boag 237, Robidoux 232, Purkiss 231, Chavart 231, Gotthardt 224, Spahn 225, Daniels 225, Plaisted 224, Dadds 223, Agnean 214, Scheeline 215, Hill 206, Hofzapfel 200.

## New York City Schuetzen Corps.

The gallery team of the New York City Schuetzen Corps, which is in training for the coming team match at Zettler's Gallery, on Wednesday of this week, had its practice shoot on Friday night, the following appended scores were made by the twelve men present. Scores: Munz 236, Zettler 242, Range 239, Kuhlmann 224, Malitzen 228, Uhlein 240, Ludwig 228, Busse 224, Radloff 220, Rehn 231, Stotzenberger 229, Facklam 234.

## Our Own Club.

The Our Own Club keeps up its weekly gallery practice with the usual attendance. The honor for high score of the night went to Kruse, with 237. The members are highly elated over the prospect of having a new club house. The following appended scores were made by the members present: Capt. Huncken 233, Kruse 237, Bohmcke 234, Dilger 228, A. Moser 227, Feldman 221, Shultz 218, D. Page 218, Sinclair 217, Offen 212.

## Lady Miller Club.

Ten members of the Lady Miller Rifle Club met at headquarters on Tuesday night for weekly practice and competition for the class medals. Mrs. Meyns won the first class medal, Mrs. D. Miller the second class and Miss Sanders the third class. Scores: Mrs. Meyns 223, Mrs. Miller 218, Miss Sanders 200, Miss Bender 235, Miss Kloepping 214, Mrs. Stadler 212, Mrs. Ahrend 205, Mrs. Boardman 200, Mrs. Stein 200, Miss Richmond 200.

## Miller Rifle Club.

The Miller Rifle Club held its weekly shoot for club medals on Wednesday night, nine members participating. Capt. Fisher made the high score of the night, 241. D. Miller was second with 241. Scores: Fisher 241, Miller 241, Meyns 240, S. Schmidt 240, Dewey 221, Zoch 233, Taylor 217, Will 228, Vanderheyden 214.

## Palisade Rifle Club.

Ten members of the Palisade Club were present at the last practice shoot on Jan. 29 to compete for the club medal. The following scores were made: Fred. Krolsch 230, Geo. Dorr 239, Rob. Glaser 227, Willie Rose 228, Geo. Esper 225, O. A. Auferholder 223, Willie Ahles 210, Frank Miller 203, August Ahles 176, Willie Bornemps 142.

## RIFLE NOTES.

At the annual meeting of the Hudson Rifle Club last week the following board of officers were elected: Captain, Hy Mahlenbrock; Shooting Master, H. E. Boddy; Recording Secretary, C. E. Bird; Financial Secretary, Charles Siedman; Treasurer, John Rehban; Sergeant-at-Arms, James Ruch. Board of Directors—G. W. Morgan, T. A. Reynolds, A. Braun, Sr., S. Middleton and Captain Mahlenbrock. The finances of the club are in a flourishing condition.

The Williamsburgh Shooting Society, Capt. George Schmitt, with headquarters at No. 122 Hamburg avenue, is out with a programme for its annual gallery tournament, to take place Feb. 11 and 12. Fifteen prizes, ranging from \$30 to \$1, will be offered for the local riflemen to compete for. Our crack shots will, no doubt, be on hand to participate.

The Hudson County Gallery League, which was organized on Jan. 21, is no more. At the second meeting, on Jan. 25, only three clubs were represented, and it was decided to discontinue any future effort to carry forward the movement this season. Lack of interest and the hard times are responsible for the early demise of the League.

Plaisted has samples of the S.S. Powder Co.'s SR, SK and Rifleite 450, which he proposes to try the quality of in the near future in calibers .25 to .33.

The Our Own Rifle Club, of Hoboken, N. J., have in contemplation the leasing of a lot of ground and the building of a club house.

The Excelsior Club, of Jersey City, is another club whose aspirations are in the direction of having a home of its own.

The monthly shot of the Glenmore Rod and Gun Club at Dexter Park last week, was not a success. Since the death of Peter Soffer, tue late President of the club, it seems as the organization was going to drop out of sight for the present at least. On Wednesday only two members were present, Messrs. Vorchak and Koy. The two shot a sweep and a high score of 20 and 19 respectively.

The fifth of the series of monthly shoots of the Massachusetts State Shooting Association will be held on Tuesday, Feb. 13, on the grounds of the Marblehead Gun Club, beginning at 10 A. M. The main events of the day will be for teams of three, at 30 targets per team for the individual and team championship and a 30 target team championship contest for the individual challenge gold badge at 25 targets.

## SAVE YOUR TROPHIES.

Write for Our Illustrated Catalogue

## "HEADS AND HORNS."

It gives directions for preparing and preserving Skins, Antlers, etc. Also prices for Heads and Rugs, Birds and Fish, and all kinds of work in Taxidermy.

WARD'S NATURAL SCIENCE ESTABLISHMENT,  
ROCHESTER, N. Y.

When  
You  
Order

A gun or a rod or a thousand shells or a lot of flies, tell your dealer to put in a copy of *Game Laws in Brief*. It will only cost you 25 cents extra. All dealers can supply it.

## THE SALMON FISHER.

BY  
CHARLES HALLOCK.

**CONTENTS:** Distribution of the Salmon. Life History of the Salmon. Technology of Salmon Fishing. Salmon Fishing in the Abstract. Luxury of Salmon Waters. Itinerary of the Salmon Rivers.

A book to read now; and to be put in one's pocket for reading again in camp.

Cloth, 128 pages. Price \$1.00.  
FOREST AND STREAM PUB. CO., 318 B'way, N. Y.

FROM the first issue of this paper it has been used, and for nearly twenty years this particular space has been occupied by

# ABBEE & IMBRIE,

who now say that they have given up advertising at least for the present.

## THE PROTEAN TENT.

Patented United States and Canada. The best tent in the world for sportsmen. Lightest, most compact, best ventilated. Never blows down. Never leaks. Only one pole required, which can be furnished in three joints, and patent light iron tent pins; also patent pack sack with shoulder straps, making a compact outfit which can be checked as baggage.

Send 2 cent stamp for 1894 catalogue.

A. S. COMSTOCK,

230 Ridge Avenue, - Evanston, Ill.

## Taxidermists.

## WM. W. HART & CO., LEADING TAXIDERMISTS,

No. 5 West Third st., New York.

Animals, Game Heads, Birds and Fish mounted in lifelike manner,

Poisoned against Moth,

and promptly returned. Reasonable charges. References from leading sportsmen and collectors. Send for Illustrated Catalogue.

IF YOU WANT THE TROPHIES OF THE CHASE mounted, and desire to have them possess their characteristic form and expression, and that are guaranteed safe from the Destroying Moth, send to our establishment. We have every College, Museum and leading dealer in the country, to whom we can refer you and who will cheerfully testify to the merit of our work and claims.

## Log Cabins AND HOW TO BUILD THEM.

By WILLIAM S. WICKS.

This is a complete exposition of the art and method of building log cabins from the simplest dog kennel to highly artistic dwellings. Everyone going into the woods and designing to construct his shelter with the materials at hand, should procure "Log Cabins," for in its pages he will find a variety of designs, simple and ornate, adapted to temporary shelter or to permanent homes, with full and clear instruction and illustration in every matter of detail. Sent, post free, for \$1.50.

FOREST AND STREAM PUBLISHING CO.  
318 Broadway, New York.

## Kennel Special.

Advertisements under KENNEL SPECIAL head, set in uniform display, 25 cents a line first time, 15 cents a line each time after. Count seven words to a line. Cash must accompany order.

FOR SALE WITHOUT RESERVE—A BEAUTIFUL litter of puppies by our winner—The Corsair ex Jennie F., she Count Noble ex Gladstone's Girl, and sister to the winners Becky Noble and Count Anteo. Cream of blood that will find birds and just the style of dog for Eastern shooting. Prices so low, they are gifts. Meadow City Kennels, Northampton, Mass.

BEAGLES—A CHAMPION ROYAL KRUEGER bitch and a champion Bannerman dog for sale, at \$15 each, thoroughly broken, neither two years old. Royal Krueger puppies, sure winners, \$10 each. SHREWSBURY BEAGLE KENNELS, Red Bank, N. J.

MOUNT PLEASANT GORDON KENNELS ARE offering for sale a number of strictly first class Gordon setter puppies from first prize field and bench sires and dams. Pedigreed and registered. Address with stamp, C. T. BROWNELL, P.O. Box 335, New Bedford, Mass.

My kennel of mastiffs is conceded to be the best in America. Have won at all the large shows. Won all 1st and 2d prizes in mastiffs late Chicago show. Dogs at stud and for sale. A few choice pups for sale. Send stamp for list and mention this paper. CHAS. E. BUNN, Peoria, Ill.

CROWDED AND MUST MAKE ROOM FOR COMING young stock, consequently will sell for half value some well trained pointers of excellent breeding as well as some very choice young stock. Address for prices and particulars, RICHWOODS KENNELS, 230 S. Washington st., Peoria, Ill.

FOR SALE—SEVERAL WELL BROKEN POINTERS and setters. These are dogs that have had large experience on game and I will guarantee that they will prove satisfactory. W. B. STAFFORD, Trenton, Tenn.

BEAGLES CHEAP—TWO NICE LEMON AND white pups, 10 and 11 mos. old, one bitch, one dog, not akin. Bitch, \$4. Dog, \$5. Pair \$7.50. Are partly broken. GOSHEN STOCK FARM, West Chester, Pa.

MUST SELL—ONE FINE BRED BEAGLE BITCH (thoroughly broken) in whelp. One beagle bitch puppy, 7 mos., pedigree. One beagle dog, No. 1 looker and fielder. For pedigree and prices, address Box 310, Mahanoy City, Pa.

COCKERS FOR SALE—FIVE GRAND BROOD bitches in whelp to champion sires; also seven young dogs, 7 mos. old. If you don't mean business don't write. GEO. DOUGLAS, Woodstock, Ont.

FOR SALE—Several first-class cocker spaniels. Black and red bitches in whelp to Cherry Punch. Stud dogs and puppies. Some prize winners. W. B. PALMER, Hamilton, Ontario, Canada.

WANTED.—A FIRST-CLASS QUAIL AND white grouse dog. Must be a thoroughly trained, staunch young dog with good nose. R. H. PARK, 128 West 11th street, New York.

IRISH TERRIER FOR SALE.—Perversity (A.K.R. 29023) Dunmurry—Boxer IV, 18 mos. A first-rate bitch. E. K. BUTLER, JR., Jamaica Plain, Mass.

WANTED.—Pair of dogs trained on bear, must not run deer. Address, stating price and particulars, to Ingram Travers, Fort Myers, Fla.

DOGS BOARDED AT 50c. PER WEEK. Address J. F. KELLY, Wayside Farm, Carolina, R. I.

SOME FINE IRISH setter pups, dogs and bitches. REDSTONE KENNELS, Huntington, N. Y.

FOR SALE CHEAP.—Foxhound bitch "Logan strain." Address JAMES JEFFERS, Westfield, Mass.

For Sale.—R. C. St. Bernard dog pups, large and handsome. Merry Mt. Kennels, L. box 65, Wollaston, Mass.

A pointer pup for sale. Address 98 Grand, Newburgh, N. Y.

Small house dog wanted. Jules Doux, Utica, N. Y.

ITALIAN GREYHOUNDS AND FINE ENGLISH pugs from imported, registered and prize winning stock. In Stud—Prize pug stud dog Cricket, weight 10 lbs. HENRY C. BURDICK, 15 Wellesley street, Springfield, Mass.

FOXHOUNDS, RABBIT HOUNDS, COON HOUNDS FOR SALE. F. H. HAYES, Dexter, Me.

Well-trained foxhounds, few rabbit dogs; guaranteed No. 1. Price low. J. H. MILLER, Christiana, Pa.

For Sale or Exchange.—Broken setter and pointer and setter pup. Bargains. J. M. Kelly, Montrose, Pa.

DOGS BOARDED.—For terms, etc., address J. F. KELLY, Wayside Farm, Carolina, R. I.

FOR SALE.—SPORTING DOGS. GEO. W. LOVELL, Middleboro, Mass.

Irish Terriers.—Of choice breeding. Puppies for sale by HUGUENOT KENNELS, New Rochelle, N. Y.

POCKET KENNEL RECORD. 50c. Forest and Stream Pub. Co., 318 B'way, N. Y.

## The Kennel.

## Hempstead Farm Kennels.

POINTERS, ENGLISH SETTERS, ENG. RETRIEVERS, COLLIES (rough and smooth-coated) FOX-TERRIERS, IRISH TERRIERS, POODLES, DACHSHUNDS and RUSSIAN WOLF-HOUNDS at Stud and For sale.

Being considerably over-stocked we offer for sale several high class pointers by such noted sires as Duke of Hessen, King of Kent and Handford Druid out of Woolton Game, Merrylegs and Gem of Klippen (all field trial winners). Several of these have been broken by Cameron and are entered in the United States Field Trials to be run at Grand Junction, Tenn., February, 1894. Puppies of the above breeds always on hand. For particulars, address,

JAMES MORTIMER, Manager,  
Hempstead Farm, Hempstead, L. I.

**BUCHAN'S**  
CARBOLIC SOAP No. 11 is the best DOG SOAP in the world. Sure death to Fleas and a cure for all skin diseases.

**Buchan's Dog Wash** will cure every case of MANGE, kills Fleas and keeps the dog in a healthy condition, makes the hair soft and silky and does not stain. It is also the best disinfectant for the kennel. Ask your druggists for it.

**CARBOLIC SOAP CO.**  
Manufacturers and Proprietors, 230 Pearl st., New York

## FOX-TERRIERS FOR SALE.

Three or four brood bitches and some young stock by Dusky Trap. Also some prize-winning Cocker spaniels and young stock. Apply to GEO. BELL, Walker House, Toronto, Canada.

## Dogs for Sale.

If you want to buy a dog or pup of any kind write for prices and what you want to J. HOPE, 305 N. Ninth street, Philadelphia, Pa.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

## SPECIMEN COPIES.

Any reader of the "Forest and Stream" may on request and without expense have a specimen number of the paper sent to a shooting or fishing friend.

## AMERICAN GAME PRESERVES.

We give to-day a report on the game which has been introduced into American game parks. The information may be accepted as authoritative, because it comes directly from the persons who are engaged in the several enterprises noted; and so far as it goes the record is brought up to date of publication. As the title indicates, this review is intended to be the first one of a series of annual reports, in which the development of the preserve system shall be summed up.

The facts recorded are interesting and suggestive. That our native deer and elk will thrive and breed in captivity has been demonstrated repeatedly, as in the well known Illinois deer paddocks, in which Judge Caton studied the ways of this game. But here are recorded the first steps in the confinement of American large game in parks which are so limited in bounds as to be within the control of individual owners and are yet so wide in their areas that the game has practically a range as free and unobstructed, and remains quite as wild, as in the limitless wilderness. No one who cares for the perpetuation of our native stock of large game can regard without profound interest the bringing of buffalo to the hills of New England, the transplanting of elk to the Catskills and the Adirondacks, and the sheltering of deer in a district of New Jersey where the last survivor of the native race was long ago dogged to its death.

The report is suggestive, too, because it marks the beginnings on this continent of the European system of game preserving—a system which, as every careful observer must foresee, is here to develop with giant strides. To the sportsman of the future game preserves will be familiar, and this first FOREST AND STREAM review of the year 1893 will be referred to curiously as possessing an historic interest. Until the present, in this country, we have depended upon game protection by the State for the benefit of the citizen, and it must be confessed that for the most part things have been going from bad to worse. Now has come this new plan of game preserving by the citizen for his own benefit, and for the individual who can afford it the system is a success. Whether it will prove a public good or an evil will depend not only upon the extent to which it shall be carried, but also upon the efficiency of public game protection. If game protection for the community shall be made a farce by the public the game supply will in time be confined to the private preserves. If reasonable game laws shall be observed in practice there will always be game enough

for all outside of private parks. If the game which belongs to the public were preserved on the same common sense plan as that of individual owners of fenced ranges there would be no lack of a due allowance for all.

This reminds us of a little story which is apropos here. The owner of an extensive and well-stocked game park, having accorded to a sportsman permission to hunt deer within the park confines, enjoined upon him as the sole restriction of his sport, an observance of the rule laid down for all guests alike, that each hunter should kill two deer only. Then wishing him true aim and the home-bringing of worthy trophies of his skill, the generous host bade his guest good-speed; and the guest with his guide rounding a bend in the stream passed from sight.

In due time the two deer permitted by the host had been brought down. But the guest, his appetite whetted by success, did not pause there. Forgetful of those restraints of hospitality, which though delicate as gossamer should bind every high-minded man as with chains of steel, scouting the will of his host, in contempt of manhood and in defiance of very decency, the occasion presenting itself, and no park guardians being by, this unworthy guest killed other deer; and did not stay his greedy hand until opportunity ceased. And more than this. For, coming out of the park with the shameless evidences of his misdoing, he boasted of his work; made light of the hospitality outraged and the rights of other guests impaired; and flaunted the booty of his success in the very face of his host.

An impossible story, do you say? Not so. It has been enacted a thousand times, if not in detail, in spirit as gross. For the game park was the public woodland. The owner was the State. And the offending guest—his name is Legion.

The photographs from which our illustrations have been reproduced demonstrate that the preserve affords excellent opportunities for the still-hunter with the camera. The deer pictured by Mr. Pierrepont are not in any sense tame; they are almost as wild as in their native haunts; and it required the exercise of all the still-hunter's skill to creep within focus range.

We all know the old story—it has been told ever since the days when they used cross-bows for hunting the deer—of the master, who, having boasted that he had shot a deer through a hind hoof and an ear at one shot, called in his servant to corroborate the tale, and with ready wit to explain the feat by declaring that the deer had been killed in the act of scratching its ear. Afterward the master was taken to task by the servant for having put the wounds so far apart. In a Georgia rice field version, recorded by the late Charles C. Jones, in his collection of "Negro Myths," the conclusion runs:

Arter de gentemans done gone, de serbant call eh Mossa one side an eh say: "Mossa, me willin' fuh back anyting you say 'bout hunt an' kill deer, but lemme bague you nex' time you tell 'bout how you shoot um, you pit de holes closer. Dis time you mek um so fur apart, me hab big trouble fur git um togeruh."

It is an old yarn, but we have improved the telling of it; for here in one of Mr. Pierrepont's photographs is a veritable picture by "an artist on the spot" of the deer in pose for the credulity-taxing shot; so that if any reader of FOREST AND STREAM may care to father the tale as original with himself, he will have no need of calling in the butler or the camp cook to make it good, but may produce this picture and say, "Here is how I photographed the game before I shot it." A sorry pass, indeed, if we cannot nowadays tell bigger stories than of old and clinch them more solidly.

## SNAP SHOTS.

Among the foolish freaks of game legislation is a bill (No. 94) of the Assembly at Albany, which gives towns authority to acquire by purchase private ponds, brooks and other bodies of water for the purpose of making public fisheries of them; and in case the owner refuses to be bought out, empowers the town to condemn the property and seize it by right of eminent domain. The difficulty of considering such a measure with seriousness is that it flies in the face of those universally accepted principles of property, upon which are based the holdings of our fields and homesteads. If the town may climb over our fences and take possession of our ponds and brooks for a public fishery, it may likewise take our

fields for a public shooting, our milk springs for trout hatcheries, our barns for winter quail sanitariums, and our houses for fishing lodges and shooting boxes; it may even by a vote in town meeting impress any luckless one of us into service as town game carrier, dog handler or fish fryer. Mr. Gerry says that this bill is of questionable constitutionality. We should say as much, and that its author is as likely as not *non compos mentis*.

The proposed adoption of discriminations against Canadian shooters in New York waters is an appeal to the principle of tit for tat. What is sauce for the goose is sauce for the gander. Nevertheless we would gladly see the lines which divide sportsmen thrown down even between the States and the Provinces, as well as between individual States and counties and towns. They are not in accord with the spirit of the age, and we should find a way to secure the desired ends without them.

One commendable feature of the FOREST AND STREAM'S Winans Revolver Trophy contests is that they bring about a very pleasant acquaintance between the contestants. Dr. Fort did not carry home the prize the other day, but he proved himself possessed of a generous spirit which recognized in Mr. Petty a good shot and a worthy competitor. The meeting was in every sense promotive of good feeling; and we trust that the Trophy may be the means of bringing about many another occasion equally felicitous.

We conclude to-day the report of the discussion at the recent coast fishery conference. The proceedings as printed have been considerably amplified by the addition of papers and remarks written out *in extenso*, but not spoken at the time. The report, then, is of decided value, for it may be accepted as giving the two sides presented more carefully and with fuller detail than would be possible extemporaneously under the conditions of a conference. The testimony here offered and the views expressed must be referred to in all future discussion of the questions at issue. The official report by Secretary Doyle has been reprinted in pamphlet form and will soon be ready for the subscribers.

## JOHN E. LYON.

JOHN E. LYON, for many years one of the foremost citizens of Oswego, N. Y., died in that city Jan. 23, aged 80 years.

Born in Onondaga county, near Syracuse, in 1813, Mr. Lyon as a child was taken to what is now Fulton, N. Y., and a little later his father moved to Oswego. As a young man he lived for some years in Cleveland, Ohio, and then returned to Oswego, where he resided continuously for more than fifty years, during all that time being engaged in successful business pursuits.

Mr. Lyon was a man of superb presence. He was cast in giant mould and towered high among his fellows. Physically and intellectually he was of the highest type. His strong character impressed itself on those about him and his opinions carried great weight in the community in which he lived, for he was universally respected and honored, and by all who knew him deeply loved.

In his younger days Mr. Lyon had been an ardent angler. In 1838 he fished the Sault Ste. Marie River, casting the fly from a canoe in those grand rapids, and he was a pioneer in fly-fishing in that country. For many years he fished the country about Mackinac and the south shore of Lake Superior at a period when it was difficult to secure canoe-men without the acquiescence of the Hudson's Company's authorities, who then had more control than the Americans over the Indians. Long after increasing years had made it impossible for Mr. Lyon to fish the brooks, he still took great delight in reading and talking about his favorite pastime. No one could discourse more fluently or more entertainingly of the art of fishing, and it was a keen pleasure to listen to his angling talk. A man of positive ideas and unswerving convictions, he was withal so gentle and kindly that it was not easy to declare and hold views opposed to his. He was the most genial and lovable of men. His whole life was a lesson to those with whom he came in contact. Cheerful and happy himself, he made others so by the mere force of his association with them, diffusing contentment from his sweet nature without effort, as naturally as the flower gives forth its perfume or the sun its heat.

A nature so well rounded and complete is most rare, and if the world is poorer now for the loss of such a man, it is richer for all the good done in his long and happy life. We have no standard by which we may measure that good, yet we know surely that the blessed influences of a career like that of John E. Lyon do not end with one's presence here.

## The Sportsman Tourist.

DANVIS FOLKS.—XXII.

The End of a Journey.

THE uneventful summer passed, marking its almost imperceptible changes by the withering of one flower and the blooming of another; the growth of grain and grass, their ripening and cutting down, the slow stoop of fruitful branches under their increasing burden, the song and silence of birds and the stealthy southward march of sunrise and sunset along the mountain crests. And lo, it was fall with no bloom but the golden rod and asters, with the red flame of the sumac, kindled in mimicry of bloom.

Bobolinks, swallows and orioles were gone, and but now and then, some remaining singer remembered or sang his summer song, and the crickets chirped with fainter monotony in the chill evenings.

The calls of migrant birds came out of the gloom from afar and near, and afar again while the listener wondered what they were. After a day portentous of storm, with gathering clouds and steadily increasing wind, there came a wild night.

Afar among the desolate mountain peaks, the wind roared with sullen, incessant anger, intermittently heard between the surging blasts that swooped upon the valley and drove the rain in a fierce, assaulting slant, with attending wraiths of flying scud.

The jaded horses of the mail wagon splashed wearily through the puddles whose agitated surfaces glittered dimly in the light of the mud-bespattered lantern, and halted in front of the post office. A wind-tossed shout of the mail driver and the thud and clank of the mail bag on the wet platform, at once brought forth the alert bare-headed postmaster, to whom was vaguely revealed by the bolt of light shot through the open door, a forlorn, be-draggled figure crouching beside the driver. Clapham strove to make it more distinct with a shading hand, but could not guess even at the sex of the muffled form until a wet ribbon fluttered and snapped about the head. Then the wagon moved on with its feeble light struggling through the storm and darkness.

"Jim's got him a passenger," he announced to the only visitor whom the arrival of the semi-weekly mail had yet tempted forth in such weather. "An' it's a womern. I can't imagine," he pondered with hovering hands arrested over the fastenings of the mail bag and eyes staring into space, "what womern is a traveling sech a night. I'll bet a cent I know. It's that Meeker gal that's ben tu work in a factry way down in Massachusetts. Yis, sir, that's jest exactly who 'tis," and chuckling over his sagacity he began to undo the straps, and his visitor waiting for his paper thought "like 'nough" as he lounged over to witness the always interesting operation.

The changes of the season were but dully noted by Pelatiah. He was sorry when the fishing days were ended, for he had brought him some consolation for a bereavement crueler than death, if not forgetfulness of his faithless sweetheart, the gleam of whose bright eyes flashed up at him from the evanescent bubbles, now mocking, now piteously pleading, and whose voice called to him, far and elusive, in the many voices of the woods. He had come to think without resentment of the girl who had won his heart but to rend it, remembering faults but to study apologies for them, and cherishing with fondest memory all that was best in her, the best, he was sure, that was possessed by any woman. Yes, she was dead to him, and he could never be fooled or happy again.

He found some solace in dogged, steady work, yet while his hands mechanically dug potatoes, husked corn, held the plow or wielded the ax, his thoughts were continually straying back into the old wearisome paths.

The early fall had brought its ordinary sport. There had already been coon hunting in the cornfields, but the shouting rabble of men and boys, the yelping pack of dogs of all breeds and the wild uproar of the closing scene when the dislodged coon fought to the last gasp against the relentless host of enemies, constituted sport little to his liking. There were plenty of squirrels barking and squalling in the nut trees, and wild pigeons gleaming the grain fields, and partridges were well grown. That very afternoon, as he drove the cows up from the back side of the pasture and passed a clump of elder, the berry-laden tops were rent apart as by a sudden explosion, and half a dozen strong-winged birds burst forth and shot in long curves toward the woods.

Such sports seemed trivial, but better was at hand when in the frost-silvered dawn he and Sam would be afield waiting for Drive's whimpered prelude to burst into melody, signaling them to make all speed to their runways.

He was thinking of this as he moved uneasily about the kitchen, waiting for a lull in the wild weather that he might go up to Sam's and plan a fox hunt for the quiet day which was sure to follow the storm. Now he let in a rainy gust at the narrowly opened door, now he peered into the blankness through the beaten panes. He watched with dull interest the flickering lantern of the mail wagon struggling against the wind and rain. With a little interest, though it reached out toward him in shivering reflections across the ruffled, rain-pelted pools of the road, he saw it stop at Clapham's to drop the mail bag that brought him no more letters.

He turned wearily away and said to his mother:

"I b'lieve I'll gwup tu Samwil's a spell," and took his hat and coat from their peg.

"Why, Peltier Gove," she exclaimed, dropping her hands and the stocking she was darning into her lap together, while the ball of yarn fell unnoticed to become the plaything of the kitten. "You'll git soppin' wet an' ketch your death cold, an' it's darker 'n Egypt."

"It don't rain sca'cely a mite naow, an' I wantner see Samwil peltier."

His mother arose and went to him, laying a gentle hand on his arm as she said in a low, beseeching voice:

"You haint a-goin' tu Hamner's, be ye, Peltier?"

"No, marm, I haint. I don't go there no more," he answered, with a decision that was convincing.

"Anyb'dy 'at's got a ruff over 'em an' do' know 'nough tu stay 'n under it sech a night, ortu be put in the 'Sylum,' his father said, shutting the stove hearth with a spiteful kick of his stockinged feet.

His sister casting a scornful glance at him from her hem-stitching, said witheringly, "Lordy! I hope tu good-

ness, I shan't never git in love if it's got tu make fools o' folks!"

Pelatiah looked reproachfully at her and went out, only saying to himself, "I hope tu the Lord you never will, Alviry."

More than a lack of sympathy and the impatience with his melancholy evinced by all the family save his mother, a desire to be out in the wildness of the night impelled him to go forth. The raging elements gave him something to fight against and he felt a kind of purposeless heroism in breasting the fierce buffets of the wind and the pelting rain.

As he struggled forward toward the road, bending against the furious blasts, he ran against some one and both were brought to a sudden stand.

"Ooogh," gasped a boyish voice. "Is that you, Peltier? I was a-comin' arter you. The 's someb'dy tu Hamner's wants to see ye, right off. My! Ef you didn't skeer me!"

The words were whisked away by the wind but not till Pelatiah had caught them all.

"Someb'dy wants to see me tu Hamner's? Well they won't, thet's all! I haint a-goin' nigh Hamner's fer nob'dy, Billy Wiggins."

"But ye got tu," the boy shouted up to him. "They said you must, Hamner an' ol' Kezier."

"But I won't," persisted Pelatiah stoutly. "Who is 't? That feller 'at buys fur?"

"No, I do' know who 'tis, but you got tu come. Both on 'em said so. It's life or death, they said, both on 'em, Kezier in partier. I wouldn't go back alone fer one dollar!" and Billy clutched at Pelatiah's fluttering coat skirts and tugged toward the road.

A strange presentiment flashed upon Pelatiah's brain and his heart choked. Life or death! He remembered his promise to his mother and was ready to break it, and taking the boy's hand in his they went down the road, struggling against the surges of the wind.

Their way was less obscure when the lights of the stores and tavern fell across the ruts and puddles, quivering as if the feeble rays trembled in the wind. Beyond, the broader, ruddier glow of the forge banded the road, pulsing with every throb of the hammer, whose thunderous beats were always heard, now rising above the hulls of gusty uproar, now dully accentuating the fiercer blasts.

"Haow come you daown tu the village sech a night?" Pelatiah asked suddenly.

"Why, haint you heard? I've hired aout tu Hamner." Billy asked, resentful of such ignorance.

"You hcd n't orter. 'Tain't no place fer a boy, an' your mother needs ye tu hum."

"She was willin'. An' I c'n be airnin' suthin'. She's got real tough, naow, an' I go hum oncte a week an' chop wood an' tinker up."

At Hamner's they entered a dark passage through a side door and groped their way up a flight of stairs. Beaconed by the light shed through cracked and shrunken panels, they came to the poorest chamber in the tavern. Hamner had evidently shrewdly classified the quality of his guest. The door was opened by a bent old woman, who, after assuring herself of Pelatiah's identity by a brief, keen glance, admitted him, but unceremoniously excluded Billy, to the disappointment of his boyish curiosity.

"She 'pears tu be asleep naow," the old woman whispered, peering over the candle that she shaded with her hand at the motionless form on the bed. "She's a drefille sick gal. Hamner was afeared she was a-goin' tu die right on his hands, an' he hustled right off arter the darker, an' he come an' gi'n her suthin' that sot her tu sleep. I don't b'lieve he thinks she's goin' tu live, fer he didn't say nothin', only sythed arter he'd pulsed her, an' ast tew three questions, an' said her fowls had orter be sent for, an' she said she didn't want tu see nob'dy, on'y you."

The old woman cautiously uncovered the candle and let its light fall for a moment on the haggard, fevered face that lay among a confusion of tangled golden hair on the lank pillow.

Pelatiah's presentiment was verified, and it was not the surprise of recognition that made him start, but the woeful change grief and despair and sickness had wrought in the face.

"Is she some o' your fowls? I sh'd a'mos' thought yer mother 'd ha' come ef she was," the old woman whispered in a hoarse, monotonous buzz.

Pelatiah shook his head and she leered at him with a ghastly grin that revealed one yellow tooth, the sole survivor of the white rows that youthful smiles long ago disclosed. There was a terrible revelation in that wrinkled visage of the old age that a sinful life brings one to, and he was thankful it was in the power of death to forestall it.

"Ooh, yer gal, eh? Wall, Jake's goin' tu see the s'lec'-men, er the postmaster, an' hev her took keer on."

Pelatiah started. "You go an' tell him the haint no need on 't. I'll take keer on her. She haint goin' tu be no taown charge!"

"I never hed no idea you was such a lively young feller," said Kezier, leering at him with an admiration that filled him with disgust.

"Go quick! I'll stay with her."

He placed a chair softly beside the bed and sat down, as the old woman left the room. The girl moaned, moved uneasily and opened her eyes, looking wildly about till they rested on Pelatiah, and then a look of gratitude lighted them.

"I was 'feard you wouldn't come. I hadn't no right to ask you, but I couldn't help it," she said in a thin, weak voice. "I haint got a friend on airt—no one, not one," and her piteous voice broke with a sob before she answered his questioning, puzzled gaze. "No, he never married me. He went off an' lef me. I must tell ye quick, fer it seems as though I was goin' away somewheres, right off; an' when I went hum my folks turned me aout door, an' I went tu work aout where they didn't know me, an' I took sick, an' they wouldn't keep me no longer, an' I come here. It seemed as 'ough I'd got tu see ye once more an' tell ye I'm sorry I was so mean tu you. You can't never forgive me, but I wish 't you wouldn't hate me."

"I never hated ye one minute, Lowizy," he spoke in a choked voice, and then after a conscientious questioning of his heart, "an' I du forgive ye. Mebby you've bore more'n I hev."

"Thank ye, Pelatiah. Be you willin' tu take a holt o' my hand?" she asked timidly, and for answer he clasped tenderly in his rough palm the thin, hot hand that was feebly stretched out to him. She closed her eyes and sighed restfully, then after a while asked:

"Why, it aint June, is it? Seems 'ough I heard the birds singin' an' smelt the young come-ups. It's time I was a-goin'. Good-bye, Peltier." The feeble tension of the little hand relaxed in his, her last breath fluttered out upon his cheek and the poor fickle heart grew still forever.

"Is she sleepin' yet?" old Keziah whispered, entering on tip-toe and exhaling an odor of strong waters.

"You needn't be afeared o' wakin' her no more", Pelatiah answered solemnly.

"Good land o' livin'," she gasped in an awed voice. "You don't say she's dead?" and then after assuring herself by a look and touch, "Poor little creature! It's turrible tu be took so young."

"I don't b'lieve 't is, not allers. Is Jake up? I wantner see him." As he groped his way down the narrow stairs, it seemed as if years had passed since he climbed them.

The storm spent itself in the night, and the morning broke on a peaceful world. As peaceful under the white veil of the dread mystery into which she had passed after the storm of life, was the face of the dead girl. It was as if she had gone forth into the unfathomed hereafter, as well assured of forgiveness there as here.

Attended by a few sympathizing friends, Pelatiah laid his dead, now wholly his, to rest in the shadow of the flaming sumacs in the old graveyard on the hillside. There was no service but the brief testimony of Joel Bartlett, who felt moved to say:

"Inasmuch as we hev ben told by One formerly that aour Heavenly Father does temper the wind tu the shorn lamb, I feel it bore in upon me, that this poor little lamb, which may hev strayed fur f'm the flock, is gathered tu the fold by the good Shepherd."

Unseen by any but Pelatiah, Huldah covertly dropped a spray of pale asters into the open grave. As the careless clouds began to fall with muffled thuds on the straw-covered coffin, the little company silently dispersed.

"It kinder seem 's 'ough Peltier felt was 'n the' was any need o' his feelin', considerin', but mebby he don't, I d' know," Joseph Hill remarked to Antoine as they lingered last at the graveyard gate.

"If you'll seen dat gal wen she was 'live an' fat an' jes' good as anybody gal, you'll ant blem Peltier for cried."

ROWLAND E. ROBINSON.

## CANADIAN SPEECH.

CENTRAL LAKE, Mich., Feb. 3.—Removing my hat and making a bow as graceful and dignified as my anatomical structure will admit, I desire to present my compliments to your correspondent "Pintail," together with the assurance of my distinguished consideration.

His comments in your last issue upon my paper on Camp Jibbenainosay are just, his conclusions reasonable and to the point. In many visits made to Canada during the last forty years or so, I cannot remember a single instance of a "misuse of the aspirant" on the part of any native-born Canadian with whom I have conversed. It might, however, have been otherwise; for instance, I once knew a born Welshman (named Rees), who spoke only a fine grade of Yellowplush cockney. The explanation was that twelve years of his youth had been passed in London.

In the Kingfisher Club, when we speak of the gentlemen we have met in Canada, it is generally as "Canadians," without much thought of their birth place, just as during the war we were all either "Johnnies" or "Yanks," though nearly every nation under the sun was represented in the armies. The fact is, that there was but one person seen at the camp in question who habitually trifled with the aspirants, and he was English-born. If I did not in my article make this clear, besides giving your readers several very comical instances of this failing on the part of the gentlemen referred to, it was that I desired to spare his feelings, for I intended to send him a copy of the paper containing my remarks.

I have sometimes felt inclined to believe that the average Canadian speaks better English than the average Englishman, and while on the subject of dialects I may say that I have often thought it odd that no one save an American has ever, to my knowledge, reproduced successfully the peculiarities of American speech, especially in its New England forms. Holmes, Lowell and Rowland E. Robinson are masters in this respect.

There is a queer passage in Forster's Life of Dickens, which I quote from memory: Dickens was aboard a vessel in some Mediterranean harbor, when an American came over the side and at once exclaimed: "Well, I'm blamed, if it ain't Dickens." After introducing first himself and then his companions, he added (according to Mr. Forster): "Personally, I expectuate you and them can fix it agreeable."

Who ever heard such a speech as this from an American mouth? Charles Reade does little better; but it is hardly worth while to attempt here the elaboration of an essay on this subject.

I will say in conclusion, as I have said before, that in writing for the FOREST AND STREAM it is well to be accurate, for if you be not, some correspondent at the other end of the earth will surely trip you up.

KELPIE.

CINCINNATI, O., Feb. 4.—Editor Forest and Stream: I noticed a "kick" in FOREST AND STREAM of Feb. 3, by "Pintail," of Sorel, P. Q., anent, as he alleges, "Kelpie," "putting the Cockney dialect into Canadian mouths," and I am moved to take up the cudgel, unasked, in defense of my old friend and camp comrade ("Kelpie"), for I know him to be a man who would not intentionally inflict needless pain on the lowliest of God's creatures nor make wanton sport of the feelings of his humblest neighbor, be he Cockney, Canuck, or indigenous to U. S. soil. "Pintail" assures "Kelpie," "That a misuse of the aspirate is not characteristic of Canadians," and winds up with, "I should have expected a man of 'Kelpie's' attainments to be better informed."

"Easy thar, brother 'Pintail,' you have hollered afore yer hurt," as they say over in "ole Kaintuck," and if I may be allowed, I will rise and explain, I trust to the satisfaction of "Pintail" and the rest of our Canadian brethren.

While in camp at Big Basswood Lake, we had a visitor, a young Englishman (not a Canadian), a friend of Br'er Dyer, who spent a day with us to his edification, as I hope and believe. He was a "bully good feller" and a sportsman, and we all took a liking to him, but at times he set us blarsted Hamerians nearly distracted by "a misuse of the aspirate." He was a "h'out and h'out Hinglish-

man, a resident, however, of the district (Algoma), but had just returned from a somewhat lengthy visit to his mother country, and besides carrying a superfluity of "haitches" which he fired at "memorandum"—as old Dave Edwards did at the rebels—he was loaded with some snob phrases that he had doubtless picked up among the swells and dudes on the other side, with which he made us weary with what "Old Knots" used to call "the damnable iteration."

Any statement that was mildly surprising to him—and there were a good many such sprung on him—invariably moved him to relieve himself with a string of "oh-ohs" usually adding to the three ohs "ah, oh!" as a clincher. Then anything said that he coincided with, he put the seal of approval on with "oh, yes, yes! quite so, quite so; ah, quite so," repeated with a rapidity that betokened a fear that some of the "ohs" and "quite sos" would get away from him before he got out of breath. I fished with him a few hours in the afternoon in a boat where I couldn't get away, and when we got back to camp I was so "oh, oh'd" and "quite so'd" and "asperated" that had I undertaken to write my name I doubtless would have started it with a capital hi instead of an haitch.

However, I reached camp without quite losing my identity, albeit I was not in a very hilarious mood, but I felt relieved, "quite so, quite so."

But, as I said before, our friend "hA." was a bully good fellow, and a sportsman, which makes amends for a heap o' sins of commission and omission. Brother Geo. Dyer, too, near whose kitchen door we had our camp, is a John Bull from 'way back, and pays as little attention to a misplaced "h" as he would to a turtle track in the sand; but he also is a good fellow and a sportsman, and we did not split with him because he haspirated a trifle when he talked through "is 'at."

But our simon pure Canadian neighbors round about us did not misuse the aspirate to any noticeable extent—the "howl don't 'oot in Halgoma"—and I am sure, "quite so, quite so," that Kelpie did not intend to "put the Cockney dialect into Canadian mouths" when he wrote the last paragraph of "A Kingfisher Corollary," but had in his mind's eye one, or maybe both, of our aforementioned English friends. I say friends, for the "Kingfishers" look on every angler and sportsman as a friend and brother, whether he hadd hon a hextra haitch where not needed or drop one hoff where it might be better 'itched hon, and besides, I can't see why brother "Pintail" should flare up and work himself into a "category" if an Englishman, or a Canadian for that matter, does misuse the aspirate, especially if he is built that way and "cawn't 'elp it, ye know."

We found our brother sportsmen in Canada to be very much the same as those we meet on our side of the boundary—gentlemen—and our Canadian neighbors were clever and obliging, and "plenty good enough fur the Joneses." And now, I trust Br'er "Pintail" will pardon me for taking up the pen in my old friend "Kelpie's" behalf, for I know him to be a conscientious, considerate and veracious chronicler, and he usually knows what he wants to say, and writes of things fairly and fearlessly, just as he hears and sees them.

CINCINNATI, Ohio.

"That reminds me."

#### A WEST VIRGINIA IDYL.

THE story which I am about to narrate to the truth-loving readers of this paper, was told by a charming young lady from Virginia. When I first heard it I confess that I did not believe it, but when I expressed a doubt regarding a few minor details, she appeared to be so hurt at my implied disbelief in the main facts, that rather than bring tears to the depths of those truthful eyes, I swallowed it all and have never doubted a word since. I make no question that those who read it here will believe it implicitly, otherwise I would not tell it.

"It all happened about three years ago," she said. "I remember the time because it was my first night-ride in a sleeper over the Central. The road was awfully rough in those days. That was the time I was pitched out of my section right across the aisle into the opposite section, and did not wake up at all. I thought it was just an ordinary jounce, and slept right along till morning. However, that has nothing to do with the story I was going to tell about the cow. It was the morning after I got home that the Colonel came up to show me his new horse. The Colonel was a great fox hunter, and he wanted to show off the horse and make him jump, but there wasn't anything for him to jump over only old Chloe's cow that happened to be lying down in the road. So he rode straight at the cow and just as the horse jumped, the cow got up. Such a mess you never saw. The cow and the Colonel and the horse were all mixed up, and you couldn't tell one from the other; but at last they got unsnarled and then you ought to have been there. The horse wasn't hurt, and the Colonel was so mad that he didn't know whether he was hurt or not, but the cow was a wreck. About that time old Chloe came out, wringing her hands and crying, and carrying on so that the Colonel had to buy the cow to make her keep still. So he paid about four times what it was worth and then he didn't know what to do with it; but he was bound to get rid of it, and gave it to Charlie, who did all he could to patch the poor old thing up, but it was no use and that night it died."

"The next day an old darky was skinning the cow when Jim happened to come along. Jim and Charlie were always great chums and loved duck shooting better than anything, and they hatched up a scheme between them for getting at the ducks down in the marsh where there was not any cover. They stretched the skin over some hoops and dried it, so that it looked considerably like the old cow, and then they were ready. Charlie got inside the skin and made the front legs, and poked his gun up through the cow's neck so he could shoot out of the cow's eyes. Then Jim got into it to make the hindlegs and he put his gun up through the cow's tail. Then they started across the open marsh toward the ducks. Such a sight you never saw. Jim had to walk backward because he was facing the tail, and if there was ever a crazy-drunk cow that one was. I never laughed so much in all my life. First Charlie would stumble and down would go the cow's nose in the dirt; then Jim would lose his balance

and the cow's tail, that was as straight as a gun barrel, would wave in all directions at once. I never saw such a circus anywhere. Of course, the ducks could not stand it, and when they put their necks up and Charlie saw they were going to fly pretty quick he started to run; but Jim couldn't go any faster backward and down went the old cow all in a heap. Jim's gun went off and blew the tail all to pieces, and we up in the woods laughed till I thought we should die right there. The boys were awful mad. They didn't know there was any one watching them and I am not sure they have forgiven us yet.

"I have not seen the Colonel for a long time, but old Chloe lives with us now. She is the best old darky you ever saw. Why, hot nights she will stand by my bed and fan me all night long, and be just as sound asleep as I am. Never stops fanning for a minute; I don't see how she can do it, do you? I don't know what I should do without her."

That ended the story and the story telling. Some of us had intended to state a few facts ourselves, but we saw the absolute futility of Massachusetts attempting to cope with West Virginia in telling stories that were strictly true, so we forbore and the party soon dispersed.

BRADLEY.

### Natural History.

#### GROUNDHOG DAY.

"I have heard old farmers say:  
You must save for Candelmas Day  
Half your wood and half your hay;  
Though the sun go down on the buds so brown,  
And the south winds blow on the melting snow,  
There are very many days, there are very many days  
Ere we see the pretty flowers of spring."

—Old Song

CANDELMAS, Groundhog Day, 1894. An old farmer in my native town once quoted the substance of the above proverbial rhyme to another, thus:

"Half yer wood an' half yer hay,  
Fer to-morrow's Can'lemas Day."  
"Yes," replied the other,  
"An' ef there's a chance for snow er rain,  
A plenty o' meat 'n grain."

As far as my observation goes, it is not a general custom with American farmers to burn superfluous candles on this important anniversary. They seem to have more cheaply compromised the matter by giving over the duties of its appropriate celebration to the bear and the groundhog, and no member of either species, if of correct principles and competent education and acquirements, ever fails on the second of February to climb out of his den, sit up, and diligently look about him in search of his shadow. If he sees it, he forthwith returns for a further nap of six consecutive weeks; if he sees it not, he goes not back to his lair, but stays outside and waits for warm weather. To-day has been quite sunny, and shadows were easily seen, and an old neighbor of mine said: "It's astonishin' haow many the 'is 't b'lieves that there story."

Our winter here in northern Michigan, though it began in November with weather of unusual severity for that season, has been for the most part quite mild. The snows are not as deep as they were two months ago, as rains and thaws have not been infrequent. There is a good deal of crust on the snow which is not favorable for some sorts of game, but I think the deer have not fared badly, and I have heard of no crust-hunting.

Speaking of groundhogs, or woodchucks, they were formerly very plentiful in this region, but within six or seven years, the badgers (as well as the skunks) have appeared in this county, where none of either was ever seen before; and the badgers have as far as I can learn, nearly destroyed the woodchucks. They are said by the farmers to dig them out, kill and devour them.

I should think that this might be a good thing, as where mowing machines are in use, the hillocks thrown up by the woodchucks are apt to cause some profanity on the part of the mowers.

KELPIE.

CENTRAL LAKE, Mich.

#### ALBINO SPECIMENS.

NEW YORK, Jan. 31.—In your issue of Jan. 27 I notice an article by J. S. Ricketts about a white deer. It is strange that so few understand what this is or what it means, it is so often written about and as being something wonderful. It is liable to occur in any family or in any living thing. It occurs even in the grasses. White deer, white corn, white fox, white squirrel, etc., are all albinos and only freaks of nature. A. M. D.

[It is well enough understood that albinism is a "freak of nature," nevertheless records of its occurrence are interesting and should be noted.]

OTTAWA, Kans.—In January I killed a fine white quail, not a snow white, but of pink cast. Turn the feathers wrong side out and it is a decided pink; but when they lie in proper manner they are between the color of a turtle dove and pink, with variegated mottles. The head has the distinct marks of a male quail. Being a taxidermist myself, I have preserved and mounted him, and have him in my office. He is the first one of the kind I ever saw.

H. B. P.

The famous Chicago albino blackbird, which for some time has been numbered among the interesting adornments of Billy Mussey's billiard hall, and which is probably as perfect a specimen of the albino blackbird as was ever seen, has a little history which may be interesting. The bird was killed at Mak-saw-ba Club, on the Kankakee River, Indiana, by L. R. Brown, who saw it among a number of blackbirds which had alighted on the frozen ground. Getting within 50 yds. or more, and fearing to alarm the flock by trying to go closer, Mr. Brown fired and broke the wing of the bird. It was still lively and in trying to catch it all the tail feathers were pulled out. Mr. Brown carefully gathered these and brought them with him, keeping the bird alive. It was alive, active and very pugnacious when brought to the city, and would probably have lived a long time, though it was thought best to preserve it in full and undragged plumage. The taxidermist put in the tail feathers when the bird was mounted. It is a very perfect specimen, milk white except for a faint tinge of ruddy feathers on the butt of

the wings, which makes the bird all the more interesting, as it was found in a flock of crimson-winged blackbirds. As shown now, the eyes are of a little lighter pink than they should be. In life they were fairly dark. Most albinos are more or less unsatisfying, but this little bird is pure white and beautiful, one of the rarest specimens in the country, and probably the best of its kind ever known, if, indeed, the white blackbird was ever really seen before.

At Mak-saw-ba a white muskrat was killed not very long ago, and it seems natural for all sorts of unnatural things to happen there.

Lately I was speaking of black foxes, red foxes, etc., in the matter of a letter from Dakota. Since then I learn of the capture of a black fox, as see the following clipping from the Saginaw, Mich., *Globe*, which is sent me by some one unknown:

At Henning & Holden's place, 405 Genesee avenue, there are displayed to-day three fine specimens of fox, which were killed within two hours' time near Reese on Saturday. One of the animals is "black," pronounced by old hunters to be the only specimen of the kind ever seen around these parts. The fortunate hunters who did this big work were Charley Frueh, Chris Waltz, William Body, Tom Gaffney, Alvin Fox and William Held. It was a field day for the boys and they are justly proud of their accomplishment. The dog that was used belonged to E. G. Fox, of Reese, and is said to be a thoroughbred English foxhound. Charley Henning thought so much of the dog's achievement that he to-day purchased him.

Incidents like the above are so unusual as to be of great interest.

E. HOUGH.

#### "Malevolence in the Lower Animals."

IN an interesting article in the *Ohio University Bulletin* on the above subject, Prof. J. E. Le Rossignol gives the views of Dr. Wesley Mills and Mr. B. Waters bearing on heredity of bad temper. He propounded six questions as follows:

- "1. Is bad temper hereditary?"
- "2. Is training or environment of greater importance than heredity in determining the good or bad temper of a dog?"
- "3. Are good and bad temper respectively characteristic of any particular breeds of dogs?"
- "4. What is the proper method to employ in overcoming hereditary bad temper in a puppy?"
- "5. What sort of treatment is calculated to spoil the temper of the puppy?"
- "6. Do the answers to questions 1 and 2 apply also in the case of horses?"

Dr. Mills replies as follows:

- "1. I am satisfied that any trait may be hereditary, bad and good temper included. I would hesitate to breed from a bad-tempered dog of either sex, no matter how excellent a specimen otherwise, especially if of a larger breed, as being more dangerous to man and his canine companions."
- "2. Heredity, I believe, by far the stronger."
- "3. No; though it occurs more frequently among certain breeds perhaps. A bad-tempered setter or spaniel is rare. Bad temper may be said to be much more common in certain breeds than in others, rare in some, but absolutely confined to none."
- "4. Furnish an environment free from temptation and encourage a sense of justice—for dogs have this in a fashion at all events—from the first. Give him little chance to quarrel, but insist on his realizing that if he does it willingly, punishment of some kind—not necessarily corporal—will follow. I have found separation sometimes a severe punishment for dogs. They seem to know in some measure what it means. Disapprobation, scolding, is severe punishment for some dogs."
- "5. Teasing, hard usage, over-punishment, injustice, &c. Highly bred dogs especially suffer much psychically under bad usage, especially punishment in anger and to excess."
- "6. Yes."

Mr. Waters's answers were:

- "1. It sometimes is; not often. Bad temper, or rather capability of bad temper is in most cases acquired. But few dogs are so fortunate as to go through life without being maliciously teased or abused. Certain actions, looks, or people are associated with mal-treatment or pain. Even when in ill temper, dogs oftenest merely make a pretense of biting, if they make any effort at all. All dogs have more or less latent ill temper, the same as human beings. They are usually good-tempered. I never saw a dog ill-tempered from pure wantonness. Of course, heredity asserts itself in the disposition as in all other phenomena of the organism; but I never saw a dog born with an active ill temper."
- "2. Training and environment have everything to do with it. There is no dog but can be made ill-tempered by improper treatment. No dog is ill-tempered but kind treatment will cure it."
- "3. Some breeds are more courageous than others. Bull-terriers, fox-terriers, other terriers and some breeds are quarrelsome among themselves, not necessarily from ill-temper. Toward their master or acquaintances they may be affection personified if kindly treated. If pain is inflicted the instinct of self-preservation prompts a defense."
- "4. Kindness. I never saw a naturally ill-tempered puppy. I do not consider that a display of anger at ill treatment or teasing is ill temper. Kindness quickly dispels ill-temper in a dog which has had good raising."
- "5. The same which would spoil the temper of a human being. Confinement, punishment, teasing maliciously, insufficient food and inflicting pain wantonly and constantly. However, a dog is very forgiving, and will forget a lot of previous abuse if treated kindly. He will resent any attack on his master sooner than if offered to himself. Cowardly dogs often show great fortitude in defense of those they love. Apparent ill-temper is sometimes only a manifestation of jealousy. Some dogs are so attached to those they love that they resent the approach of strangers. This is apt to become habitual if the master shows the slightest approbation of it. If their love is not recognized, or a rival dog is shown more favor, the defeated dog often shows dejection and grief, sometimes going in hiding to mourn alone."
- "6. These answers do not apply to horses. Horses are not so affectionate as dogs. Some colts show malicious ill-temper from birth."

There is in these answers a diversity of opinion as to whether bad temper is hereditary. We must say, however, that our experience prompts us to lean to Mr. Waters's view. The old saying "Train up a child in the way he should go, etc.," is very applicable here. Very few dogs, in fact they are the exception, are born with bad tempers, they either become vicious by environment through association with other dogs or through the ill-advised treatment of their masters. Prof. Rossignol takes this view when he says:

"Unkind and unfair treatment of animals by men has the effect of rendering them chronically ill-tempered. It is partly for this reason and partly, perhaps, because of the fact that animals possess the tendency to imitate, the quarrelsome people generally possess ill-tempered dogs. 'Like master, like dog.' On the other hand, people of kindly manners are generally found surrounded by animals of like disposition, showing that environment exerts a power equal, if not superior, to that of heredity. Ill health is frequently the cause of bad temper in animals as well as in men. Yet it is well-known that animals will often endure severe surgical operations without resentment, as if conscious of the good intention of the operator."

If some of our large breeders could be induced to give their views on this important question of hereditary bad temper they would prove both valuable and interesting.

## AMERICAN GAME PARKS.

### The "Forest and Stream's" First Annual Report on Game in Preserves.

IN the issues of March 12, 1891, and May 26, 1892, *FOREST AND STREAM* published accounts of Mr. Austin Corbin's Blue Mountain Forest Park. In the second of these articles particular attention was paid to giving an estimate of the increase of wild animals in the park. So much interesting matter was developed that it has now been deemed profitable to follow out this same line of investigation with the other game preserves which are yearly becoming more numerous in this country, and in a rough way take a census of the wild animals with which they are stocked. One of the main objects of this census is to ascertain, wherever possible, the increase of the different species in confinement, thereby demonstrating which are most prolific in changed habitats and under strange conditions, and enabling a discrimination of those most suited for special parks. With this object in view the inquiry will be continued each year, and the results laid before our readers.

#### Blue Mountain Forest Park.

The Corbin Park in New Hampshire presents one of the most successful examples of game stocking on a large scale that has ever been achieved in this country. Its conception only dates back seven years, when Mr. Corbin conceived the idea of inclosing a few thousand acres in the vicinity of his home-stand at Newport, N. H., and it is only a little more than four years since the first wild game was released there.

Mr. Corbin's first intention was to inclose about 5,000 acres of land. His modest estimate grew till he ended by inclosing 26,000. Two years were consumed in building the fence of barbed and woven wire, putting up gates and making other necessary arrangements for the care of the animals.

Previous to the completion of the fence an inclosure of about thirty acres had been constructed in which twenty buffalo had been placed. When the fence was at last finished, the formal stocking of the park began.

The following animals were released: 130 deer, 150 elk, 20 moose, 30 antelope, 7 reindeer, 14 wild boars and 20 buffalo. Mr. Corbin, in speaking of them at the present time, says:

"I lost all the antelope and all the reindeer. The antelope because of the climate being too variable, and the reindeer for want of the proper food. I am satisfied that neither animal will thrive on the Atlantic coast, except that north of central Maine the reindeer may possibly do well.

"My deer are now estimated at about 400; elk, 400; moose, 60; wild boars, 250. All these animals lived through the winter months without feeding. I have also, young and old, 40 buffalo—30 females and 10 bulls. I should have this spring about 15 calves, or possibly 18. They breed and thrive as well as domestic cattle. These buffalo are kept in large yards during the winter months and fed like domestic animals.

"There are also in the park German hares, rabbits of all kinds, the native partridge and the Mongolian pheasant, all of which are doing well." Included among the deer are about twenty-five blacktail, with whom the New Hampshire climate seems to agree.

Mr. Corbin has also at Blue Mountain a number of fine dogs, including boarhounds, large dogs, brown and white and liver and white in color, with long drooping ears. They are kind in disposition. In the near future Mr. Corbin intends to secure some mountain sheep and beaver for the preserve, and he now has seventeen European red deer en route. The result of introducing red deer among the elk will be watched by naturalists with interest, as it is a well-known fact that these animals have been successfully crossed. None of the animals in the park have been shot except a few stag elk and some wild boars. The wild boars frequent the highest parts of the mountain and are very difficult to approach.

The natural features of the park make it an ideal game preserve. Blue Mountain is wooded to its summit, 2,800ft. above tidewater. On its sides many springs take their rise, which furnish an abundance of cold water to Sumner's and Governor's ponds, both of which afford good bass and pickerel fishing. The brooks—about forty miles of them—are well stocked with trout.

Before the inception of his Blue Mountain Forest Park, Mr. Corbin had already had considerable experience with deer and elk in captivity. At Babylon, L. I., he had an inclosure of 130 acres, reaching to a fresh-water lake, in which a number of both varieties were kept. Running through the center of this inclosure was a fence that separated the deer and elk, as a safeguard against quarrels. The deer and elk increased quite rapidly, and there are

now some thirty of the former and twenty-five of the latter.

At Manhattan Beach Mr. Corbin had in 1892 ten sea lions and a dozen seals, as well as a number of elk and buffalo. There is not the slightest doubt but that the seals and sea lions would have thrived in the salt-water pool provided for their accommodation, but they made too much noise for the comfort of the guests at the hotel, and were taken away. The elk and buffalo did not thrive very well, and were also taken away. When the marsh grass was young they ate it, and it did not agree with them, and the neighborhood of the salt water was not to their liking.

#### Ne-ha-sa-ne Park.

Next to Austin Corbin's Blue Mountain Forest Park, Dr. W. Seward Webb's Ne-ha-sa-ne Park bids fair to be one of

ELK IN NE-HA-SA-NE PARK.

From a photograph taken on Christmas Day, 1893.

our largest game preserves. This park is in the western Adirondacks, and extends twenty-four miles along the line of the new Adirondack & St. Lawrence Railway. It includes what is to-day probably the wildest part of New York's North Woods, and is admirably adapted for stocking with certain species of American big game. The native deer are at present very abundant there and it has only been a few decades since moose were also found. In fact signs of a moose have been reported in *FOREST AND STREAM* as having been seen in that neighborhood within the last few years. Of the entire park Dr. Webb has reserved about

[BUFFALO IN BLUE MOUNTAIN FOREST PARK.

[Reprinted from our issue of May 26, 1892.]

50,000 acres for his own use, and of this about nine thousand acres at present are fenced. Into this inclosure has been turned out the game mentioned in the following letters:

New York, Dec. 21, 1893.—*Editor Forest and Stream:* I have your letter of Dec. 16, in regard to my Ne-ha-sa-ne Park, and in reply would say that I have as yet turned out very little foreign game. Last month, however, I turned out 22 elk (10 two-year-olds and 12 three-year-olds) and next week I shall turn out about a dozen more. In the spring I shall probably turn out, as an experiment, about 50 English pheasants. Whether they will escape the foxes and vermin is hard to say.

At my place at Shelburne, Vermont, I have turned out quail from North Carolina, and I raise about a thousand English pheasants every year. I find that they winter as well as our American partridge (ruffed grouse), and both the pheasants and the quail have been found from thirty to forty miles back in the country and up and down the shores of the lake.

W. SEWARD WEBB.

New York, Jan. 8.—*Editor Forest and Stream:* For your information I would say that last Saturday morning I turned out 15 more wild elk, yearlings, in my park in the Adirondacks. This makes 37 in all that I have turned out. I have also made arrangements for 20 blacktail deer and 10 moose.

It is hardly necessary for us to add that the press reports to the effect that Dr. Webb's elk came from the National Park are entirely without foundation. The elk were sold by Frank D. Ball of Opal, a town in the extreme southwestern portion of Wyoming.

#### Litchfield Park.

Another game preserve from which interesting developments may be expected is that of Mr. Edward H. Litchfield, near Tupper Lake. This is comparatively near Dr. Webb's park, and it is one of the most recent enterprises in this line. Mr. Litchfield gives some interesting details in the following letter:

New York, Jan. 5.—*Editor Forest and Stream:* My park embraces between 8,000 and 9,000 acres, being the south third of Township 25, Franklin county, lying in the exact southwest corner of Franklin county, and south and east of Big Tupper Lake. I purchased it last August.

My intention is to create a private preserve for my own use, similar to those in Scotland and the Tyrol.

I have five lakes and ponds; the largest is Lake Madeleine (formerly Jenkins Pond), and is two miles in length; Duck Lake, the next in size, is almost as large. These lakes all contain brook trout; Lake Madeleine has lake trout as well. In common with most Adirondack lakes they have been fished to death. I found ice-chisels on the shores, showing they had been fished through the ice, contrary to law. Inquiry developed that this was customary. This practice has been stopped by me as a matter of course, and the fish will have a rest this winter and hereafter in close season. I think it will take several years to put the lakes back where they were before in the matter of fish.

My first step on taking possession was to stop hounding. This created for me enemies, I suppose, but I have my own convictions as to the injury caused by hounding, and I propose to adhere to them.

My intention is to stock Litchfield Park with exotic game. I have bought a small herd of elk, four bulls and seven cows; they are now wintering at Rome, N. Y. In the spring I will inclose a tract of several hundred acres in the park and then turn them out there. Probably more elk will be bought and added to the herd, and the inclosed area will be enlarged as required. From my acquaintance with their habits I have every reason to believe they will do well in the Adirondacks. I have also bought some black-tail deer, but I have grave doubts as to whether they will thrive there. You can easily see that with such game inclosed in a small park it would be folly to allow hounds to run through my tract, and that I will be obliged to protect my elk and deer as if they were sheep. I may experiment also with birds, such as sharp-tailed grouse, etc.

I have had considerable experience in Rocky Mountain hunting, as you may remember, and I have long wished to introduce the elk into the Adirondacks, their ancient home. The last elk was killed on or near the Saranacs about 1830; Drake De Kay gives the exact date.

I may try breeding moose, but not yet. At present there are a good many fur-bearing animals in Litchfield Park, including some otter and a few bear. The latter, however, are migratory. Partridges are not very numerous. Black ducks, sheldrake and loons are to be found in their season. My men estimate the deer (whitetail or Virginia deer) to number about 250. I think myself that this estimate is too large, but that there are about fifty permanently inhabiting the tract. It seems quite a favorite spot for does and fawns, and this again is an argument against hounding. I will not allow does to be shot there at any time or under any circumstances, and it would be very wise to

enforce such a law all through the Adirondacks. I am credibly informed that back in St. Lawrence county, where hounding is forbidden by law, deer are much more numerous and much tamer than in Franklin county. The law is a dead letter at the head or south end of Big Tupper Lake, and hounds were started and run there regularly last fall, and many deer were killed by their aid within the county line. This line crosses Big Tupper Lake, the southern portion being in St. Lawrence county.

EDWARD H. LITCHFIELD.

#### Brandreth Park

Dr. Webb and Mr. Litchfield seem so be the only individuals in the Adirondack region at present who are attempting to introduce exotic species of game. Fifteen years ago the Adirondack Club imported a few moose from Canada, in the hope of restocking their preserve with these animals, but they all died shortly after reaching their destination.

One of the oldest Adirondack preserves is Brandreth Park. The following letter with regard to this park is quoted on account of its general interest, though it does not rightly come within the province of this article, which deals with game propagation in inclosed parks:

SING SING, N. Y., Dec. 26.—*Editor Forest and Stream:* Brandreth Park (23,600 acres), Hamilton county, N. Y., has been preserved for twenty years. It has never been stocked with game, but the deer have increased very considerably, not only in our park, but in the regions adjoining. We estimate our present number at 400. We lost last winter about 20 per cent. on account of the severity of the weather, difficulty in procuring food and the wolves that made their appearance last winter the first that have been seen in over ten years. One was trapped in November, and there is still a small pack in our vicinity. Stray dogs were also very troublesome.

The average number of deer killed by us annually has been under twenty-five. We rarely use hounds and would be glad to see a law prohibiting their use. There are a few black bear, but it would be impossible to give an estimate of their number. We have a great many foxes, which are very destructive to the ruffed and spruce grouse. There are quite a number of the northern hare.

We have stocked our waters twice with landlocked salmon and speckled trout; the latter have done well and improve the native trout, but we cannot give any report of the former, as they have not been in the waters long enough for a fair test.

F. BRANDRETH.

#### Mr. Vanderbilt's Asheville Park.

Mr. Austin Corbin's game preserve is said to have cost him nearly half a million dollars. Dr. Webb's Ne-ha-sa-ne Park must have cost nearly that figure, and now Mr. George W. Vanderbilt has followed their lead and bought up a domain in North Carolina, near Asheville. His park is naturally well stocked with native varieties of game, such as quail, pheasant, woodcock, deer, foxes, etc., and it is reported that he will soon introduce the principal varieties of American big game, and as much foreign game as seems desirable. It is not possible at present to give any figures on the subject.

#### Furlough Lake

Besides those already mentioned there are a number of important preserves comparatively near New York city. Among these may be mentioned the South Side Sportsmen's Club on Long Island, Blooming Grove Park in eastern Pennsylvania, Mr. George Gould's Furlough Lake Park and the State Park in the Catskills, Tuxedo, and the Sterling Iron & Railway's park in Orange county, N. Y.; the Liberty Club, near Meriden, Conn., Mr. Rutherford Stuyvesant's park at Allamuchy, N. J., and Mr. Pierre Lorillard, Jr.'s park at Jobstown, N. J. In most of the parks named stocking has been confined to game birds and fish and the common deer. There are one or two exceptions, however. One of these is Mr. George J. Gould's park at Furlough Lake in the western Catskills. Following are some statistics of the varieties and numbers of animals in the park:

NEW YORK, Dec. 23, 1893.—*Editor Forest and Stream:* I send you herewith all the information I can collect relative to the game in my park, requested in your letter.

DEER IN TRANQUILITY PARK.

Amateur Photo by Mr. J. J. Pierrepont.

In regard to the elk received in 1889, they were kept in a very small inclosure, and several of the deaths occurred shortly after their arrival, which I attribute to these conditions, and also to the fact that we did not know how to feed them. The deaths among the deer occurred last winter when the snow was so deep they could not get their natural feed, and my men fed them too heartily with oats.

GEORGE J. GOULD.

FURLOUGH LODGE, Dec. 18, 1893.—MR. GEO. J. GOULD—*Dear Sir:* Replying to your communication from FOREST AND STREAM of the 11th ult., there were received of elk on July 10, 1889, 8; December, 1891, 2 bulls and 3 cows; May, 1892, 2 cows and 1 bull; April, 1893, 28; increase in 1892, 3; in 1893, 4. Total number positively known to have died, 11. Total number of elk in preserve to best of my knowledge, 35. I cannot give exact number of elk until they all come out of park. A number were received in very bad shape and there may possibly be no more than I count, but I will not say so positively.

Received of deer July 10, 1889, Rocky Mountain black-tail, 2 does and 2 bucks. August, 1889, native deer (percentage of does in majority), 8. 1892, 1 buck deer, March, 1893, 1 buck deer and 2 does. April, 1893, 1 doe and 1 fawn. Number of deer positively known to have died was 12. Number of deer in preserve to best of my knowledge is 11. Increase of deer, positive, was 5. Park thoroughly gone over to-day (Dec. 18) and only 11 deer seen.

There are 28 Japanese green pheasants and 4 Japanese ring-necked. I did not succeed in rearing young, as stock was received too late in the season to get acquainted with new quarters.

There are 60 Belgian hares in stock and 135 in the preserve. All are doing remarkably well, the game and animals being in first-class shape. J. J. ERMYNKEATOR.

#### Tranquility Park.

The following interesting information with regard to Mr. Rutherford Stuyvesant's Tranquility Park, at Allamuchy, N. J., is contributed by Mr. C. W. Puffer, the superintendent, who is an old Adirondack guide, and a man of considerable experience with game animals and birds:

ALLAMUCHY, N. J., Dec. 28, 1893.—*Editor Forest and Stream:* Mr. Stuyvesant's park contains about 4,000 acres, fenced with a close board fence 9 ft. high and one barb wire 11 in. above boards. The land in the park is made up of hills and swamps and some old, abandoned farms, and have just completed an artificial pond of about 75 acres, with 12 ft. of water. I have just ordered from Caledonia 5,000 German brown or Von Behr trout to stock it with, and 1,000 shrimp.

In 1890 Mr. Stuyvesant stocked the park with thirty Ad-

DEER IN TRANQUILITY PARK.

Amateur Photo by Mr. J. J. Pierrepont.

irondack deer and four blacktail or mule deer. The black-tails are all dead. I don't think the climate is suitable for them, as they all die in good condition. I made an estimate this month of the number of deer now in the park and put it at seventy-five or eighty—it is impossible to tell exactly the number.

Last spring we put in twenty elk—five bulls and fifteen cows, from one to two years old. They had no young this year, but think the cows will all have calves in the spring.

We fed the elk hay when there was snow last winter. The deer wintered without any feeding, and came out well. We have not fed the elk anything as yet this winter, as we have had no snow as yet.

We have one bull buffalo with which we are trying the experiment of crossing with some Galloway cows. We think they will drop some calves in about two months, and if it proves successful will let you know. We put in last summer and fall seven beaver in the pond; two made their escape and one died. The other four are doing well; have quite a respectable house very well started. They are building dams on the inlet to the lake and are cutting timber.

We have quite a plenty of mountain grouse in the park, and are going to put in English pheasants in the spring.

C. W. PUFFER, Supt.

#### Tuxedo Park.

Mr. James L. Breese has furnished the following information with reference to Tuxedo:

NEW YORK, Dec. 29, 1893.—*Editor Forest and Stream:* "At present there are no game birds at Tuxedo Park except the native ruffed grouse, and they seem to increase every year, and offer good sport to any one who can tramp over the rough hills and woods. When the park was first opened I was chairman of game committee for about four years, during which time we raised and turned out about 4,000 English pheasants, but discontinued it, as owing to character of the country it was impossible to keep them from straying. We also turned out three or four thousand quail, but for the same reason as above, not having enough open fields, we gave it up. We also tried wild turkey and Guinea fowl, but had no success. The park at present is well stocked with deer, but we are selling them as fast as we can dispose of them."

#### The Liberty Club.

MERIDEN, Conn., Jan. 15.—*Editor Forest and Stream:* In answer to your inquiry regarding game birds found on the preserve of the Liberty Club at Liberty Hill, Conn., I find our common quail, partridge, woodcock, English snipe, yellowlegs, wood and black duck and sometimes mallard and sheldrake. Among the birds that have been imported by the club are English pheasant and California quail.

The club are expecting to liberate about 500 Virginia quail this spring, which will make nearly 3,000 that have been imported since the club organized.

Owing to the severity of last winter a good many flocks were killed, but partridge seemed to be quite plentiful last fall, and we have had a good winter for game in Connecticut so far, so we are living in hopes of good shooting next year.

T. A. JAMES.

#### Sterling Park.

NEW YORK, Dec. 12.—*Editor Forest and Stream:* Replying to your favor of the 11th I beg to say that we have not stocked the park of the Sterling Iron & Railway Co. with any game. The game there is, therefore, the natural game of the country, being partridge, woodcock, squirrels, etc. We have, however, stocked about eight miles of our streams with 8,000 brook trout, which were put in as yearlings in the fall of 1892.

MACGRANE COXE.

#### State Park in the Catskills.

The superintendent of the State forests informs us through Mr. C. O. McCreedy, secretary of the Forestry Commission, that there are fifty-three Virginia deer now in the Catskill Park. Our correspondent A. N. Cheney sends the accompanying account of how these animals were captured in the Adirondacks.

#### Catching Deer for a State Park.

When I learned that my old friend Mr. Thomas Powers, Forester of the New York Forest Commission, was in charge of the hunt to secure live deer for the State breeding park in the Catskills, I knew that it would be well worth my while to make an effort to see him and get from him for FOREST AND STREAM a detailed account of his operations.

Mr. Powers is a lumberman of wide experience in the Adirondacks, having conducted some of the largest enterprises inaugurated in that region, and his familiarity with the woods and his knowledge of woods life, has been acquired by spending the years of his own eventful life (except when he served in the Army during the civil war and made an honorable record) in the wilderness of northern New York. Not infrequently when one wishes to pay a compliment to "a thoroughbred man" or "a royal good fellow," has the figurative expression been employed that "He will take off his shirt to accommodate a friend." I believe that Tom Powers would do this literally, for that is the kind of man he is.

The first attempt to catch deer for the park was made on the Fulton chain of lakes and it was not successful, as but one deer was captured. This was not under Tom Powers's management, but he tells me that when he received a letter from Col. Fox asking him to undertake the task of capturing a lot of does, uninjured, he thought the scheme bid fair to be a failure.

However, orders are orders, and he went to Indian Lake, a region that I have already written about in FOREST AND STREAM, and with a guide looked the ground over. The guide started a dog and Tom watched on an island in the lake. The first deer that came in was a big buck, and he was a long way off, but Tom opened on him with his Winchester with little hope of hitting him, and at the eleventh shot killed him. After a time a doe was driven into the water and Tom set out in a skiff to lasso it. He could row up to the deer, but she would dodge the noose at every throw, and then it was found that a skiff was not the kind of craft to take a live deer into unaided. Finally a man rowed out to him with the second boat and the deer was secured and taken to a barn. Strange to say, the treatment the deer were subjected to in making the captures did not frighten them, as one would suppose, for they would feed from the hands of their captors the same day that they were put in the barn.

The first capture proved that different arrangements must be made in the future. A long-handled withe was cut with two prongs, and these prongs were twisted until flexible and the ends fastened together, making a fairly stiff loop at the end of a long handle. A flat-bottomed scow was also provided, and when a doe was driven to water a man in a light skiff would overtake the deer, put the withe over her head and turn the handle until the loop was of proper size to secure the deer, but not tight enough to choke her, and that she would be held until the scow could come up and she was lifted into it and her feet

DEER IN TRANQUILITY PARK.

Amateur Photo by Mr. J. J. Pierrepont.

tied as one would tie a sheep. Then she was hurried away to the barn and released.

On one occasion the man in the skiff withed a big doe and the scow did not come to his assistance. The lake was rough, the deer strong, and the boat cranky, so there was a fair prospect that the man would be dumped into the water and the doe would escape. He had an anchor stone and anchor rope in the boat, and he fastened the rope to the withe and dropped the stone overboard, and there the deer was anchored. She swam around as far as her tether would permit until the scow arrived, when she was taken aboard out of the water. Another doe when cut off by the skiff did not turn from her course, but dived fairly and squarely under the skiff. She must have gone deep, for she came up some distance beyond and on the other side of the boat, with her head covered with grass from the bottom of the lake. This was shaken off as a swimmer shakes the water from his eyes after a dive, upon which she pursued the even tenor of her way.

These does were not to be handled with impunity after they were once withed. A doe had been brought up to the side of the scow, and Tom lifted her up by her ears and one of the men stepped up to fasten her feet, but with these same feet she stripped the man's shirt off as quickly as it could have been done by machine power.

Again, after fifteen does had been placed in the barn, Forest Commissioner Weed arrived and went with Tom Powers and a guide to see them. It was evening and

lanterns were carried, and the deer gathered together in a group with their eyes turned toward the lights. The guide stood in a corner and as the other men moved about suddenly the deer rushed for the guide's corner in a body, and all he could do was to make himself as small as possible and hold his arms over his face, for the deer fairly climbed up the man in a mass until they reached the ceiling. After this exhibition the guide did not have left on him clothes enough to wad a gun.

The yearlings and fawns were much wilder after capture than the old does, and all the buck fawns but one were released as soon as their sex was discovered. The old does could use their feet for other purposes than tearing the clothes off the guides, for when one was taken into the boat, and before it could be tied, it expressed its disapproval of the proceedings by stamping its feet so vigorously that it stamped a hole through the side of the boat.

All told, 19 deer were taken alive, 18 of them being old does, two years and upward, and one buck fawn. To capture this number Mr. Powers estimates that from 100 to 150 deer were started and run by the dogs. The quickest work was when three does were taken in three hours. Besides the deer that were captured alive about 40, mostly bucks, were killed. This came about from the fact that other parties were hunting at Indian Lake (all the deer were captured at Indian Lake except one, and that was taken in Lewey Lake, which is near by), at the time that Tom Powers's men were conducting their hunt, and it was arranged that whether the deer were run by dogs employed by the State or by dogs owned by the sportsmen, the bucks were at the mercy of the sportsmen, while all the does were to be unmolested by the sportsmen that Powers's men might capture them.

Tom tells me that there is a growing sentiment in the Adirondacks against killing female deer, and that the deer are increasing very fast. I wish that there was a growing sentiment against running deer with dogs, and then shooting them while swimming in the water. In saying this I am fully aware that few will echo the wish, for deer hounding is very popular, and he who opposes this method of hunting will find himself unpopular in the woods. Men can kill deer in this way who could kill them in no other way, and it would require a rock-ribbed, iron-bound statute to prevent deer hounding, even if such a statute could be passed, which I doubt. Aside from the question of the sportsmanship of shooting a swimming deer, venison that has been "run" by the hounds is not to be compared for the table with "still-hunted" venison. From all parts of the North Woods come reports that the deer are increasing, and I hope that it is so, but it must be remembered that a score of dogs are now used where formerly there was but one, and the scores are greater in consequence.

A. N. CHENEY.

#### A Suggestion for Game Preserves.

ROCHESTER, N. Y., Feb. 7.—*Editor Forest and Stream:* So much interest is manifested of late in game preservation, without, I regret to say, correspondingly good results following, that I offer a suggestion for consideration by some one who may be in a position to make the experiment. It is to take measures that will result in returning some of the domestic fowl to a wild state, so that when the native game is exterminated in a district sport may again be had there if those interested take the pains to restock the ground with domestic birds that would resume a wild life. Of course, our tamest fowl came from stock that was as wild as any grouse, when our own ancestors were wild men of the woods. As some people claim that the passion for shooting is a survival of the instinct for the chase by which primordial man obtained food, may it not be that there is a remnant of their ancestral wildness in chanticleer and his flock that under suitable cultivation would develop them into fair substitutes for our disappearing ruffed and pinnated grouse? It might take a long course of training to break them of their tameness and give them by practice strength of wing to fly fast enough to insure sport.

It would be interesting to watch the result if game bantam eggs were introduced in the nest of a ruffed grouse as substitutes for some of her own and the young hatched together. Would the old bird discover the cheat and resent the attempt to mix the children up by committing infanticide? If the substitutes came to light would they learn the art of self preservation from the practice of their twin brothers and sisters. Here is a clue for some future Darwin to follow and find some amusement at the end. On a preserve that was large enough it ought to be possible in the course of a few years to reawaken enough of their old love for liberty in the turkey so as to transform the tame bird into the alert and wary gobble of early days. But it would be useless, except as an experiment, to try the suggestion anywhere outside of a preserve. When so many are now found disposed to follow the last grouse in a woods until he is brought down, what would they not do to get a turkey.

Why would it not be worthy of consideration for some of the clubs or the State Sportsmen's Association to have wild turkeys introduced in the forest reservations now maintained by the State where deer are protected. They could, to be sure, fly out, but some of them might fly the other way and escape from civilization, its guns and guns.

E. REDMOND.

#### THAT PLANK.

*The Sale of Game Should be Forbidden at all Seasons.*

*Editor Forest and Stream:*

If the mail is rapid enough, allow me the honor of being among the first to climb on the plank. Make such a law, and every other game law may be wiped out, and the game will stay with us and with our children.

EVERETT O'DONNELL.

LOWVILLE, N. Y., Feb. 1.

*Editor Forest and Stream:*

You "bit the nail on the head" in your editorial last week, and you want to put a spike in that "plank." A law against the sale of game can be enforced. A few years ago we had a county law against sending game out of the county. I happened in one of the express offices one evening and saw a bunch of quail and woodcock which was marked to go to Buffalo. I told the express agent that if he carried them I would make complaint against him, and he refused to take them. I found them there the next morning after two trains had gone.

J. L. DAVISON.

#### OREGON NOTES.

I WISH that every sportsman in the United States could see the mounted specimen of *Cervus canadensis* that stands in the show window of the Ockerman & Dietrich Company, corner of Washington and Sixth streets, Portland. The elk was killed in the Olympic Range and was mounted by Fred Edwards, taxidermist of Tacoma. There are probably a hundred men in Tacoma that have seen elk at their homes in the wilds, and it is the universally expressed opinion of all that the specimen above referred to "takes the cake." One never sees a pair of elk antlers that are perfectly regular and even, but this pair is the most regular and about the most handsome I have ever seen. Six points without a wart or a scratch. Beautiful mahogany brown except the tips, which look like polished ivory. Here are some of the dimensions of his majesty: Height at shoulders 5ft. 1in., height at top of head 6ft. 5in., length from nose to tail 7ft., length of antlers 4ft. 5in., spread of antlers 4ft. 8in., circumference of body 6ft. 9in. The elk is mounted on his own skeleton, and having been in perfect color and form when killed, and having (luckily) fallen into the hands of an expert taxidermist, it is but natural that Portland sportsmen should claim the proud honor of possessing the finest mounted specimen of elk in the United States.

As has been before remarked, we have had no duck shooting this winter. Since the first day of November the waters have been extraordinarily high. Now and then the sun would smile down on us, of course, and our hopes would rise correspondingly, but only to be again dampened at once by an "Oregon mist" of a week or more duration and out of Oregon's old, original stock. It really has been an unusual winter. The "old settler" says that he has never before seen its like. Well, the natural result was that the ducks, not being able to find the deep down food, went on to California, where the boys have had the best duck shooting for years. Our loss, their gain.

But spring has come. The tree frogs are heard in the land and the robins nest again. And with spring comes the festive canvasback on his way to the land of the midnight sun. I do not believe in spring shooting, but our legislative bodies do, or always have heretofore. I guess that, under the circumstances, I will have to believe in it for the nonce. I don't like to keep shells over the summer, you know. J. Roberts Mead, my "pard" in the Green Lake, was down there yesterday. He says the canvasbacks are coming in in great numbers. He thinks there must have been a thousand or more in the lake, and more a-comin'. If the water continues falling for the next week as it has during the past, it is a safe two to one bet that there will be ten thousand canvasbacks in the Green Lake a week from to-day.

Will you kindly inform me what has become of "Podgers" and "O. O. S."? Truly, I feel as if some of our family were either away from home or dead unless they "come up smiling" for another round in FOREST AND STREAM now and then. You remember "O. O. S.'s" story about killing the cougar with a hand-spike, on the Pilchuk, out in this country, some time ago. Well, do you know that Smith has one mortal enemy here in consequence of that story? A certain very amiable, very estimable sporting friend of mine settled here about that time from Hartford, Conn. He is a sportsman from the ground up, but he came here imbued with weird ideas of the wild and woolly West, and he implicitly believed all that Smith said in his famous cougar story, of course. He had day-mares and nightmares about savage cougars and such, until one day I happened to remark that Smith was a good man, but could tell the most infernal yarns of any man I ever read after. My friend eyed me closely for a moment and then pointedly asked, "Why?" "Do you suppose for a moment," I replied, "that cougars go paddling around in deep water like muskrats? And, too, did you ever stop to think how providential it was that Smith should, in turning to avoid the angry, swimming mother cougar, find ready at hand a nicely-fashioned hand-spike with which to beat out her brains, particularly in a country where the shadow of a white man was seldom seen. And then, too, how kind and considerate and affectionate the male cougar was to swim in and get the baby cougar," etc. But before I concluded my friend's thoughts were far away playing tag with two monsters, one on the Pilchuk, the other at a place called Newton, Pa. From that day to the present my friend has never mentioned Smith's name, although I am extolling his merits and virtues nearly every day. Do you know that he really feels that Smith premeditatedly, maliciously wrote that yarn just simply for the purpose of imposing on him individually, and he never, never will forget or forgive.

P. S.—FOREST AND STREAM of Jan. 27 just at hand, wherein I see that "O. O. S." and "Awahsoose" are airing themselves and their ideas of the best way of disposing of the nuisance that argues politics in camp. Tie a stone to his neck and drop him in the Pilchuk for the cougars to feast upon.

My friend, Charles F. Johnson, of Chicago, who has been spending a month or more down the Columbia, back of Woodland, in Cowlitz county, Wash., just dropped in to tell me that he had had and intended to have a great time with the fauna of that great country. He reports elk, deer, bear and cougar very plentiful, and one would think, to hear him tell it, that big game are about as plentiful down there as Cherokee steers are on the Texas plains. I think that Charley is entitled to all this, for he is one of those appreciative hunters that gets the full benefit of such surroundings and knows how to manifest his appreciation of such environments.

Last summer my friend, J. R. Mead, designed and tied a new fly for trout. Judge Cheney described the fly in detail last summer, and expressed the belief that it would become a great favorite for both trout and bass. The wings are a waxy hackle, long, and lie low and drooping, as if in an undeveloped state, while the legs and tentacles are of furnace brown hackle. The body is of yellow floss silk, wound with silver tinsel, full and plump, with red tip. It is the "trout bug" of the Oregon boy, and a very good imitation of this interesting Cadis fly. We expect great results from this fly the coming season. Mr. Mead caught 22 trout one afternoon last fall, the smallest 1lb., the largest 2lbs; 18 out of the catch were caught on the Mead fly. His whip carried three flies. Most of the larger fish we took last summer were taken on this fly.

Mr. Mead has been distributing them among sportsmen, and we hope to hear good reports from the Atlantic to the Pacific next fall. I believe it is the greatest fly yet tried for western trout. Appropriately enough, the wings are secured from the lovely Mongolian pheasant.

S. H. GREENE.

PORTLAND, Ore., Jan. 30.

#### THE POWDER TEST.

*Editor Forest and Stream:*

The variations in velocity and the bursting strains given by black powder in Mr. Tenner's valuable tests show well against the nitros, but at the same time are greater than those ordinarily produced by this explosive. As chemist for a powder company, the writer has access to records taken daily for the last fifteen years, and in no case can he find a consecutive string of twenty shots with the differences recorded at Carney Point. Remarks about the Hahn gauge are made with diffidence, as the machine is unfamiliar; still it seems possible that the sudden pressures exerted by nitro brands act too quickly to overcome the inertia of its several parts, and that it is responsible for at least some of the above unreliability. When makers depended on the pendulum years ago, a clever superintendent could, on this principle of inertia resistance, "throw" further with a slow blasting charge than with a first-class grade of sporting.

Mr. Tenner's summary by points of merit is interesting, but the trouble with all of us possessing the instruments for making accurate tests is that we are biased in favor of particular explosives. This consciously or unconsciously affects results when we theorize. Mr. Tenner evidently considered his trials as a competition between the various nitros, rather than a broad one between nitro and black powder, and his arbitrary scale does not emphasize the very superior showing made by the latter in stability and high velocity.

Had a black powder manufacturer been present at the tests, he would have suggested a few changes in them. In the first place, all the black brands used were cheap ones, and FFF (FFF.G) is too small grain to give good pattern results. It is to be regretted that something approximating nearer the nitros in cost was not employed. Then it is well known that two or more of the nitros shot low velocity rapidly if chilled, one of them becoming unreliable when long exposed to a temperature from twenty to twenty-five degrees. In a table claiming to fully classify explosives, the omission of such a series was a grave oversight.

Our manufacturer might have asked, as well for a record with shells containing maximum loads, but these "dipped" by an outside person instead of being carefully weighed. Much stress was laid by Mr. Tenner on the disadvantage of overcharging. It is impossible with a wood fibre grain as now made, to dip or pour equal weights from a bulk measure. In tests for sportsmen, the trial would have been quite legitimate, as they are interested in service and not laboratory loads.

In the writer's humble opinion, "evenness of velocity" should have received many times the prominence allowed it in the merit percentages. This is the one thing that wing or rifle shots must have. Black powder is inferior to its newer rivals in residuum and recoil, and has been superseded in certain kinds of shooting where velocity is of less importance than smoke. But for the varying conditions found in the hunting field, we that believe in saltpetre think that nitro-cellulose can never be manufactured satisfactorily. Its responsiveness to any change in conditions is inherent, and sportsmen are becoming educated in ballistics.

D.

*Editor Forest and Stream:*

Unless your readers are blessed with an exceptionally high degree of endurance, I should judge that the powder test controversy must be growing tiresome to them. It certainly has lost its charms for me, and I have concluded to have with this and with your permission, my final say in the premises, no matter how strong the provocation and temptation may hereafter be for the contrary.

"T. H. G." considers my basis of rating the properties of a gunpowder an arbitrary one. I readily admit that it is open to objection; but I am equally confident that any basis "T. H. G." may suggest would meet with the same fate.

He thinks I ought to have given all the details and figures as employed for rating some of the properties not accompanied with the dates in question. Well, I have been quite liberal in furnishing figures and have been more explicit in the premises than others are under similar conditions. If "T. H. G." can produce a similar report more detailed than mine, he would oblige me by stating where it ever has been published.

Testing institutions, as a rule, do not make public tests; they rarely publish all the details, for the simple reason that the latter create just what I experienced. They are misunderstood and misconstrued by persons believing that powders ought to behave like a clock, and that men criticize a work they are less acquainted with than they suppose. Mr. G. says that a cold test is more important than a dry-heat test. I claim that they are about of equal value. Has he ever considered to what a degree of heat a powder is subjected when used in summer in the sun and in the field? The temperature chosen by me for the test has not originated with me; it is the temperature employed by all military authorities in Europe for a similar purpose, and I venture to say that these authorities know what they are doing. How could I have made a cold test in summer? To reduce the temperature of the powder and gun metal to a degree of +10° does not suffice, and I could not afford to have a refrigerator built for the purpose at my expense offering ample facilities for such a test, and my experience is that many persons find it cheaper to criticize a powder test than to contribute toward carrying it out. "T. H. G." thinks that the black powder did better in point of pattern than I acknowledged. Those who conducted and witnessed the tests believe different.

He takes issue with me again on the question of the difference in the arrival of pellets at a given point driven by a fine-grained powder and those propelled by a coarser grained black powder.

We will never agree on this point, I fear, for the simple reason that I cannot admit that birds fly at the enormous speed of 60 miles an hour, and because Mr. G. forgets or is not aware of one important fact. The velocities registered by the chronograph are lower, and must be lower, as they are in reality. Now, when a person knowing these facts makes a statement as made by me, and which

G. criticises, he takes all the facts, and as they are partially unknown to G., into consideration. Before assuming the rôle of a critic, G. should first of all make himself familiar with the subject at issue. He cannot expect that I explain and exemplify every statement I make; if I did I would have to write volumes instead of columns on questions of the character at issue.

According to his figures a shooter must lead a quartering bird at 40yds. fully 13ft. Let Mr. G. reduce his theory into practice, and challenge me for a shooting match at live pigeons. Although I am a novice in live pigeon shooting, I think I can manage to get the better of him under such conditions. I will agree to be contended with a lead of 2ft. at such a distance, although I know that this would be too short a distance for leading such a bird for others.

Mr. Justus von Lengerke devotes over three columns of your last issue to me and my last reply to him. Much what he says does not concern me, and if it is not written for the benefit of some particular powder, it is, in my judgment, then intended for a county down in North Carolina called Buncombe, for I really have a better opinion of his knowledge in the premises than to suppose that he actually means what he says, or rather, says what he knows. My reply will be as short as the circumstances will permit it to be, and I intend to single out only those of his statements which appear to have a general interest, and which go to show that it is not distasteful to him to treat me and my utterances unfairly.

Mr. von Lengerke knows that I am not a green hand in making powder tests. He knows that I did this work before and that I am acquainted with the manner and methods employed by the London *Field* for carrying out such tests. He has good reason to suppose that I am aware how E. C. and Schultze powders must be wadded. He has been informed time and again that the powders named were loaded by a disinterested, competent party, not by me. He knows that the London *Field* never specifies the wadding material used under similar circumstances. The *Field* simply uses the term "Field loading," which means that a trap wad was employed next to the powder, a white felt wad on top of this and a cardboard wad over the felt. I mentioned in my report U. S. C. Co. wadding. I learned at Chicago that a black-edge, or two of them, are frequently used here for nitro powders instead of the white felt wad. I had no occasion to object to such a method of loading, which has been found to answer the purpose well. In speaking of the wadding material employed I made a mistake. Instead of saying that a cardboard wad was used over the felt I said black-edge wad. Every fair-minded and intelligent reader undoubtedly knew that by a slip of the pen I used a wrong technical term, and Mr. von Lengerke was aware of this, in fact he admits that he knows the shells were not wadded as I mistakenly said. I have good reason to believe that he knows even more than he cares to know, that he knows that the powders were indeed wadded properly. But in spite of all this he makes all the capital he possibly can out of my mistake. He makes it appear as if I had never seen Schultze or E. C. powders loaded before, and that I accomplished what he himself admits is an impossibility. The powders were loaded in the presence of intelligent spectators, all sportsmen, among them Mr. Ike Watson, who, as I found, commands a great deal of experience in loading nitro powders. Yet Mr. Lengerke does not find it distasteful to exploit my error. He makes a great fuss about nothing, and I do not think that I deserve to be treated thus at his hands. I would certainly have displayed more fairness toward him under similar circumstances.

I compared the nitro powders with tamed wild beasts. This has apparently caused Mr. von Lengerke much merriment. He tries to be funny and says that I evidently had Walsrode powder in my mind when I made the comparison because, as he claims, according to the London *Field* a certain German testing institution considers a double charge of Walsrode powder extremely dangerous. This is my opinion too. Walsrode powder reacts very violently to such increased charges, and has in this respect much in common with the tamed wild beast—it is treacherous. But to give Mr. von Lengerke still more cause for merriment, I shall give him another illustration showing that other nitro powders too resemble in their behavior wild beast pretty closely. I refer him to his authority on ballistics, to the London *Field*. If he will glance over the files of that journal of 1893, he will find that on several occasions the regular charge of Schultze powder, 8 drams or 42 grains, loaded in a 12-bore shell, suddenly showed traces of the nature of wild beasts. It damaged guns, and when the *Field* tested these shells for bursting strain, it was found that their loads developed a bursting strain far beyond the permissible limit. And these shells had not been baked in an oven like Boston beans, they had been stored on a shelf in a room, where black powder for instance would not have been affected the least by the warm temperature. By making this statement I do not intend to convey the impression that I consider Schultze powder particularly dangerous. It is in my opinion a comparatively reliable and meritorious propelling agent.

What Mr. von Lengerke says in regard to the difference in the cheaper and better grades of black powder, proves that he has been wrapped up too much in E. C. and Schultze powders to find time to make himself familiar with the chemical composition, process of manufacturing and the properties of these powders. He is not able to advance one single argument to prove that his opinion is based on facts. Every ballistic engineer and every powder manufacturer will tell him that the better grades of black powders will not and cannot possibly be more violent than the cheaper grades, other conditions being equal. He thinks that the FFG DuPont black powder employed by me was not this grade, but a special and better grade. He is wrong.

The powder tests were partly carried out on the premises and under the eyes of the proprietors and officers of one of the oldest powder manufacturing concerns in the world. Their smokeless powder—not in the market—was tested also. It was rated lower than either E. C. or Schultze. Did these gentlemen find fault with me? Would they not have done so if they had found that the tests were not carried out correctly? Are they not capable of telling how such tests must be conducted?

Mr. von Lengerke was in Chicago about the time the tests were in progress, so was Mr. Money. Why did they neglect to avail themselves of the opportunity of witnessing the tests? Did they stay away purposely in order to

be able to raise the cry "foul" afterward? I am sorry to say it looks to me that way.

I again say that nitro powders are superior to black powders in many respects. I claim, too, that the nitro rifle powder has driven black powder to the wall to a greater extent than the smokeless gunpowder has taken the place of black gunpowder. But I do not claim, nor have I ever asserted, that the nitro powder is as safe, or safer, than black powder. Whenever the former have ceased to display the nature of tamed wild beasts I shall readily admit it, for I am not an advocate of black powder and hope that I and Mr. von Lengerke will live to see such a change take place.

ARMIN TENNER.

[We think that this discussion has run as far as its interest warrants.]

## CHICAGO AND THE WEST.

[From a Staff Correspondent.]

Got a Head.

An old-time friend of FOREST AND STREAM, "Ahmeek," who is Consul for the United States located at Chatham, Canada, is in trouble about one of the most important features of FOREST AND STREAM, and writes as follows:

"I trust I am not trespassing too much upon your courtesy in urging you to use your influence with the proprietors of FOREST AND STREAM to induce them to change their outside heading. I have been a constant reader of that invaluable paper ever since I first saw a copy of it ten years ago, and it is now a great solace to me in my exile. My luck under the crude but comparatively inoffensive old heading was very good, and I caught fish and shot game without any suspicion of a 'hoodoo'; but ever since that baleful caricature first put in an appearance I have found the fish all gone, or the game all shot, or worst of all, been unable to get away to try for either of them. This is not right, and as one of a large and growing class which must depend upon FOREST AND STREAM for a large part of its mental pabulum, I write to protest against its action in foisting upon an innocent and unsuspecting public the monstrosity at the top of its outside page.

"To illustrate: The two sportsmen (God save the mark!) in the foreground are clearly dudes out for blood. One wears a full-blown necktie over a starched shirt front, and the other has on boots that probably cost at least \$16. To the eye of the critical observer nothing but a miracle keeps the rushing stream from overflowing its banks and spoiling those boots, while the two specimens of *Cervus virginianus* are braver than the rest of their tribe in that they are not afraid of it. However, what else could you expect of a buck that has his horns turned the wrong way?

"The cutter on the lake is fairly good, a little too much peak in her mainsail perhaps, but then a yachtsman who would use such a jib might use such a mainsail. The paddler is using a doublebladed instrument in his birch, but he matches his neighbor.

"The two men in camp are in a wet place if it rains and their tent guys are loose, but as the one on the log is evidently tired, I assume that he is a tenderfoot and probably pitched the tent in that manner and in that particular place.

"The sky effect is bad, very bad, and leaves the awed mind of the spectator in doubt as to whether it is a cold gray morning in October or half an hour after sunset in August.

"The moose head in the center was mounted by a man who had a cow for a model, and I think he must have been a good copyist, but as an illustration of the picturesque front of *Cervus alces* it is a rank imposture. And in this connection let me ask, is the head surrounded by the forest shade or a spring flight of ducks? This is an important question, and it is your duty to settle it. I do not think even 'Katie' of glorious memory could look upon that flight unmoved, unless it was after twenty-four cups of coffee.

"I confess this thing has worried me, as this long letter goes to prove, and now that I can contemplate the mistakes of my countrymen from a foreign soil its perspective haunts me. Cannot something be done to remedy it? What right has my fireside companion to queer my luck, and doubtless that of thousands of other friends all over the world? The title is all right, but the unities have not been observed and the accessories before the act should be punished.

"To you an enlightened, an interested and a solicitous public looks for succor. Shall it look in vain?"

Nay, nay, it shall not be. If "Ahmeek," or anybody else wants the head of FOREST AND STREAM changed, it must be changed at once. To so much, I am sure, I can bind the proprietors of the paper as to say cheerfully that, if "Ahmeek" will submit a design for a new and improved head, it will have careful consideration. Barring the few exceptions named, he evidently thinks this head is about right, so it will be but little trouble to get up a perfect design. It will be carefully considered, and if accepted, will be put in use at once. So will other designs. Attention is, however, called to the fact that the head can only be changed fifty-two times a year.

To one thing, however, being sworn as a staff member to support the Constitution of the U. S. and the head of the paper, I must object, and that is any criticism of the historic moose head. That moose head is known in all corners of the country, and although it may be covesque in some regards, it goes. It dominated the FOREST AND STREAM at the World's Fair, it runs on the FOREST AND STREAM stationery, appears on book covers, shows on a thousand news stand signs, and moreover, sagely presides over every word that is written, every think that is thought, by any and every member of the FOREST AND STREAM family. The other day, just last week, a man down in Texas found fault with this same moose head.

"It violates all principles of art," said he, "because it is just stuck up there without anything on earth to hold it up—not the least indication of a support for it anywhere."

"My dear sir," I said to him, "you overlook the fact that that moose head is supported by over twenty-one years of success."

Will this thought be of service to "Ahmeek" in getting out his new head? He can jump on those tenderfeet, who were formulated by one who thought long boots were a good thing, and he can reconstruct the Chinese, had-to-get-it-all-in perspective, but as to monkeying with the moose head—sweet sir, prithee, say not so. You can't very easily make FOREST AND STREAM take down its horns,

## A Game Law Muddle.

CHICAGO, Ill., Feb. 10.—Last week I called attention to the fact that the *Tribune* of this city had announced the illegality of killing Illinois song birds after Feb. 1, and suggested it might amend by adding that it is also illegal to kill them before Feb. 1. The *Tribune* of Feb. 8 corrects its error, and points out that it was misled by a game law circular put out by City Game Warden Chas. H. Blow.

Get a copy of the *Game Laws in Brief*, Mr. Warden.

The *Tribune* says:

The game warden starts out with the statement that it is unlawful to kill prairie chicken, grouse, pheasant, quail, deer, antelope, turkey, squirrel of any kind, or any song birds after Feb. 1. Every farmer's boy in the State knows that no prairie chicken may be killed lawfully after Nov. 1, and that grouse (*Bonasa umbellus*) and quail are protected by law after Dec. 1. Moreover, it is unlawful at any season of the year to kill any of the song birds which Mr. Blow enumerates. These birds are covered by law at all seasons. Squirrels cannot be shot legally after Dec. 15 until the open season for them begins in June.

Mr. Blow has been led into error doubtless by the fact that game may be sold in this State until Feb. 1, provided that the game so sold has been brought from other States. It is unlawful to sell at any time any game, except water fowl, that has been killed in the State of Illinois. Further down in the game warden's circular stands this somewhat startling sentence: "The sale of all game except water fowl is prohibited by law in the State of Illinois." If this was correct the law of game sold this winter on South Water street would, if the penalties could be collected, net the State enough money to run its government for some years. Mr. Blow probably means that it is unlawful to sell at any time game killed in Illinois.

That's right, get a copy of the *Game Laws in Brief*, Mr. *Tribune*, and you'll always be right.

The *American Field*, in a burst of enterprise, sent out copies of this erroneous circular as a folder to its subscribers, hoping by this illustrated supplement to disseminate useful information and accumulate some glory. Some folks never do have any luck, and continually accumulate experience instead of glory.

If you see it in FOREST AND STREAM, it's so.

## Not Stingy.

A copy of the *Game Laws in Brief* is always at the service of the editor of the *American Field* any time he wants to send over to this office and borrow it. There is really no good reason at all for him to make such mistakes. We may be tough people, but I trust we are not stingy with our things.

## Stopped Fishing.

Last month the summer residents who own property around Fox Lake learned that the notorious Stanley family of that locality were again at their fishing through the ice, and had shipped over 2,000lbs. of fish to the Chicago market. A meeting of interested parties was called and investigations were made. The committee discovered illicit fish in transit, and followed the trail to South Water street, Chicago. Judge Green, one of those owning property about Fox Lake, approached Stanley and tried to state the thing fairly to him, and to induce him to stop fishing. Stanley said he would not stop, and that, if interfered with, would burn the buildings of every man opposing him. "We'll break a few heads too, if you fellows try to stop us," said Mr. Stanley. All this was reported at the second meeting of the summer residents, held at the Sherman House last Wednesday, Mr. M. R. Bortree in the chair. Meantime, State Fish Warden McNeil was sent up to see the belligerent Stanley, and to investigate the head-breaking and house-burning proclivities as per Mr. Stanley's earlier remarks. Stanley weakened at once, stopped fishing and has not had a line through the ice since. The property owners have called this old bluff of the lawless fishers, and now if a house is harmed around the lake it will probably be the worst thing for the Stanley outfit that ever happened.

## Successful.

The Lansing (Iowa) Rod and Gun Club have been successful in their case against fisherman Hoag, charged with illegal seining within Big Lake, an arm of the Mississippi River. The trials lasted three days and was stubbornly fought on the ground of no jurisdiction. The club is now going after the violators of the game laws also. More power to their arm and may they never grow weary. This is the way in which a good sentiment is created, and the value and proper ownership of the people's game and fish explained to the careless, the ignorant and the wanton.

## A Valuable Correction.

A correction and admonishment of great value is contained in the following letter from Mr. C. A. Tuttle, of Anaconda, Mont.:

I notice your article in FOREST AND STREAM under date of 13th inst. wherein a Mr. W. H. Haskell figures as quite a sportsman, inasmuch as he and his party succeeded in killing 4 elk and many deer. Doubtless Mr. Haskell is not aware that it is against the laws of this State to kill elk under penalty of not less than \$200, or more than \$500 or imprisonment from 60 days to 6 months, else he would not have taken the risk he did. But it seems to me the first thing any true sportsman would do would be to find out the game laws of the State he was visiting and then honor them. Furthermore the relating of such incidents as a sportsman's paper of the tone of FOREST AND STREAM, does not have a tendency to keep those of our own State in check. They reason that they should be allowed as many privileges as outsiders.

I inclose you a certified copy of the laws of our State, and call your attention to our manner of notifying anyone whom we hear of violating the laws, and although we are unable to stop it all from the vastness of the territory about here, we manage to hold a lot of them in check.

The section of the law referred to reads in full as follows, the act being approved March 1, 1893:

An act to provide further protection to game, fur-bearing animals, birds and fish.

Be it enacted by the Legislative Assembly of the State of Montana:

SEC. 1. That any person who shall wilfully shoot or otherwise kill for the period of ten years from and after the passage of this act, any bison, buffalo, or quail or Chinese pheasants, or who shall shoot or otherwise kill for the period of six years from and after the passage of this act, any moose, elk, otter or beaver, within this State, shall be deemed guilty of a misdemeanor and be fined not less than \$300 and not more than \$500, or be imprisoned in the county jail not less than two months nor more than six months, or both such fine and imprisonment for each offense committed, in the discretion of the Court, and the possession of the skin or meat of any of the above-mentioned animals, or of offering for sale any unmounted heads or horns, of said animals killed during said period, shall be *prima facie* evidence that the persons having either in his possession killed the same in violation of this section.

The above is offered to the observation of all readers of FOREST AND STREAM. Mr. Haskell was perhaps ignorant of the change in the law, and I confess that I was also ignorant of it. There is only one way to keep posted on all the different laws of the different States and Territories, and that is to do as Mr. Tuttle says, look up the laws of the section in which one is about to shoot. The *Game Laws in Brief* should be in the hands of all shooters. I

always consult it when about to make a trip, and Mr. Haskell and his party should have done so. At best, ignorance is a poor excuse, though often it is the acting reason for an illegal act. FOREST AND STREAM will thank Mr. Tuttle sincerely for his letter, and wish him all the success in the world in apprehending shooters who in either ignorance or defiance of the law kill illegal game. Montana's noble heritage is worthy of the strictest preservation, and the means thereto cannot be too impartially or too stringently enforced.

#### By the Way—

And by the way, has Rev. Dr. Thomas, of Chicago, ever paid his fine for those illegal Wisconsin deer?

#### A Piratical "Elk."

Dr. J. W. Cowan, of Geneseo, N. Y., sends me a clipping from the *Utica (N. Y.) Globe*, which he thinks merits comment, and so do I. The clipping shows simply a half-tone engraving, a very good one, too, of a full-grown moose. Below the picture is the descriptive foot line, which says, "A Bull Elk. A monarch of the forest whose species is fast passing away." Now, Dr. Cowan probably thought the above misnaming was funny enough by itself, and so it is, but does he notice that this cut is a reproduction of one of the illustrations of Mr. Madison Grant's article on "The Vanishing Moose," in a recent issue of the *Century Magazine*? Such is the case. The *Utica Globe* "elk" is too palmed, and I trust the *Century Magazine* will try to show that he is also too piratical. Readers will remember Mr. Grant's late article in FOREST AND STREAM, upon much the same lines as that above cited. It won't hurt the daily press to take an interest in outdoor sport, but it should be a healthy interest. Stealing isn't healthy, mostly.

#### Mississippi River Crusade.

The crusade of the anglers against the market fishers of the Mississippi River goes on bravely at La Crosse and Lansing. At the former place two fishermen were arraigned last week for violating the law four months ago. At Lansing the successful cases are even greater in number, and the Lansing Rod and Gun Club is determined that the seining in the lakes and sloughs must be stopped. The Lansing *Mirror* says: "We have in this vicinity some of the finest fish preserves along the river anywhere, and it is sheer nonsense to say that the supply is not diminished by seining them at a season of the year when even catching with a hook and line is not allowed. Sportsmen to a man are with the club in this matter, and we believe the sentiment of a large majority of the community are the same. As it is, Lansing is a noted resort for sport with the hook and line, but let seining be stopped in this vicinity for a few years and fish would be almost as plentiful hereabouts as leaves on the trees." E. HOUGH.

909 SECURITY BUILDING, Chicago.

#### GAME DESTRUCTION IN MONTANA.

The following paragraphs show two sides of the game protection question in Montana, a State which to-day offers as good hunting as any in the United States. The men who feed deer to their hogs and chickens live along the line of the Great Northern R. R. on the west side of the Continental Divide. The Livingston taxidermist who suggests poaching in the park, and who—Heaven save the mark—is President of the Livingston Game Protective Society, is sufficiently well known.

Much more encouraging is the paragraph from a gentleman living in the vicinity of the National Park, which tells of the change of sentiment among people of the better class living thereabouts:

"When I tell you that parties in this 'neck of the woods' kill deer and feed them to their hogs and chickens, you can form some idea of the manner in which the game in this part of Montana is being destroyed. One party last winter fed 75 to his hogs, and report has it more than that number so far this winter. Another party killed them for chicken feed, and did not stop his infernal work until quite late in the spring. Deer are killed here by the hundreds every fall, and in fact at all times of the year, for their hides alone. We have a so-called game warden, but his chief occupation seems to consist in getting 'anchored' by a comfortable fire, putting about a quart of 'snake-bite' under his belt, and boasting of the awful things he intends to do, but never does. In the meantime the deer, elk and other game are being exterminated, and no effort made to stop it.

"Not long ago Mr. Sheard, the Livingston (Montana) taxidermist, wrote a letter to a man who a year before had been the winter keeper at the hotel at the Grand Cañon in the National Park and whom Sheard supposed this year to be in the same position, telling him he 'had better get a bottle of strychnine and poison some of those cross and silver gray foxes at the cañon this winter. Their hides can be sent by mail.' Sheard is president of the society for the protection of game at Livingston and does it more damage than any man in the country.

"This year a poacher who has been living on the edge of the Park and making short trips into it for game was caught in a snowslide about the middle of January and was not found for a week, so you see the Lord is on our side.

"This year sentiment has changed greatly in all this country. I now find most of the better classes about here, and even the Livingston people, in full sympathy with all efforts to protect the game, and consequently dead against the poachers."

#### Taken to Task by a Purist.

COLD SPRING HARBOR, Suffolk County, N. Y., Feb. 9.—*Editor Forest and Stream*: You have done excellent work in the line of stamping out such conventional phrases as "speckled beauties," "finny tribes," etc.; but for several weeks your editorial page has contained references to "wild game." Is there any good reason for the use of this term? The two expressions quoted above are merely hackneyed, but "wild" game seems to belong to such forms as "the spine of my back" and "his eyesight was destroyed." If there existed other spines, sight and game \* \* \* FRED MATHER.

[We said "wild game," having in mind such enterprises as Col. Mather's duckery, wherein he is breeding wild ducks, which one of these days he may wish to sell as game game, when we shall have our wild game prohibition law in operation.]

#### VERMONT GAME.

PUTNEY, Vt., Feb. 5.—*Editor Forest and Stream*: The attempt of the Vermont Fish and Game League to introduce new feathered game should meet with approval from all lovers of sport, and every one interested should not fail to respond to the call for funds and to secure proper protection after the game is turned loose to shift for itself. With the exception of that grand and wily bird the ruffed grouse, which is found in fair numbers throughout the State, we have no gamebird except in a few localities where a fair sprinkling of woodcock may be found during their migration; or a few ducks may stop at some of the lakes and marshes. The laws of Vermont have been revised and amended till they will, in most respects, compare favorably with those of other neighboring States. Should success crown the efforts of the League in this attempt, and I am sure it will if the sportsmen will tender their assistance and support, there is no reason why Vermont should not prove an attractive spot for the city sportsmen, most of whom now seek places where game is more abundant.

With deer protected by law till 1900, we hear reports of their increasing numbers and appearance in localities where they have not been seen for many years. This is surely encouraging.

With such birds as black game, capercaillie, sharptailed grouse and quail, in addition to what we have now, it seems as though any sportsman could find satisfactory sport within the limits of this State. I would also like to see the Mongolian pheasant numbered among our game birds, but perhaps it would not be advisable to try too many varieties at the first attempt.

In order to afford the greatest protection and induce people to respect the laws, I know of no better method, after securing proper laws, than to organize the sportsmen in every town or city of any size into clubs. Rifle clubs, trap-shooting, canoeing or yachting clubs will afford the members many pleasant hours of sport, and such organizations will change many a locality, where at present the laws are disregarded, into law-abiding communities in this respect as well as in others. The example of many who respect the laws, when organized into clubs, will have greater influence upon the would-be lawbreakers than if such organizations did not exist. We have had a striking illustration of the above in our own town. When such organizations are scattered through the principal towns of Vermont then the fish and game will not suffer from illegal destruction. W. E. A.

#### GROUSE TRAPPING IN SOUTH DAKOTA.

MITCHELL, S. D., Jan. 31.—*Editor Forest and Stream*: I have your letter wishing information about the extent of the prairie chicken and quail trapping in South Dakota, and about the measures which are to be put into operation to stop it. The crusade against the game-hog here has terminated in a warm one. But the exact course that will be taken at other places such as Elkpoint and Vermillion, to stop this slaughter of game has not fully been decided on.

Two years ago in Union county, some sportsman made complaint and forced the sheriff to capture several barrels of chickens that were at the depot, ready for shipment. They were stored in the county jail. Later the sheriff finds that a city and other good friends were interested in this financial success, and he was induced to lose his keys. They, of course, were found and at night the chickens were taken over on to an island and afterwards shipped. This affair was soon quieted and it was also found by others that there was money made by trapping. Last winter they began the work on a more extensive scale. Men claimed at different towns that they could beat general business and farming all to pieces by trapping. No doubt they could from the amount of game that was shipped out of this State.

This winter the local gun club here raised quite a large sum of money, to carry out the prosecution of this law. They also have a committee of three on the lookout, and one of its members, Mr. John Hough, went to different points over the State, to try and get the sportsmen interested in this work. He returned to-day and reported that in such places as Vermillion and Elkpoint, where trapping has been carried on most extensively, he could get them to do nothing. He was told by good authority that there has been \$7,000 worth and possibly more of chickens shipped from Elkpoint this winter. While there, Mr. Hough was informed by a friend that if he made his business publicly known he would stand a good show to be lynched. He realized what respect they had for the life of a "chicken" and pulled out.

The local clubs will make the next moves after the railroads and express companies. At present the work will be done on the detective plan.

It is expected that the State will take hold of the matter in the way of commissioners or wardens and at once stop it or at least endeavor to. H. G. NICHOLS.

#### SAUCE FOR THE GANDER.

*Editor Forest and Stream*:

Civilities are the inheritance of sportsmen. From a feeling of kinship the world over, their recognition is especially sought and most heartily reciprocated.

Appropos with such suggestions is the remissness of the fraternity in our own State of New York in cordial reciprocation with our Canadian brethren, as will be seen by reference to *Game Laws in Brief*.

In Sec. 14 of the Ontario statutes for the protection of game (Act of 1893) there is an exhibition of graceful concession that should have at least substantial acknowledgment. It is provided as follows:

Non-Residents.—Sec. 14. No person not a resident or domiciled in the Provinces of Ontario or Quebec shall be entitled to kill any moose \* \* \* or any other game animal, or bird, referred to in this act, or any other bird or animal, whether protected by this act or not, without having first obtained a license in that behalf. \* \* \* the fee to be paid therefor shall be \$25.

Perhaps the sweeping severity of the section—creditable in a humanitarian sense—is mollified by a reference published in one of the Canadian papers, calling attention of foreign sportsmen to "the \$25, which they may have forgotten," and directed to Game Warden Stewart, who is requested to make proclamation.

The Warden published the section in a modified form, limiting the slaughter but maintaining the price at the same figure: "No person, not a resident and domiciled in the Provinces of Ontario and Quebec, shall be entitled to hunt, take, kill, wound or destroy any moose \* \* \*

or any other game animal or bird, referred to in this act," etc., and prescribing a license of \$25 for a single season, and denouncing the penalties of the game laws of Ontario against offenders.

The italicizing above is my own.

Now as substantial reciprocity, and as essentially necessary to the protection of game and fish within our own borders and jurisdiction, the Legislature of New York could be asked, at its present session, to incorporate into our game laws a section like the following:

Any person who shall not be a citizen and resident of the United States, who shall either kill, capture, wound, or pursue any wild animal, wild bird, or fish, within the State of New York, the killing, capture, wounding, or pursuing of which is prohibited in said State during the whole or any part of the year, without having first paid to the Chief Game and Fish Protector for said State the sum of twenty-five dollars, and received from him, over his hand and seal, a license, granting to such person for the year in which the same may be given, the rights and privileges conferred upon the citizen residents of said State in the killing, pursuit and capture of wild animals, wild birds, and fish therein, shall, for each and every offense, be guilty of a misdemeanor, and be subject to a penalty of fifty dollars, to be sued for, and recovered as other penalties, provided for in Chap. 438, of the laws of said State passed May 5, 1892, as amended.

Such a statute will aid the citizens of the State in preventing the wholesale and wanton destruction of game and fish now persistently pursued by irresponsible and marauding parties from the neighboring Dominion, whose habitual disregard of their own protective laws is an encouragement to piracies this side the border. SAINT LAWRENCE.

OGDENSBURG, N. Y.

#### The Gun Testing Institution.

*Editor Forest and Stream*:

The names of the following gentlemen have been enrolled upon the membership list of the American Testing Institution for hand firearms, etc.: J. A. H. Dressel, New York city; C. H. Smith\*, Sec'y B. R. and G. Club, Butte, Mont.; Chas. Macalester\*, South Seaville, N. J.; André Louis Bagger\*, Royal V. Consul of Denmark, Washington, D. C.; M. F. Cook, Sec'y Colt Hammerless Gun Club, Hartford, Conn.; R. H. Blain, Civil Engineer, Morgantown, W. Va.; T. W. R. McRae, Sec'y Forest and Stream Club, Belleville, Ont.; E. A. Leopold\*, Norristown, Pa.; J. P. Dannefeler, Gunsmith, New York city; J. Seaver Page\*, New York city; Horace B. Derby, Sec'y East New York Trap-Shooters, Albany, N. Y.; Howard Simpson\*, Inspector of Rifle Practice, Wilmington, Del.; E. J. Darlington\*, Wilmington, Del.; Benj. P. Morris, Att'y at Law, Long Branch, N. J.; E. S. Holmes\*, Kent Scientific Institution, Grand Rapids, Mich.; J. C. Clark, Sec'y Kansas State Sportsmen's Association, Topeka, Kansas; Browning Bros., Arms and Sporting Goods, Ogden, Utah; Thomas Cumming, Cummings Point, Stamford, Conn.; C. F. Bates, Pres. C. R. Gun Club, Cedar Rapids, Ia.

The institution is now in operation. ARMIN TENNER, Supt.

\* Members of the Advisory Board.

DEXTER PARK (P. O. Station E), Brooklyn, N. Y.

#### A New Vermont Club.

TOWNSHEND, Vt., Jan. 30.—A Rod and Gun Club has been formed in Townshend for the purpose of providing better hunting and fishing in that vicinity and to enforce game laws. The officers are: President, A. B. Call; Vice-President, E. C. Holden; Treasurer, R. I. Holbrook; Financial Secretary, Park Holland; Corresponding Secretary, P. E. Howard; Directors, H. J. Twitchell, M. O. Eddy, F. H. Lawrence.

## Sea and River Fishing.

### TO SEIZE PRIVATE PROPERTY.

NEW YORK, Feb. 10, 1894.—*Editor Forest and Stream*: I beg to invite your attention to Assembly bill, printed No. 94, a copy of which I inclose, now in the Assembly Committee on Game Laws.

I have personally appeared before the committee and opposed the passage of this bill, which is a populist measure of the worst description under the pretense of "home rule." Not only is its constitutionality very questionable but it is an outrageous attempt to apply the law of eminent domain for the confiscation of private property without adequate compensation. There is danger of the bill being reported in some modified form which will not obliterate its objectionable features, and I trust you will call the attention of those interested in the enjoyment of their private trout ponds to its sweeping provisions and urge them without delay to write to the committee and present their objections. The bill is one of the worst introduced in the Legislature for years and ought to be summarily killed. ELBRIDGE T. GERRY.

Bill No. 94 is entitled "An act to permit towns to acquire the title of lakes, ponds and streams, and to maintain places where the public may fish with none to molest or make them afraid." Its provisions are "in brief."

It shall be lawful for any town to acquire or take the title to any lake, pond, stream or portion of a stream in or running through the town for the purpose of establishing and maintaining thereat a public fishery. Twenty-five taxpayers of a town may file with the town clerk an application that proceedings be instituted under this act to acquire the title to a lake, pond or stream and to maintain thereat a public fishery, and that a proposition be voted upon at the next town meeting. The town clerk shall give at least ten days' notice. He shall provide a ballot box and have at the town meeting ballots to contain the words "for establishing a public fishery" or "against establishing a public fishery." In case a majority of the ballots cast shall contain the words "for establishing a public fishery," the supervisor shall proceed to acquire by purchase from the owner the title together with all rights therein, provided, however, that the consideration agreed upon shall not exceed one thousand dollars; which lake, pond or stream and all rights therein shall henceforth belong to the town; and in case the water and rights cannot be obtained by agreement or the consideration demanded exceeds one thousand dollars, the supervisor shall acquire title thereof by the exercise of the right of eminent domain. Whenever a lake, pond or stream is acquired it shall be maintained as a public fishery, to which all persons shall have free access for the purpose of fishing under such restrictions only as provided by the game laws of the State. The supervisor of the town may bring action to sustain the rights of the town in any public fishery in the town.

#### Committee on Fisheries and Game.

SENATE.—Harvey J. Donaldson, Ballston; John Lewis Childs, Floral Park; Charles L. Guy, New York.

ASSEMBLY.—M. W. Van Amber, Castorlands; Richard Higbie, Suffolk; M. F. Smith, Greenwood; Jonathan Wyckoff, Navarino; E. G. Stewart, Ithaca; Taylor J. Eldridge, North Creek; E. B. LaFetra, New York; W. M. Keenan, Troy; R. V. Stauffeld, New York.

## ANGLING NOTES.

## Salmon for Lake George.

MR. S. G. WORTH, acting-assistant of the U. S. Fish Commissioner, in charge of the Division of Fishculture, writes me that the first shipment of yearling landlocked salmon for Lake George will consist of from 10,000 to 15,000 fish, and it will be made during the month of September, and will come from the Green Lake Station in Maine. This is the first authentic statement that has been made upon this particular subject. The FOREST AND STREAM note about the planting of the salmon has been copied into a number of New York newspapers, with various additions and amendments not authorized by the announcement of the fact which I made solely in FOREST AND STREAM.

I have not said that the planting would consist of "6,000 fish annually," as the papers have it, for I did not know until I received Mr. Worth's letter what the shipments would amount to annually, although I would have guessed nearer to the truth than 6,000 had I been asked to do so. Thus far I have selected three streams in which to plant the salmon, and they are East Brook, at the head of the lake, near Caldwell village; Harris's or Edmond's Brook on the west shore, five miles from Caldwell, and Indian Brook, on the west shore, two miles from Bolton. They are natural trout streams, have no mills on them, and there are no obstructions to prevent the salmon from returning to them for spawning when the time arrives for them to do so.

## Habits of Landlocked Salmon in Maine.

Any one who has been interested in investigating the habits of landlocked salmon will know that the fish of Grand Lake (Maine) ran down into Grand Lake Stream to spawn, and that in other waters they went into the inflowing streams for the same purpose. I asked Mr. Chas. G. Atkins, in charge of the U. S. Fish Commission salmon breeding works in Maine, and probably the best authority we have upon the habits of the salmon, if the downstream spawning fish perpetuated the habit in their young, and he has just sent me a most interesting reply containing new information, from which I quote as follows: "I had charge for some years of the fishculture work at Grand Lake Stream on the Schoodic Lakes in this State (Maine). We worked only with landlocked salmon. It was the established habit of the whole race of the salmon of Grand Lake to run down into Grand Lake Stream to spawn. There was a good stream at the head of the lake, presenting good facilities for spawning, and there is sufficient evidence that at a former time it had its brood of fish, but it is not established whether these were salmon that went up from Grand Lake or down from Junior Lake. In my time it was rarely visited by spawning fish.

"As to the persistence or non-persistence of this downward habit in the descendants of these salmon in new homes, I regret to say that I can tell you nothing definite. In this State the Commissioners have disseminated another race of landlocked salmon, those of the Sebago waters, from spawn gathered from up-running fish, and it happens that the most of the lakes where landlocked salmon have been introduced have received stocks from both races.

"I delayed my reply that I might put your question to Mr. Stanley, of the Maine Fish Commission, whether there were any cases in which the Schoodic fish had alone been used, that would solve this problem. He was here the other day and we discussed the matter briefly, but he could not give me such an instance.

"Perhaps, now, the experience of New Hampshire will afford the necessary data. I think, though I am not sure, that their landlocked salmon were derived wholly from the Schoodic (down-running) race.

"Mr. Stanley tells me that the landlocked salmon of the Sebago waters, that is of Sebago Lake, have within recent years taken up the habit of running down as well as up. Perhaps, rather, resumed an original habit after a lapse of many years.

"Probably you are familiar with the result of the introduction of landlocked salmon into Woodhull Lake, in your State."

I have already referred to Woodhull Lake in these notes. There the salmon went down stream and disappeared, as I believe, for lack of suitable food. I am more and more convinced that salmon can be held in a lake of suitable water, provided there is an abundance of suitable food for them, no matter which way they go to spawn. Of course, if they run down to spawn many of the young will escape, and it is desirable to plant fish that run up for this purpose; but food—smelts or frost fish (the round whitefish)—is the main thing to insure success in stocking new waters. Mr. Atkins's letter throws new light on the habits of the landlocked salmon and is a valuable contribution on the subject.

## "Dynamite Fishing."

With uplifted hands I protest against the use of the term "dynamite fishing" in some of the newspapers of the day. That fishing, an honorable pastime, should be dragged in the mire by being coupled, with a hyphen, to dynamite is utterly wrong, and inexcusable. Dynamite murder, and that in the first degree, is the only term which correctly expresses the act of killing fish with this explosive. Those who use this and kindred explosives should get the law "sled-length," and without benefit of clergy. Last summer a dynamite outrage was committed in the Mohawk River by which a large number of fish, large and small, were killed. The chief actor, the man who exploded the dynamite, was arrested and bailed for appearance in court. He ran away, forfeiting his bail, and his bondsman pursued him and he was re-arrested, pleaded guilty to the crime, and was fined fifty dollars and fifty days in the penitentiary; and yet the papers called the act which landed the man in prison, "dynamite fishing," showing that they did not distinguish between a crime and a harmless, healthy recreation. If there is a more dastardly way of breaking the fish laws than by using dynamite to kill fish I do not know it.

## Habits of Landlocked Salmon in Sunapee Lake.

Upon receipt of Mr. Atkins's letter, from which I have quoted, referring to landlocked salmon in New Hampshire, I sought information upon the subject, as he suggested, from Prof. John D. Quackenbos, who was, fortunately, visiting me at the time. Probably no one is better acquainted with the history of the landlocked salmon in Sunapee Lake than Professor Quackenbos, who

has made his summer home on its shores for a quarter of a century, and Sunapee is the most celebrated of the New Hampshire lakes that have been planted with this fish.

What follows is the reply that Professor Quackenbos makes to my queries, and it furnishes further valuable information regarding the habits of the landlocked salmon: "First, there have been so many introductions of landlocked salmon into Sunapee Lake that no living man can say where the eggs and fry all came from. The plants began in 1867. Whether the early fry were landlocked salmon or not I do not know. But I do know that the same early plants produced salmon in Newfound Lake. So you may draw your own inferences.

"Second—Landlocked salmon in Sunapee were never known to go down stream into the Sugar River to spawn. They go down when they can in the spring, and it is in spring and early summer that salmon have been speared in the Sugar River. This may be because of the difficulties attending descent and the filthy condition of the river below the dam. We now keep the screen in place (such being the law that dam owners are bound to respect) and fish of large size cannot possibly run down if the screen is in repair.

"Third—From the very earliest periods of observation, that is, from the seventies, landlocked salmon have swarmed to the mouths of the inflowing brooks in September and attempted to force their way up these small streams to spawn. I have seen them come in such schools to the Pike Brook that in default of room in the holding tanks (where the fish are kept until they are 'ripe') we have carried 6lbs. specimens up the beach and restored them to the water. I have known the run to be so great that the Commissioners were compelled to take up their nets and retire; the salmon gilled so fast they could not be removed by the force at the hatchery rapidly enough to save their lives.

"I have often sat on my piazza and the piazza of the State camp in September and watched monster salmon throw themselves out of the water on the sandbars in front of my brooks, and as soon as it was dark they would rush into the shallow water and fling themselves over into the deep estuary with a splashing that thrilled one to the very boot heels, and then when daylight came again we would find them preparing their beds on sandy or pebbly shallows far up the brook.

"At Chandlerville, where a great feeder with all the drainage of Sunapee Mountain enters the lake through a long, black estuary, salmon have for years been taken in the fall, sometimes in the State nets, sometimes by the poacher's spear and mesh. Even where there is little more than a rudimentary channel, the salmon find it, and their instinct seems to tell them that wherever there is a sand beach there ought to be a brook (and there once was in every case), and back and forth they wander, seeking the cool waters that have long since ceased to flow. Under such circumstances we have netted them for the hatchery.

"The ouananiche of Sunapee are no down-running race; they are climbers from away back, and if the natural conditions permitted they would follow the streams with their silvery brides to the very summits of the mountains, and spend their honeymoons in water-hollowed basins blazing with the reflection of the autumnal forest." It will be remembered when reading the two contributions upon the habits of the landlocked salmon, here given, that Mr. Atkins speaks of the fish in its original habitat, and Prof. Quackenbos of the planted fish and their descendants.

## Varnish for Rod Whippings.

A correspondent asks how to treat silk thread wrappings on a fish rod to prevent the silk from discoloring. First, the silk must be waxed with white beeswax or the white or colorless wax used by fly dressers, and made as follows: 2oz. of best white resin and 1oz. of white beeswax should simmer together on the fire for ten minutes, then add 1oz. of tallow and continue to simmer for fifteen minutes, when the mixture should be poured into a basin of water and when cool enough worked in the fingers until the wax is white and pliable.

That is the receipt given by Francis Francis, and one that I have used for years. I find that it is not unlike the wax that can be purchased of fly-makers in this country. Pennell gives a different receipt: Burgundy pitch 120 grains, white resin 60 grains, tallow 20 grains. Powder and mix pitch and resin, put into an oven and when melted add the tallow and stir all together. When the rod is wound with the silk, varnish with coach-body varnish called "wearing body," which is the best varnish for the rod as well as the whippings. Use the varnish as it comes from the maker; do not add a dryer or anything to thin it. Many amateur rod makers use shellac varnish, and if for any reason this should be preferred use the bleached shellac, sometimes called white shellac, to make the varnish. Treated in either of the ways mentioned the silks usually employed in mending rods will not be materially changed in color. Mr. Wells says in his book "Fly-Rods and Fly-Tackle," that another method may be used: Wet the silk with hot water, then cover it with thin white glue.

As rod-makers use coach-body varnish it may be assumed that that is best, and I presume that any of the dealers in tackle who advertise in the columns of FOREST AND STREAM will furnish the wax and the varnish. I know that some dealers make a specialty of wax and varnish in small quantities for amateur work.

A. N. CHENEY.

## Boston and Maine.

ALL the hotels and fishing camps in the Maine wilds are preparing for a great season in 1894. There will be no World's Fair to draw patronage from them, and generally their proprietors believe that fishing is to be better than ever. Generally the water has been low in the Maine lakes and ponds, however, and it is low up to the present time, a condition not favorable to the trout. Tom French of Andover and of Richardson Lake steamboat fame, writes me that he shall "be there" the coming summer, with his steamers, whatever the other steamboat people may do. He says that the water in Richardson Lake is very low; has been very low all the fall and winter. He fears that if the drawing down of the Rangeley Lakes is continued winter after winter, as has been the case for several winters past, that the fishing will soon be ruined. For several years after the raising of the Middle Dam by the Union Water Power Company, which added 13ft.

more of flowage to Richardson Lake, the company kept that lake full of water all winter, or nearly so, and those winters were followed by the best fishing ever known on that lake. For three or four years the reverse has been the case. SPECIAL.

THE JOSEPH DIXON CRUCIBLE COMPANY, of Jersey City, N. J., announce that they now have ready a revised edition of their pamphlet on graphite as a lubricant. A copy will be sent free of charge to any one interested in the subject.—Adv.

## Fishculture and Fish Protection.

## THE COAST FISHERY CONFERENCE.

Proceedings of Conference Held to Consider the Subject of the Exhaustion of Coast Line Food Fishes.

OFFICIAL REPORT BY SECRETARY E. P. DOYLE.

(Concluded from Page 122.)

At this point MR. GITHEEN asked Mr. Cochran: How many bluefish were in Raritan Bay last summer?

MR. COCHRAN—I may say none.

MR. GITHEEN—What was the supply of bluefish in the summer previous?

MR. COCHRAN—Moderately fair.

MR. GITHEEN—Right. The fishermen who usually catch their bluefish off Seabright, this season a year ago really left the ocean and went into the Bay and fished there almost entirely for bluefish, and found them in large quantities. Now how can you catch them in large quantities without the assistance of pounds and weirs? Will you answer that question?

MR. COCHRAN—I will answer the question generally. For market purposes nets must be used. The gentleman will please bear in mind that I confined my remarks to weakfish, and said nothing about bluefish. If local supply is endangered or destroyed by artificial causes there should be limitation and restriction.

MR. GITHEEN—We cannot catch the bluefish in quantities unless we have weirs or pounds or other nets. The remark was made yesterday by me that the weakfish could not be caught by hook. I did not mean to make any such statement. My intention was to state that the weakfish off the shore do not readily take the hook, and cannot be caught by hook and line to supply the market. In fact they rarely take the hook. Then it is conceded, gentlemen, that it is beyond the possibility of the hook and line fishermen to supply the market with bluefish and weakfish (caught by the hook and line alone), and we must catch them in weirs or by these new inventions. It has been stated here that there is a scarcity of food fish, that there has been a depletion of fish in the waters. There has been no such thing proven. Figures have been produced here that would show that the increase of the catch has been steadily going on, even though the means of catching have been greatly advanced each year. On our own coast we have evidence that 10,000,000 lbs. have been caught there. That they are not to be found in some of these little bays and lagoons is no argument whatever that the ocean is being depleted of fish. There is evidence here as an actual fact that the State of New York is supplied with a tremendous increase of fish. Is there any one to dispute this? And at no increase of price, but at a decided decrease of price. You say they are fishermen's figures. The books are open and any one may verify these statements.

MR. ROOSEVELT—I think it is probably the fact that the syndicate of fish dealers regulate the price of fish.

MR. GITHEEN—The fishermen are not responsible for that. I do not believe that any such syndicate exists. They may regulate the price, but it fluctuates. In the month of September, 1892, we landed a catch of 35,000. We were the only ones along that entire coast that happened to catch the fish. We landed them in New York, and at the market at that time they were in splendid shape. We got them on ice about 7 o'clock Sunday morning. The fish three days previous to that were worth 1½ to 2 cents a pound. On Monday there was not, I believe, 5,000 lbs. of fish outside of that market. We put them all in one man's hands. The rest of the market had to pay his price. About 11 o'clock on Monday morning the thing was decidedly changed. What was the cause? Down came a great big smack, and she was loaded with bluefish, and down went the price. That does not show any syndicate. In reference to a committee being appointed, I would be only too glad to have a committee come and look at our books. In regard to having a Commission established that is disinterested and is fair to us, or is prepared to legislate to save the fish, that will not be objected to on my part. I am perfectly willing to do that and have always been open to that. What are we going to do? We must not drift from the facts that have been maintained and submitted at this conference, and there is not a single man who has spoken that has not substantiated the facts which have been offered by the pound fishermen and the net fishermen, and facts which are open to investigation—figures, prices, all that on which depends the amount of fish to the number of pound nets which are sent to Philadelphia and elsewhere.

MR. ROBERT B. ROOSEVELT offered the following resolution:

First—That in the opinion of the Association for the Protection of Fish and Game the setting of pound nets in the salt waters of this State should be prohibited between the first day of November and the first day of June.

Second—In the opinion of this Association fishing with nets or seines for menhaden in the waters of Long Island and all salt waters over which the State has jurisdiction should be prohibited.

No action was taken on the resolution.

MR. LUTHER MADDOCKS (Me.) said: Allusion has been made to the appointment of that Commission. I think I can see the star of peace arising and the wisdom which permitted this Commission of New York State, divinely inspired I have no doubt, to call this meeting. I believe it is going to lead to the solution of this question, which I have been interested in, and my friend Church and others all our lifetime. Perhaps I may not appear egotistical by saying that no man in my community has had the opportunity to investigate the fisheries that I have. I have been a member of the Fish Commission under Mr. McDonald. I have no words of criticism upon his policy. I was not a member as a business matter, but I was appointed by him specially to investigate, to find out where the menhaden spawn. In April, 1888, I was sent to Florida, there to stop until I saw some evidence of young fry on that coast. On April 2 I went to the mouth of the St. James River, and as far as could be seen we could see these young menhaden coming in as thick as rain upon the water. I never saw such a body of fish in my life. They could not have been over three months old. I followed that class of fish, and the larger class of fish which followed them, all the way to the State of Maine.

Aside from being connected with the fish business of every description from the whale down to the scup, I had a great interest in the conclusion which I was to arrive at. I followed those young fry along the coast up to Georgia, South Carolina and North Carolina. After they arrived in North Carolina I lost the run of those small fish. Those fish went into the Chesapeake Bay. They filled the waters full. They stayed there. I came along further north and as I came

along I found larger fish. On July 2 I arrived at my home in Maine and our coast was literally swarming with the overgrown fish. Up to that time it was considered, although there was no evidence to prove it, that these fish spawned off-shore. I believe they do, now. It was my conclusion and is so in my report, that these fish spawned in the fall after they go down by the Capes of Delaware and Virginia in the off-shore waters adjacent to the Southern coast. Two years after that, by some unknown cause, the spawn of the menhaden was retarded. The fish that went in the fall came back in the spring with the spawn in them. This is a conundrum that no man has been able to solve.

Col. McDonald said: "I am going to put my men on in the spring and I am going to try and settle that question." He is in doubt and every man is in doubt. The fish that have spawned have been seen upon this coast, the spawn has been retarded. I believe that the menhaden do spawn on the off-shore adjacent to the Southern coast and that the theory which is proved to be established that they are an inshore spawner is not based upon facts. It is the exception and not the rule. It has been said that the whole question should be referred to a Commission. I believe that is wise. It has been said that the U. S. Commission is the proper authority. I beg to differ. While no man has a greater respect for the U. S. Commission than I have for every member of it, and I am inclined to think that every man on the Commission, especially those who investigated the waters of the Delaware coast, are fine men, yet they lack practicality. They will go on our coast from one end to the other but they will not get at the facts. We do not want to rest this important question on what information a few gentlemen may get that have no great interest in it and are not practical men, and are not able to judge whether the answers to their questions are right or wrong. This is an important question which interests every man, woman and child of this country. In it lies the food supply of future generations.

I said in the beginning that the star of peace has arisen. I believe that this meeting has been conducive to more benefit than anything that has ever taken place. I have attended more meetings perhaps than any man in this room, and it has been my lifelong study. I believe if we appoint a commission of men who will attend to it and give it an impartial investigation, that the facts, the truths, will come out, and whatever is right will be done. I believe the gentlemen who called us here together are perfectly fair. They have used us handsomely. I feel under great obligations. I believe that the next time we meet that they should be the guests and we should be the entertainers. I believe we should keep this up and come here and listen to reports, and we will be greatly helped and benefited.

The following resolution was offered by EDWARD P. DOYLE, of New York:

*Resolved*, That the chairman of the convention appoint a committee of one from each State to prepare the records of this meeting for publication.

GEORGE N. BLISS, Rhode Island—In 1886 I was elected to the Legislature of Rhode Island for the last time, having been elected in all eight times a member of that body, and I was against the net fishermen. I was ready to vote to abolish all nets and pounds, everything except seines. The only thing I was willing to allow was that they should shoot out seines from the shore and catch fish as they used to do when I was a boy. I have helped haul fish seines and seen very large hauls of fish caught in them, but observation and time has changed me, and I have seen some new light, as Paul did on his way to Damascus. And although I have had no special connection with fishermen, except as a Commissioner of Shell Fisheries for ten years in the State of Rhode Island and as a member of the Legislature to investigate fisheries (my principal fisheries having been to take every opportunity to go fishing), still I have all my life been interested in them and am trying to learn something about it.

It seems that even a man of the experience and research of our friend, Col. McDonald, has just discovered that he was entirely wrong a few years ago. He thought the menhaden fish did not spawn at all on this coast, and now he thinks they do. I should judge from the testimony that there is a little trouble on both sides, that there are a few fish that come back in the spring not having deposited their spawn in the southern waters, and who do spawn in our in-shore waters, and so those few fish that spawn give color to his conclusions now.

If I had known exactly what was to come out here to-day, I would have been better prepared with documents to give exact dates, but somewhere in 1893 or 1894 I was a member of a committee appointed by the Legislature of Rhode Island to investigate the pound nets of the State and all the means of taking scup and other fish, and we went to every part of the State of Rhode Island where such nets were maintained—in Narragansett Bay and a large number in the outside, along the sea coast—and the conclusion we arrived at that time was a divided one. Two members of the committee—there being three—presented a report to the Legislature advocating the entire abolition of all pound nets and traps. I made a minority report, advocating the abolition of all the traps in the bay north of a certain point a few miles north of the ocean. At that time I thought it was a proper position to take. The Legislature took no action whatever on either report. If the committee had made a uniform report, possibly there would have been some action, but it never came to a vote. I thought then, as many gentlemen think now, that the traps in the bay interfered with the spawning of fish and consequently that if we could take away these standing traps, which stood in the way of the fish that went in the bay, they would have an opportunity to spawn, and I reasoned that the trap fishermen, who set their traps at the mouth of the bay, would get a large increase of fish from that change and it would be really for the benefit of the entire population.

Last winter a friend of mine who was in the Legislature enlisted me to appear before a committee of the Legislature, to inquire into the abolition of the traps, except along the ocean coast where they catch scup in the spring of the year, to advocate the passage of a law which would prohibit traps from November to June or July 1, on the same theory that this would give the fish a chance to spawn before the traps were set, and consequently the trap fishermen would catch, during the season, a larger number of fish than they would if the traps were standing during the usual period. We were met with opposition—something I did not expect, from the fact that these fishermen set their nets the year round and that they would thereby be deprived of every opportunity to catch shad and herring; the result was, no action was taken then. I have now reached the condition where I am in search of testimony and I think that I fairly represent two members of the Commission—Root and Morton—who have asked me to appear here for them, in stating that they wish further information before being sure what legislation to recommend. Upon one thing I think we may all be said to be agreed. If any method can be devised for allowing the fish better opportunities for spawning, so that it will increase in the future the annual supply, certainly every man here would favor it. The only question is whether any legislation which we can adopt will secure that object. That is the only question.

There is no doubt that in certain localities the fishing has decreased, that certain fish which we once found abundant are now very rarely found or not at all. At the same time, it is very evident from the testimony here that in other localities where the fish were once scarce they are very numerous.

Within my own recollection weakfish were caught rarely, if at all, in Narragansett Bay, and last summer the waters were full of them, although I have not heard of 100 being taken with hook and line. We are not successful in catch-

ing weakfish with hook and line in Narragansett Bay. There are very few who can catch them, but we know the waters are full of them. Perhaps we do not use the right bait. I presume if we got the right bait perhaps we might catch them. I never caught but one in my life. Still, the traps were full, so full that the fish caught could not be marketed. They are allowed to come in and go out of the traps, because the market would not take them. At the same time in other parts of the country there were very few; they were gone.

There are certain laws which govern the movements of ocean fishes which we do not understand, and there was a very marked instance of it here a few years ago when the tilefish were discovered off our coast at a point where neither purse seines nor traps nor pound nets could interfere with the development of or with the supply of those fish, and we had hardly been able to discover them and have time to congratulate ourselves upon the addition of a new and valuable resource, when the news came that the waters were full of dead fish. I believe they have recently been rediscovered, and possibly we may be able to get a supply of food fish from them in the future. No one has given any special reason for their disappearance. There has been a conjecture that the temperature of the water might have been too cold for them during that season, and led to their being chilled and to their death, but no one knows with any certainty what caused those fish to make such an immediate disappearance.

It seems to me we are not yet in possession of the necessary evidence to lead us to formulate wise laws with reference to this matter. We do know that the fishes that go into the streams, like the salmon, the shad and herring, can be very easily exterminated by the pollution of the water, by the erection of dams that prevent their passing to the spawning grounds, or by putting nets across the streams. In Rhode Island the Fish Commissioners put in a large supply of shad fry, and about three years after we had a large supply of fish. One stream that has not been polluted has been very successful in the supply of shad. Col. McDonald, in his argument of yesterday treated the matter of the reproduction of fish from the point of the protection of crops upon land, and it seems to me that there was no comparison between the two crops. "In the crop upon the land we know that a certain quantity is necessary for seed, and we are able to watch that crop all through its development. Every month the Agricultural Bureau of the United States gives us the condition of the crops, gives us the influences which are favorable to or injuring it, and we can figure with almost absolute certainty about the success of the year in which the crop will be. We know the amount of seed and we know the amount of the crop, and although there may be good years and bad years, the general average is about the same. It is not so with fish. We do not know the quantity of seed, we do not know the condition of the crop, the influences which are favoring it or injuring it, and we do not know what the harvest will be. Twice within my recollection scup have been plentiful around the city of Providence and for ten years afterward they were not there.

The scup were so plentiful last year that the fishermen hauled thousands of fish for market. Why this has been so I cannot tell. We cannot see any reason. Possibly there is a different temperature of water. We certainly cannot account for these sudden floods of fish and these sudden scarcities. The table which was shown here yesterday gave the fluctuations of mackerel and specified instances of fish becoming plentiful and shortly disappearing, and then again becoming plentiful.

I do not think it safe to legislate until we have further facts, and facts upon which there is no dispute. I am very glad that this conference was called. I promised rashly to come here, regretted it very much, and would have excused myself could I have done so, but I am glad I was not permitted to escape and that I am here. I have learned much, and I trust I will have an opportunity to learn more when I read the papers which have been read here. I trust the development of facts, and the bringing out of facts, will produce a great deal of good, and that this conference will have proven to be a noteworthy one.

MR. J. M. SOUTHWICK (Rhode Island)—I do not understand what is said about anadromous fishes. It is generally understood that the anadromous fishes are the salmon, shad, alewife, etc., and that the distinction between them and other migratory fishes is that they go to the headwaters of streams to spawn, while the other fish, like the weakfish, go only to the bays or estuaries. The scup never goes into the fresh water. Once in a while a fish gets separated from the main school and scattered, and in that way they get into places where they do not want to go; and I think in that way spawn is sometimes developed in places where it is not the natural spawning ground, and a few fish spawning under favorable circumstances would make quite a showing of spawn and young fry.

MR. ROOSEVELT—Are you at all sure where striped bass spawn?

MR. SOUTHWICK—No, I am not sure. During one season in Rhode Island, after the usual catch of the great body of the school of scup, an unaccountable body of young fish were seen along the edge of the shores. The waters were full of them. The seines were full. They would pass through the meshes of the nets, and it was a phenomenon before unknown to the fishermen. They did not know how to account for it. I think they were very young. Those fish traveled long distances, and it did not follow that because the young fish were found at Narragansett Bay that they had spawned at Narragansett Bay. Do not believe they did. Never said they did. It seems to me that the great masses of scup came into our bay. If they all came into our bay to spawn in a mass, previous to going to the upper waters of the bay, they would be seen there. They never were seen or observed in large masses in that way before the traps were in use, nor have they been seen since. They sometimes go up the Bay as far as Providence, or as far as the salt water, but never in the large schools. It is quite an important matter to discover and to know whether the fish are anadromous, whether they spawn in fresh water or salt. If the fish spawn in the ocean, we cannot control them in the shallow waters or in the bay. If they spawn in the bays we can. What man can do may have some benefit on them. Another thing will be observed which will give confirmation to this theory, if you will call it a theory, and that is that where there has been a reduction it has been among anadromous fishes. The salmon have almost or quite disappeared from our waters. If they ever were plentiful, they might have been the weakfish, so called. At any rate, there is no salmon in the Rhode Island waters to speak of. The shad are very scarce also. There is no quantity of shad. The river herring have maintained their numbers better than any of the other fish, but they are not so plentiful as they used to be. Fishermen tell me that they held their own for the last number of years.

The other fish that I have considered as anadromous is the striped bass. It is one of the most valuable fishes that we have with us. It is the fish that entices the sporting man, and in that connection I wish to say, for myself, that I think the sporting interest is one that should be fostered and encouraged. It is the right and privilege of every man. It affords relaxation for every business man and he ought to have that privilege and should be encouraged and every means adopted and permitted to continue it. But the question as to the striped bass. They have really decreased in the last 25 years. I commenced the study of this question about 25 years ago, or a little less than that, a little before the investigation of Mr. Spencer F. Baird, and when he came to Newport on the investigation of fish, we opened a correspondence that continued for a number of years on the fish question. At that time I stated to Prof. Baird that I thought there had been no diminution of the sea bass. During the

first summer he was there, there was a species of striped bass that came into our harbor which we caught and compared with those caught at a former time, but since that time there has been a diminution of bass. They are not so plentiful on our coast. The last year has been a very poor season. How have these fish been diminished? They are not caught in large quantities by netting in our waters, and never were. The largest quantity that has ever been caught were caught with the shore seine. Take them in bulk and weigh them, and it is a much larger quantity than ever was caught in any pound or trap, and the quantities caught in the trap since are very small and constitute a smaller species of bass. They are caught during the spring months. The large catch of the trap-seine of fish generally is during the month of May. Perhaps seven-eighths of all the catch is during that month. You will see by our report, where we give the catch for each month, the vast increase of shipments during that month, which comprises more largely scup than any other fish. During the last year there was a large shipment of squire-teague.

There is another question I wish to speak of, and that is about the fluctuation of fish. Mr. Bliss, who preceded me, spoke to you about them, but I have had occasion to inquire into the history of the fishes of our State, and I learned that, in 1794, a scup was caught and nailed up on the side of a hotel as a new specimen, never before known. Never knew what it was! It had been absent from the water so long. A few years ago, my father, who was living then, remembered that the fish were very scarce and I recall his mentioning the fishes of the earliest part of the century and said he once went fishing and got a bluefish. Of course, the mackerel as they were known then, was the only one he caught. It was rare at that time. Where these bluefish went to no one knows; and what causes the fluctuation of these fish? It is an interesting question and certainly one that is appertaining to this subject before us. If these fluctuations occurred before netting, it does not necessarily follow that they were due to netting. Netting may change it, or it may not. In the case of the bullseye mackerel—they have been absent from our waters and again come in. Some thirty-five years ago, they were very abundant in these waters of Rhode Island. They disappeared about thirty years ago and were not seen here until 1882, when they were abundant again.

MR. CALLEB C. HAILEY said: As there have been some remarks implying that there might be a combination among the fish dealers to keep the prices of fish high, I wish to repudiate anything of that kind. Nothing whatever of the kind exists.

MR. C. F. CHAMBERLAIN of Massachusetts: I think, with all deference to the feelings of Capt. Church, that the consideration of a remedy for the scarcity of fish without deciding that there is such a scarcity, would be a valuable action of this meeting. Various remedies have been suggested. Among them is that of regulating the size of the mesh, or limiting the kinds of fish or the amount of fish for which the net may be used. We have found in Buzzards Bay, in our practical experience, that any such limitation is absolutely without value. If netting is permitted in certain waters for any purpose, it is permitted for all purposes. We have no such money or machinery at our disposition, and no such power of enforcing such regulations by patrol boats or otherwise as would make them effective. No officer would have dared to board a vessel which may be legally fishing. For example, under the law of 1865, in Buzzards Bay, people were allowed to seine for bluefish, seining being forbidden for other fish. Everybody who owned a net was invariably found to be fishing for bluefish; it was definitely found impossible to enforce it, and the prohibition was made general forbidding all seining.

It has also been found practically impossible to enforce any regulations prescribing a certain number of days in each week during which a pound or other device shall not be operated. We have had laws since 1880 prescribing that from 6 o'clock Saturday A. M. until 6 o'clock Sunday evening, pounds should not be used; the pocket should be drawn or some provision made by which the net shall not be operated. It has been found that any such restrictions are an absolutely dead letter. They cannot be enforced, they are not enforced, and the protection so afforded is utterly illusive. These laws do not enforce themselves and we do not have such patrol vessels as could be effective in the matter.

The only way we can preserve fish is to protect the period of reproduction, and study the ways in which reproduction takes place. Intelligent action cannot be under a single, general ironclad regulation, but by our discriminating laws there should be prescribed a fixed period during which certain mechanical devices should not be employed, and it should be provided that in certain waters constituting spawning grounds they should not be employed at all. The use of nets in spawning grounds has a peculiarly injurious effect to all the interests represented here, and the use of nets during the whole of the spawning season may be such as to be materially curtailed with advantage to all interested.

There is only one other suggestion I venture to make as the result of considerable investigation into the subject, and that is that the appointment of a commission for devising remedies for the growing scarcity of food fishes is not a course from which any good will result. We have had just such a Commission for twenty years at Washington, and it has done little in that line.

The Fish Commission of the United States was established in 1871 in response to a suggestion by Mr. Spencer F. Baird, who was connected with the Smithsonian Institute at Washington. He called attention to the alarming decrease in the coast fisheries both in Buzzards Bay and Vineyard Sound, and suggested to Mr. Henry L. Dawes, then a member of the House, and subsequently a Senator from Massachusetts, that a Commission be appointed for the investigation of precisely that subject. His suggestion was adopted, and the Commission has now been in existence for a period of twenty-two years for the purpose. It has made absolutely no recommendations for protective legislation. The only legislation for fish protection which has passed Congress was the Act of 1887, prescribing a close season for mackerel, by enacting that during certain periods of the year no mackerel should be imported into the United States. It was a regulation of commerce and not an attempt to regulate the coast fisheries of the United States. That legislation of Congress was absolutely opposed by the agents of the Commission, who came forward in large numbers, Mr. J. W. Collins appearing prominently among them, and said that nothing was known in regard to the habits or catch of the mackerel, and it was necessary to catch them and all other fish at all times, wherever possible, for if not they would be lost and do nobody any good.

Under circumstances like these, there having been a body established for twenty-two years for this precise purpose, operating entirely free, as may be supposed, from any personal influences, with abundant funds at its command and especial opportunities for observation, which has been able to discover absolutely nothing, it hardly seems worth while to appoint another Commission, with the facts which are at our disposal for an investigation of this matter by those who are interested in the local supply of food fish, and charged by the States with the duty of protecting special waters in their jurisdiction.

A single instance I will trouble you with, as to how little this Fish Commission has been able to decide or discover in its twenty-two years of existence. Col. McDonald, at this meeting, made the first definite statement, so far as has been known to me, of where menhaden spawn. That was an era making paper. Prior to that time, the result of his Commission was absolutely zero. There has been no fish that has received in its investigation such a large portion of the

money of the United States as the investigation of the menhaden. Prof. G. Browne Goode has written a book on this subject. The Commissioner has attended investigation after investigation by committees of Congress. He has had his men at work continually on the subject, and yet as late as 1892 he replied to a question of Senator Stockbridge, of Michigan, Chairman of the Senate Committee on Fisheries, which were preparing to consider the "Lapham Bill" if it were passed by the House, "very little is definitely known as to the spawning of the menhaden."

Until Col. McDonald spoke yesterday there was no definite statement, as the result of the most exhaustive investigation ever made as to where menhaden spawn.

The appointment of a commission, it would seem to me, would be barren of result for the reasons stated. It is frequently said that the Fish Commission is not opposed to the use of pounds. Mr. Spencer F. Baird, after calling attention to the fact that there has been an alarming decrease in the supply of fish, calls attention to the mischief which pounds and weirs have caused, including the loss of food to a large class of people who are idle. He goes on to say:

"The decrease of the fish may be considered as due to the combined action of the fish pounds or weirs and the bluefish, the former destroying a very large percentage of the spawning fish before they have deposited their eggs, and the latter devouring immense numbers of young fish after they have passed the ordinary perils of immaturity."

"There are no measures at our command for destroying the bluefish, nor would it be desirable to do this, in view of their value as an article of food. The alternative is to regulate the action of the pounds so as to prevent the destruction of fish during the spawning season."

"The quickest remedy would be the absolute abolition of the traps and pounds."

He also says: "Many persons are in the habit of considering that the fish supply of the sea is practically inexhaustible, and therefore that a scarcity of any particular location is to be referred rather to the movements of the fish, in changing their feeding grounds capriciously, or else in following the migration from place to place of the food upon which they live. This may be true to a certain extent, as we shall hereafter show; but it is difficult to point out any locality where, near the shores in the New England States at least, under the most favorable view of the case, the fish are quite as plentiful as they were some years ago. It is by no means to be inferred from our remarks as to the scarcity of fish that fewer are actually caught now than formerly at any time; the contrary, perhaps, being the case, since by means of the improved methods of capture, in the way of pounds and nets, an immense supply is taken out at certain seasons of the year, so as to frequently glut the markets. The scarcity referred to is better shown by the great difficulty experienced by line fishermen in securing a proper supply throughout the year on grounds where they were formerly able to catch all they needed for their own use and for sale."

"The evil effects of the state of things here indicated are felt in many ways; primarily on the part of many fishermen resident on the coast who have been in the habit of making a living by the proceeds of their occupation, not only supplying themselves with food, fresh and salt, for the year, but also making a comfortable living by sales of their surplus. At the present time this resource is cut off to a great degree from this class of people in many places on the Massachusetts coast, where, as on Nantucket, Martha's Vineyard and elsewhere, the deprivation from the loss of profits by fishing is being most seriously felt. The result, of course, of the inability to make a living in this manner is to drive the line fishermen to other occupations, and especially to induce them to leave the State for other fields of industry."

He further said that it is unfair to vested interests to absolutely prohibit the use of pounds, and that the conditions of the problem are such that it is only during the spawning season that fish come to the coast and so are within the reach of man, and also the mischief of man's energy is greatest when exerted at that time. He therefore advises a reasonable regulation, consisting of a close season on weirs and pounds. It is very possible that that is the remedy which is really open to this conference, most fair to invested capital and most thoroughly in the best interests of the fisheries.

MR. D. T. CHURCH—You said that Spencer F. Baird framed a law for the purpose of prohibiting the use of pound nets in the State of Rhode Island. That law was backed by public opinion for the reason that for twenty years the scup had almost totally disappeared. Mr. Baird, in connection with this, offered a bill that was introduced in the Rhode Island Legislature, and one of the terms of the bill was to destroy these nets, if found in the waters, without judge or jury. But we escaped and Professor Baird saved us, for in the following year the greatest crop of scup that was ever known appeared on the coast of New England, and Mr. Baird is on record as saying that he was confounded by the large supply. Mr. Baird said if the law had been passed and our traps and pounds had not been allowed to be put in the water the increase in fish would have been credited to the restrictive laws.

MR. CHAMBERLAYNE said, in reply to Mr. Church: I have examined the statements of Mr. Baird. There is nothing in any of his statements which covers the ground.

MR. CHURCH—That statement was made about 1870. As a matter of fact, since then, between the years 1890 and 1893, every fish that has its home in the waters of southern New England were never more plentiful, a result exactly contrary to Mr. Baird's prophecy and statement. I will leave the whole matter to any one that will go in as a disinterested man and take the testimony and find out that what Mr. Baird stated was a mistake, and that there is not a single fish whose habitat is between Sandy Hook and Cape Cod but what has been plentiful since 1890.

On motion of Mr. D. T. Church the Conference then adjourned *sine die*, with the understanding that should there be need for a future conference the call will be issued.

The following papers were handed in for publication:

This paper, presented by Capt. D. T. Church on the first day of the Conference, was handed in too late for insertion in its proper place. Mr. Church said:

The industrial fishermen at this convention represent millions of capital invested in mackerel, cod, scup and other fisheries. They employ ashore and afloat several thousand fishermen and laborers, whose prosperity depends on the success of the interests we are here to defend.

There is not one of us but what believes that regulation of our fisheries means disaster to us all, with no advantage whatever to those who ask for regulation.

The experience in Holland, where they tried regulation for 400 years, exactly agrees with our observations, and it seems unreasonable for us to pursue a course (that is sure to be attended with disaster) that has been abandoned by England and Holland after a trial of centuries, Holland substituting absolute free fishing, and the great English commission recommending the same policy in their report to the English Parliament in 1864.

Rhode Island has had twenty-three years' experience with free fishing from 1870 to 1893, and there is not the slightest evidence that there is any diminution in the supply of its food fish.

Since 1870 there is not a single fish known to our seacoast waters but what has been, at times, as plenty as ever before known, also very scarce, proving conclusively Huxley's statement to be true, that man is not a factor to be reckoned with in trying to explain the mysterious appearances and disappearances of tide water fish.

United States Fish Commissioner McDonald unfortunately takes his position with our adversaries, antagonizing the result of the English Commission's investigation, also Holland's 300 years of experience, and talks of remnants of fish when it is not remnants but floods that have confronted us periodically, in quantities equal to any ever before known in this country; and all fishes known to our waters have given us examples since 1870.

The scup made their appearance in Narragansett Bay in 1800, and disappeared in 1870 or nearly so. The pound men were thought to have caught them up, and a law abolishing traps was introduced in the Legislature backed by a strong public opinion, but it failed to pass, and the scup came back again plenty as ever, with the traps unrestricted. Without question, scup in the vicinity of Narragansett Bay were as plenty as ever before from 1800 to 1893. The following figures, taken from the Fall River Line books, covering the last ten years, are instructive in this connection, for they refer mostly to scup:

	Barrels.		Barrels.
1892.....	8,392	1888.....	13,327
1893.....	8,865	1889.....	17,597
1894.....	10,062	1890.....	7,696
1895.....	15,263	1891.....	17,562
1896.....	14,586	1892.....	25,253
1897.....	14,460	1893.....	25,844

The small shipment of 1890 is accounted for by the fact that there were but few large scup on our coast that season, but an unheard of quantity, weighing twenty-five to the pound. It would be interesting to the public to have all the fluctuations of our coast fisheries for the last twenty years, from the Penobscot to the Delaware, put on a chart. Their ups and downs would show almost as regularly as waves of the sea. Professor Baird once showed me a mackerel chart showing the fluctuations of that fish. In his remarks he spoke of the extremes as periods of plenty and scarcity. The chart showed a year of great scarcity about fifty years before, which was long before purse seines were in use for taking mackerel.

Tautog, in 1856, were very plenty from Wellfleet to New Jersey, and there was quite a fleet of smacks that year engaged in taking that fish for market, but the extreme cold of the following winter froze most of them, and as a regular fishery that was abandoned by all in 1857. Since then there have been several periods of scarcity and plenty, but the 1892 crop was equal to, or ahead of, any ever known.

The following letter from S. B. Muller is instructive in this connection, for it will be noticed he names three of our coast fishes as plenty during the season of 1892, especially weakfish.

NEW YORK, Jan. 11, 1893.—D. T. Church: Dear Sir—Your letter at hand asking for information about blackfish. Well, I will say they were very plenty and very cheap. I have no recollection of seeing them more plentiful in the last fifty years, and at the end of the season for shipping them in barrels. The smacks began to arrive with live ones, until at one time it was estimated there was alive in the dock more than one hundred thousand pounds. But they are out at a much less price than any year for the last ten years. Bluefish and weakfish have been through the season very plenty. I never knew weakfish as plenty and as cheap in my time. One cent per pound was considered a good price for many days and many tons were sold for less.

Yours,  
S. B. MILLER.

Weakfish in Narragansett Bay and vicinity were extremely plenty during the fishing season of 1893, notwithstanding the fact that there were over 100 traps and pounds set between Block Island, Providence and Fall River. Without question, this year's crop exceeded any ever before known, and the curious thing is none can be taken with a hook, or hardly any, showing that but for the pounds they might have come and gone, and no one would have known that they had been here.

We should like to have Commissioner McDonald square his "remnant" statement with the fact that as a whole, there were more weakfish present on our coast last season than ever before known; also with the tautog flood of 1892, the bluefish flood of 1890, the scup flood of 1890-93, the menhaden flood of 1888, the mackerel flood of 1884, the Silver Lake flood of 1893, the sea bass flood of 1884, and the two or three striped bass floods that have been present on our coasts within the last ten years. They all controvert McDonald's "remnant" theory, and prove it a myth.

The King of Holland, at the opening of the legislative session 1865-6 used the following language:

"Up to 1857 the Dutch fisheries were burdened with many restrictions, intended for their protection and encouragement. The period within which herrings could be fished was limited. The places of fishing, the time, the nets, and the tackle were all under regulations. But the fishery languished and declined, and it was determined by the Legislature to try the effect of another system. A law was passed in 1857 abolishing all restrictions, regulations and enactments as to close time, trawls, nets and lines. Every one was left free to fish the sea in any mode, and at any time he deemed most advantageous, while a Fishery Commission was established to collect the statistics of the various fisheries, and report annually to the Legislature upon all matters affecting the interest of the fisheries."

"The result has been a steady and continuous improvement. The last report of the Commission shows greater anxiety to find new markets in foreign countries for the fish, than about the prospects of an abundant catch. The Commissioners conceive that the future prosperity of the Dutch fisheries will depend on a profitable outlet for the fish being found by a freer intercourse with neighboring countries. A return is given of the number of vessels employed in the herring fishery at Scheveningen, and their annual catch, which rises from 24,909,000 in 1858 to 33,535,000 in 1864. The export of cured herring from all parts of the country had risen from 30,919,371 'stuks' in 1858 to 42,698,000 in 1864."

Thirty years ago it was claimed in England, as it is in the United States to-day, that improved methods of taking fish with nets, seines and other contrivances was diminishing the supply of fish, resulting in the appointment by the Queen of James Caird, Thomas Henry Huxley and George Shaw Levevre to inquire into the condition of the sea fisheries of the United Kingdom of Great Britain and Ireland.

Their conclusion, after a three-years' exhaustive inquiry, was expressed in the following words:

"We find the laws relating to sea fisheries to be complicated, confused and unsatisfactory; many restrictions, even of late date, are never enforced; many would be extremely injurious to the interests of the fisheries and of the community if they were enforced; and with respect to these and others, the highest legal authorities are unable to decide where and in what precise sense they are operative."

"We advise that all acts of Parliament which profess to regulate or restrict the modes of fishing pursued in the open sea be repealed, and that unrestricted freedom of fishing be pursued hereafter, and for the present we advise that all acts of Parliament which profess to regulate or restrict the modes of fishing pursued inshore be repealed."

In the face of this statement, and bearing in mind the high authority and the historical data at their command concerning the conditions of the fisheries which they investigated, it is impossible to come to any other conclusion than that the supply of migratory fishes is practically inexhaustible. But I cannot quite agree with that portion of the report of the Royal Commission referred to which suggests the advisability of enacting laws to permit the unrestricted freedom of fishing inshore. As a matter of fact, in the course of his address at the International Fisheries Exhibition in London, in 1883, Prof. Huxley made it very plain that the statement made by him and the other Commissioners referred chiefly to migratory fishes. Monsieur Rimbaud, one of the greatest French authorities, states that the supply of migratory fishes is absolutely inexhaustible and cannot be affected by any means or appliances adopted by men for their capture. But he asserts, and it is pretty generally conceded, that fishes which spawn locally inshore might be depleted or even exhausted by continuous or depredatory fishing. The class of fishes known as inshore or local fishes does not comprise mackerel, herring, bluefish, striped bass, whitefish, menhaden or any other of the great species that form the basis of our industrial fisheries.

I shall only give one other example of the effect of repressive legislation on the economic and industrial development of fisheries, and this example should of itself be considered of serious import in the discussion of any question relating to proposed restrictions, or for the protection of fisheries. In the opening of the legislative session of the Dutch Parliament in 1865-66 the King of Holland drew attention to the fact that for three hundred years, "up to 1857 the Dutch Fisheries were burdened with many restrictions intended for their prosecution and encouragement. The period within which herrings could be fished was limited. The places of fishing, the times, the nets and the tackle were all under regulations. But the fishery languished and declined and

sive legislation would be advisable. But as this evidence has already been placed on record in the publications of such men as Capt. Collins, Mr. Atwood, Capt. Church and others before the Senate of the United States in connection with the reception of evidence concerning the Lapham bill, I think that my appearance in the matter will be more profitably confined to elucidating the comparative effects of such legislation in Great Britain and European countries.

As a matter of fact knowledge of the habits of sea fishes was very imperfect until recent years, but the economic value of the supply of fish attracted considerable attention from legislators and rulers from the earliest times, and as a consequence from time to time enactments, progressive or repressive, were petitioned for and considered. For instance, in 1675 the fishermen of the southern Irish coast petitioned the King through Secretary Burchard that the length of the nets used by the French fishermen broke the shoals of the pilchards and drove them from the coast. This petition prayed that the Government should restrict the use of these long nets by the Frenchmen; but for some reason or other the request of the Irish fishermen was not acceded to, and the Frenchmen continued to fish for pilchards inshore and in the deep sea without restraint. It is recorded in the annals of Kinsale that for three years, from 1675 to 1678, the supply of pilchards diminished to such an extent that the native fishermen discontinued that industry. The falling off in the supply was attributed to "the depredations of the Frenchmen," but in the following year, 1679, notwithstanding that "a fleet of three hundred French sail, each boat carrying nets one league in length" swept the coast with these nine hundred leagues of nets uninterruptedly, previous to and during the three seasons referred to, the pilchards returned in "greater numbers than ever before seen on this coast." This fact is proved from the writings of Sir Robert Southwell, who was himself one of the signers of the petition to Secretary Burchard in 1675.

In 1831, '82 and '83 a somewhat similar petition was made by the fishermen on the southern Irish coast concerning the too early fishing for herring by the Scotch fishermen. I was at that time chairman of the South of Ireland Fishing Company, and relying simply on the statements of the local fishermen, I heartily approved of their appeal for repressive legislation in connection with the south of Ireland herring fishery, in the shape of instituting a close season. I had not then made any research into the habits of the fishes or concerning the effects of men's efforts, by any method for their capture, upon the supply, and, with others who were as deeply interested in the progressive development of the Irish fisheries as was I, I was astounded when Prof. Huxley and other famous scientists as well as inspectors of fisheries appointed by Her Majesty's Government, pool-poached our request, and informed us that not alone was there no necessity for appointing a close season, but that from their observations and investigations they had decided that the supply of herrings or of other migratory fishes could not be diminished by any means or appliances that could be used by men for their capture.

The fishermen and boat owners on the southern Irish coast, myself among the number, felt aggrieved by this decision, and it was universally predicted that the herrings would be driven from our coast by the fact of the Scotch fishermen plying their nets—over two thousand miles of them—before the time when the Irish fishermen considered that the season should begin. But no such result has happened. It is true that sometimes for a season or two, or even for five or ten years the supply of herring and other migratory fishes, such as mackerel, pilchard, etc., seem to disappear, altogether or partially, from the coast. But as regularly, or perhaps I should say as irregularly, they return with increasing numbers as did the pilchards in 1679.

These are matters which it will be observed have come under my own personal observation and with which I was intimately connected. It will be understood from what I have said that during the year 1880, '81 and '82, I was under the impression that fishing for migratory fishes at irregular periods and with destructive appliances was economically dangerous to the progress of a fishing industry. But upon learning the decision of the authorities to whom I referred to concerning the effect or rather the inutility of curtailing methods employed for the capture of fishes, I studied the question and arrived at the conclusion that the comings and goings of migratory fishes or their reproduction cannot be influenced by man.

Bearing on the statement which I have just made, and upon much higher and practically unimpeachable authority, the following quotation from the report of the Commission appointed by Her Majesty the Queen of Great Britain, unqualifiedly takes the position that the supply of migratory fishes cannot be increased or diminished by man. That Commission consisted of Professor Thomas Henry Huxley, the Rt. Hon. Geo. Shaw Levevre, and the Rt. Hon. James Caird. With all the resources of the British Government at their disposal, and after three years of exhaustive inquiry into the condition of the sea fisheries of the United Kingdom of Great Britain and Ireland, these men deliberately presented the following report:

"We find the laws relating to sea fisheries to be complicated, confused and unsatisfactory; many restrictions, even of late date, are never enforced; many would be extremely injurious to the interests of the fishermen and of the community if they were enforced, and with respect to these and others the highest legal authorities are unable to decide where and in what precise sense they are operative."

"We advise that all acts of Parliament which profess to regulate or restrict the mode of fishing pursued in the open sea be repealed, and that unrestricted freedom of fishing be pursued hereafter; and for the present we advise that all acts of Parliament which profess to regulate or restrict the modes of fishing pursued inshore be repealed."

In the face of this statement, and bearing in mind the high authority and the historical data at their command concerning the conditions of the fisheries which they investigated, it is impossible to come to any other conclusion than that the supply of migratory fishes is practically inexhaustible. But I cannot quite agree with that portion of the report of the Royal Commission referred to which suggests the advisability of enacting laws to permit the unrestricted freedom of fishing inshore. As a matter of fact, in the course of his address at the International Fisheries Exhibition in London, in 1883, Prof. Huxley made it very plain that the statement made by him and the other Commissioners referred chiefly to migratory fishes. Monsieur Rimbaud, one of the greatest French authorities, states that the supply of migratory fishes is absolutely inexhaustible and cannot be affected by any means or appliances adopted by men for their capture. But he asserts, and it is pretty generally conceded, that fishes which spawn locally inshore might be depleted or even exhausted by continuous or depredatory fishing. The class of fishes known as inshore or local fishes does not comprise mackerel, herring, bluefish, striped bass, whitefish, menhaden or any other of the great species that form the basis of our industrial fisheries.

I shall only give one other example of the effect of repressive legislation on the economic and industrial development of fisheries, and this example should of itself be considered of serious import in the discussion of any question relating to proposed restrictions, or for the protection of fisheries. In the opening of the legislative session of the Dutch Parliament in 1865-66 the King of Holland drew attention to the fact that for three hundred years, "up to 1857 the Dutch Fisheries were burdened with many restrictions intended for their prosecution and encouragement. The period within which herrings could be fished was limited. The places of fishing, the times, the nets and the tackle were all under regulations. But the fishery languished and declined and

By MR. ROBERT WALSH:

This question should not be approached unintelligently. From the evidence of the best known and most widely experienced men engaged in fishing as well as from the writings and researches of the scientists and ichthyologists of the United States Bureau of Fish and Fisheries we have in this country alone sufficient data to decide whether or not repres-

it was determined by the Legislature to try the effect of another system. A law was passed in 1857 abolishing all restrictions, regulations and enactments as to close time, trawls, nets and lines. Every one was left free to fish the sea in any mode and at any time he deemed most advantageous, while a Fishery Commission was established to collect the statistics of the various fisheries and report annually to the Legislature upon all matters affecting the interests of the fisheries. The result has been a steady and continuous improvement."

These statements comprise the result of the investigations of governments and scientists and practical authorities for over four centuries, and in every instance, notwithstanding the erroneous ideas that existed in the minds of fishermen and others, those engaged in the research decided against repressive laws, and established the fact that fishing with nets or with any other appliances cannot influence or decrease the supply of migratory food or other fishes.

Now, I do not believe that the gentlemen who signed the petition calling this meeting fully understood the facts to which I have referred, or they would not place themselves in opposition to the published decisions of those great authorities in science and ichthyology, whom I have quoted, and who have in many cases made life studies of the subject which is now under consideration. I notice that in the circular calling this meeting the statement is made that during the past year the spawning ground of mackerel and other migratory fishes has been discovered to be local and inshore. This statement is an error—in fact, it looks uncommonly like an intentional error. No man knows where these migratory fishes pass the winter, and after twenty years' experience and investigation the best living American authorities cannot definitely locate the precise ground where any of these fishes spawn.

I do not think that I can add further new matter to this argument. It is the duty of the people of the United States to insist through their States and National Legislatures that the food fish shall be conserved and protected; but it is as clear as the sun at noon that the only fisheries that can be benefited by restrictive or protective legislation are those of oysters and other shell fishes, crustaceans, and those fishes that are known not to be migratory. It is therefore apparent that those who seek for the enactment of repressive legislation have not given this matter the attention or study necessary to place before the Commissioners an intelligent argument, and as far as my experience and understanding of the facts enable me to form an opinion, I believe that it is the duty of the representatives of the people to oppose by every and any just means all attempts at legislation which would restrict our fishermen in their freedom of fishing for migratory fishes by every means at their disposal.

SOUTH HARWICH, Dec. 7, 1893.—*John T. Hangaard, Secretary:* Sir—Whereas, my attention has been called to a meeting to be held at the office of the Commissioners of Fisheries of the State of New York for the purpose of securing national legislation restricting the use of pounds, traps and seines in the taking of fish, claiming that by their use the supply of food fish is being rapidly depleted. If the proposers of this measure were honest and not influenced by their desire for private amusements during a few weeks of the year, regardless of consequences to the poor people of the villages along the coast, whose living must come from the waters, to whom robbing them of their rights and privileges of catching fish by more reliable means than simple hook and line, means to them a loss of their little all, for which they have toiled, &c., the value of such gear as they have for fishing, and a loss of employment and a living for their families—they could easily learn that the use of these contrivances does not contribute an atom to the cause of the scarcity of fish; neither do they retard the periodical seasons of plenty. Again, the proportion of fish taken by these fixed contrivances on the shores to the whole bodies of fish in the waters is so small it cannot be computed, only imagined. There have always been, from time immemorial, years of plenty and years of scarcity of fish; not only of one kind, but of all the different kinds and varieties which visit our shores and bays, from the alewives in our brooks to cod upon the banks of Newfoundland. Such are the facts in fisheries as in everything which comes to the lot of men. As regularly as the tides ebb and flow so come successful years, and then the reverse; and it always will be so. There are evidently as many fish now as ever in the sea, notwithstanding all the contrivances and appliances of man. Let man take all he can, he cannot reduce them. We records, according to recollection of our old men, and our records, times of greater scarcity of fish on the shores of old Cape Cod years, yea scores of years, before any such contrivances as pounds, weirs and traps were conceived of. Two years ago several kinds of southern, or warm water, fish made their appearance in our (Chatham) bay, fish that the fishermen never before saw. Why did they come? It is said by very old people that, from great abundance of bluefish on the shores of Nantucket and Martha's Vineyard, they suddenly disappeared and for a long time (it is said fifty years) were not known, so when they returned only some of the oldest people could name them. I have heard an old uncle of mine (a fisherman until age incapacitated him) say, when he was a boy (in his teens), while with a party using a sweep seine, a bluefish was caught, and as none could name it, it was left on the beach, the men fearing to eat it; but later, another was caught, and a very old man remembered that fish of that kind was plenty in his early years. Now, as there were then no traps or weirs or seines to deplete them, why and where did they go and again return? So with all fish; they go and come, and natural causes—to man now unknown—are responsible for it, and not man with his contrivances for their catch. Surely, pounds, traps and seines are not the cause of the years of great scarcity of codfish on all the banks, where at other years they do so much abound—sometimes large fish, at other times fish of seemingly smaller growth. Who can account for all the changes? Not man. Neither does the catching of them in large or small number, or quantities, with the millions of eggs deposited by individual fish. Man has no influence, only the power that created them for the use of man and decreed that he take of the abundance thereof. Fish has from the days of the Apostles (and then there were times of scarcity) to the present been a great means of livelihood to those about the coasts the world over, and all nations have the same years or seasons of scarcity and plenty, even where pounds and traps are unknown. If pounds and traps are the cause of our seasons of scarcity, why should all other nations have them without the said pounds and traps?

No, as a fisherman of close observation of the ways of fish lore for two score years, I am fully convinced that the coming and going of fish is not influenced by the use of traps, weirs or seines. We have just had a few years of small catch, but the last two have decidedly improved, and our oldest fishermen look with pleasure to a series of greater plenty, till in a short time it will be high tide followed by another ebb; and all, like myself, do protest against legislation robbing us of our God-given right of living by fishing, solely that a few wealthy summer residents may claim better fishing for sport alone, and surely raise the prices, making fish a luxury thereby. Respectfully submitted,

DARIUS F. WEEKES.

NEW YORK, Dec. 11, 1893.—We, the undersigned wholesale fish dealers of New York city, certify that, as regards the general supply of edible fish brought to this market, there is no evidence whatever of a decrease in the catch as compared with the supply at any time during the past ten or twenty years, and that the prices obtained during the past three or

four seasons have not been higher in the average than during any similar period of time in the past.

## The Kennel.

### FIXTURES. DOG SHOWS.

Feb. 20 to 23.—Westminster Kennel Club, at New York. James Mortimer, Superintendent.  
Feb. 27 to March 2.—Columbus Fanciers' Club, at Columbus, O. G. F. Mooney, Sec'y.  
March 7 to 10.—City of Straits Kennel Club, at Detroit, Mich. Guy D. Welton, Sec'y. Entries close Feb. 21.  
March 13 to 16.—Mascoutah Kennel Club, at Chicago, Ill. J. L. Lincoln, Sec'y. Entries close Feb. 24.  
March 27-30.—Philadelphia Kennel Club, at Philadelphia, Pa., Dr. D. B. Darby, Sec'y.  
April 3 to 6.—New England Kennel Club, at Boston, Mass. D. E. Loveland, Sec'y.  
April 18 to 21.—Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.  
May 2 to 5.—Pacific Kennel Club, at San Francisco, Cal. H. W. Orear, Sec'y.  
May 15.—Portland Kennel Club, at Portland, Ore. D. L. Williams, Sec'y.

### FIELD TRIALS.

Sept. 5.—Manitoba Field Trials Club, at Morris, Man. R. J. Gallagher, Winnipeg, Sec'y.

Exhibitors should remember that entries close for Columbus show, Feb. 20, with Geo. F. Mooney, Columbus, O., for Detroit, Feb. 21, with Guy Welton, Detroit, Mich. Entries for Chicago close Feb. 24 (the day after New York show), with Room 910, 276 Dearborn street, Chicago.

### The Canadian Kennel Club Meeting.

We have already published an account of certain proceedings at this meeting, and the secretary, Mr. H. B. Donovan, sends us further particulars as follows: In addition to the committee selected by the president to confer with the A. K. C. toward forming a new compact between the two clubs, the president appointed Messrs. H. B. Donovan, J. S. Williams, C. A. Stone and R. W. Boyle to draft instructions to delegates, also to be submitted to him.

The following communications were read by the president. He was empowered to carry on any further correspondence necessary:

LONDON, Ont.—*Clarke Wallace, Esq., Ottawa:* DEAR SIR—As it is generally understood that various changes are about to be made in the tariff, I take the liberty of bringing to your attention the subject of the importation of thoroughbred dogs. As it is at present, the duty of 20 per cent. on dogs, which, like other animals, are imported for the improvement of stock, is a serious drawback to the dog breeders of the Dominion, and a great good would result if it were made compulsory for free admission of dogs that they should have pedigrees that were eligible for registration in the Canadian Kennel Club's register, which calls for three generations. Thus, in order to get free admission, it would be necessary that certified pedigrees must accompany all importations, and in this great good would arise to Canadians. As it is at present, dogs are sent out from England and the Continent to purchasers with only partial pedigrees, and it is almost impossible to get the correct pedigree after a dog has once been shipped. But if it were made a matter of importance by the Customs authorities that this certificate must accompany importations, the seller would be compelled to give full pedigrees before a purchase was made, and thus a great deal of trouble would be saved the importers. The duties that are now collected must be very little, as all dogs are valued by the Customs officials, who have no more idea of the value of the animal than they have of "cheese brought from the moon." I would suggest that in the new tariff all dogs shall be free that are accompanied with a pedigree that can be registered in the C. K. C. Stud Book. I shall be much obliged if you will give this subject your consideration, as it would not only be good for the country at large, but for the individual importer. I have the honor to be your obedient servant,

J. S. NIVEN, President C. K. C.

OTTAWA, Jan. 22.—*Dr. J. S. Niven, 423 Colborne street, London, Ont.:* MY DEAR SIR—I beg to acknowledge the receipt of your letter of the 17th inst. on the subject of the tariff status of dogs (thoroughbred), and carefully note the suggestion you make and the representations in behalf of such request, in effect that free admission thereof should be allowed. I am glad to have this matter brought before me at this time, as it can now receive full consideration in connection with the revision of the tariff. If you have any further facts that would have a bearing on your view of the question, I shall be glad to have them as soon as possible. I am, faithfully yours,

N. CLARKE WALLACE.

A paragraph from the Toronto Mail of Jan. 19 was read, when it was voted that Dr. Wesley Mills and Mr. Nichols, of Chicago, be asked to give this club an explanation of the case.

It was decided to permit the registration of dogs the product of dogs already registered, but not eligible under the present rules.

### Heavy Mastiffs.

Editor Forest and Stream:

An enthusiast in any line of useful work or investigation, particularly one whose efforts are wisely directed and unselfish to a degree, deserves well of his fellows. Assuming this to be true, no man in this country is deserving of higher praise in mastiff circles, than Charles E. Buyn.

For years he has been an ardent admirer, a painstaking student and consequently, a successful breeder of the best type of English mastiff. With possibly one exception, no man in America has done more than he to advance the interests of the breed, and no one has been more willing to give all mastiff lovers the benefit of his investigations. He has invested largely both in this country and in England, and has met defeat, successes and losses alike with the courage and courtesy of a generous and high-minded gentleman. I am sure he will receive universal sympathy in his recent heavy losses. Within a year he has lost Edric, Ilford Cameo, Miss Caution, Caution's Own Daughter and now

Ormonde, five of the best specimens of the breed in this country. Every one a superb individual, and every one a loss not only to the owner but to mastiff breeding. Such reverses would dishearten most men, but fortunately he seems to be of the kind who are in the work to stay.

Speaking of "large mastiffs"—are we not in danger of sacrificing too much for mere size? Understand me, I favor the largest mastiff that can be produced, provided that nothing of massiveness, activity and true character, by which I mean to include not only appearance but utility, is lost. A mastiff unable to jump a fence, to accompany an owner on his walks—yes, and drives—without the disposition and ability to guard his person and property, if necessary, against all comers, is not worth feeding.

Only a few years ago the craze was all for head. Anything with a head was all right. Many judges never saw anything behind the ears. Thanks to many a severe drubbing, judges are now requiring that to a good head shall be united a strong symmetrical body, with sound legs and feet. Some of our winning mastiffs even of to-day are weak in hocks, generally deficient in hindquarters and feet; but the signs of the times are hopeful, the trend of breeders is mainly right. Now let us not replace the former type of mastiff—an animal of magnificent head on a cripple body—with an overgrown hulk, with no virtue but avoirdupois. Mastiff dogs weighing from 150 to 175 lbs., and bitches from 125 to 150 are very large animals, larger than the average of good all-around mastiffs. If we can breed them of that weight with good heads, good bodies and good legs and feet, we shall do well. And let no one grow excited over stories of 200 to 230 lb. mastiffs, such phenomena is rare. One or two well authenticated cases may have been known, but the conditions which produced them seldom exist. At no time has the outlook for breeding sound, active, symmetrical mastiffs of good size been more encouraging than at present; but don't let us lose our heads and try to breed elephants.

The mastiff's rightful place is in the front rank of the canine race, a position to which it is easily entitled by its unequalled strength, courage, fidelity and intelligence.

We should strive to produce animals worthy of this distinction, but we shall have to develop an entirely new animal before many of them will be 200-pounders.

CLINTON N. POWELL.

OMAHA, Neb., Feb. 3.

### Specialty Club Secretaries.

It has always been a subject for remark among dogmen who are also members of different specialty clubs that the majority of the secretaries do not sufficiently interest themselves in the welfare of their club and the breed the club is organized to push forward. It does not seem to occur to them that their position is the most important one in the list of officers. On the work of the secretary depends in a great measure the welfare of the club and advance of the breed the club is supposed to foster. Our attention was first drawn to this subject owing to a motion that was made by a member of the executive committee at the annual meeting of the National Beagle Club, that the secretary be instructed not to furnish the kennel press with a report of meetings held by the club. Of course, the motion was lost, and it is due to Mr. Laick, the secretary, to say that he has always furnished the papers with reports, and is always willing to do so. Such hide-bound policy as that suggested had a good deal to do with the lack of interest taken in the old American-English Beagle Club. Very few, if any, secretaries of these clubs go to the trouble of advising all the members of the club as to what transpires at their meetings. The Spaniel Club, when Mr. Wilmerding was secretary, generally had the minutes printed on a circular, and this was mailed to all members. This is expensive in a sense and is not necessary when the kennel papers are willing to print the reports. Every member of a club has a right to know what is going on in that club. The secretaries for their own benefit and according to rules are compelled to write out the minutes of every meeting, and while doing so, by the aid of manifold copying paper they could at the same time make three or four extra copies, and these can then be forwarded to the principal kennel papers with little extra trouble or expense. By this means every member of a club will know what has transpired at the meeting.

There is another consideration which such a procedure would cover. When a reader of these papers, not necessarily a dog man as we understand the term, sees an account of the meetings and reads the names of the men interested in whatever breed the club represents, would he not be more likely to think about joining that club than if he just had some undefined idea that such a club existed? The more publicity there is given to the doings of these clubs the more likely is it that the membership list will be extended.

There are several specialty clubs in existence about whose meetings nothing is heard, unless it be the annual one at the New York show. Such are the St. Bernard, the Collie and the American Mastiff clubs, and in a lesser degree other clubs we could mention. It is impossible for the papers to cover these meetings, for unless some one connected with the paper is a member of the different clubs, they are seldom advised as to when such meetings will take place, and it is not known if reporters would be welcome if they did. The remarks above also apply to secretaries of kennel clubs, for upon the energy and ambition of the secretary often depend the financial prosperity and influence of their organizations and the success of their shows. We do not think that this apparent lack of energy results from anything more than thoughtlessness and an unfamiliarity with what we have distinctly pointed out as the duties of such a secretary. These remarks are made entirely in a friendly spirit, and are suggested merely from the dictates of our experience with dog men and what is required. The specialty clubs in England have done a great deal of good for the breeds they represent, and the secretaries of these clubs, we should say, without exception recognize the value of publicity from the fact that in the principal kennel papers a certain part of their columns is set apart for "club notices," and full reports of all meetings are sent in by the secretaries.

### Holding the Crowner's Quest.

JOHNSTOWN, N. Y., Feb. 5.—*Editor Forest and Stream:* The statement appearing in the FOREST AND STREAM of Feb. 3 relating to the decrease of the circulation and suspension of the *Fancier's Journal* does a grave injustice to C. H. Mason. I was business manager during the first three months of Mr. Mason's editorial connection with the above-mentioned paper. In that time the kennel advertisements more than trebled in number and there was an increase in subscriptions, the latter coming from dog fanciers. These are the facts.

J. H. DREVENSTEDT.

Editor Forest and Stream:

The falling off of subscriptions to the *Fanciers' Journal* during the three months' regime of Messrs. Mason and Drevenstedt was exactly 200. This statement can readily be proven by the subscription book, now in the hands of the Poultry Keeper Company, Parkersburg, Pa.

VICTOR M. HALDEMAN.

[From Mr. Haldeman's note it appears that we erred in saying that the 200 subscribers fell off in two months; we should have said that the decrease took place in three months. We also erred in putting the subscription list at the beginning at 784, for Mr. Haldeman tells us "it was more like 950 we had in June. The subscribers continued to fall off all summer," he adds, "so that there were less than 500 when we sold."]

SOUTHERN FIELD TRIAL CLUB'S TRIALS

The Southern Field Trials began with the Derby on Monday, Feb. 5, at New Albany, Miss. They were much delayed by stormy weather, the time selected being most unfortunate in striking a rainy season this year and last year.

The unreasonable time limit also delayed the trials unnecessarily, several heats being run in the first series longer than was necessary, and there were intervals before the time limit expired in which the dogs were simply run to kill time, one competitor showing decisive superiority over another.

There were birds enough for the purposes of the competition. The grounds were favorable for good work, though the sedge grass was uncommonly heavy in places, owing probably to the mild, open winter, frosts and storms being necessary to beat the cover down.

These trials are important ones to the Southern sportsmen, and therefore they should be given attention in business matters and thought given to their management, but slipshod and careless methods seem to prevail. Such cannot fail to result in dissatisfaction and injury to the club. Owners and handlers particularly complain of the neglect of the club in not engaging judges in season and publishing their names before the entries close, so that they will know who is to pass upon their dogs' standing in the competition. With such neglect in important matters, dissatisfaction is sure to result. The retirement of this club would be a great misfortune to field trial interests. Yet, without more system and more energy, there are doubts whether the club can hold the necessary interest of members on the one hand and dog owners on the other, to insure its future success, even if its existence is not jeopardized.

The club's rules need some revision, no part more so than that which refers to the time limit of forty-five minutes. It is a rule which has a sole use in soothing owners into a feeling that he is getting at least a fixed value of some kind in return for his money, and has no reference at all to the direct competition between the dogs in a stake.

There was a good attendance of sportsmen and much interest was manifested in the trials. There were Mr. Wilbur Dubois, Cincinnati; C. F. Joyce, Greensboro, N. C.; A. M. Young, Manchester, Tenn.; F. S. King, Leighton, Ala.; Foster, Chicago; Arnold, P. H. O'Bannon, P. H. Bryson, R. Pitts, Cherry Creek, Miss.; Dr. M. F. Rogers, New Albany, Miss.

The Derby.

There was an unusually large number of good puppies in the stake, though no sensational work was done. Not a competitor in it could be classed as positively inferior. As a whole, the dogs were better broken than those which ran in the trials of recent years, although there was a great deal of that undesirable feature, "hustling." It is strange that hurrying and scrambling are tolerated by any judges at the present day. A little firmness in the beginning of a trial by the judges in checking scrambling, and there is no more trouble from it during the rest of that trial.

The judges in the Derby were the club's secretary, Mr. T. M. Brumby, Marietta, Ga.; Major J. W. Murnan, Huling, Tenn.; and Capt. R. P. McCargo, Olive Branch, Miss.

The stake was for setters and pointers whelped on or after Jan. 1, 1892. The purse was \$850, divided into three parts, \$400 to first, \$250 to second, and \$200 to third.

First was won by Topsy's Rod, though his work was far below that shown in the trials last year. He has good range and speed, but his point work was faulty.

Bessie Shoupe, winner of second, ran a much better race, everything considered, than Topsy's Rod, though he had a decided advantage in range. Her point work was sharper, greater and more accurate in the competition, excepting in the last heat.

Allene had held Topsy's Rod quite even in the competition, though both had done faulty point work. In the rain on Tuesday the birds were much easier to find and point, and it would then have been but fair to have given all the best dogs a chance to see what they could do under improved conditions. Ighfield Rosalie and Callie White both made an excellent competition, as compared with the others.

MONDAY.

A white frost, a cool, bracing air and a clear sky were most favorable weather conditions for the beginning of the trials. As the sun mounted higher the weather became warmer. In the middle of the afternoon it was uncomfortably warm. The grounds had dried up to an astonishing degree notwithstanding the torrents of rain which fell on Friday night and all day Saturday. The lowlands were still wet or soft, but such lands were but a small part of the field trial grounds. The drawing took place on Monday.

There were twenty starters, namely:

Jackson-Denmark Kennels' b. w. and t. dog Earl Palmer (Frank Whitley—Dulcinea), Thomas Bond, handler, with P. Lorillard, Jr.'s, o. and w. bitch Beryl (Gladstone's Boy—Ruby D.), C. Tucker, handler.

P. Lorillard, Jr.'s, o. and w. bitch Ighfield Rosalie (Fred—Rosa), C. Tucker, handler, with Avent & Thayer Kennels' b. w. and t. bitch Thalid (Jean Val Jean—Avent), J. M. Avent, handler.

P. Lorillard, Jr.'s blue ticked bitch Antoinette (Antonio—Daisy Hunter), C. Tucker, handler, with F. R. Hitchcock's bitch Topaz (Count Gladstone—Tory Diamond), J. M. Avent, handler.

F. R. Hitchcock's b. w. and t. bitch Amethyst (Count Gladstone—Tory Diamond), F. S. Bevan, handler, with A. P. Stokes's b. w. and t. bitch Bessie Shoupe (Gath's Hope—Countess Rush), D. E. Rose, handler.

Greensboro Field Trial Kennels' b. w. and t. dog Rod's Mark (Roderigo—Mark's Maid), F. S. Bevan, handler, with Manchester Kennel Co.'s b. w. and t. bitch Nellie Gladstone (Dan Gladstone—Queen Novice), A. P. Gilliam, handler.

F. S. Bevan's b. w. and t. bitch Dame Durden (Eugene T.—Dell Rivers), owner, handler, with B. Cooper's b. w. t. bitch Sadie Ross (Gath's Hope—Tempest), D. E. Rose, handler.

W. E. Smith's b. and w. dog Major Thomas (Gladstone's Bay—Bell Foster), A. P. Gilliam, handler, with T. H. Gibbs's l. and w. dog Lad's Rush (Lad of Rush—Devonshire Belle of the Ball), L. W. Blankenbaker, handler.

P. Lorillard, Jr.'s b. w. and t. bitch Leona (Eugene T.—Bess of Hatchie), C. Tucker, handler, with Manchester Kennel Co.'s b. and w. bitch Callie White (Gath's Mark—Georgia Bell), A. P. Gilliam, handler.

Blue Ridge Kennels' b. w. and t. dog Blue Ridge Mark, D. E. Rose, handler, with Greensboro Field Trial Kennels' b. w. and t. bitch Miss Hattie (Gath's Hope—Queen Noble), F. S. Bevan, handler.

Avent & Thayer Kennels' b. w. and t. dog Topsy's Rod (Roderigo—Topsy Avent), J. M. Avent, handler, with Blue Ridge Kennels' b. w. and t. bitch Allene (Gath's Mark—Ruby's Girl), D. E. Rose, handler.

EARL PALMER AND BERYL were cast off at 8:47 in open

BESSIE SHOUBE AND AMETHYST were started at 11:17 and ran till 12:14. Bessie was not ranging at all near her form of the previous Thursday, yet she did some excellent clean, sharp point work and showed good judgment in her work. She located and pointed a bevy nicely. On the scattered birds she made a point. Rose flushed one, and the bitch held her point staunchly. Rose said that there were more birds. He walked forward and flushed three. She still held her point, but no more were found to it. She made three more good points on single birds. Amethyst stayed out well and ranged steadily, but it seemed difficult to change her from a set range, and her handler made no attempt to work her on scattered birds. She, too, picked out the easy going.

The running was suspended while the party partook of a most agreeable lunch at Mr. W. G. Bias's place.

NELLIE GLADSTONE AND ROD'S MARK at 1:10 began a beat which lasted 37m., 3m. short of the limit. On the trail of a bevy, Mark was first to locate and point it. Nellie backed. The work was indifferently done after a plodding fashion. Mark pointed a bevy in open sedge. Both were fair rangiers, but their work was inferior. They were steady to shot.

DAME DURDEN AND SADIE ROSS started at 1:53 and ran till 2:38. Dame made one good bevy point, two single bird points, two points which proved barren and one flush. Sadie flushed a bevy and made one point on footscent. Both showed faulty judgment in ranging. Dame showed a proclivity for pointing on scent. They were steady. They had good speed.

MAJOR THOMAS AND LAD'S RUSH ran an ordinary heat.

Major stopped to the flush of an outlying single, then pointed the bevy. He pointed a single next, and moving on he stopped at the same time two birds flushed. Another find and point on a bevy and a single bird point finished his work on birds. Lad's Rush pointed twice on single birds, and found and pointed a bevy which flushed wild about 100 yds. ahead, and he made a point which was blank. Each backed well. Neither ranged wide nor showed much judgment in it. Down 39m.

LEONA AND CALLIE WHITE began at 3:28 and ran 47m. They ranged well and with good judgment. The work on birds was not first rate. Leona pointed a bevy, and at the same time Callie, a short distance away, pointed or backed. On the scattered birds, Callie made a good point. Leona pointed a bevy, Tucker failed to flush, although the bevy was but a few yards away. Callie came in as the bevy flushed. They were steady to wing and shot.

BLUE RIDGE MARK AND MISS HATTIE started at 4:20. Down 41m. Hattie made a good point on a bevy and was backed. Mark pointed a single, and next he pointed on the trail of a bevy, and Hattie going on about 30 yds. further pointed the bevy. Had she been brought in to back as was proper, she would not have profited by Mark's find. Mark pointed a single and a bevy in open sedge. The handlers were separated a great deal in the heat. Both had fair range. Mark was the better finder.

TOPSY'S ROD AND ALLENE started at a great pace at 5:03 and ran till 5:49. They took wide casts at high speed, in fact, too wide at times. The handlers became separated. There was a good deal of awkwardness on the part of the judges in managing the heat. Topsy's Rod pointed on footscent (of larks probably) and persisted in pointing staunchly after it was plain there was nothing. Sent on, he pointed again in a few minutes, but went on to an order from the whistle. He seemed to point on scent to the extent of a fault. No birds were found till the end of the heat. On the trail of the running birds, both drew to a point several times, but Allene was the more accurate, being sharper and quicker in ranging. She followed the bevy into woods and pointed it, and was steady to shot.

In the evening the judges made out a list of the dogs to remain in. The selection cannot be entirely commended, as several of the dogs had done common work and had no chance to win, among which was pre-eminently Thalid. Antoinette and Beryl were both superior to him, and Dame Durden had shown so much false pointing that it marred her work sadly. Lad's Rush also had not shown sufficient range and general performance to rate with the others. Blue Ridge Mark had shown a good competition.

TUESDAY.

The weather was clear and cool, with a stiffish southeast wind blowing. Birds were not found in abundance, and the work was, with few exceptions, inferior. An excess of false pointing and inaccurate work in locating was common. As the imperfect work was exhibited by nearly every dog which ran during the day, the failing was due probably to bad scenting conditions. There was quite a large attendance of spectators, of whom five were ladies. The running was managed rather awkwardly, and the judges seemed unnecessarily slow in reaching a decision. They were painstaking, yet worked some dogs unnecessarily often and long, and seemed to feel not quite sure of the proper decision.

BESSIE SHOUBE AND MAJOR THOMAS began at 8:41. Bessie pointed a bevy in the open at the same time Major pointed an outlying single. Sent on. Major dropped to a point, then roared and pointed the bevy. Bessie made an uncertain point, then moved on and flushed the bird. Both were steady to shot. Up at 9:14. Bessie was far superior in the class of her work. She had better range and more judgment.

DAME DURDEN AND MISS HATTIE began at 9:17 and ran 23 minutes, and Dame flushed a single bird. Both pointed on the footscent where a bevy had flushed. Miss pointed a bird. Next both had a point on the same bird. Sent on, Hattie

"DICK FOX BACKING MISS RUBY."

Mr. D. E. Rose at the Eastern Field Trials, 1893.

sedge not far from town. Earl pointed a bevy, and Beryl going across wind flushed it and dropped to wing. Beryl flushed a bird in woods. Sent on she pointed a bevy in open sedge. Earl after pointing a sparrow got a point on a single bird. In roading to a bevy, both on the trail of it, Beryl showed better work. On scattered birds each made three points, Beryl quicker and sharper in locating. Both would potter on false or strange scents, though not frequently. Up at 9:31. Their range was but moderately fair. Both were steady to wing and shot.

IGHTFIELD ROSALIE AND THALID began at 9:37. Rosalie showed a decided superiority over her competitor both in locating, pointing and beating out the ground for bevies. She pointed a bevy and Thalid made a point and a flush, each on a single, and missed some good opportunities to point in open sedge. Thalid made four points on singles, while Rosalie made three points on singles, also one on several scattered birds, one on a bevy, which she found nicely, and one on scent where a bird had flushed a moment before. Several of her points were dashing done, she wheeling to them in her stride after catching the scent. Both were steady to shot and wing. Thalid was irregular in-range, showed poor finding qualities and looked for orders frequently as to what she should do next. Up at 10:20.

ANTOINETTE AND TOPAZ began at 10:28 and ran 44 minutes. Antoinette easily outworked Topaz, she finding two bevies, one of which Topaz passed closely without recognizing scent. She pointed a single nicely, and another one she pointed then moved on and flushed. She made an excusable flush and pointed once at the same moment the bird flushed, and twice nothing was found to her points. Topaz flushed a single and a bevy, and made an awkward piece of roading on a bevy which flushed wild. Her work was poor. She came in frequently for orders, and was inferior to her competitor in range and industry. Both were steady to shot.

pointed a bevy. She potted occasionally. Neither ranged regularly, though they went at a good pace and Dame had a fair range.

SADIE ROSS AND IGHFIELD ROSALIE began at 9:47 and ran till 10:13. Sadie was unfortunate at the start, in going down wind on a bevy and flushing it, though it was excusable under the circumstances. Sadie pointed one bird and flushed one across wind. Rosalie made a point on some scattered birds. Both showed good speed and range, yet the point work was not first-rate.

LEONA AND LAD'S RUSH were started at 10:15. Leona got three points on scattered birds and Lad one. Leona was superior in every respect. Up at 10:40.

TOPSY'S ROD AND CALLIE WHITE began at 10:43. Rod flushed a bevy. Next he made a false point. Next he roared up wind to a flush on an outlying single and dropped to a point on the remaining birds. A vent flushed the bevy. Callie in open sedge made a good point on a single. Rod flushed a bird and lost a number of opportunities to point on birds in sedge. He pointed a single. He located awkwardly and was disposed to point on footscent or false scent. Callie made a good point on a single. Rod had taken a long cast-away, and not returning, a short search resulted in finding him on a false point. Both ranged well, Rod the wider. The point work was ragged.

ALLENE AND THALID began at 11:29. Thalid had run poorly in the first series, and had but little claim to run again. Both dogs appeared to be out of pointing form. Each made three false points. Next Allene made a good point on a bevy and a point on a single bird. Thalid made a point and a flush on singles. Allene was far the better ranger and had greater speed. Up at 12:23.

BLUE RIDGE MARK AND BERYL began at 1:51, after lunch, and made a good display of speed and range, Mark the better. They took a cast out of sight on a side hill. Both were found on a point, or Beryl was pointing and Mark backing. On a marked bevy both at the same time pointed the scattered birds. Mark was superior in range and speed, Beryl tagging him frequently, which marred her performance. Up at 2:31.

The judges then announced that they would want next Bessie Shoupe, Ightfield Rosalie, Dame Durden and Callie White.

BESSIE SHOUPPE AND IGHFIELD ROSALIE started at 2:42. Bessie soon drew very accurately and prettily with a high nose several yards to a point on a bevy. Rosalie following behind went by as Bessie was drawing and came to a point ahead of her. Several thought that the point was Rosalie's, but Bessie was first to make both the find and point. Bessie made two points, to which nothing was found, and Rosalie one, possibly on footscent, as horsemen flushed birds not far from them. Up at 3:20. Bessie showed greater judgment and independence in her work.

DAME DURDEN AND CALLIE WHITE started at 3:23. The handler of the former being absent Mr. F. S. Bevan took her handling interests in charge. Both pointed at the same time, Callie on the bevy and Dame on an outlying single. Dame got three more points on singles and Callie two. Both were steady to shot and wing, and ran a good heat. They showed good range and speed, and good point work. Up at 3:45.

TOPSY'S ROD AND ALLENE were called next, starting at 3:47. Rod pointed a bevy in heavy sedge. Allene made a point. Rose failed to flush. Allene sent on roared the bird to a flush. She made two false points, and Rod made two of the same kind and one good one on a single. Allene took a long cast and found and pointed a bevy staunchly. On the way after the scattered another bevy was found and pointed by both dogs. Some said one dog pointed it first, others said the other dog did, and so it rests. Rod pointed a bird and both flushed one. Rod next made a flush on a single while the judges were consulting. He ran a few yards, turned back and pointed where the bird flushed. A vent claimed a point. It was a promising place for more birds. They were not there, but a few yards further on across the creek each got a point on the scattered birds. Allene was a bit the faster and both ranged wide. Rod was faulty in pointing on footscent too much and he did not handle easily. Up at 4:32.

The judges consulted and announced that the competition had ceased for the day. On the morrow they would want Topsy's Rod and Bessie Shoupe to run a heat, after which they would announce their decision.

### WEDNESDAY.

An almost steady downpour of rain in the forenoon prevented any attempt at field trial work. A start was made in the afternoon when the rain ceased and there were signs of the clouds breaking away—delusive signs, for soon after the dogs were started the rain again began to fall, shovely at first, but soon settling into a steady downfall. Notwithstanding the unpleasant weather, birds were easily found and the scent apparently was excellent. The dogs could easily and accurately point either beves or single birds, conditions which did not prevail at any previous time of the stake.

TOPSY'S ROD AND BESSIE SHOUPPE started at 2:54. The dogs had not got well started when Rod, who had started off to the left, after going about twenty yards, came up on a point. Bessie backed. A vent failed to flush and the dogs were ordered on. Both at once commenced roading and pointing. The judges ordered Rose to hold. Bessie up till Rod located. Mr. Rose obeyed promptly. Rod located and pointed the bevy. There was little merit in the accidental find. Holding Bessie in was according to the club's rule, a sound rule it is, too, but the rule was made to apply alike to all the dogs. It had not been observed before in the stake, nor was it observed afterward. Sent on, Rod pointed a single bird. Next, after a short search, Rod pointed a bevy and Bessie backed promptly. On the scattered birds there was some good work, Bessie making three good points and Rod two, and each backed well. Sent on to search for another bevy, Bessie was first to find a bevy and pointed it. Rod coming in from the right, also pointed the bevy. Rod next pointed and nothing was found. Bessie pointed a single in open sedge. Sent on, and Bessie soon struck the trail of a bevy and was roading when Rose gave a word of caution and she pointed. A vent coming in, made no attempt to get his dog in behind to back. Bessie started to road, and A vent, about thirty yards ahead, then claimed a point for Rod on the bevy which soon flushed. Here was a grand opportunity lost to enforce the rules by ordering Rod held in as was Bessie. Neither Mr. A vent nor his dog had any right moving about where Bessie was roading. It cut her out of an opportunity to work out her find, violating a mandatory rule of the club, and it was not giving her the same just protection accorded to Rod shortly before when he was locating. Sent on, and there was an exhibition of the most inconsiderate scrambling on the part of Rod's handler to get every advantage. The rules were constantly violated in the work on birds. Though Rose asked the judges to hold his competitor back on even terms, a just request, it was not done. To the credit of Rose be it said, he handled his dog fairly to the end of the race. Sent on, Rod flushed a bird in open sedge. Hurried ahead, Rod got a point on a single in woods, at the same time Rose protested against the rushing. Bess pointed a single and Rod at the same time about 100 yds. ahead pointed and A vent rushed to him. He roared into the woods and pointed a single. Next he pointed; nothing found. Up at 3:47. Reviewing his work previous to this heat, he had found very little, although given ample opportunity. His point work, too, was limited considering his many opportunities. Bessie excelled him in that respect both in quantity and quality. She was better broken,

handled with less noise and beat out her ground with better judgment, all of which are governed by the club's rules. A toot of the whistle was often given Rod to test him when on point, and he by it was moved on from a number of false points during the stake and nursed up to the birds better by it when on true points. Be-sie, on the other hand, was perfectly reliable on point. She made fewer errors. Rod's only claim to superiority was a wider range. In every other respect he was beaten. Rules and judicial firmness were lost in this heat. The winners were:

Topsy's Rod first, Bessie Shoupe second; third divided equally between Ightfield Rosalie, Callie White and Allene.

B. WATERS.

The report of the All-Age Stake had not arrived at the time of our going to press, the mails having been delayed by the severe storms on Monday night. The result of the All-Aged Stake, however, was: First, A vent and Hitchcock's Count Gladstone; second, Manchester Kennel Co.'s Glean's Pink; third, divided between Denmark Kennels' Lillian Russell and Pierre Lorillard, Jr.'s Miss Ruby.

## DOG CHAT.

### Bulldogs.

It is a matter for congratulation that this breed seems to be so well looked after on both sides of the Atlantic by its specialty clubs. The large number and great value of the prizes given by the English and American clubs are evidence of the standing and enthusiasm of the admirers of this much maligned breed. This journal has persistently upheld the many virtues of the bulldog, and we are glad to see that the unjust suspicion under which the breed has labored in this country is to a great extent disappearing, and several new men are coming into the fancy. Our breeders have little means of gaining a knowledge of the best dogs on the other side, and such an interesting resumé as Mr. Farman gives of the breed's doings during the past year, in the English *Kennel Gazette*, is therefore particularly important and valuable. In the open, winners and limit classes at English shows sixty-five different dogs and bitches have won first prizes, of this number thirty-two have won one each, the majority of the first prizes at the many shows therefore going to thirty-three animals. Mr. Farman does not remember a year in which the mortality among the best specimens has been so great as in 1893. No less than five champions have died—Grabber, Bedgebury Lion (owned at the time by Retnor Kennels, New York), Forceps, Harper (owned by Mr. Mariner, Milwaukee, Wis.), and Dryad. Including champion Dryad, eight grand bitches have joined the majority, their names were, Tonish, Margaret, Semolina, Enfield Tartlet, Catchpool, and Aston Bit of Fashion, and others could be mentioned equally as valuable from a breeder's point of view. It is a lamentable fact that all these bitches died in giving birth to puppies, and not a single pup was saved. This decimation among the cracks, with the exportation of champion His Lordship, now owned by Mr. W. Travers, of Newport, R. I., leaves England with but two champions, Datholite and Ruling Passion.

Turning to this rather gloomy side of the picture we find that several strikingly new dogs have been brought out during the year. These are Monkey Brand, Facey Romford, Master John Bull and Aston Bit of Fashion, and Mr. Farman finds satisfaction in saying that these are distinctly of the right type, that is, pear-shaped, short-backed and low to the ground. He thinks such dogs are more in keeping with the standard than the flat-sided, straight-bodied and beefy specimens which have sometimes been placed in the front rank. This writer gives to Monkey Brand the palm as being the best of the new ones. He is a formidable competitor in the very best company, and several of the best have had to take a back seat to him. This dog has a curious mixture of striking and grand qualities intermingled with two bad faults, which lie at both ends—his head is too short and his tail is too long, but he excels in true bulldog character, with plenty of heart and quality. Facey Romford, we are told, is a coarse reproduction of Monkey Brand, and there is no denying that he is a fine specimen, though not so striking as the other dog, in the first place, because he is too beefy, and secondly, he falls away in front of his eye, and is coarse in ear. He is said to be good in bone, large in skull, low to the ground, in fact, a good all-round dog without any one point being too exaggerated.

Master John Bull seems an unfortunate, for his "frogginess"—we presume our bulldog readers will understand the term which alludes to the frog-shaped formation of muzzle—has stopped his chances of winning prizes, but forgive him this defect and he is one of the best bulldogs alive. He has a remarkable body, skull and face, and "is a living illustration of an animal that must generally be first or nowhere. I fear he will generally find himself nowhere as a froggy-faced bulldog is almost as bad as a Dudley." The other good new one was Aston Bit of Fashion and she died in helping to Cyclops, another new dog of exceptional promise.

Mr. Farman, while acknowledging the advance made in the rank and file of the exhibits, draws attention to the woful lack of character among the large majority of bulldogs now on the bench. By this he means the listless way in which they walk into a ring, their softheartedness and the lack of that "all there" quality—active and ready for anything. He quotes Old Grabber as having been a fair exponent of this quality, and also Dom Pedro, who is still alive. "Those are the sort of dogs we want instead of the milk and water animals which one constantly sees nowadays." He attributes a good deal of this to inbreeding, and warns breeders that while this may be necessary in obtaining certain points, care must be taken not to sacrifice the dog for its external appearance. Because the dog's vocation is gone this is no reason for not perpetuating his spirit.

Mr. Farman thinks that there is a tendency to exaggerate elbows, breeders forgetting that the formation of the shoulders should play an important part in the peculiar cut at elbow appearance of a bulldog. As this is generally considered of so much importance we may as well conclude by quoting Mr. Farman on this point. He says: "It is true that the elbows of a dog should stand away from the ribs, but at the same time this could be overdone, which is certainly the case in some of the specimens which one sees. I have no hesitation in stating that a flat-sided dog with an elbow standing out at right angles from its body and swinging about like a door on its hinges is practically a cripple, or, at any rate, a deformity. A dog formed in such a way can have no real strength and certainly could never perform the functions for which it originally existed. I decline to admit the contention that, because the breed's vocation is gone, it should be transformed into a fancy article, 'Not to be touched—for exhibition purposes only.'"

Another society man, Mr. William Waldorf Astor, proprietor of the *Pall Mall Gazette*, is going in strongly for bulldogs. This is good news, indeed, as Mr. Astor has always been extolled as the epitome of refinement in his ideas and surroundings.

Mr. John Armstrong, brother of the manager of the Cragstone Kennels, is importing two good English setters—Rock of Undercliffe and Prince Rupert. They are said to have won prizes at English shows. They are to sail Feb. 16 and may be shown at Chicago.

As showing the popularity of collies in England, and the

number of fanciers interested in the breed, it is only necessary to say that the Liverpool Collie Club alone has seventy members within a four mile radius.

A fashionable stud dog in England is a veritable gold mine. For instance the fortunate owner of the St. Bernard Duke of Maplercroft, we are told received seventy stud fees at seven guineas, during the past year. The collies Christopher and Ormskirk Amazement brought to Mr. Stretch thousands of dollars. Some of the fashionable fox-terrier sires may also be quoted as proof of the above statement, especially when we note that Mr. Stephens' celebrated terrier Vice Regal, by Rational out of Vauvienne, has already had ten nominations booked for this year, at ten guineas (\$52.50) each.

Very few people in America have an idea of the magnitude of the "cat" fancy in England. At most of the all-round shows classes are provided for these domestic pets, and from time to time special shows are held in London. Notice of one of these we find in the *British Fancier*. It will be organized by Mr. C. Craft, and is to take place after his great dog show at the Agricultural Hall, London, which was on last week. At this show twenty-five cups and upward of 100 special prizes will be offered. This will be sad news to many on this side the water, who only think of a cat when they are about to shy a boot-jack at it. Such ladies as the Duchess of Wellington, Duchess of Newcastle, Countess of Warwick, Countess of Sefton and a number of other members of the aristocracy are among the patronesses of this show.

A correspondent of the *Fox-terrier Chronicle* sends some interesting items about fox-terriers in South Africa. They are the favorite breed there and it must be a perfect elysium for a terrier that knows his business and likes it. One gentleman owns half a dozen terriers, and their record of kills for the past 4½ years is: 110 silver jackals, 45 manhaar jackals, 79 porcupines, 137 monkeys, 2 baboons, 32 musk cats, 23 bush cats, 7 rattels (something like a badger) and a lynx. There should be little fear that terriers from this man's strain will lack in terrier character or pluck.

### Taxing Dogs in Massachusetts.

The dog has many true friends in Massachusetts, and some of our very best fanciers are to be found within a radius of 30 miles of Boston. But if the following bill becomes a law "Cynoculture" will decline considerably in the Bay State. Mr. B. Alton Smith sends us word that E. Paige and F. B. Sanborn have introduced a bill in the Bay State Legislature, asking for more protection against dogs by raising the licenses to \$10 for males and \$20 for females; by having all damages by dogs paid from the dog license fund; licenses to be refused or annulled for all dogs that bark or disturb their neighborhood; by severe fines with loss of license to be imposed on all female dogs found at large when in fever; and all police to be required to capture such dogs at such time, for which they shall be paid \$5 for extra hazardous work; the police to be required to capture all dogs at large without a collar, suitably inscribed, and for which they shall receive \$2 for extra service. Should such a restrictive law be passed and enforced, the kennel interests of the State will suffer immensely.

We publish in another column a picture of a very promising rough St. Bernard, 16 months old, by Kingston Regent out of Cleopatra. If all goes well with him he should make a name for himself. He has a good-shaped head, good bone and excellent body, coat and action. He stands 32in. at shoulder and weighs 17lbs. He will be shown at New York. He was bred and is owned by Mr. Samuel D. Mann, of New York city.

### We Shall Be Glad to Meet Him.

ALLEGHENY CITY, Pa., Jan. 30.—To the Honorable Kennel Editor *Forest and Stream*: DEAR SIR—Please let me know through your paper the names and address of several prominent breeders of bulldogs. I wish to purchase a bull bitch. I write to you because I know you to be thoroughly reliable, and hope to make your acquaintance at the W. K. C. show at New York this month. Believe me to be, A CONSTANT READER. [As there are several "Constant Readers" it is impossible for us to identify the writer of this note, or to give him the information; but we hope to meet him at the show.]

We understand that Mr. Geo. S. Thomas is giving up his kennels at Salem, Mass., finding his expenses therewith too heavy.

### The C. K. C. and the A. K. C.

From what we can gather the committee appointed by the C. K. C. to confer with the A. K. C. at its annual meeting will carry instructions that should result in an amicable arrangement being made by which the *entente cordiale* between the two clubs will in a degree be resumed and the outcome redound to the credit of each club. The organization of the two clubs is not at all the same, the Canadian club being composed of individual members and not of clubs, as is the case with the A. K. C., and it depends not on any one place for its inspirations, the whole Dominion has a say in its affairs, as every member has an equal right to think and to influence the executive committee. The committee selected by the C. K. C. represents regions 600 miles apart. The whole situation should be discussed in all its bearings by the delegates assembled at the annual meeting during the New York show and some final decision arrived at then and there, and not be referred to the advisory committee, as so many important motions, etc., have been hitherto.

The annual meeting of the Collie Club of America will be held at Madison Square Garden on Thursday morning, Feb. 22, at 11 o'clock. A full attendance of members is urgently requested.

Dr. F. W. Kitchell, a well-known member of the Spaniel Club and at one time partner with Mr. Wilmerding in the cocker raising industry, has purchased the black and tan cocker Bambo from Mr. E. W. Fiske, of Mount Vernon, N. Y. Bambo will be placed at public stud.

### Woodale Kennels' Sale.

The sale of fox-terriers from the Woodale Kennels last Friday, at the American Institute, cannot be said to have been a success. The prices realized were miserable, considering the good breeding that some of the dogs could boast. There were 12 terriers put up, and prices ranged from \$12 for Woodale Deacon, by champion Raffle ex Ebor Nettle, to \$2 each for Rustle, by Starden's Jack ex Semolina, and Danse, by Woodale Rumpus ex Blenheim Radish. The average price for the 12 was less than \$5. The sale was not properly advertised, and this, with the wretched weather, must be taken as the principal reasons for such poor results.

Everything is progressing smoothly in the preparations for the Boston show, though the N. E. K. C. people are rather disturbed over the possibility of Fast Day being abolished in Massachusetts. If this happens the show exchequer will probably feel the change, as the Boston people depend upon this day's receipts to make both ends meet.

We are sorry to hear that the Saratoga Poultry and Kennel Club lost \$600 as a result of their first show held last month. Accounts are being paid off just the same, and the

club has elected the following officers for the ensuing year: President, R. G. Smith; Vice-Presidents, Allison Curtis, Col. W. T. Rockwood, John E. Hodgman, C. E. Rokenstyre, F. B. Zimmer, A. E. Blunck, Frank Cook, W. E. Hammond, Edward Ross, Ralph Russell; Treasurer, A. Edison Hall; Recording Secretary, Frank Cook; Secretary, Kennel Department, Lyman W. Clute; Secretary, Poultry Department, W. D. Eddy. Directors: F. W. Gaylor, Daniel Eddy, A. Edison Hall, Wm. B. Hall, Walter B. Benedict, Frank Sherman, David Clute, and W. E. Fraser. Delegate to the A. K. C. convention, Jas. Robinson; Alternate, L. W. Clute.

#### Club Meetings at the New York Show.

Those who are interested in the meetings of the different clubs which will be held in Madison Square Garden during the New York show will find the following list a handy reference:

American Kennel Club's annual meeting, Feb. 22, at 2:20 P. M. At the close of the annual meeting the executive committee will meet. A. P. Vredenburg, Sec'y.  
Bulldog Club, Feb. 20, at 7:30 P. M. E. A. Woodward, Sec'y.  
National Greyhound Club, Feb. 21, at 8 P. M. H. W. Huntington, Sec'y.  
English Setter Club, Feb. 21, at 12 M. Wilson Fiske, Sec'y.  
Irish Setter Club, Feb. 21, at 12 M. Dr. G. G. Davis, Sec'y.  
National Beagle Club, Feb. 22, at 2 P. M. G. Laick, Sec'y.  
Eastern Field Trials Club, Feb. 22, at 3 P. M. W. A. Coster, Sec'y.  
American Spaniel Club, Feb. 21, at 4 P. M. Rowland P. Keady, Sec'y.  
Gordon Setter Club, Feb. 22, at 7:30 P. M. L. A. Van Zandt, Sec'y.  
Pointer Club of America, Feb. 20, at 8 P. M. Adrian C. Pickhardt, Sec'y.  
American Pet Dog Club, date not given. Miss M. E. Bannister, Sec'y.  
Collie Club of America, Feb. 22, at 11 A. M. J. D. Shortwell, Sec'y.

#### Death of Count Howard.

We regret to hear that Mr. F. Windholz has sustained another severe loss by death in his well known English setter kennel. His champion Count Howard died last Friday of pneumonia. Mr. Windholz used him down South this fall and winter with his other dogs, and noticed that when coming home, three weeks since, the dog had a slight cough. Little attention was paid to this, and Count was sent with the other dogs to Mr. Miller's kennels in New Jersey. When the dog became really ill, Miller sent him into New York to Mr. Windholz, and being held in the express office some hours after he should have been delivered, pneumonia set in, and one of our best show setters passed away. Count Howard would have been ten years old on May 7. He was bred by Mr. G. Potter, of England, and was by champion Sir Allister out of Mena, by Rock out of Cockerton's Meg. He was imported by Mr. Windholz about 1888, after winning a string of firsts at the principal English shows. His first appearance in this country was at Richmond, Va., in the fall of that year. His career is too well known to need recapitulation here. Though rather on the heavy side he was built on correct lines. He was scarcely fast enough for field trial work, but as a private shooting dog his owner considered him a good one. Mr. Windholz will not show at New York this year, though he has a young dog by Count out of Princess Beatrice, that he thinks ought to do well; he has also some young stock by Count that are very promising.

Mr. Wolfraun of this city sends a picture of his noted "life saving" dog Hans, A. K. C. S. B. 21,069. It represents a rough St. Bernard of goodly proportions but lacking the blaze so desirable in this breed. He is by Vindex out of Princess Helene and received last week the "Police Gazette Champion Life Saving Medal." Mr. Wolfraun, unfortunately, does not furnish us with particulars as to what the dog has done to deserve this honor.

There is some talk of having another dog show in Bridgeton, N. J., this winter. The interest in dogs created by the show held last year has resulted in several good dogs being purchased by local fanciers. The last show was a success and there is no reason why another one should not be held.

We have little hesitation in saying that the sketch by G. Muss-Arnolt representing Dick Fox honoring Miss Ruby's point is one of the finest and most natural field scenes ever published in the kennel press. Lovers of field dogs can look long and earnestly upon it and it will bring back to them many scenes familiar to those who love the dog and gun.

The ridiculous statement made by our Chicago contemporary, that "now that Princess Florence has returned to the land of her birth it leaves our American-bred to the best rough-coated St. Bernard bitch in America, for she is closer to Princess Florence than others that we have seen," etc., will cause amusement in the ranks of St. Bernard breeders. It never came any nearer to Princess Florence than Chicago is to New York, and never will be. Our contemporary forgets that Rustic Beauty and Lady Livingstone are still alive, both of which can beat it, to say nothing of one or two others who have beaten her. We could mention several that can give to a very close run for the money. It is a big, well-grown bitch, and that is the best that can be said for her.

Mr. Thompson S. Craig, of Albany, N. Y., has purchased the bull-terrier dog Rookery Boy, first prize, under 30lbs., National dog show, Birmingham; first and special, Birkenhead, also New Brighton, England. Rookery Boy is entered for New York, and is a son of Surefoot, winner of second prize at that show last year. This dog came over on the White Star Liner Civic last Saturday.

Owing to pressure on our columns, a number of fox hunting notes, kennel notes, etc., must lie over another week.

The FOREST AND STREAM will as usual have its stand at the Madison avenue end of the Madison Square Garden, and if those exhibitors who cannot be present themselves, but would like the earliest intelligence as to what their dogs have done, will send their names and addresses to this office, or to our stand in the show building after Feb. 19, we shall be pleased to telegraph them at once the result of the judging. Many of the best dogs are sent to shows in the care of handlers who are both very busy the first two days of the show and are often forgetful of the anxiety of the owner, who is compelled to stay at home.

Mr. L. A. Van Zandt, secretary of the Gordon Setter Club, will send his white English terrier Blink Bonny over to England on the Persian Monarch to be bred to the best dog on the other side, and this will probably be champion Ben, who changed hands after winning first and special at the late Liverpool show. Mr. Van Zandt seems to be going into this breed pretty strongly, as he is importing the bitch Little Beauty and another bitch in whelp to champion Ben. We should like to see these smart handsome terriers become more popular on this side; there will be six shown at New York next week.

Additional specials and classes at the Mascoutah Kennel Club show are as follows: Mr. R. G. Short offers \$25 for the best pack of not less than ten American foxhounds, entered and owned by one exhibitor. Class 208½, for toy spaniel

puppies, 6 to 12 months old, dogs and bitches, prizes \$5 and \$3. The entries for this show close Feb. 24 at Room 952, 276 Dearborn street, Chicago.

The White Star Liner Boyie that was due in New York Wednesday Feb. 15, had on board two bull-terriers for Mr. John Whelan, Central Park Kennels, New York; one collie dog for Mr. James Snowcraft, Paterson, N. J., and six dogs for Mr. James Mortimer. These are a bulldog, two bobtailed sheep dogs, and two field spaniels for the Hempstead Kennels and the other is a wire haired fox-terrier owned by Mr. Geo. Raper of England. All these are entered for the show next week.

Mr. F. F. Dole has sold his winning bull-terrier bitch Edgewood Tipsey, to the Castle Point Kennels at a large price. In turn friend Dole has purchased the well known bull bitch The Graven Image from Mr. Mariner, Milwaukee, Wis. He has also a new setter that will climb into the money, it is hoped. Mr. Dole will be at the Rutherford fox-terrier sale, and is willing to take a few more commissions to buy for those who cannot attend themselves.

The White Star steamship Civic, which arrived Jan. 24, in addition to the 11½ couple of English foxhounds, also brought over a terrier for Mr. S. S. Howland, who is hunting the country round Washington, D. C., and Annapolis, Md. The Nomadic, which arrived on Friday last, brought a bull-terrier for Mr. T. S. Bellin, of Albany, N. Y. This vessel also carried nine coops containing twenty-four fine fowls.

The tendency of some breeders, ever on the lookout for a novelty, to produce white specimens of certain breeds when other colors are more fashionable and considered more correct.

ROUGH ST. BERNARD PUP DEMETRIUS.

has led Dr. Hoyt, of Sharon, Pa., to breed a couple of white Italian greyhounds. He sends us a photograph of them, which shows them to be very fair specimens of the breed outside of their unusual color. As we have remarked before, this tampering with color may prove expensive in the end.

#### The W. K. C. Show.

A couple of weeks since the officials in the W. K. C. office at 44 Broadway, while assuming an assuring look when asked about the prospects for a big entry, to the careful observer it was apparent that there was an undercurrent of anxiety as to the outcome. Hard times and the objectionable features that follow in their train might well have given rise to a doubt that the entry list would reach the total of last year. All this is passed now and joy has succeeded anxiety, and well it might, when 1,526 entries will have to be catalogued for the eighteenth annual show, an increase of 56 over last year's entry. The entry by breeds for this year is as follows:

Mastiffs.....	20	Poodles.....	58
St. Bernards.....	174	Bulldogs.....	57
Bloodhounds.....	6	Bull-terriers.....	52
Great Danes.....	24	Boston terriers.....	13
Newfoundlands.....	6	Basset hounds.....	4
Russian wolfhounds.....	30	Dachshunds.....	22
Deerhounds.....	18	Beagles.....	40
Greyhounds.....	42	Smooth fox-terriers.....	50
Foxhounds.....	21	Wire-haired fox-terriers.....	41
Retrievers.....	3	Irish terriers.....	45
Chesapeake Bay.....	2	Black and tan terriers.....	16
Pointers.....	137	White English terriers.....	6
English setters.....	99	Dandie Dimont terriers.....	5
Irish setters.....	69	Bedlington terriers.....	7
Gordon setters.....	44	Scottish terriers.....	18
Irish water spaniels.....	6	Skye terriers.....	13
Clumber spaniels.....	2	Yorkshire terriers.....	12
Field spaniels.....	23	Toy terriers.....	12
Cocker spaniels.....	77	Pugs.....	28
Rough collies.....	117	Toy spaniels.....	27
Smooth collies.....	13	Italian greyhounds.....	13
Bobtails.....	3	Miscellaneous.....	27

Total entries 1,526, duplicates 189, actual dogs to bench 1,337, an increase of 18 over last year.

The number in the miscellaneous class will probably be increased to 33, as Dr. Cook, the Arctic explorer, who will make a display of his dogs and Esquimaux, sleds, etc., has bespoken space for 15 dogs, which will be placed in the basement. A separate class will probably be made for Esquimaux dogs.

It is safe to say that quality will be better represented than at any previous show, and although in many breeds there was a better showing in the early exhibitions as far as numbers go, they were a mixed lot at best, and bear about as much comparison to the dogs of to-day as does the old John Bull engine of the early thirties to that superb triumph of mechanism which draws the Empire express. The greatest advance has been in the St. Bernards, poodles, great Danes, Russian wolfhounds, spaniels, collies, bulldogs, beagles and the different terrier breeds, notably Scotch terriers and Dandies. Speaking of Russian wolfhounds, we find that Mr. George J. Gould, the financier, will exhibit largely in the latest breed. He will show Cedric II. and Olga IV., the latter a daughter of the famed Kirilutt, and also some puppies of his own breeding; so it seems as if the two principal kennels hitherto are going to have a formidable competitor. But then there is always one consolation, that the richest men do not always breed the best dogs. The management will be sorely tried in getting all the dogs on the floor, but we believe that relief in this respect is to be found by putting the pet dogs and some terriers along the sides of the amphitheater above the boxes; this will relieve the floor space and allow of larger judging rings.

#### Associate Members' Officials.

The mail votes for officers of the Associate membership of the A. K. C. were opened on Feb. 6 by the vice-president of

the A. K. C. Thos. H. Terry, and president of associate members, H. B. Cromwell. There were 65 votes received and none returned for irregularity. Officers elected were: President, H. B. Cromwell; Vice-President, Edward Brooks; Secretary, A. Clinton Wilmerding. Delegates: Thos. H. Terry, H. T. Foote and A. C. Wilmerding.

#### American Spaniel Club Dinner.

The fourth annual dinner of the American Spaniel Club will be held at Zangheri's, 17 East Twenty-second street, on the evening of the second day of the New York dog show, Feb. 21, at 8 o'clock. Tickets, price \$3, may be procured of A. C. Wilmerding, 163 Broadway, New York city. It is requested that applications for tickets be made at once, so that proper arrangements may be completed early. All friends of the spaniel are invited, and a pleasant reunion of breeders and exhibitors is anticipated.

A telegram received by Mr. Avent at the United States field trials states that Mr. Bayard Thayer broke his leg at Washington, D. C. Fellow-sportsmen will sympathize with Mr. Thayer in his misfortune.

#### Mastiff Brampton Beauty.

##### Editor Forest and Stream:

Much has been written concerning the new mastiff bitch which Mr. Higgs has sent to this country, Brampton Beauty, and I note both the reporters and others have stated she never met defeat in England. Mr. Winchell also stated, "She first appeared at Cruft's show, 1892, making a clean sweep as she did everywhere."

I do not know just where these gentlemen got their information, but for the sake of having the records of our bitches correct I will state the bitch was not first shown at Cruft's and was defeated on two occasions before coming to America.

Brampton Beauty was first shown at the Crystal Palace show in 1891. She was in the junior class and the awards were as follows: First and second, Woolmore's Salina and Robin; third, Higgs's Lady Cameron; reserve, Brampton Beauty.

She was again shown January, 1892, at Liverpool. Combe Baroness first, Lady Florida second and Brampton Beauty third. This of course does not in the least add to or detract from the bitch, but it is just as well to have the records straight. C. E. BUNY.

PEORIA, ILL.

#### United States Field Trials.

GRAND JUNCTION, Tenn., Feb. 12.—[Special to Forest and Stream.] Rainy weather prevented a start of the Pointer Derby till afternoon. There was a strong cold northwest wind, most unfavorable conditions for good work. There is some doubt about running a successful trial on the grounds here. Birds were fairly plentiful, but owing to thorough cultivation the available ground is confined to barren strips of woods or small areas of sedge.

There were ten starters in the Derby, namely: Alice Leslie with Lad's Rush. Flying Jib with Hempstead Duke. Kent Elgin with Strideaway. Lulu K. with Don. Hempstead Bow with Fly B. Judges, Messrs. Royal Robinson, Balmer and W. W. Titus. There is a good attendance of sportsmen. The first series was completed to-day, but was indecisive. Strideaway, Don, Lad's Rush and Hempstead Bow are in the second series. B. WATERS.

#### ANSWERS TO CORRESPONDENTS.

A. A., New York City.—We cannot trace the pedigree of bull-terrier Jack.

H. W. B., Syracuse, N. Y.—Have the vagina and womb examined by a veterinary.

E. E. S., Duck Lake, Mich.—Your dog is not too old to train, but of course a good deal will depend upon his natural ability in the field.

A. S. W., Canton, N. Y.—1. Yes, very probably. 2. Keep the dog clean and take out on a lead. 3. Yes. 4. It is impossible to account for it.

A READER, New York City.—A is right. The dog must be muzzled and also carry his license tag. The fee is \$1 and the license expires April 1.

G. J. S., Pensacola, Fla.—You do not give sufficient details. Are the dogs thin and do they continue to lose flesh? Have they any skin trouble?

AN OLD READER, Washington, D. C.—This is a case that requires a personal examination. Why not send the dog to your nearest veterinarian. 2. Any of our advertised remedies are good, either Spratts' worm powders or Glover's vermifuge.

G. A. M., Ozark, Ark.—1. Keep the pups warm, do not exercise much, and give a three-grain quinine pill night and morning every other day. 2. Hounds sometimes have dew claws; they can be easily cut off when very young; if older have a "vet" take them off.

C. C. N.—On the side of the head of one of my Irish terrier pups the hair is entirely off, the skin is dry and scabby, though it does not seem irritated at all; the bald spot is about 8 in. square. Another one of these puppies is affected very much the same way, but on the hindleg; the hair has not entirely come off yet, but the skin is dry and lumpy. Both these pups seem, except for this, in good health.

Ans. Treat for worms. Apply compound tar ointment to the spots. F. S. L., Clifton Springs, N. Y.—I have a pointer bitch nine months old that is troubled with swelling of the breast and filling with milk, with little appetite and dull, otherwise in fair condition. It is about nine weeks since she was in heat, during which she was kept confined and away from dogs. She has had similar attacks before. Ans. Rub the teats with camphorated oil, if they are hard rub and milk till the hardness disappears. Give a dose of castor oil once or twice a week, feed sparingly for two or three weeks. Breeding may probably prevent the attacks, but spraying would be more likely to do so.

#### A Winter Vacation in Florida.

On February 13th and 27th and March 13th and 27th the Pennsylvania Railroad Company will run personally-conducted tours to Florida. The special trains in charge of experienced tourist agent and chaperon will leave New York 9:30, Trenton 11:08 A. M., Philadelphia 12:10, Willmington 12:50, and Baltimore 2:30 P. M. These trains will be composed of the finest Pullman sleeping and dining cars fitted with modern appointments and conveniences of the most sumptuous type.

\$50 from New York, \$48 from Philadelphia and Baltimore, and proportionately low from other points on the system, will cover all expenses while on the special trains—transportation, Pullman accommodation, and meals, with the exception of the last tour, the ticket for which covers Pullman facilities south bound only, the limit, however, being May 31, thus allowing a much longer visit.

A stay of two weeks in the glorious health-inspiring peninsula may be enjoyed on the first three, and that time may well be spent in following out the numberless side trips available from Jacksonville. These tours are especially apropos during the penitential season now upon us, and a vacation in this beautiful State should prove of great benefit to those more or less fatigued from the pleasures of the social life and excitement of the winter.—Adv.

#### A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which \$3).

## Yachting.

### Design for a Centerboard Sloop for Racing and Cruising.

The author of the accompanying design, Mr. G. M. Duggan, is known to our readers as the designer of the speedy little Valda, of Montreal, whose lines were published in the *FOREST AND STREAM* of Dec. 24, 1891, as well as her owner and skipper in the many successful races which she has sailed in the St. Lawrence Y. C. from 1890 to 1893. The present design was made by Mr. Duggan early in 1892, with the intention of building that year; but this idea was not carried out, and he has sailed Valda up to the present time. The lines were submitted to us some time since for criticism, and at our request, as we believe that, though untried, they will interest many yachtsmen, Mr. Duggan has given his consent to their publication.

The design was primarily intended for racing in the 20ft. sailing length class of the St. Lawrence Y. C. of Montreal, both measurement and classification being by the original Seawanhaka rule, slightly different from that now in use under the name by the S. C. Y. C. and other clubs in the States. Local conditions impose a limit of draft of about 30in., and in view of the possibility of sometimes handling the boat alone in sailing or cruising, the dimensions were kept down to a sailing measurement of but 25.5ft.

As compared with boats of approximately similar draft, displacement and sail area in use on the coast for general sailing, cruising and racing, such as the Cape cat or cat-sloop, the design appears to us to possess some excellent features in the way, on a limited draft, of

ample beam for all purposes of initial stability and roomy cockpit, modern ends, good deck room, and a fair, easy form that promises speed with good steering qualities. Of course such a model could not race under a "mean length" rule against the usual type with plumb stem, short counter and very large midship section; but, where other work than racing is intended, this general form offers many advantages over the short, wide craft; and even for racing only the opportunities for successfully using a model of moderate beam and area of midship section, with long ends, are fortunately increasing each year.

The dimensions of the design are as follows:

Length over all.....	33ft.
l.w.l.....	24ft.
Overhang, bow.....	2ft. 6in.
stern.....	5ft. 6in.
Beam, extreme.....	8ft. 5in.
l.w.l.....	7ft. 8in.
Draft, without board.....	2ft. 2in.
Freeboard, least.....	1ft. 7in.
bow.....	2ft. 6in.
stern.....	2ft.
Displacement, long tons, in fresh water.....	3.08
Keel iron, long tons.....	1.00
Area midship section.....	8.58sq. ft.
l.w.l. plane.....	90.90sq. ft.
lateral plane.....	93.60sq. ft.
Station O to midship section.....	14.00ft.
center of buoyancy.....	13.10ft.
center of lateral resistance.....	13.22ft.
center of mast.....	6.00ft.

Station O to crane iron on bowsprit.....	9ft. 6in.
Mast, deck to hounds.....	21ft. 6in.
deck to truck.....	23ft. 4in.
pole.....	12ft. 3in.
Boom.....	29ft.
Gaff.....	13.10ft.
Topsail yards.....	20 and 16ft.
Foot yard.....	12ft.

DESIGN FOR SLOOP FOR 29 FT. CLASS, ST. LAWRENCE Y. C. BY G. H. DUGGAN, 1892.

German-American Riflemen.

On Wednesday night of last week the headquarters of the famous Zettler Rifle Club was the scene of an interesting rifle contest, between teams representing four of New York's most prominent German-American shooting societies, viz.: The New York Schuetzen Corps, New York Central Schuetzen Corps, New York City Schuetzen Corps, and the Harlem Independent Schuetzen Corps. By having good men to put him in the last stage of the match the New York City team was enabled to send their competitors to the rear, the New York City team making a grand total of 2,384, against 2,240 for the Harlem Independent team. After the match was finished several impromptu 10 shot matches were shot. One between Walther and Zimmerman for a basket of wine, in which Walther won. Walther also won one with Barney Zettler, and lost one with C. G. Zettler. The closeness of the race between the New York Corps team and the Central team generated so much rivalry between the two corps that before they separated a match was made between teams of the two corps, to be shot on the 200yds. range next June, ten to twenty men a side. Scores:

Championship of Hudson County.

During the early part of last year the Hudson Rifle Club of Jersey City issued a call to all New Jersey rifle clubs to participate in a series of matches for the championship of Hudson County.

The various clubs responded giving as many excuses, principally not enough strong shooters to compose a team being the more prevalent. There was one club, however, the Greenville Rifle Club, who accepted the challenge, and after considerable correspondence the first match was arranged for December 12 to take place at Armbruster's Schuetzen Park and resulted in a good victory for the Greenvilles. The next match took place at Marion on Labor Day following, and this time the honors were given the Hudsons. This placing the two teams on an equal footing, the third match was arranged but did not come to a head until Feb. 3, '94. In the first two matches a purse of \$50 was at stake for each of them, but it was finally suggested by the Greenville Club to have the last and final one shot on friendly terms to decide who the champions were.

Capt. Mahlenbrock, therefore, selected his team and journeyed to Greenville on the above date, and after the usual practice shots sanctioned to commencement of the last match which would prove victorious for the winners.

Capt. Bong was in readiness to proceed, but was interrupted by the ruling element of which the club composed, and the prize was forthcoming the Greenville Rifle Club refused to shoot under its own name, but was willing to continue the match under a *nom de plume*.

Capt. Mahlenbrock would not consent to this, and at once ordered his team to shoot their scores, which they did, and did well under the existing circumstances. The score was as follows:

Hudson Rifle Club.....	22 24 19 25 18 23 17 23-18-215
H. Mahlenbrock.....	17 13 17 18 23 23 22 22-200
A. Braun.....	24 withdrew
A. W. Steuber.....	17 23 18 16 23 13 11 12-168
T. A. Reynolds.....	23 23 23-21 17 19 16 25 18-200
G. W. Graf.....	10 16 21 15 13 21 25 17-223-183
John Smith.....	24 21 23 20 21 20 23 19 18-203
C. Straderman.....	17 17 17 16 16 16 23 20-177
H. L. Hansen.....	19 21 12 19 14 18 withdrew
Jos. Antenrieth.....	23 17 11 24 16 16 14 22 19-183-1534

As this completes the series and results in a victory for the Hudson Rifle Club, who are now champions of Hudson county (the Greenvilles losing by default), although they had but little chance, as their annex members were not present, the champions now stand ready to pit a team against any club in Hudson county, to defend the championship honors which it has so nobly defended. Any communications will be speedily answered by sending same to Capt. Henry Mahlenbrock, Magnolia and Tonnelle avenues, Jersey City.

SEE BEZ.

Jerseyman at the Target.

The regular Saturday shoot in Armbruster's Park on Feb. 10 showed the smallest attendance of riflemen of any day during the winter. The day was an ideal one for target shooting, the atmosphere clear as a bell, and of a spring-like temperature. Scores:

Hansen, scratch.....	24 21 21 22 23 21 24 23 20-223
	23 23 23 21 21 23 21 20 19-220

Texas Trap and Rifle.

[From Our Special Correspondent.]

SAN ANTONIO, Texas.—Editor Forest and Stream: There was a little shoot at the Lake View grounds of the San Antonio Gun Club on Feb. 5, but the scores were kept on the remains of a shell box and were lost to the world. Mr. Adams and Mr. Samuels each killed 45 out of 50.

The shooting at Gun Hollow on the coast, which is reached by the San Antonio and Aransas Pass Railway, is better this season than it ever was known before. Four guns netted 130 ducks in three hours on the 5th inst. The Aransas Pass Road put on low excursion rates to the coast, which are being taken advantage of by the many visiting sportsmen in San Antonio.

At the rifle range but little was done this week. The weather has been cold and the attendance slim. Charlie Hummel has devised an original match which will be shot off on the 18th. It seems that Capt. Dosch lost a case of champagne that Charlie won on a bet, and Charlie proposed that Capt. Dosch choose a team of seven men, Charlie to do likewise, and that they shoot for a supper, the case of champagne to be thrown in. It will be shot off hand at 150yds. and the losing side to pay all expenses. Capt. Dosch's team consists of Albert and Ernest Stevens, Gus Altman, Arthur Guenther, Hans Degener, and Oscar Guessaz. Charlie's choice is Adolph Almann, E. Seffel, Albert Uhl, Ed. Dreiss, and Dr. Herff. Great excitement prevails among the riflemen, as the teams represent the cream of the rifle club and are about equally divided.

OSCAR GUESSAZ.

THE REVOLVER CHAMPIONSHIP.

It is rarely one's pleasure to write the details of a pleasanter or more sportsmanlike match than that which took place Feb. 6 for the Amateur Revolver Championship between Dr. Samuel J. Fort, of Ellicott City, Md., and Mr. William E. Petty, Roundsman of the Twenty-first Precinct, New York city.

From first to last the match was marked by an entire absence of personal feeling, and each contestant seemed only anxious that his opponent should be given every opportunity to show what he was capable of. To meet the needs of the shooters the Empire Rifle Club had generously waived a prior claim to the gallery.

The conditions were the same as those of previous matches, 30 shots at 20yds., of which the best three strings of six shots each, by string measurement, were to count. Dr. Fort won the toss up and sent Petty to the score. When the target was drawn back it was seen that the shot was a trifle off the 15th bull. This proved almost an exact index of what Petty would do. On subsequent measurement this shot was found to be 1.13in. from the center of the disk, which was within .03in. of the average for his 18 shots.

Dr. Fort's first shot was a miss-fire, but this did not worry him, and reloading he put the mark of his .44cal. ball fairly on the disk. His second shot was the first black scored. The Doctor shot throughout the match with noteworthy quickness, and the sighting for many of his shots took less than five seconds. He threw his pistol quickly into alignment and seemed almost instantly to catch the sights on the bull. Dr. Fort was ably seconded by Mr. F. L. King, of the Stevens Arm and Tool Co., while Mr. Petty's interests were looked after by the Empire Rifle Club.

Dr. Fort's first shot was a miss-fire, but this did not worry him, and reloading he put the mark of his .44cal. ball fairly on the disk. His second shot was the first black scored. The Doctor shot throughout the match with noteworthy quickness, and the sighting for many of his shots took less than five seconds. He threw his pistol quickly into alignment and seemed almost instantly to catch the sights on the bull. Dr. Fort was ably seconded by Mr. F. L. King, of the Stevens Arm and Tool Co., while Mr. Petty's interests were looked after by the Empire Rifle Club.

WM. E. PETTY.

Messrs. Thurston and Heintz. Mr. Thurston also rendered material assistance with the targets, as likewise did Mr. Wm. Rosenbaum, of the Empire Rifle Club.

The match began at 8:15 P. M., and the last shot was fired an hour later. The 60 target disks were then measured by B. Zettler with the following results:

1st String.	2d String.	3d String.	4th String.	5th String.
1.12	1.64	0.49	*	1.89
1.52	0.91	1.83	1.61	0.51
1.79	0.99	1.21	1.50	1.01
1.41	0.11	1.52	0.83	1.01
1.14	1.81	1.54	2.10	0.94
0.60	0.64	0.61	0.83	1.68
7.58	6.10	7.20		7.04

\* Defective shot.

6.10+7.20+7.04=20.34

DR. SAMUEL J. FORT.

1st String.	2d String.	3d String.	4th String.	5th String.
2.11	2.57	2.12	1.16	8.00
0.72	0.54	1.10	2.75	0.42
4.00	1.25	1.50	1.00	1.13
1.45	1.61	1.45	0.79	2.11
1.34	0.73	1.00	0.29	
2.00	1.55	1.64	0.24	1.70
11.62	8.30	9.07	8.94	10.65

8.30+9.07+8.94=26.31

The shooting on the whole was good despite the fact that it was Dr. Fort's first experience at match shooting of this kind, and almost his

DR. SAMUEL J. FORT.

first experience in gallery shooting with a revolver; also despite the fact that Mr. Petty was suffering from a lame shoulder. Two weeks ago, in the pursuance of his duty, he stopped a runaway fire department team that had gained considerable headway in a dash of a block and a half. When Petty saw them coming he forgot all about the advisability of keeping in trim for his match, and only realized the fact that the street was full of children returning from school. He tackled the team like a hero, and was swung with his feet as high as the horses' heads. Eventually he steered them into one of the supports of the Third Avenue elevated road, and brought things up in a heap.

But Petty did not lose the trophy, although his opponent proved a steady and consistent shot, and no one was more sincere in their congratulations than Dr. Fort. Dr. Fort is a gentleman of rich experience in field and trap shooting, and a well known correspondent of Forest and Stream, both over his own signature and the *nom de plume* of "Pious". He is a small wiry man weighing not over 135lbs. and notable in conversation for his good sense and dry humor. After the match he said to the Forest and Stream representative, "When you write up my pedigree, put me down as a man who wasn't beaten because his gun, loads, or sights weren't right, but simply because he ran up against a better man."

Both contestants shot .44cal. S. & W. revolvers. Dr. Fort's charge was 10grs. of powder and the Ideal 175-grain bullet. Mr. Petty shot 8grs. of powder and 110yds. of lead. He had intended using the S. & W. lubricated bullet and 13-grain powder charge, but decided not to on account of the condition of his arm.

After the decision was announced declaring Mr. Petty winner of the match, Mr. Bernard Walther presented the champion a formal challenge to shoot on a date to be decided later. Mr. Walther has already had one try at the trophy, and announced that he would defer his challenge to a future date if any one else was anxious to jump into the breach.

The competition was witnessed by a number of gentlemen interested in rifle and revolver shooting. Among those present were George E. Jantzer, Fred Ross, Otto Uehlein, W. E. Carlin, A. L. Himmelwright, Armin Tenser, Barney Walther, F. L. King, Henry Oehl, H. E. Heintz, M. A. Thurston, W. A. Jones, G. Zettler, Wm. Rosenbaum, J. Heintz, Jacob Grimm, Ben Zahn, G. W. Plaisted and B. Zettler, besides representatives of the local and sporting press.

Mr. Petty seems a hard nut to crack. His victory over Dr. Fort is his fourth consecutive, and he has now held the Winans trophy something over fourteen months. If he keeps the gait ten months longer the trophy will become his personal property and out of competition.

The trophy has changed hands three times since it was formally declared to Dr. Louis Bell, June 9, 1892, as winner among 40 contestants in the preliminary competition.

Dr. Bell's winning score was 17.52in. for 18 shots. Aug. 3, 1892, Geo. E. Jantzer won the trophy from Dr. Bell with a string of 22.5in. Mr. Jantzer held the trophy from this date until Dec. 8, having in the meanwhile defeated his first challenger, Henry Oehl, on Oct. 15. He succumbed, however, to his second challenger, W. E. Carlin, in the best match of the series, scoring 30.49 against Petty's 15.31in., which latter is the record for 18 shots.

W. E. Petty met his first challenger, Bernard Walther, on the night of Feb. 4, 1893, and defeated him, the respective scores being 21.34 and 23.36in.

His second challenger was Heintz, against whom he scored 20.95in. The match with Dr. Fort brings the record up to date.

Revolver Shooting in England.

The season for revolver shooting at the North London Rifle Club will open for the current year on March 14. There will be two distances shot at, 30 and 50yds., instead of only 20yds. as heretofore; but there will be no moving or disappearing targets. It is curious that, while to win at Bisley men must be good shots at moving targets, all the English competitors practice only at stationary targets, and then wonder when an American beats them.

The scores for the championship of the club will this year consist of 6 scores of 6 shots each at 20yds., and 2 scores of 6 shots each at 50yds. There will be a time limit of 3 minutes for each series of 6 shots. Mr. Andrews, who came second for the championship last year, and who took 40 minutes over 6 shots, will not be able to be so deliberate this year.

Miller Rifle Club.

HOBOKEN, N. J.—At a meeting of the Miller Rifle Club the following officers were elected for the ensuing year: Captain, Richard W. Dewey; First Lieutenant, Louis E. Loh; Second Lieutenant, Frederick A. Liell; Third Lieutenant, Frank Gallon; Orderly Sergeant, August Meyns; Sergeant-at-arms, H. Van Derheyden; Shooting Masters, David Miller, Ernest Fischer; Recording Secretary, Wash. H. Rogers; Financial Secretary, John Meyer; Treasurer, Frederick Brandt; Trustees, R. W. Dewey, D. Miller, J. Meyer.

The following scores were made: Fischer 245, Miller 243, Liell 236, Loh 234, Meyns 244, Dewey 230, Zoch 238, Will 232, Rogers 220, Taylor 225, Brandt 241, Klepping 236, J. Meyer 225, H. Meyer 221, Stadler 225, Schlicht 240, Van Derheyden 235, Prien 220, Gallon 234, Hencken 240, Kruse 239, Devitt 228, Newman 236, Kammel 208, Forkel 225, Freitag 231, Judson 243, Vogel 238, Tobler 237, Scott 220, Dunstedt 218, Murphy 231.

Zettler Rifle Club.

ONLY ten members of the Zettler Club participated in the weekly gallery shoot on Feb. 6. Champion medal: R. Busse 246, F. C. Ross 245, C. G. Zettler 244, H. Holges 243, L. Flach 243, B. Walther 243, Gus Zimmerman 242, B. Zettler 235, Gus Nowak 237, H. D. Miller 235. Best 10-shot score five strings: Henry Holges 1848, Gus Zimmerman 247, F. C. Ross 247, Louis Flach 247, R. Busse 246, C. G. Zettler 244, H. D. Miller 243, B. Zettler 243, B. Walther 243, Gus Nowak 237.

Beideman Rifle Club.

BEIDEMAN, N. J., Feb. 7.—The following shows the weekly shoot of the Beideman Rifle Club, week ending Feb. 3. Conditions 25yds., strictly off-hand, 14in. ring target, possible 250: Dr. E. L. Gardiner 244, J. L. Wood 244, W. Gilbert 236, H. Myers 239. Pistol score, 20yds., possible 250: W. Gilbert 235, E. L. Gardiner 235, H. Myers 218.

WALT. GILBERT, Sec'y.

Palisade Rifle Club.

THE Palisade Rifle Club held its practice shoot at George Schlicht's gallery on Feb. 4. The following scores were made: George Dorf 230, Rob Glaser 223, Fred Esperer 227, Fred Krobatsch 224, Henry Rose 224, C. S. Aufderheide 223, Ad. Ailes 221, Frank Miller 214, Willie Rose 205, Fred Ward 202, Willie Bontemps 200, Willie Ailes 197.

Our Own Rifle Club.

At the weekly shoot of the Our Own Club on Dec. 7 fourteen members were present and participated in the competition for club medals. After the shooting of the official scores a meeting of the club was held. Wm. F. Dilger was chosen financial secretary, Tony Cuneo, Fred Derker and Charles Schmidt were elected members of the club. Scores: J. H. Kruse 240, A. Molz 240, A. W. Steuber 239, Capt. H. D. Hencken 235, W. F. Dilger 235, W. Bohncke 235, F. Sessmann 231, C. Feldman 217, A. Mohr 216, A. Cuneo 215, J. Stein 215, J. Offen 203, C. Schmidt 203 and D. Page 203.

New York Rifle Club.

NEW YORK, Feb. 11.—The New York Rifle Club held its regular weekly shoot at Zettler's gallery, No. 12 St. Marks place, on Feb. 10. The following members were present and made the scores below: Chadbourne.....239 239 Isbell.....238 237 Gensch.....239 238 H. Duane.....233 231 Young.....239 238 Barker.....227 220

E. R. CHADBOURNE, Sec'y.

Schlicht Rifle Club.

At the weekly shoot of the Schlicht Club on Feb. 5 eighteen members were present and participated in the competition for the class medals. The winners of the class medals are as follows: Aug. Meyer champion medal, George Dorf first class medal, Fred Lambrich second class medal, George Richter third class medal. Scores: Geo. Schlicht 235, Aug. Meyer 229, George Dorf 228, E. C. Brellenthine 223, Fred Lambrich 225, W. Schlicht 225, Charles Meyer 223, J. Diehl 223, C. Schlicht 221, George Richter 220, G. Lautenberger 218, J. Schlicht 215, C. M. Hunt 209, M. Zeller 205, F. Manne 203, I. Dorr 203, G. Grave 202, A. Dublin 200.

Lady Miller Rifle Club.

TWELVE members of the Lady Miller Rifle Club assembled at the club house on Tuesday night to compete for the class medals. Mrs. Fischer won the first class medal with 224; Mrs. Bordenmann the second class medal with 213; Mrs. Volk the second class medal with 217. Scores: Miss Bender 201, Mrs. Ahnert 210, Mrs. Fischer 224, Mrs. Volk 217, Miss Saunders 200, Mrs. Meyns 223, Mrs. Miller 203, Mrs. Bordenmann 213, Miss Begerow 210, Miss Gerhart 199, Miss Youmans 200, Miss Kloepping 208.

RIFLE NOTES.

The history of the California Rifle and Pistol Club and the records of some of its members, extracts from which will be found in another column of this issue, speaks well for the healthy growth of this most manly of sports on the Pacific Slope. The California riflemen have for years been noted for their remarkable ability with the target rifle, and within the past ten years they have made records with the Sharps and Springfield military rifles that seem almost incredible to our Eastern military shooters. The glorious climate of California is credited with many wonderful growths, vegetable and otherwise, and it is possible that the citizens of this far Western State attain their high ability with the rifle through absorption of some of the invigorating qualities of that wonderful climate. We have often queried it with ourselves as to whether we could not absorb some of the extraordinary holding qualities by internal application of the products of that glorious climate that comes to us in the East packed and labeled in enticing form. We hear that a delegation of Eastern riflemen will visit the Pacific coast in a few weeks and we shall watch for their return with feeling.

(interest and more or less anxiety. For the return of these pilgrims may lead to a general exodus and our occupation will have become obsolete. In such a case we shall be compelled to join the rear ranks. We are informed that the Californians are contemplating the issuing of an open challenge to the shooters of the country for a team match, all around shooting, military, sporting rifle and pistol. In New York we have but few men who are proficient in the three arms. In Boston, however, a team could probably be got together which would make a good record in the three styles of shooting.

Milton Lindsley informs us that he expects to have a nitro (wood) powder in the market shortly that will meet the wants of the rifleman. Let it come; Mr. Lindsley, the cranks are waiting with that patience born of hopes long deferred.

Mr. Brown, of the Leonard Snookless Powder Co., left a sample of his Leonard powder with the Zettler Bros. for trial in the 23cal.

Speaking of a standard target, Barney Zettler says he thinks the German 25-ring target in its present shape (21in. black 34in. rings) has come to stay, and will eventually become the standard for 200yds. shooting.

At the suggestion of a number of gentlemen interested in revolver shooting, Mr. Conlin set apart last Thursday evening especially for a social gathering of the lovers of that sport, and for revolver practice.

## Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

### FIXTURES.

Feb. 13-15.—Reading Shooting Association tournament; two days targets, one day live birds, at Three-Mile House, Shillington, Pa.  
Feb. 15.—Springfield Gun Club tournament, at Mount Pleasant, Pa.  
Feb. 22.—White Plains (N. Y.) Gun Club tournament.

Feb. 22.—Targets and birds at Dexter Park, Long Island. Trapper Mills's day.

Feb. 22.—First tournament of the Eastern New York Trap-Shooter's League, season of 1894, under the auspices of the West End Gun Club of Albany, N. Y. H. A. Kratz, Sec'y.

Feb. 22-25.—Cumberland Gun Club jubilee, live birds and targets, at Lowell, Ind.

Feb. 21.—Union Gun Club, 25 bird shoot, \$20 entry, Springfield, N. J.

Feb. 23.—Endeavor Gun Club all-day tournament in conjunction with first contest of New Jersey Trap-Shooters' League, Marion, N. J.

March 26.—Acme Gun Club, open shoot at Dexter Park, targets and birds.

April 4-6.—Interstate Manufacturers' and Dealers' Association's grand American handicap at Dexter Park, Long Island.

April 18-19.—Interstate Manufacturers' and Dealers' Association tournament, at Pittsburgh, Pa. Pittsburgh Gun Club will add \$200.

April 24-27.—Central City Gun Club's tournament, Central City, Neb.

May 1-3.—Peekskill (N. Y.) Gun Club, spring tournament; two days targets, last day live birds.

May 1-6.—Arkansas State Sportsmen's Association's tournament, at Fort Smith.

May 2-3.—Interstate Manufacturers' and Dealers' Association tournament, at Springfield, O. Springfield Gun Club will add \$200.

May 7-10.—Arkansas State Sportsmen's Association's fourth annual tournament and meeting, at Ft. Smith, Ark.; \$1,000 added money; professionals and experts will be handicapped. Address Joseph P. Matthews, Ft. Smith, or John J. Sumpter, Jr., Sec'y, Hot Springs, Ark.

May 8-10.—Ohio Trap-Shooter's League annual meeting and tournament, at Columbus, O. Ed. Taylor, Sec'y, Cincinnati, O.

May 17-18.—West Newburg (N. Y.) Gun and Rifle Association's

May 17-19.—The Interstate Manufacturers' and Dealers' Association's fourth tournament, under the auspices of the Prairie Gun Club, at Garfield Park race track, Chicago, Ill. The Prairie Gun Club adds \$500 to the purse.

May 22-25.—Knoxville (Tenn.) Gun Club's thirteenth annual tournament; first days, targets, \$1,000 added money, known traps, unknown angles; last day, live pigeons. Open to the world. No handicap. R. Van Gilder, Sec'y.

May 30.—Eastern New York League tournament, at Canajoharie, N. Y., under the direction of the Canajoharie Gun Club. Charles Weeks, Sec'y.

May 30.—Eastern New York League kingbird tournament, at Canajoharie. Chas. Weeks, Sec'y.

May 30-June 1.—Interstate Manufacturers' and Dealers' Association fifth tournament, and second annual tournament of the Michigan Trap-Shooter's League, under the auspices of the Valley City Gun Club. \$200 added money.

June 5-7.—Kansas State Sportsmen's Association's fifth annual tournament, Topeka, Kansas. J. C. Clark, Sec'y.

June 11-16.—New York State Sportsmen's Association for the Protection of Fish and Game, thirty-sixth annual tournament, at Utica, N. Y., under auspices of Oneida County Sportsmen's Association.

June 12-14.—Atlantic City Rod and Gun Club, three days' tournament. Address R. C. Griscom, Sec'y, Atlantic City, N. J.

June 14-16.—Sportsmen's Association of the Northwest, annual tournament, at Tacoma, Wash.

June 19-21.—Chamberlain Cartridge and Target Company's first annual tournament, at Cleveland, Ohio. \$1,000 added money.

Aug. 21-24.—Pennsylvania State Sportsmen's Association annual tournament, at Altoona, Pa. Address Rod and Gun Club, at Wopsonook Park, Altoona.

Oct. 4-5.—West Newburg (N. Y.) Gun and Rifle Association's fall tournament.

## DRIVERS AND TWISTERS.

NUTLEY, N. J., can now boast of two active gun clubs, both starting out under very favorable auspices. There is the Nutley Rod and Gun Club, which has thirty-seven shooting members and elects new ones at every meeting. This is comprised of shooting enthusiasts who believe in active work in the way of matches, etc., and will open its season in March. The officers are: Andrew C. Brown, Pres.; S. S. Davis, Vice-Pres.; Frank Seales, Sec'y-Treas.; William S. Rusley, Director and John W. Richardson, Captain. The club will shoot at both live birds and targets. The other local organization has been christened the Yautacaw Gun Club and has over forty members. This club shoots every Saturday afternoon at kingbird target. Its officers are: Pres., E. R. Tilton; Vice-Pres., George J. Malcolm; Sec'y, William J. Berg; Treas., Conrad H. Ray; Captain, George Deakin. The officers will constitute the board of governors. Yautacaw, the quaint name adopted by the club is the name of a river running through the town. This is a river flowing from the north to the south, and is named after the Yautacaw Indians, who were formerly located here. Mr. and Mrs. Frank E. Butler, who have recently located in Nutley, have joined both the above clubs and will shoot in all club contests. And speaking of Frank Butler reminds us that he has a new find, this time in the way of a wonderful "Bronch Charley" and a still more wonderful "Topsy." Unlike the original Topsy, this one was "horned" since which time it has developed into a tamed freak. Topsy is a horse, presumably, who is covered with a peculiar woolly substance, has neither foretop nor mane, a short tail like a sheep, and as a whole is a wonder. Up to her fifth year, Topsy had never had even a halter on and was as wild as the proverbial kilder. At this time Mr. Charles M. Miller ("Broncho Charley"), got hold of her and after many a fierce tussle succeeded in bringing her around to his views, and since she has been one of the star attractions of Buffalo Bill's show on both sides the ocean. A few of Topsy's tricks are untying a handkerchief from her foreleg, doing sums in addition or subtraction, telling her age, rolling a barrel, standing on a pedestal with an 18in. surface, walking on her hind feet, high jumping, doing a comic laugh act, ringing a bell and shooting a revolver.

The Worcester Sportsmen's Club has arranged for its annual tournament, to be held at the new park at North Pond, Washington's Birthday. On all nine days the club will have a shooting match. The day's events will begin at 9:30 A. M. and continue until the card is shot out. A good caterer will be in attendance and furnish a dinner at the club house. The events will be all sweepstakes, with entrance fees from \$1 to \$250. The card consists of twelve events as follows: No. 1, 10 birds, Keystone; No. 2, 15 birds, Keystone; No. 3, 10 birds, Keystone, unknown traps; No. 4, 30 birds, Keystone, unknown traps; No. 5, 10 birds, Sportsmen's Club; No. 6, 25 birds, Keystone; No. 7, 10 birds, Keystone, unknown traps; No. 8, 15 birds, Sportsmen's Club; No. 9, 20 birds, Keystone, known traps; No. 10, 10 birds, Keystone, unknown traps; No. 11, 15 birds, Keystone, known traps. No. 12, 5 pairs, regular order.

During the Interstate Manufacturers' and Dealers' Association tournament at Chicago, May 17, 18 and 19, there will be shot one event known as the Prairie Gun Club Stake, the conditions of which will be 25 live birds, entrance \$150, play as per game, four moneys, the Prairie Gun Club to add \$50 to the purse. The Prairie Gun Club will also add \$250 in cash as well as a number of valuable merchandise prizes, to the other purses. This shows a decided spirit of liberality on the part of the Prairie Gun Club. The tournament will be held at Garfield Park race track.

Several pigeon shooting matches were held on the grounds of the Flushing Gun Club on Feb. 3. The first was for \$25 a side between Charles Hance and Charles M. Donnelly against H. Nelson Perritt and J. J. O'Connell. The conditions were ten birds each at 25yds. Hance and Donnelly shot 14 birds each, a total of fourteen. Perritt and O'Connell scored a total of twelve. The second contest was a club sweepstakes of five birds, handicap. Charles Hance, Leroy Dresser, F. J. de Raines and G. B. Nickle tied on four birds each. In the shoot-off, Hance, at 27yds., won. The other men shot at 25yds. Hance also won the club handicap sweepstakes for a silver cup, by killing ten straight. He shot at 25yds. E. J. de Raines and G. B. Nickle, 25yds., tied for second place at eight birds each. The cup was presented to the club by G. A. Baker, and will have to be won three times in succession before it becomes the property of any contestant.

The Washington Heights Gun Club has elected these officers for the ensuing twelve months: President, H. W. Oliver; Vice-President, Jas. Rogers; Secretary, E. R. Terhune; Treasurer, Robert B. Saul; Captain, J. J. Organ; Assistant Captain, H. B. Ellis. The prizes for the year's shooting are distributed as follows: H. Harrison first, gold medal; J. J. Organ, second, gold medal; H. W. Oliver third, 500 cartridges; J. J. Maloney fourth, 500 cartridges; W. J. Cox fifth, 400 cartridges; J. V. Benedict sixth, 300 cartridges; M. W. Disbrow seventh, leather gun case and cartridge box. The members of the club have presented Mr. Terhune, who has officiated as secretary for the past ten years, with \$50 in gold and a handsome gun case.

ORANGE, Feb. 3.—The Brighton Gun Club held its monthly shoot on its grounds in East Orange, N. J. The following scores were made out of a possible 20: 1. Ketchum, 19; 2. Ketchum, 18; 3. Ketchum, 17; 4. Smith 17. Afterward sweepstakes were shot and these scores were made out of a possible 5: Kutchler 1, Badgley 5, Smith 5, O'Malley 3, Soveral 2, Harrison 2, Gower 0, Campfield 3. Twenty-target sweep: Ackerman 6, Badgley 17, O'Malley 12, Soveral 6, Kutchler 12, Harrison 2, Smith 18, Campfield 9, Twenty targets: Ackerman 10, Kutchler 14, Smith 18, Campfield 9, Badgley 19, O'Malley 13. At 10 targets: Soveral 4, Smith 4, Campfield 4, Ackerman 0, Badgley 5, Kutchler 2, Harrison 0, Potter 2.

Toronto, Feb. 1.—The Toronto Junction Gun Club held their annual meeting last night at their club room. The following officers were elected for the ensuing year: P. Wakefield, President; C. Zeidler, Vice-President; Geo. Summers, Secretary, 62 Macdonell avenue, city; W. Davidge, Treasurer; Messrs. Walton, Hinton, Harvey and Scott, Executive Committee. A challenge was received from the Victoria Gun Club to shoot a friendly match, six or eight men a side, which was accepted.

The following were the winners of prizes in the series of the merchandise shoots of the Canadainia (N. Y.) Rod and Gun Club, just ended: One hundred per cent. class, club gold medal, Eaton; hunting cap, Adams; 90 per cent. class, hunting coat, Greig; gun case, Nichols; one year's subscription to Ontario County Journal, Reed; 70 per cent. class, hunting knife, Clausen; 50 per cent. class, pair corduroy trousers, Ellis; pair hunting gloves, Norris.

On Washington's Birthday an all-day open-to-all tournament will be held on the grounds of the Maplewood Gun Club, at Maplewood, N. J., the sport to begin at 10 A. M. The affair will be in conjunction with the team contests to take place between the Union and Maplewood gun clubs, one contest for five men teams at 10 live birds per man, and the other for ten men teams, at 25 targets per man.

Notices have been issued by the Endeavor Gun Club for an all-day tournament to be held on their grounds at Marion, N. J., on Tuesday, Feb. 28, in conjunction with the first of the series of team contests of 1894 of the New Jersey Trap-Shooters' League. The open to all events will begin at 9:30 A. M., and the team shoot will be started at 2 P. M.

Bristol, Conn., Feb. 5.—At the annual meeting of the Bristol Gun Club, held on Jan. 28, the following gentlemen were elected for the ensuing year: Pres., H. J. Mills; Vice-Pres., F. A. Horton; Sec'y-Treas., E. M. Daily; Field Captain, A. F. Rockwell; Directors: F. W. Lee, C. L. Hotchkiss, F. N. Manross, H. J. Mills.

On Feb. 7, A. Muller and Mayor Jackson, of Woodbury, N. J., shot at 10 birds each, against J. Eastburn and John Plum, in the presence of 1,000 people. The match took place at Woodbury. The result was as follows: Muller 6, Jackson 4; total 10. Plum 5, Eastburn 6; total 11.

The South Side Gun Club, of Newark, will to-day open its season of shoots announced in our last issue. These will take place on the third Saturday of each month and will be open to all comers, shooters being privileged to shoot for targets only if they desire to do so.

EAST BLOOMFIELD, N. Y., young men have organized a rod and gun club, with these officers: Pres. and Assistant Shooting Master, William Lee; Vice-Pres. and Shooting Master, Fred. McCarthy; Sec'y-Treas., John Buell; Scorer, R. Wheeler.

T. W. Morfe, of Paterson, and John H. Outwater, of Rutherford, will shoot a 100-bird match at Willard's Park, Paterson, on Feb. 21, for \$100 a side. There will be plenty of good birds for sweepstakes shooting both before and after the match.

ELIZABETH, N. J., Feb. 6.—At a meeting of the Elizabeth Gun Club, the following officers were elected: Robert E. Chetwood, Pres.; Robert S. Williams, Vice-Pres.; William M. Parker, Sec'y-Treas.; John W. E. Williams, Field Captain.

Enoch D. Miller informs us that the 25 bird shoot, \$20 entry, to be given by the Union Gun Club at Springfield, N. J., will be on Feb. 21 instead of Feb. 27, as previously announced.

Perhaps Mr. Samuel Castle, Newark's 64 year old veteran would oblige "Uncle Dan" Lefever, of Syracuse, with a little race at 50 or 100 live birds each, for \$100 to \$250 a side!

The Acme Gun Club, will hold an open shoot at Dexter Park, on Monday, March 26. Shooting will commence at 9:30 A. M. at targets, followed by sweeps at birds.

The Peekskill (N. Y.) Gun Club announce an open tournament for May 1, 2 and 3, the first two days to be devoted to targets and the third day to live birds.

Don't forget that Feb. 21 is the correct date for the 25 bird shoot at Enoch D. Miller's. Instead of the date previously announced.

The Raritan (N. J.) Gun Club is erecting a new club house. Their meeting rooms are corner Somerset and Thompson streets.

There will be live bird shooting all day on Washington's Birthday, on John Erb's Newark grounds.

C. H. TOWNSEND.

### McMurphy's Protective System.

CHICAGO, Ill., Feb. 1.—Mr. Harvey McMurphy, of the Fulton Arms Co., whom it is unnecessary to introduce to the shooters of America, was in town for a short stay here this week. Mr. McMurphy was full of a new trap-shooting system which he himself had recently devised, and which he said was now used exclusively and with the utmost satisfaction by the club at his home town. In company with a number of the club members here we talked it all over, jumped on it, as we would, picked it to pieces, found fault with it, and asked hypothetical questions about, and must say that it seemed to us to stand all sorts of tests remarkably well, much better than any of the multitudinous so-called systems to adjust the inequalities of trap-shooting which are constantly cropping up.

I got Mr. McMurphy to write out his plan for Forest and Stream, giving us a full and full illustration. He did so gladly, and the result is given below. The whole thing is so simple as to be understood at a glance, and yet so far as I know, at least, it is altogether new. The big discoveries are often the simplest, and unless the first hurried examination deceives Mr. McMurphy has made a discovery both simple and great.

Of course, "everybody knows that the sport of trap-shooting is not in good healthy condition so long as such abuses can be cited against it now prevail. If the shooters would only stop to think it over, they could not help seeing that this continual dishonest dropping for place at shoots is a crooked and disreputable thing to do. In short, I defy any man to successfully refute the assertion that trap-shooting, as practiced in the tournaments of to-day, is the rottenest, crookedest and most dishonest sport being carried on in the world. When you come to think over the common practices at the tournaments, you can't help admitting this assertion to be true. Horse racing is clean compared to it. The rebellion against this is not yet fully on, because the amounts involved are small, and because the state of affairs has been of slow growth. Still, all who are interested in the sport of trap-shooting know and have known that some plan will have to be devised to correct the abuses of the sport, or the sport must be hurt seriously and perhaps irreparably. This is the reason why so many plans have been proposed to prevent dropping for place, and to 'protect the amateur,' as the cry usually goes. Therefore, we have had all sorts of handicapping schemes, and all sorts of rules, the chief object of which is to make oil and water mix, and to make black into white.

"Have long thought that we would never get to where we wanted to be so long as we followed the old handicapping trail, because its ideas are wrong, and it is a game which can be beat," as the boys say. It seems wrong to me to handicap either the expert or the amateur. For a long time they have been trying to take it all out of the expert. I got to figuring a while ago on some sort of a plan to protect the expert, and I have come to believe I've hit on one that protects the good shot and the poor shot, which saves the money of the average shooter, and still pays out well to the high guns. It is practically on the plan of high guns take the money, only they don't take so much. It prevents ties, does away with class shooting altogether, and absolutely prevents dropping for place, because it doesn't leave any place

to drop into. If you can pay the top men about as much as you can under the class shooting system, and still have the bulk of your competitors lose nothing but their targets and ammunition, you have, it seems to me, come about as near covering this case satisfactorily as you ever will come, and that is just what this plan seems to do. Our boys and men shoot any other way, now, but they have tried this before. Of course nothing new is proved, but I want you to put this before the public, and ask everybody to come forward with the severest objections and criticisms they can invent, so that we can test this and lay it aside if it will not do. I would like very much if clubs over the country would give it a trial and say how they like it. I hope the statement as put on paper will be plain to all."

Mr. McMurphy's written communication is as follows:

### THE SYSTEM IN DETAIL.

"The question of handicapping the expert shooters of the country so as to give the amateur an equal chance to win some of the purses at trap shooting, is one to which a great many are now giving their attention, and as yet a system satisfactory to all has not been proposed. Handicapping shooters as to distance is a complete failure. Indeed, is not handicapping any shooter in any way wrong and unjust?"

"I think shooters will agree with me that what we want is some system whereby the expert shooters, as experts, and experts as amateurs are protected, not handicapped; one that will prevent combinations being formed by two or three shooters at tournaments for the purpose of placing themselves for positions in the different purses by simply purposely making a miss, they dividing up their winnings at the close of the day. In doing this they deprive many of the honest contestants who were in the different purses of a share of such purses, and they also shoot any other way, now, but they have tried this before. Of course nothing new is proved, but I want you to put this before the public, and ask everybody to come forward with the severest objections and criticisms they can invent, so that we can test this and lay it aside if it will not do. I would like very much if clubs over the country would give it a trial and say how they like it. I hope the statement as put on paper will be plain to all."

"As our shoots are now conducted it is customary that all ties for the different purses be divided. This I believe to be right, but generally the contesting share of the purses does not equal the entrance fees, and though he may shoot an 85 to 90% average, he is a loser at the end of a day's shoot. I wish to submit a system to the shooters of the country for their consideration and trial. Where it has been tried the shooters of all classes seem to be pleased with it.

"One of the good points in this system is that it prevents any one from purposely missing for a place and propping by so doing. Another good point is that it prevents the expert shooter from being a loser. Any contestant not getting in first place, and who does get in either second, third or fourth place, receives as his share of the purse an amount equal to his entrance fee, less the price of the targets he shoots at. Those in first place receive all that is left of the purse after paying out of it to each contestant. In second, third and fourth places the amount of his entrance fee less the price of the targets he shoots at. This division is simple and can at once be understood by the following illustration. We will suppose the following event was shot and give the results of the division of the purse, both according to this new system I propose, and according to the one now prevailing. The tie to be the same for all, the entrance fee to be the same amount for all. No handicapping of any one.

"Event, 15 single targets, entrance \$2.45, including price of targets at three cents each, four places:

	Score.	Receives.
A.....	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	15 \$7.33 1/2
B.....	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	15 7.33 1/2
C.....	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	15 7.33 1/2

O.....	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	15 2.00
P.....	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	15 2.00
Q.....	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	15 2.00
R.....	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	15 2.00
S.....	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	15 2.00
T.....	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	15 2.00
U.....	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	15 2.00
V.....	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	15 2.00
W.....	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	15 2.00
X.....	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	15 2.00
Y.....	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	15 2.00
Z.....	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	15 2.00

"Amount of purse after deducting price of targets at 3 cents each, 26 contestants at \$2 each, \$52. Pay each contestant in second, third and fourth places, who are D, E, F, G, H, I, J, K, L, M, O, P, Q, R, \$2 each, making in all 15 at \$2 each, or \$30. Deduct this from amount of purse, 15 at \$2 each, or \$30. Of course a less number of ties for the different places makes the purse larger for those in first place.

"A, B and C, \$2, or \$7.33 1/2 each.

"You will see that by this system three win \$1.88 1/2 each more than their entrance fee, 15 who win their entrance fee, less the targets they shoot at, making 18 in all out of the 26 contestants who really are not losers. I have made the number of ties for each of the places in this event unusually large, so as to show that with even so many it gives the shooter in first place a winning of course a less number of ties for the different places makes the purse larger for those in first place.

"The result of the same match and scores divided as under system now generally used would be as follows:

"Four moneys or purse divided 40, 30, 20, 10%, 25 entries, \$2 each (after deducting price of targets), \$33: First purse, 40% of \$52, \$20.80. Second purse, 30% of \$52, \$15.60. Third purse, 20% of \$52, \$10.40. Fourth purse, 10% of \$52, \$5.20. Of course a less number of ties for the different places makes the purse larger for those in first place.

"Thus you will see according to the system now prevailing there are in the third and fourth purses 10 contestants who do not receive the amount of their entrance fee, or that is, losers, and probably their losses would be greater had there been a combination in this shoot of three contestants.

"I should recommend all events on targets to be at unknown angles, and a suggestion of Mr. John Parker's that both barrels be used, I consider a very good one. Both barrels are used in field shooting and in live bird shooting, and why not in target shooting? That is what double-barreled guns are made for.

"I have tried to have the gun clubs throughout the country try this system I suggest, and if they can discover anything in it that is unjust or find any opening for trickery then kindly let me know."

H. McMurphy.

Mr. McMurphy adds that this system would do equally well in live bird shooting.

Of course, under the system proposed by Mr. McMurphy, the money won by the high guns all comes out of the tenderfoot shooters, the 'poor shot' who shoot in the 'poor' purses, and the 'poor' purses are the human breast and there is a 'mighty few' of them, as one of the party said the other evening, 'who haven't got conceit enough to think they are going to win when they go into a shoot.' No system on earth can make a poor shot a good shot, and no just system can pay him a good shot's money until he has earned it by his skill, but the poor shot who goes in under this proposed system can be sure of one thing, and that is, he is not going to be a loser, he won't have to see some crooked shooter who has gone straight, wink at another shooter who has gone straight, and then turn deliberately around and miss a bird so as to get into a better hole. This dropping for place is ungentlemanly and rotten robbery, and the poor shots of the country will hail Mr. McMurphy's name with joy if he has succeeded in at last knocking it out.

E. HOGAN.

909 SECURITY BUILDING, Chicago.

### Live Bird Shoot at Flemington.

An interesting series of live bird shoots took place at Flemington, N. J., on Feb. 6 among the contestants being "Dutchy" Smith, Scott Terry and Dan Terry of Plainfield, J. W. Hoffman of German Valley, H. Millburn of Pattenburg and W. C. Agar of Frenchtown. Through the kindness of the genial "Dutchy" we are enabled to show the results. Events No. 1, 2, 3, 5 and 6 were at 4 birds, \$3 entry; No. 4 at 7 live birds, \$5 entry. In event No. 6 Millburn drew his pro rata of first money and the rest shot out, and out, D. Terry and Wilts divided the pot on the second round. The scores:

Three Straight for Rochester.

ROCHESTER, N. Y., Feb. 9.—A two days' tournament was held Feb. 7 and 8, on the Rochester Rod and Gun Club grounds where about eight thousand bluecocks were thrown. On the 7th, the team contest between Rochester, Syracuse and Auburn took place; the result will be found in the scores below. The weather was all that could be asked for and the shoot was a success. The visitors were entertained in the evening by the Rochester Club, and all expressed themselves as having a good time and hoped to visit Rochester again in the near future. The following are the scores:

The Climax are Awake.

THE monthly shoot of the Climax Gun Club, of Plainfield, held at Benner's Grove on Feb. 7, was very well attended, there being thirteen in the club handicap shoot. The day was a good one as to weather conditions, and everybody was enthusiastic. The club is now in a strong condition and will make a big effort to win first place in the coming series of contests for the State league championship, which will open on the 28th inst.

Among the members of the club are Dr. P. J. Zieglio, of Warrenville, the former being one of the best live-bird shots in the State and rapidly coming to the front as a target smasher, a game at which his brother can claim at present. Ferd. Van Dyke, the tall and slender blonde from Dayton, is another of the club members. The shooting of this club is all done from five unknown traps and angles, one man up, otherwise American Association. The scores in the club handicap event were as follows. The figures in ( ) indicate the allowance:

Onondaga County Sportsmen's Association.

SYRACUSE, N. Y., Feb. 2.—The monthly contest for the three class medals of the Onondaga County Sportsmen's Club took place at Maple Bay yesterday, under fine weather conditions. Each of the medals is worth \$75 and a great deal of interest has been awakened in these contests. The shooting is done from five Kingbird traps, unknown traps and angles, and every member uses E. C. powder:

Jones wins 2d class medal first time, Geo. Larned wins 3d class medal second time.

Connecticut State League Meeting.

THE annual meeting of the Connecticut League of Trap Shooters was held at the Hotel Heublein, Hartford, Tuesday afternoon. Allen Willey acted as secretary of the meeting and the following business was transacted. A. F. Rockwell, of Bristol, was elected president of the league for 1894, and the following vice-presidents were elected: each of whom is the president of his home club: H. J. Mills, Bristol; A. C. Collins, Colt Hammerless, Hartford; F. F. Porter, New Haven; J. W. Webb, Willimantic; Dr. U. S. Cook, Moodus; George C. Strong, New London; E. P. Sperry, Ansonia; Egbert Decker, Hartford Gun Club, Hartford, and Judge John G. Crump, Thames Club, New London. F. C. Fowler, of Moodus, was chosen secretary and treasurer; G. F. Phillips, of Moodus, assistant secretary, and H. L. Edgerton, of Willimantic, manager. The governing committee chosen were C. E. Longdon, New Haven; H. J. Mills, Bristol; E. P. Sperry, Ansonia; M. F. Cook, Colt Club, Hartford; H. A. Penrose, Thames Club, New London; Allen Willey, Hartford Club, Hartford; H. L. Edgerton, Willimantic; F. C. Fowler, Moodus, and J. W. Clinton, New London Club.

The by-laws were changed so as to allow each club to enter as many teams as they desired to, no man to shoot with but one club during the year. The teams will consist of two men each instead of three, as last year. It was voted to refund to the Bristol Club the \$35 which they bid for the last league shoot and the league also voted to adopt Keystone targets. The team shoots will be at 30 birds per man, known trap and known angles. The merchandise event will be at 16 birds per man; known traps and known angles. The team making the highest total in one shoot over one-half the number of tournaments held will take first money. Each team will pay \$15 entrance fee and there will be four moneys, divided 40, 30, 20 and 10 per cent. A committee to obtain prizes was chosen, consisting of H. A. Penrose, president, W. M. Thomas, F. F. Potter, Allen Willey, F. C. Fowler and M. F. Cook. A ballot was taken to decide where the first shoot of the season should be held and it fell to the lot of the newly-organized Hartford Gun Club, which is officered as follows: Pres., Egbert Decker; Vice-Pres., A. F. Pitkin; Sec'y-Treas., Daniel Wadsworth; Directors, Allen Willey and John Melrose.

The Hartford Gun Club has a pleasant shooting ground fifteen minutes' ride from the city by horse and electric cars, a good, new club house and a complete outfit of bluecock traps and Paul North's electric trap pull. They will endeavor to make the initial shoot of the Connecticut Trap Shooters' League a great success as they have the best of everything to do with and experienced tournament managers to run it. The shoot will be given the 23d of March—Fast Day. The Thames Club of New London will be a fine addition to the league. Unless we are mistaken, this club will be the great gun club of Connecticut. It starts with twenty charter members who pay \$25 initiation, and will be much like the Larchmont and Connecticut social position. The season should be held in the spring, when the birds are in the best of their live bird events shot on Fisher's Island, in Long Island Sound, State of New York, but only seven miles distant from New London. A steam launch is to be bought to carry the members of the club to the island.

The Essex Gun Club.

NEWARK, N. J., Feb. 1.—At the annual meeting of the Essex Gun Club, the following officers were elected for the ensuing year: President, R. Heber Bretnall; Vice-President and Treasurer, William Hayes; Secretary, Asa Whitehead. Executive Committee: R. H. Bretnall, Wm. Hayes, Lemuel Thomas, Fletcher Walters and Asa Whitehead. Below is a table showing the work done by the members in club contests from February 1893 to January 1894, inclusive, showing the rating and number of points gained. The handicap was on the point system, a member being allowed one point for each kill above club rating. A recapitulation is also appended.

Anaconda Gun Club.

ANACONDA, MONT., Feb. 7.—Inclosed I hand you scores of our weekly medal and sweepstakes shoot. It was an off day for all and longer scores than are usually made was the result. The day was perfect, but a very bright sun, with the snow for a background, made it very trying to catch the swift-flying targets. The boys trapping got it into their heads too that a few puzzlers would make the shooting more interesting and the variety of angles they gave us called for very prompt action in many cases. Twoly again captured the medal after a very close shoot with Dr. Rockefeller, they being tied up to the last five birds. Ashford retained the B medal, but will soon be expected to shoot in the class as our conditions are very consecutive shots in medal class, relieves the B men of his presence.

Sweep No. 1, at 10 singles: Twoly 7, Tuttle 8, Bartlett 8, Cruger 6, Dr. McKenzie 6, Ashford 6, Smith 4, Dr. Rockefeller 4.

Sweep No. 2, medal shoot:	
Twoly.....	110011111111111111111111-19
Tuttle.....	011111100000111111111111-15

McKenzie.....	000110111111111111111111-12
B. Smith.....	100111111111111111111111-9

Twoly and Rockefeller shot off tie for medal in this event.

Newark Gun Club at Erb's.

At the monthly shoot of the Newark (N. J.) Gun Club, held at Erb's "Old Stonehouse" grounds on Feb. 8, the attendance was better than for some time, and yet some of the steady ones, notably Bretnall, Lindsey and Freche, were absent. The day was delightful and the birds as good as the best.

The first event was at 10 birds, \$5 entry; No. 2, the club shoot at 10 birds; No. 3, at 7 birds, \$5 entry; Nos. 4, 5 and 6 were \$3 miss-and-out affairs. The results follow:

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

## SNAKES.

"COAHOMO'S" plea for snakes comes from the pen of one who has been much in the field and as a thoughtful observer of wild creatures has studied the ways of animal life and grown into sympathy with those humble members of creation which are commonly despised and maltreated by man. What he writes of these will find hearty seconding among the few whose hearts are not through prejudice or ignorance hardened against the race of snakes. The one criticism which might perhaps be made is that he fails to recognize the distinction which should be drawn between the common impulse to kill a snake and the wanton taking of other animal life.

This enmity to the serpent has its spring very deep in the heart of the race; it is as old as human history; it dates from the Beginning, when the Divine declaration was uttered: "And I will put enmity between thee and the woman, and between thy seed and her seed; and it shall bruise thy head, and thou shalt bruise his heel." The enmity has been there ever since; it is there now; and it will continue. We are told of a blessed time to come, when the sucking child shall play on the hole of the asp, but the day is yet afar off; and we have now to do with man and snake as we find them, still dwelling in enmity, bruising the head and bruising the heel. And because this antipathy to the serpent is thus ingrained in very human nature and the expression of it in "overt acts" of violence is involuntary, he who would preach tolerance for snakes has taken upon himself an exceedingly difficult task.

A person so intelligent as the reader of FOREST AND STREAM—or let us say, as one must be after having read FOREST AND STREAM, if only for a brief period—recognizes that, as "Coahoma" points out, there are snakes and snakes, some harmful and some harmless. But to the average man, and certainly to the average woman, a snake is a snake, a venomous deadly creature, a thing to be dreaded, to flee from, to cast stones at, to cut a club for, to kill, to stamp out on the instant. This sudden impulse is of a nature entirely different from the feeling which prompts the boy to shy stones at birds; not an abnormal prompting by the way, but one in extenuation of which much might be said—think you not that the youthful David had practiced his art on a multitude of the fowl of the air, while he was tending the flocks of Jesse in the wilderness, before he let fly the pebble into the forehead of Goliath. By and by the boy learns that birds are not to be bombarded; his stone-throwing propensities are outgrown; he looks upon the songsters as friends, and if blessed with more than average good sense he may even recognize the usefulness of hawks and owls. But his stone-compelling animosity to snakes is never outgrown; boy, youth and man, he goes through life's seven ages, bruising the serpent's head, making no distinction and for the most part knowing none between the innocent garter and the deadly rattler. In a word, it is human nature to kill a snake; and it is human nature to kill every snake. He then who deprecates snake killing deprecates human nature; and he who pleads for a changed attitude toward snakes is pleading for what may be achieved only as the result of special instruction and information not yet nor for a long time to be widely popularized.

Mankind has cheerfully committed itself to the doctrine of the total depravity of the entire ophidian race; the whole tribe is under the curse. When a "Coahoma" rises up as a prophet of snakes, proclaiming their right to life, liberty and the pursuit of field mice, he finds himself addressing a froward and untoward generation much more prone to read the snake stories in the New York Sun than to be instructed in the economies of animal life. The fact is that the average person does not care a button to know the truth about snakes in general. He much prefers a whopping big lie about some snake in particular. Tell him that snakes are useful as destroyers of creatures which injure the farmer's crops, and he is incredulous. Tell him

of a scaly monster that swallowed a man and an ox and a cart, and he gulps it down with avidity, boots, wheels, horns and all; and when he tells it to the next man adds another ox. Fed on this highly spiced fiction, the public has no appetite for plain truths of natural history. The result is that what people think they know about snakes, having learned it from the papers, is actually what they do not know, though the papers have told them. They cherish a fund of preposterous misinformation, and this misinformation determines their attitude toward the snake tribe.

## SOME FIGURES OF SPEECH.

### I.—"A FISHING EXCURSION."

MANY familiar and expressive figures of speech are derived from the language of field sports. One runs across them constantly in the newspaper English of the day.

The New York Legislature has appointed a Senate committee to investigate certain branches of the municipal government of this city, and there has been some public discussion of the probable scope and thoroughness of the investigation proposed. When the committee came to town the other day the *World* reported (italics ours):

There was considerable speculation among Tammany men uptown as to what the committee would do if Dr. Parkhurst fails to come forward with any charges or evidence. The Chamber of Commerce has announced that it has no formal charges prepared, and the committee, it is claimed, is down only to investigate formal charges and is not on a fishing excursion.

This was saying, of course, and saying very effectively, that the committee did not intend to make inquiries at random, for the purpose of securing something by chance, as a fisherman casts his hook into the water with the hope that something may be found there and brought to the surface. The expression is one which has been used before in connection with legislative investigations into the affairs of this city—angling in the troubled waters of local politics. In the year 1888, when the commission known as the Fassett Committee was here, an incident took place which the *Sun* recorded the next day thus:

Ex-Aqueduct Commissioner Edgar L. Ridgway, who has been down on Long Island enjoying himself, was at the afternoon session. He rode up in the elevator with Chairman Fassett, who accosted him: "Ah, you here? Then it must be this is not a propitious day for blue-fishing?" "No," Mr. Ridgway responded, "and I see by the papers that yesterday was a blue fishing day for you."

And in the course of the Fassett Committee hearings, during the evidence by ex-Mayor Grace, the same figure came in in a colloquy reported by the *Times*:

Gen. Tracy objected to the question as irrelevant. He and Mr. Nicoll indulged in an argument which was cut short by Mr. Grace, who said there was litigation pending between him and the *World* regarding the publication of alleged transactions between him and Grant & Ward. He did not think it was proper that counsel for the *World*, Mr. Nicoll, should be allowed to go on a fishing expedition to get testimony he could afterward use in the pending litigation.

Lawyers know well enough what it is to go on a "fishing excursion" for some chance bit of evidence that may give them a lead to something for their side of the case; and many an astute attorney plies the angler's art as deftly and as successfully in the court room as on the stream in vacation. In one of the hearings of the Stewart will case in this city, the *Times* reported:

Further inquiry about this deed elicited nothing further after recess. The examination continued industriously on the line pursued in the morning. An effort to show that Mrs. Stewart favored the witness by giving him money at various times and paying his debts tended to show that Mr. Choate was on a fishing expedition for luck.

In another will case the *Times* said:

It was not pretended that the contestants had any testimony to invalidate the will. They contented themselves with fishing for testimony by sharply cross-examining the subscribing witnesses to the will, in hopes that some flaw or other would be discovered of which they might take advantage.

Surrogate Ransom, in rendering his opinion in the case, declared:

I am afforded the opportunity to give formal expression of my views on the subject of contests forced upon the proponents of wills by disappointed next of kin, who, in virtue of our very liberal statute, may, without the shadow of just cause, compel the beneficiaries under the will to suffer unavoidable delay and expense, while a contestant indulges in a fishing expedition.

These examples might be multiplied; we content ourselves, however, with a reference to but one other fishing excursion for evidence, an expedition whose result was a pretty pickle of fish and one that was to engage for more than the proverbial nine days the attention of the civilized world. The fishing and the fisherman's luck were

told in the London correspondence of the New York *Tribune*, in these words:

It has long been known Mr. Houston was the man from whom the *Times* got the letters which Mr. Houston got from Mr. Richard Pigott. The interest of his testimony turned on Mr. Houston's knowledge of the source from which Mr. Pigott got them. He wanted evidence, he told us, to connect the Parnellites with crime. Mr. Houston offered Mr. Pigott \$5 a day and expenses to go fishing. Mr. Pigott went. He fished in Dublin to no purpose; in London to no purpose; got a nibble in Brussels; followed his fish to Lausanne; perhaps hooked it; then to Paris; then, Mr. Houston still finding funds, extended his excursion to New York; returned, revisited Paris, and finally landed a whole basketful of letters—five from Mr. Parnell and six from Mr. Eagan. These Mr. Houston took to Mr. Buckle, editor of the *Times*, who referred him to Mr. Macdonald, who finally accepted them subject to proof of their genuineness.

## CONFUSION WORSE CONFOUNDED.

HERE is a disgraceful state of things. In 1892 the New York Legislature adopted a code of game and fish laws, the result of the protracted labors of a commission charged with the task of considering all interests, and drawing up a law which should stand. The following year there were amendatory bills by the score. This year again the pulling to pieces and patching and knocking holes in the bottom and tinkering up goes merrily on. We note to-day twenty-six separate bills to amend the law, and this is the record only up to Feb. 15. In many instances a section is sought to be amended in more than one of these bills; there are in two cases five different measures affecting a single section. Nothing but confusion can come from such a mess. The entire lot should be referred to the Fish Commissioners, the Commissioners should confer with the State Association, and one bill should be drafted embodying whatever is good in the entire series.

But whether this shall be done or not, some one should give himself the pains to look out for Assembly Bill No. 279, introduced by Mr. Messiter, and designed to throw open to the public any private waters which may have been stocked with fry from State waters or State hatcheries. We have said again and again that the State should not supply trout for private waters. In past years this has been done to a large extent. Such men for instance, as Mr. Henry B. Hyde, President of the Equitable Life, men abundantly able to pay for trout to be had of private culturists, have come again and again begging fish of the Commission, and have had ladled out to them fry supplied at public expense. This has been stopped now; and we cannot right what has been done by throwing Mr. Hyde's fish-ponds open to the public.

## SNAP SHOTS.

In Madison Square Garden this week more than a thousand dogs have emulously been striving for the blue ribbon, which in these modern dog days is the particular and coveted symbol of highest excellence, and lucky dogs are they called that win and wear it. But history records an occasion big with canine fate, when the ribbon of blue was worn by luckless canine wights to their undoing. It was in the troublous times of Covenanter and Royalist in Scotland, when the blue ribbon was the badge of the Covenant, and every adherent wore it on his arm. In 1639, when the army of Montrose went out from New Aberdeen, the ladies of the town showed fine scorn for their departed guests by decorating all the tykes and street curs with the hated blue ribbon. Thereupon, the troops returning, swift fate was meted out by the enraged Covenanters, and death overtook the blue-badged mongrels. "The renegade soldiers" records John Sargent "is abusing and plundering New Aberdeen pitifully, without regard to God or man. No foul-cock or hen—left unkilld. The hail house-dogs, messens, and whelps within Aberdeen felled and slain upon the gate, so that neither messen or other dog was left that they could see."

We have suggested as a plank in the platform of game protection that the sale of game should be forbidden at all times. This is taking advanced ground; but it is a position which is justified by the situation. We would like an expression of opinion on the proposition and particularly a presentation of facts showing the relation of markets to the game supply.

Club secretaries are invited to send us the constitutions and rules of game protective organizations, that in turn we may pass them along to the organizers of new clubs.

## The Sportsman Tourist.

### A FLORIDA NIGHT ADVENTURE.

READING "R. P. B.'s" account of the alligators on the Anclote River in Florida, recalls to my mind the days when every river, lake and bayou in that State fairly teemed with the saurians, before man discovered a ready market for their hides—a time when to those living near the water no more familiar sound was known than the bellow of some "old bull gator," as he raised his gentle voice at night in friendly rivalry with br'er frog.

One such sound still reverberates in my ears, not from unfamiliarity, but owing to my sudden and unexpected introduction to the author of that particular bellow.

I had been on a hunt in the great gulf hammock, that dismal and weird feature of the peninsula of Florida, that stretches for miles along the coast near Cedar Keys. It is a mass of tangled undergrowth and vegetation; giant cypress, live-oak and magnolia lift their heads; and from their limbs long festoons of gray funeral moss hang swaying in the air. Strange, silent and still, the very birds move with scarcely a sound save the rustling of their wings, or at night the blood-curdling cry of the panther as he slips through the brush. Under foot, save the runways of the deer, path there is none. Everywhere it is a labyrinth of tangled vine and palmetto, with long stretches of swamp and "flatwood," with here and there a knoll of dry ground that rises as an oasis in this dark and silent land. Here the wild game finds a retreat from man, only to fall a victim to the wolf and panther. Here in these wooded fastnesses Osceola and his band of Seminoles laughed defiance to his white antagonists, its pathless maze unfathomable save to the Indian eye, and by his side stood that other scourge, malaria. But in these forest depths no Indian lurks to-day, and for those who will risk the fever, no better spot can be offered to the lover of the chase, and there I have spent many exciting moments, when with gun in hand I heard the crash of the deer as he came rushing along before the hounds.

On the occasion to which I refer, I had become separated from my companions and my horse as well, for on search no trace of either could be found, save the remains of a parted bridle rein, and there was for me in prospect but a weary tramp homeward, some thirty miles or more. Floundering through the soggy woods I at length reached the railroad that crossed the hammock on its way to the gulf, trestle after trestle marking its path through a land that contained no human inhabitant. But what a relief to me it was to find firm dry ground for my weary feet. So forward I started, just as night closed in, with not a star in sight and the ever-nearing thunder warning that more misery was in store for me. Onward I plodded, mile after mile, drenched to the skin from that tropical storm, with no shelter save the live-oaks beside the track and under whose dripping arms myriads of mosquitoes disputed my right of shelter. Choosing the lesser evil, I dragged myself along, but no friendly moon nor star came out as the rain passed away. All around me was impenetrable darkness, save when a friendly flash of lightning showed me a trestle about to entrap my feet. At length the trestle came, but without the light; and through it I fell, to land up to my waist in a slimy bayou. There, right beside me apparently, from out the murky darkness, rose the angry snort of a bull alligator. Many a time in sport have I and my brother swam in lakes that were full of them and with never a fear, but then the bright sun lent us courage. But here, alone in inky darkness, I was face to face with an enemy I could not even see. How I scrambled out I never knew; but out I finally managed to get, gun still grasped in hand, and over the trestle I picked my way, as badly scared as a man usually can be.

A mile or so further on I passed some negroes camped beside the track, and by their cheerful lightwood fire dried my soaked clothes and warmed my chilled limbs. After a rest and a meal of corn pone, which refreshed me in a measure, I resumed my way, lighted by a torch of lightwood. All now was plain sailing, and just as the dawn broke I reached the trail that led to our plantation, weary and footsore and burning already with the fever that put a quietus on my hunting trips for many weeks to come.

W. R. H.

### AN EVENING ON VANCOUVER'S ISLAND

IN the winter of 1682, Cavalier de la Salle, accompanied by Tonty and twenty-three other Frenchmen, together with a band of Wabenaki allies, came to the Chicago River, made the portage to the northern branch of the Illinois, and continued their journey down its frozen course.

If any one had predicted to the great explorer that in two hundred years another band of Wabenaki Indians would camp near the mouth of the Chicago, and that a few steps from them would be a village of their old enemies, the dread Iroquois, he would probably have considered the prophecy as one of the vagaries of a disordered brain. If it had been further predicted that near the camps of the Wabenaki and the Iroquois other aborigines from an island on the northwest coast, of which he never heard, would build their rude habitations and erect their totem poles; and that these and still other tribes would be dwelling together in harmony in the midst of one of the world's great cities, which would be built on the banks of the insignificant stream which the Indians named after the skunk cabbage, La Salle would no doubt have been skeptical as to the arrival of the millennium so soon.

But all this came to pass, and the wilderness of 1682 became in 1893 the scene of many wonders of which the discoverer of the great West never dreamed nor would have deemed possible of human accomplishment.

Near the birch bark wigwams of my Wabenaki friends of the Penobscot tribe, of whom I wrote in a recent paper, was the camp of the Iroquois, in which dwelt the representatives of the Six Nations. There was the "long house," the *ho-da-no-sau-nee*, built of bass and elm bark, fastened to poles with hickory withes; three smoke holes were in the roof, under which could be lighted the three council fires, which are kindled when the Six Nations come together. It was in just such a house as this, hidden in the wilderness of the Mohawk Valley, that the councils were held which sent war parties against the other red nations and the pale-faced men who had come from over the great water; it was in just such a house that the battle songs were sung whose echoes struck terror to the settlers on the St. Lawrence and the wild tribes on the Mississippi.

Near the *ho-da-no-sau-nee* was a round hut of bark, surrounded by a palisade of stakes sunk firmly into the ground, showing the ancient mode of protecting their dwellings and forts.

There was another structure similar to the "long" or council house. In this village were members of the six tribes which comprise the league of the Iroquois, Senecas, Oneidas, Mohawks, Onondagas, Tuscaroras and Cayugas. In the old days the Iroquois were the most dreaded, savage and relentless of all the Indians; to-day there are none who lead them in civilization, and some of the best farms in New York State belong to them.

They are a fine-looking people and at the Fair were employed, as were the Penobscots, in making and selling their native wares, baskets, canoes, bead work, etc.

The Penobscots do not make much bead work, but excel in the manufacture of baskets. I became acquainted with one very intelligent man, whose name I cannot now

IROQUOIS BARK HOUSES AND POLE STOCKADE.

recall, but who in his early life had hunted and traveled over much of my own well-loved hunting grounds in northern Maine. This formed a bond of sympathy between us, and he and Nikola Sockbeson and myself had some pleasant chats together.

This man had a strong Indian face of very dignified expression, wore his hair long and had gold rings in his ears. His home is near Chautauqua Lake, and he asked me if I had ever heard a certain public man speak. "I heard him at Chautauqua," said he, "and he is a very able man." This one expression shows as well as a volume the possibilities of Indian civilization. "My people do not hunt much now," said he. "They are mostly farmers and do not go in the big woods much." This seems rather strange, as they live near the Adirondacks, and my friends, the Penobscots, get most of their living from their native forests, guiding, hunting, lumbering and river driving. At the Fair were Chief Daniel La Porte,

QUACKAHUTS AND TOTEM POLES.

an Onondaga, chief of the Six Nations, and Chief Thomas Webster, the wampum keeper, who knows the history of all the wampum belts. Chief La Porte speaks all of the six languages.

Then there were Solomon O'Bail, a Seneca, 78 years of age and grandson of the famous Chief Cornplanter, who made treaties with Washington and was a great friend of the whites; and Deerfoot, another Seneca, who won name and fame years ago by his fleetness of foot. Thirty years ago in London he ran eleven and a half miles and ninety-nine yards in one hour; this feat, which I believe has never been equaled, was witnessed by the Prince of Wales. Some of their women were handsome; one in particular, a Seneca, who used to come over to the Penobscot camp, had a pretty face with fine eyes and a soft voice. Drawn up on the shore of the pond, near the graceful bark canoes of the Penobscots, were several dugouts belonging to the Iroquois, who were never such good canoe builders, for the birch was scarce in their country and they used elm bark and hollowed logs. But birch and dugout lay peacefully side by side on the South Pond, even as the Wabenaki and the Iroquois dwelt in harmony.

The wonderful change since the days of La Salle came to me very forcibly one evening as I stood talking with Nick Sockbeson and my Iroquois acquaintance of the long hair and gold ear-rings.

There were two Indians whose ancestors for generations thirsted for one another's blood, and a pale face, a descendant of the common enemy of both. It brought to mind the old Indian wars, and the many traditions extant among the Penobscots of their fights with the Iroquois.

One great battle with the Mohawks was fought at a certain place on the Penobscot where there are rapids in the river, and after a fierce encounter the Penobscots vanquished the foe and killed or captured every one. Two they saved, and after cutting off their ears sent them back to their own country that they might tell their people of the fate which had befallen the expedition. To this day the falls are known as the Mohawk Rips, and every time we go through them the story is told again.

We were speaking of it one time at the Fair, and I told Nick that if I saw any member of the Six Nations wandering around the grounds minus his ears, I should know that the old feud had been revived, but Nick said he had left his scalping knife at home, so I apprehended no danger. Nick is a good deal of a wag himself, notwithstanding that the stoical red man is not much given to fun, and he often made a shy Indian joke at the expense of the people who ask so many questions.

It was a curious fact remarked by the different people from all over the world who were represented at the Fair, that nearly all visitors who talked with them, limited their conversation to a few stock questions.

Almost every one who looked into a Penobscot wigwam, glanced up at the little patch of sky which showed through the smoke hole, and asked, "What do you do when it rains?" After answering this question several times one day, Nick replied soberly to a gentleman and lady, "Oh, we do just as they do in Canada."

"What is that?"

"Why we just let it rain."

Sometimes when tired of answering questions he would have a little quiet fun by pretending to be extremely deaf.

"I should think you would prefer to live in houses," said a visitor after a critical inspection of the wigwam.

"We'd have been dead Injuns long before this if we was shut up in houses," replied the imperturbable Penobscot, and I smiled as I thought of his neat cottage on the Indian Island.

One gushing young woman with her husband, came in, bought a basket and said with great animation, "Oh! I want to see the little Indian baby."

She probably thought an infant went with every exhibit in the ethnological department, the same as a chromo with every package. Nick replied ingenuously and with such an innocent expression as to disarm any feeling of offense: "We haven't got any Injun baby," and then as if an after-thought had occurred to him, "But nobody knows what may happen. You might call around at this time next year." The couple went away laughing and Nick walked down to see if the canoes were all right.

One evening in the early summer we sat on a deer skin by the wigwam door; we had just eaten our supper and were enjoying the cool breeze from the lake and the quiet of the twilight which was stealing over the White City. As we sat there we heard the soft dip of a paddle and young Joe Sockaleris stepped from his canoe, and after lifting it carefully out of the water joined us. It seemed as if we must ask him if he had seen any game or which flies the trout were rising to that evening.

It was the quiet hour between daylight and dark, which is the pleasantest of the day, the hour which in camp is devoted to the well-earned siesta, so delicious after a day in the open air. We had been talking of the woods, and as the light faded I thought of many just such peaceful evenings when we had seen the sun sink behind the pine-clad hills and watched the purple shades creep up the steep slopes of old Ktaadn, or Kineo, or Kokadjo, or the Travelers.

But no mountains loomed up beyond the South Pond, no reflection of rock or forest tree floated in the water. Still it was a spot where the wizards of 1893 had wrought their spell, one of those places where one came under the influence of the magic power of the White City, and the owner of the seven-league boots would have gone at a snail's pace in comparison to the steps one took at ordinary gait.

Here the potency of the magic was so great that wonderful powers were given to the eyes as well as to the feet.

So it was that sitting by the door of a Penobscot wigwam on the Indian Island we found our vision becomes so powerful that we easily looked across the entire breadth of the North American continent and saw Jimmie Deans sitting on a log on the shore of another island, which is laved by the waters of the Pacific. About him we could see the representatives of another tribe of Indians, as different from the Wabenaki people as their canoes and habitations were different from those which had come from the Maine woods.

Wonderful, wonderful, was the magic of the Fair.

"Nick," said I, "Let's go over to Vancouver's Island and call on the Quackahs." A charming proposal, was it not, for an evening's stroll; from the Atlantic to the Pacific; but that was nothing at all in the White City, and if the owner of the seven-league boots visited the exposition, it must have been pure chagrin which kept him from announcing his arrival.

"All right; we go over; perhaps we see 'em dance to-night," and we walked through the country of the Iroquois and in due time arrived on the Pacific coast with our scalps on our heads; a feat which Cavalier de la Salle would not have accomplished so easily in his day.

"Good evening, Mr. Deans," said we to the grizzled old Scotchman, who has spent the greater part of his life among the fish-eating tribes of Vancouver's Island, and who brought the Quackahs to Chicago.

"Good evening, good evening, how air ye," responded the old man cordially, as he took his pipe from his mouth and extended his hand, while his eyes beamed kindly under the Scotch cap whose ribbons hung over his gray hair. We were soon joined by another man of powerful build and swarthy skin, who spoke English with a voice soft and gentle as a woman's. This was George Hunt, a half-breed—whose mother was a Quackah squaw and his father a Scotchman—the interpreter of the tribe. I nodded to Wanug, the prince consort of the Quackahs, who squatted on the ground near one of the big canoes, wrapped in his blanket and drawing comfort from a pipe. Wanug grunted something in his native jargon with no change of expression on his stoical face. His wife, the tribal queen Doquayes, also wrapped in a gay blanket and with her pappoose on her back, stood in the door of one of the houses.

The Vancouver Islanders had a very picturesque village consisting of three weather-beaten shanties, two for

dwelling and the third a council house. These structures were built of drift wood and timbers of wrecked ships, collected on the shores of their far-away island, and were supported by rudely carved posts. In front of these were reared the totem poles, grotesquely carved with ferocious looking heads of birds and beasts, reptiles and men crudely painted with black, red and yellow, which only served to emphasize the ugliness of the carving. There were, too, several huge statues of hideous monsters, also carved from great solid logs. These gigantic caricatures were enough to make a teetotaler think he had the delirium tremens, but represented the highest of high art to the Quackahs! Bears, frogs and ravens seemed to be the models most often used, though it required a very elastic imagination to liken the horrid shapes to anything ever seen on the face of the earth. The distorted images on the totem poles chronicle the history and important events of the tribe, as do the wampum belts of the eastern nations.

There were several big canoes, capable of holding a score of men each, on the shore; they were hollowed from huge logs, and on each side of the bows were painted great glaring eyes. "Are your people going to dance to-night?" I asked of the interpreter.

"Yes, they gettin' ready now," he replied, and I noticed that all those who had been outside had gone into the houses, where he soon followed. At that time the village had not been opened to the public, but a curious crowd of people loitered about, attracted by the sounds that came from behind the closed doors.

Soon a terrific pounding was heard, accompanied by a choice assortment of yells and whoops, apprising us that the ceremony had begun. We went inside, the door being opened just wide enough to admit us, by George Hunt. It was a strange spectacle which we looked upon, and we had taken another of those wonderful steps which transported us in an instant two thousand miles away. The huge, barnlike shanty contained but one room; there were no windows to break the monotony of the bare, smoke-blackened walls, and there was no furniture except some rude bunks at the back and a pile of wood in one corner. There was no floor except the bare ground, and no chimney; the ridge pole was one great cedar log 2 ft. in diameter. A log fire blazed in the center of the hut, the smoke escaping through a hole in the roof. There were no other means of illumination, and the wavering flames and shifting shadows, with the curling of smoke, spangled with sparks which leaped upward only to vanish, intensified the weirdness of the scene.

Prof. Putnam and a few friends, the only white people present, were grouped in a corner by the door. Nick and I sat on the pile of wood in another corner. At the back of the room, facing the door, were four warriors squatting in a row, with a long plank in front of them; each held a short club in his hand, and all were enveloped in gaudy blankets and had their faces hideously painted. The other bucks and the squaws, even the little pappoose, were similarly clad and painted. At a signal from the interpreter, the quartette with the clubs broke into a wild chant and began to beat violently on the plank in front of them. It was no gentle tattoo, but each blow was given with the full strength of sinewy arms, while their powerful lungs were strained to the utmost as the notes of the wild cadence rose and fell on the night air. A squaw pounded on a square, box-shaped drum, adding her mite and might to the din.

Suddenly a warrior cast aside his blanket and sprang into the open space of which the fire was the center. He was scantily clad and bare-footed, as they all were. He circled around the fire, taking a few steps, first to one side, then to the other, constantly turning and all the time waving his hands and arms gracefully in time to the measure of the song. He kept this up for some time when the music (if one can call it by that name) ceased and he retired to a corner and his blanket. Again the clubs beat upon the plank and the chant was resumed. Another Indian sprang into the circle and commenced the mythical cannibal dance, a sort of pantomime illustrative of a legend of the Quackah mythology.

In the mountains of their island home dwells an evil spirit who, when he becomes hungry descends from his fastnesses and seizes upon some member of the tribe, whom he bears away and eats at his leisure. The Indians hold him in great dread, and this dance is to appease his wrath. The dancer now before us represented the terrible cannibal of the mountains, but I doubt if the spirit himself is any more ferocious in appearance than was the apparition which crouched and leaped around the fire in the Quackah hut. He did not stand erect, but squatted like a frog, and a strange robe fell from his shoulders and dragged on the ground behind him. Two other warriors kept constantly by him, and as he circled around the fire they placed themselves between him and the spectators.

A wrinkled old man also promenaded solemnly around shaking a rattle shaped and carved in semblance to a human head. Long hair, which waved as he shook it, made it in the dim light a gruesome object, and the pebbles, or whatever was in it, sounded like the rattle of dry bones.

The painted musicians howled louder and beat harder and faster with their clubs, and the dancer accelerated his motions to the uncanny accompaniment. He crouched till he almost sat upon the ground, his arms outstretched and his fingers working convulsively as if they longed to strangle some victim to appease the spirit's awful appetite. He was watching for his prey, and uttered hoarse, guttural growls, while his eyes glared savagely as they wandered from one to another of the onlookers. Suddenly without rising from his crouching posture, he would jump swiftly around the fire, covering several feet at each leap; then he would stop and once more the bloodshot eyes would gleam balefully and the twitching fingers would again be stretched toward some one. Then the two watchers would seize him by the waist and hold him with all their strength till he was quieted, when the dance was resumed. As the performance went on he frothed at the mouth, and the muscular strain his legs were subjected to was terrible. At last he became exhausted and was carried away howling and moaning, and placed in a bunk.

In this cannibal dance the dancer has to be watched, for he becomes so excited that he will sprang at any one and bite them. On several occasions he bit George Hunt's bare arm so that he drew blood, and one night he sprang at Nick and seized him by the ankle as he sat with his legs crossed watching the ceremony. Nothing but his thick shoe prevented him from being severely bitten, as

the teeth marks showed even through the leather. "I knocked him more 'n twenty foot," said Nick; "I don't want to be chawed by cannibals just yet." One night he sprang at me but I got out of the way in a very lively manner.

Jimmie Deans told me that a few years ago a woman of the tribe died, and the dances were held to appease the wrath of the spirit. The dancers became so excited and uncontrollable that they seized the body and tore it to pieces.

After the cannibal dancer disappeared another leaped on to the floor wearing an enormous mask, representing a raven's head. The raven is supposed to be the slave of the evil spirit and was represented by a Quackah second in agility only to his predecessor. He leaped about the fire, twisting the raven's head from side to side and snapping the huge jaws together in a most threatening manner. The pounding and the ear-splitting music were continued as the musicians taunted the spirit of the mountains. Then the raven's head was changed for another mask, representing a duck, the sign of the great (good) spirit, and the dancer indulged in more contortions.

After this four squaws, one of them a young girl, danced, and their performance was a relief after what preceded them. The pounding was more subdued and the bare feet made no sound on the earth floor. They swayed their bodies back and forth, holding their arms stiffly in front of them, the gesture seeming to be one of supplication. They glided back and forth and revolved as in the waltz, first in one direction, then in the reverse. The queen danced by herself, the other three keeping on the opposite side of the fire. The dance was rhythmical and graceful, but their faces showed no expression as they whirled through the measures.

This was a dance of peace and was continued for a long time, after which two warriors bared to the waist came forward. Stout cords were passed through the skin on their backs in two places, and the knots securely tied. Two others held the ends of the cords, driving them as if they were horses, and as they danced they strove to break away by tearing the knots through the skin. The cords, held taut by brawny arms, stretched the skin to a tension painful to witness as the dancers pulled and struggled to break away. The beating became louder, the song faster; the men jumped and pulled and leaped, while their drivers held firmly to the cords which were wound around their hands. One of the dancers seemed ready to faint with the pain and was supported for a moment by one of his comrades. Again they sprang forward and a knot pulled out; then another, and another, and another. They were free, and we had seen enough, but the dance was by no means over. When the Quackahs became thoroughly warmed up and excited over their dancing, they never ceased till one and all dropped from exhaustion. Many a night they kept up their weird orgies till daybreak, and neither Deans nor the interpreter could stop them.

As we walked back to the Penobscot camp we were followed by the sound of pounding and yells and whoops. "They won't stop till they drop," said Nick, "they'll whoop it up all night long. I never saw such dancing as that before. Our dance is a gentleman compared to that one," referring to a dance of the Penobscot people which is done to the music of shot rattled in powder horns, and is a very pretty performance.

"Do the Quackahs make any bead work, or baskets, or anything, the same as your people and the Six Nations?" I asked.

"No," replied Nick, "they don't make anything except a noise. They make so much of that, they don't have time to do anything else." W. A. BROOKS.

#### The Hummingbird.

ONE beautiful day when I was hunting, I sat down to rest upon the dry, brown leaves of the forest with my back leaning comfortably against a log, in the enjoyment of ease and reverie, when the deathlike stillness of the woods was broken by the welcome buzz of the hummingbird. The tiny creature catching sight of me poised himself in mid-air almost within my reach, and seemed to stare with wonder as though he inquired, "Is it somebody and is he dead or alive?" In order to study the bird I kept motionless; but I was not more so than it was except its wings. These gave but flashes of light, so rapid was their motion. The perfect and continued poise, without the least deviation up or down, such physical command elicited my highest admiration of the bird and wisdom of Him who formed it. N. D. ELTING.

#### Appreciation and Recognition.

Mr. J. B. Battelle has asked us to forward to Mr. Hough the following note in this way, and we think it a very fitting way too:

TOLKED, O., Feb. 3.—My dear Mr. Hough: You want to stop the "Singing Mouse" series in the FOREST AND STREAM. Stop it right away, and don't publish any more of them. The "Lake Belle Marie" in the paper of Jan. 27 is the place to end. Do you ask why? Simply because you may not do anything so good again. You may think you will, and like the man who struck the bulls-eye, believe that it is easy to duplicate the shot.

"Lake Belle Marie" is about as fine a specimen of the prose poem as I have encountered for a great many moons. It has a rhythm and cadence that are well-nigh perfect; and a strength and simplicity that show what the English language can accomplish when it is rightly handled. When a song is keyed to such a pitch, a single false note will mar the harmony, and it is a great deal easier to strike it than to avoid it. But this has the true ring. No man could have written it who did not draw the inspiration from the camp and the waters of the lake itself.

I send you my congratulations feelingly, because having now and then essayed to do this sort of thing myself, I know how very difficult it is to do it well. Sincerely yours, J. B. B.

Editor Forest and Stream:

Excuse my troubling you in this way, but I have just read the little article "How the Sleepers Got Egg Nogg," on page 112, of your Feb. 10 issue, and I must say something. I have not enjoyed anything so much for several months. It is exquisitely good; though, no doubt, lots of people would pass over it in their quest for more important articles. The "ole nigger" is really alive—seems to walk right out of the paper at a fellow. CLAUDE KING.

#### Club Property.

RICHARD V. HARNETT & Co., auctioneers, will sell at auction Feb. 28, the estate of the late Captain Jacob Travis, in Princess Anne county, Va. This is a good opportunity for a club to secure a valuable shooting property. The property consists of five islands lying about twelve miles south of Virginia Beach. Particulars will be furnished by Wm. H. Willets, 29 Wall street, New York.—Adv.

## Natural History.

### MEN AND SNAKES.

MR. HORACE KEPHART wishes some one to explain the phenomenon of the blacksnake crawling straight down the trunk of a big tree, which snake he shot with his "pocket revolver." The only explanation I intend to offer is, that he ought not to have shot the snake. It was a perfectly harmless creature, and had as much right to occupy a place in this vale of tears as any other inhabitant thereof. I believe the Darwinian theory of the brutish ancestry of man is well exemplified in the propensity so generally manifested, to kill every creature that unluckily falls into his power, unless he has a direct interest in its being alive. Let a strange bird come about the premises, if it is large enough to attract attention immediately the cry is raised, "get the gun and shoot it!" Let a half starved deer or other wild creature, in a helpless state approach the cruel precincts of man, the cry is "Kill it, kill it! crucify it!" without other thought than that of mere destruction.

It is a hopeful sign, however, for the advancement of humanity to a higher plane, that as a man grows older the natural impulse to kill whenever an opportunity presents, diminishes in force. Here is a case in point, which I was reminded of when I read in a recent number of FOREST AND STREAM, about the immunity from danger of a pair of eagles, somewhere on the St. Lawrence River. The writer, if you will pardon the egotism of the recital, whose head is now becoming frosted with the passage of half a hundred winters (and summers), was a short time ago riding along the bank of Flower Lake, when a large brown eagle was discovered on a tree less than 50 yds. off, engaged in eating a fish or other prey. He remained under my observation for several minutes before he concluded to sail away over the lake. I had a good Marlin carbine conveniently hanging to my saddle, with which I occasionally knock over a duck, squirrel or rabbit; and though an eagle is considered quite a trophy in these parts I made no attempt to shoot this one, and when asked afterwards why I did not kill him (or her), I simply replied that I had no use for him. In fact, as I grow older, and I believe it is true of others also, there is a growing repugnance to wantonly destroying life of any kind. This, I think, is a worthy sentiment to cultivate, and ought to be taught to all children, and especially boys, while growing up.

But aside from the sentimental view, which has a more direct relation to the constitution of the mind itself, than the rights of other creatures, we have a very imperfect acquaintance with the multifarious functions of all the birds, beasts, reptiles, insects, fishes and other creatures, in the vast economy of nature; and are apt to look with contempt and disregard upon creatures which, apparently insignificant, yet really play an important role in the affairs of the world. For example, until the discovery a few years ago by Darwin, who supposed that the modest and retiring angle worm that wriggles so helplessly on the school boy's hook, is the great soil maker of the earth? And yet it is a fact, that this insignificant creature is engaged in incessant labor for man's benefit. He bores down deep into the ground, collects and assimilates the fertilizing ingredients that make soil and brings it to the surface. Equally or more important functions probably attach to many other creatures, which we do not at all suspect. It is somewhere related that some years ago, in one of the provinces of France, all the small birds had been destroyed, whereupon the noxious insects so multiplied that the labors of the husbandmen were of no avail, and a famine threatened. Measures were then taken by government to restock the land with birds. There is danger that this country is drifting on to the same breakers. But, returning to my text; in all the more thickly settled parts of this country, there are now remaining but comparatively few poisonous snakes of well known varieties, and easily recognized. Of these, the rattlesnake is the only one with which I am acquainted that is at all dangerous. The "copperhead" has a bad reputation, but I have never seen one of that variety. The deadliness of the cotton-mouth moccasin of the Southern swamps has been made the theme of blood-curdling stories, which are pure libels on that good-natured and much-enduring reptile; for with him I am on intimate terms, and granting that he has plenty of poison, though short fangs, I have never encountered a specimen that would offer to strike, though poked at and teased out of all patience. But outside of the few poisonous varieties, there are very many others that are entirely harmless and have a perfect right to pursue their innocent avocations without being ruthlessly destroyed whenever they chance to fall under the baleful notice of their neighbor man. And who can tell what useful offices they may perform in the destruction of noxious vermin inimical to man's welfare?

I did not intend to preach so long a sermon when I began, Mr. Editor, so with the hope that these hasty expressions may induce some of the thoughtless to do some thinking, I will ring down the curtain. COAHOMA.

CLARKSDALE, MISS., JANUARY.

#### Guillemot in Connecticut.

WILLIMANTIC, Conn., Jan. 13.—Editor Forest and Stream: About the middle of December last a boy brought to me for mounting a bird which I think is quite rare for this section of country. It was a species of auk or guillemot, and was shot on the river near one of the thread mills in this city. In size the bird was about the same as a black duck. Top of the head, back of the neck, back and wings were all of a uniform black in color. Throat, breast and all under parts were white, shading off into black on the sides of the neck. The lower edges of the wings tipped with white. Bill narrow, about an inch and a half in length. Feet blackish. I have not been able to find any bird answering to the above in any of the ornithologies to which I have access here. Can you tell me the name of the bird, or can any of the readers of the FOREST AND STREAM give me any information in regard to it? HORACE J. FENTON.

[This was very likely a common guillemot (*Limonia troile*), or possibly a thickbilled guillemot (*L. arre*). Accounts have been published this winter in FOREST AND STREAM of the taking of these birds in unusual localities, as on Lake Champlain and in Connecticut, north of the town of Madison.]

## BUFFALO IN COLORADO.

DENVER, Col., Feb. 10.—*Editor Forest and Stream:* A few weeks ago the people of Colorado were regaled with a fairy story in our newspapers, about certain deputy game wardens who, this time, had discovered a second herd of wild buffalo in Colorado. They said these animals were in North Park, in Routt county, and numbered about two dozen; that they were being fed and protected by the neighboring farmers, who wanted no special deputy game warden to watch them. We are frequently amused by this kind of game stories, but the subject seldom rises to the dignity of a whole herd of buffalo. They generally refer to deer, elk, fish or other small cattle. Just now it is clouds of elk among the farmers of Routt county, variously estimated by rival game wardens at from 2,000 to 10,000 head, and they, too, are being fed daily by the philanthropic farmers. When this kind of a story is started by some enthusiastic deputy, and is repeated officially by the chief warden, and thus gets into the hands of the talented newspaper reporters, there is no telling to what magnitude it may grow. We may find a flock of mastodons here yet.

To show the absurdity of this buffalo story, it is only necessary to state that Routt county is not in North Park, and that no part of North Park is in Routt county. That no neighborhood of farmers would feed and protect such a herd without consideration, or without the knowledge of the public at large, even if the animals were disposed to stay with them, which they would not do. It is probable that some deputy game warden has heard a dim and misty story about the remnant of what was a few years ago known as the Middle Park herd of buffalo.

As buffalo literature is not very plentiful these later days, *FOREST AND STREAM* may be willing to give space to a brief history of this band. Thirty odd years ago, it was well known to the few people who visited that region. It had evidently chosen its permanent abode there, and ranged throughout the park and its bordering slopes, winter and summer. This is a section of country about fifty by ninety miles; of mountains, hills and valleys; timber and prairie. About thirty years ago the band was noted as having a white animal in it. This was afterwards killed and proved to be a common ox. The herd was drawn upon moderately for meat by prospectors and trappers who visited the neighborhood.

In 1874, Middle Park first began to receive permanent settlement, although the northern band of Ute Indians claimed possession until four years later. In the winter of 1875-6, these Indians established their winter camp in the western edge of the park near where Grand River leaves it. The winter was very severe with a remarkable fall and accumulation of snow. In the latter part of the winter, the Indians found the buffalo "snowed in" on the head waters of the Muddy (Fremont's Milk River), near Whiteley's Peak, in the northwestern edge of the park. Taking advantage of their helpless condition, the noble red man slaughtered all that could be conveniently reached—between sixty and seventy. Some reports say more. A few animals escaped by hiding in the willows along the little streams, or by breaking a way through the snow to the ridges where it was less deep. The Indians took the tongues and a small portion of the meat. The great bulk of it was left to rot. The next spring a citizen of Hot Sulphur Springs went to the ground with a team and brought away a wagon load of tallow that he took from the carcasses.

The few animals that escaped made their way in a northwesterly direction some twenty miles, and took refuge upon a depressed and broadened section of the main range of the Rocky Mountain range. They found there an extended range, mainly timbered with spruce, pine and fir timber, with aspen groves and thickets upon the lower levels, with abundance of open prairie country interspersed that furnished plenty of the best of grass; a very ideal summer pasture and not bad in winter, except in the event of a very hard and snowy one like that of 1875-6. There has been none since. The altitude is from 8,500 to 10,000ft. above sea level, and the country is yet an absolute wilderness. Here a few buffalo were occasionally seen by hunters, but none were reported as being killed except as hereafter stated.

A year or two after the Indian slaughter, some travelers came into Hot Sulphur Springs and reported that they had seen two buffalo with a bunch of cattle near the road, eight or nine miles east of the Springs. They evidently thought the buffalo belonged with the cattle and did not disturb them. Nobody knew this to be the case, and so there was a chance for an easy buffalo hunt. Some of the hot-bloods of the town were soon upon their horses, with guns, and before night the two buffaloes were butchered in cold blood in the midst of the cattle herd. They proved to be yearlings and where they came from was never known, but it was most probably from the herd in the northern edge of the park.

Yet later, by a year or two, there came into the park three brothers, known as the Porter boys. They located in a little obscure valley about four miles northwest of the Springs, and built a cabin. They had been buffalo killers, hide hunters and bone gatherers on the plains, and played a large part in the extermination of the great plains herds. That business was finished. They brought their hunting outfit with them, including teams and wagons. They turned their attention entirely to trapping and hunting. Colorado already had a game protective law which provided for a close season upon all important game animals, and prohibited absolutely the killing of buffalo. Hot Sulphur Springs was by that time quite a lively frontier town, with many visitors. Hotel keepers and others were quite willing to wink at infractions of the game law, provided there was a share of the profit in it for themselves. Elk and deer meat could be bought cheaper than beef. The Porter boys soon found a ready market and much profit in their unlawful business, but in order to escape unpleasant consequences, they had to "sneak" their game in at night. One morning, the fact developed that they had in the night before offered buffalo meat for sale. They said they had killed one, but assured their customer that whenever he wanted more of that kind of meat, they could find it for him; that they knew where it was. To another citizen they offered two buffalo tongues and told about the same story. The news leaked out early in the morning. A complaint was made before a justice of the peace, who issued a summons for the elder Porter. The regular constable was absent. A special was appointed to serve the paper. He mounted a horse and proceeded to Porter's cabin, where he found the

proprietor, with whom he was acquainted, engaged in pegging out a fresh buffalo skin to dry. After the greetings of the day, dismounting and with his bridle over his arm, the constable said, "Mr. Porter, I have a paper to serve on you," which he began reading. Porter immediately responded: "Hold on, hold on, I don't want any of that, d— you." The constable looked up and into the muzzle of a very vigorous looking "45." Porter reached for the paper and tore it up saying, "You'd better get home." The constable got home and said he wanted no more commissions like that.

Porter had now violated the law and resisted an officer and naturally felt uneasy. He could defy a frontier court and intimidate its constable, but the district court was to sit at the Springs in a few weeks, and he did not want to face that. A day or two later, it was discovered the Porter boys had mysteriously disappeared with all their movable goods and chattels. The next heard of them they were in Montana, at the old business. The people of the Springs have had no buffalo meat since. In their excursions for elk and deer, the Porters had accidentally stumbled upon the buffalo. I have heard of none being killed since, and very seldom of their being seen. In 1884, Judge Spicer, now of Chicago, while hunting young elk for capture, in the region referred to, saw five, and soon after described them to the writer. He was intent upon his elk chase and did not pay much attention to the buffalo or look for more.

The Lost Park herd of buffalo is about seventy-five miles southwest of Denver. The location is a peculiar one and singularly inaccessible—never frequented by man. It is a depression among the low mountains east of South Park and about 8,000ft. above sea level. The last known raid upon this herd was about six years ago, by a well known Denver man, who boasted of having killed one very large bull. The meat spoiled before he could get it to the railway—some fifteen or twenty miles distant. I think he also lost the head and hide. Although the facts were notoriously well known, he was never prosecuted. Quite an excitement was raised about two years ago by a report that a taxidermist was among these buffalo killing right and left. The game warden fairly surrounded the district with deputies, and made a thorough search for offenders, but found none. The case was left in complete uncertainty as to whether any offence had been committed or attempted, or not. The carcass of one cow was found, but it could not be determined whether she had been killed by man or had died from some other cause. No part had been taken away. From reports it would appear that this band is increasing in numbers. Their range is now included in a National Forest Reserve. I believe, also, that a few of the old time Middle Park herd yet live, but I do not believe that farmers are feeding any of them.

For the private information of the *FOREST AND STREAM*, I inclose a map showing the location of these buffalo "game holes," and also where the Ute slaughter occurred in the winter of 1875-6. WM. N. BYERS.

## A Pair of Pet Quail.

LINCOLN, Neb., Jan. 23.—One day last November I went hunting in company with a friend named Cunningham. We drove twelve miles west of Lincoln to his farm near Malcolm. My friend asked one of the men how the pet quail were getting along. He had hardly asked the question, when one of the children said, "See, there they go now!" The birds were then running on the ground near the house and flew on a small outhouse, and one of the little girls went out and climbed upon a wagon standing near the house and tried to get them, but they were too high for her to reach. The birds (a cock and hen) sat perfectly still all the time and did not attempt to fly until quite a little while after she had climbed down. These birds were taken during haying last summer; the machine was run over the nest, killing the old birds; there were fifteen birds in the nest, just hatched. One of the men took them to the house and gave them to a hen, which had just hatched a setting of eggs, and they were kept in confinement for a few days, when they were liberated; thirteen of them left. The children have fondled and played with these two so much that they can pick them up most any time. They roost in the hen house with the chickens.

We found one covey of birds about 5:30 P. M., and succeeded in killing six of them, but it was getting too late in the day to follow them up close. I had a young dog which had never been handled. What do you think of a young dog holding a point until three quail were shot at over him, two of them killed, the gun reloaded and the third one flushed and missed; and this after only having been hunted about four times, and nearly two years old and never yard broken?

We had lots of birds (quail) here this season; we could hear and see them everywhere; and plenty of birds were left over. C. G. F.

## The Weight of Bears.

CORA, Wyo.—*Editor Forest and Stream:* I noticed in *FOREST AND STREAM* of Dec. 16 an article on "Bears of North America," in which the writer says that 800lbs. is about the limit for grizzlies, and that I am inclined to think is very nearly correct.

At the time of reading the article I had just returned from a hunt for grizzlies with a New York gentleman, and we succeeded in bagging one of the largest I ever saw. As the weight of bears had been under discussion we determined to weigh this one and set all guess work to rest. On the day following the killing of his bearship we armed ourselves with a 50lbs. scale and returned to the carcass. This we cut into pieces and weighed, and when through and summed up we had a total of 797lbs.

This bear had laid himself away for the winter far up in the mountains near timber line, and it was with much coaxing and teasing that he was induced to come out so we could examine his fur, but when he did come it was with a rush and a *bo-wah! she-wah!* that was intended to make one's hair stand on end. He made a charge at me and the New Yorker failed to stop his coming until he was within 8ft. of me, then he turned on a coat that I had laid on a log a few steps away and nearly shook it into rags before letting go to die.

This was nearly a year to a day from the time when another grizzly was taking choice steaks out of my anatomy and in the same locality. IRA DODGE.

SEVEN live Rocky Mountain elk for sale. Exhibited at World's Fair, Gentle. Price very low. Soper & Arter, 46 Lakeside, Chicago.—*Adv.*

## Game Bag and Gun.

## STOP THE SALE OF GAME.

A PLATFORM PLANK.—The sale of game should be forbidden at all times.—*FOREST AND STREAM*, Feb. 10.

WEST DULUTH, Minn.—*Editor Forest and Stream:* Inclosed find clipping from *The North*, published at Minneapolis:

The quantity of game handled yearly in this State by cold storage companies is something enormous—at least 4,000 carcasses of venison for the past year, and for the same period 280,000 birds. From Lake Pepin alone there has been shipped this year 500 tons of coarse fish, such as sturgeon, catfish, red horse, etc. The fishing industry of the State is an important one. More than 6,000 tons of fish are annually handled in the cities of St. Paul and Minneapolis and Duluth. During the year the State Board of Fish Commissioners have confiscated and destroyed 839 nets, which spread out would cover a distance of eight miles. Their combined value was \$3,500.—*The North*.

It isn't the amount of game taken in Minnesota by legitimate sportsmen that will exterminate, but this wholesale killing for the market that is fast cleaning out our forests and lakes. I know of lakes that eight years ago teemed with black bass, where big fellows of from 3 to 5lbs. weight each could be taken as fast as they could be played and landed, that are now cleaned out, and not by use of hook and line either. We have much lake and wood that will be prolific of game for years, but only because of its being remote from shipping stations. Our game wardens do not do their duty near as well as the Fish Commissioners, and illegal killing of deer is the result in all seasons. L.

HARTFORD, Conn., Feb. 17.—*Editor Forest and Stream:* I think your scheme of "stopping the sale of game at all times, by all persons and in all places," is the true way to prevent the total extermination of game. A. C. COLLINS.

## A WARNING FROM CANADA.

TORONTO, Feb. 12.—*Editor Forest and Stream:* Your issue of Feb. 10, which has just come to hand bearing new terrors for sportsmen interested in wildfowl, reminds me that on several occasions during the past few months, upon reading reports of the destruction of game in the United States, I have resolved to ask your permission to draw the attention of your readers to what I believe to be the greatest danger which threatens the existence of migratory game.

Sportsmen throughout the whole range of the flight of migratory birds are equally interested in their protection, but every one must admit that the power to utterly exterminate them is with those controlling their breeding grounds. In Ontario we pride ourselves that the game law has for the most part been framed from the sportsman's point of view, and therefore from an unselfish point of view. It is many years since spring duck shooting has been allowed here, and even in the open season no one man may shoot more than 400 ducks. Even in the case of plover and other waders, spring shooting is not allowed, although they are seldom seen in any numbers in the fall. The open season for duck begins Sept. 1, and many species only stay with us for less than a month after that date. These and other valuable provisions of the law have not been obtained without opposition, which becomes stronger instead of weaker on each occasion that an amendment is brought before our Legislature, and it ought to be understood throughout those States lying to the south of Ontario that unless we can prove that some little self-denial is being exercised to the south of us by dealers in, and purchasers of, game as well as by sportsmen, the time is not far distant when we may be overborne by the cry which is now heard in every discussion of the game question (I give it as it is heard): "Why should we preserve game for the Yankees?"

Almost every week throughout the winter our papers contain more or less exaggerated reports of the slaughter of ducks etc., in the South, and of the use of night lights, batteries, punt guns, etc., and there certainly is a strong feeling among the mass of the people who are not active sportsmen, that our gunners might as well be allowed (in the language of the game hog) to get their share before the last duck is killed. It is unnecessary to say that such arguments are used with considerable effect by many sworn foes of game laws, and they may at no distant date control a majority in our Legislature, in which case it will not be very long before decoys will be chiefly of use for firewood.

Personally I have for many years tried to have my finger in the pie at the earliest probable date when any amendment to the game law was being drafted, and have not been far away from the lobbies when any bill has been before the Legislature, and I have taken part in numberless discussions upon the subject, and I regret to say the above statements are well within the mark. I trust that no sportsmen will misunderstand the spirit in which this letter is written; it is intended as a warning, and not as a threat. Ontario sportsmen would not allow spring shooting or take away protection from wildfowl if it were certain that nine-tenths of the ducks would be killed before next season, but unfortunately they are not in the majority, and they can only hold the present law as long as they can convince the majority that they ought fairly to be allowed to do so. *Verbum sap.*

What do we want, you will ask, in order to strengthen our hands? Nothing more than every sportsman wants, viz., no spring shooting, and to the sportsmen this warning is addressed merely as an argument to be urged upon the Legislature of their respective States, "If you don't abolish spring shooting, Canada will not long continue to forbid it and we may then have no ducks to protect."

While I am upon this subject, perhaps you may allow me as a wildfowler of not a little experience to state my opinion that it is quite within our power to make ducks again as plentiful as they were twenty or thirty years ago. All sportsmen must agree that the ideal plan is the new plank of the *FOREST AND STREAM* platform, "No Traffic in Game," but wildfowlers need not go so far, "One year's rest" is good enough for us if spring shooting is abolished. Or if it is too much to ask purchasers to deny their appetites and dealers their profits for one year in order to provide plenty for years to come, protect marsh duck for one year and deep-water duck the next, and let protection include an absolute prohibition of sale no matter where procured. Amend the law of each State by adding a provision that the governor shall have power by pro-

clamation to prohibit the shooting and sale of any species of migratory game during any year upon being satisfied that the same protection would be afforded in Ontario. If you will do this, we will.

WILDFOWLER.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

The Storm and the Possum Club.

CHICAGO, Feb. 16.—The great storm which broke over Chicago last Monday, Feb. 12, was, no doubt, the greatest storm a city ever experienced. If there is any doubt about this, and if New York thinks that her big storm of a few years ago was a bigger storm than the Chicago blizzard, we will have a bigger storm here after a while. At any rate, the streets were impassable and traffic suspended almost entirely. Things were in this shape, not a street car running at 6 P. M., when the small coterie representative of the Possum Club started down town for "Possum Bill's" parlors, at 72 Bryant avenue, to celebrate the annual possum dinner given by that worthy. Not a wheel moving and Werner's twenty miles away! At last the idea of a trip south on the elevated road to Thirty-fifth street and then a cross-town walk to the point in view was proposed and carried out. And such a walk! The drifts were waist deep and the air so full of snow one could see hardly a half block ahead; but the resolution not to disappoint Mr. Werner and not to lose the supper carried the party through the long walk, and at last they drew up, breathless except for their ability to shout, before the hospitable doors and overflowed the entrance as quick as Mr. Werner opened the door. After that all was mirth and jollity, as the society reporter would say.

Mr. Werner's '94 banquet deserves more than passing mention. The tables were the most beautifully decorated of any the old-time caterer has offered the sportsmen of this city, and it need not be said that the appointments and furnishings from *pièce de résistance* to *demi-tasse* were all in perfect keeping. The party was small but happy, and the storm outside was forgotten. Mr. Werner was called to the head of the table, and there sat before him Messrs. C. D. Gammon, R. B. Organ, L. M. Hamline, W. P. Murray, F. A. Place and the writer. To quote from the society reporter again, it was a late hour when the merry gathering disbanded. Mr. Werner certainly has given renewed cause of gratitude to the Chicago guild, and the only thing left to be desired is better weather and a larger attendance in '95—for "Possum Bill" vows that this is a fixture which he will not let expire.

The Storm General.

The late storm was one of the most severe and the most generally extended one that ever struck the West. From the middle South to Minnesota the entire country is lying under a blanket of deep snow, and what damage this means to game birds can only be guessed.

To Widen a Law.

Mr. R. Bortree, ex-warden of Chicago, and long prominent in protective matters, is of the belief that the Illinois statute in regard to importation of game into Illinois should be extended in construction so as to prevent the importation from other States of any kind of game, even wildfowl. Commenting on the position—which would solve the game problem of the West if tenable—the *Tribune* of this city remarks:

The effect of this section, Mr. Bortree says, is to prohibit any one from receiving from any other State and selling any species of game after Feb. 1. The prevailing impression is that wild geese, wild ducks, brant and water fowl are exempt from this prohibition, and there is any quantity of these kinds of game on sale in Chicago to-day. But Mr. Bortree says that the misunderstanding has grown out of the fact that these birds, if taken in Illinois, may be sold until May 1. This privilege does not extend to the same birds killed or taken in other States.

Believing in the strict enforcement of all laws for the protection of game throughout the United States and the Territories, Mr. Bortree gives notice that on and after Feb. 15 prosecutions will be commenced against all persons and corporations not complying with this provision of the statute.

More power to him!

Iowa Affairs.

The war progresses in Iowa. The sportsmen continue to molest the Mississippi River seiners. The Des Moines *Capital* says:

State Fish Commissioner Griggs has a measure in process of incubation which will correct the insufficient phraseology of the present law and add many new features, chief among which is the abolition of spring shooting. Seining, dynamiting and fishing out of season are covered in such a way that the hobos who dangle for black bass over their spawning beds will tumble into a whole ocean of grief if there is an efficient Commissioner appointed. Freezers and market-hunters come in for attention.

Meantime, not to be outdone, the market-fishermen have a member of the house, Ross, who has introduced a bill to allow seining in the back waters or border rivers. It is, at this stage of the game, bill and bill.

The Big Tree.

The big tree which made so wide a reputation as a restaurant counter at the World's Fair has been moved to Lake street, this city, and is still in the same business. This great stick of timber is of yellow fir, and came from Washington. As it now is seen, it is 110½ ft. long, breast-high in diameter, and weighs 74,000 lbs.

They Will Come To It.

What is going to happen when even the kennel writers begin to come around to my often expressed position in regard to the despised meat-dog? The *Stock-Keeper* speaks right out in meeting, and what it says for New England is good elsewhere:

Can the craze for a flyaway hunting dog be compared to anything else than to a fad which arrests attention for a short time and then, meteor-like, disappears? The thought is suggested that it is about time for the dawdling of a practical era, when the dog who is able to find game birds in the near vicinity to the sportsman who is directing his movements will be duly appreciated.

The day is past when a majority of the sportsmen cry out enthusiastically, "Look at the range and speed!" It sounded well and for a time had the call, but necessarily soon brought this accomplishment (?) to a practical level, and something else is now demanded as a recommendation of a dog's value.

Several pet names have been bestowed on the practical shooting dog by those who affected the race horse canine of the South and West, some ridiculing the slower dogs as mole-diggers, potterers, meat hunters, etc.

It is this popular cry of those who have heretofore allowed fancy to drift in another direction that will counteract the evil effect and give to sportsmen of this section a dog that is capable of useful work in the field.

So there is a "popular cry," is there? Well, it has come up suddenly; but the men who voice it have a lot of hard sense on their side. Long live the meat-dog. I remember that I had the "range and quality" notion once upon a time, but the older I get the more do I cherish the proverbs that facts are stubborn things and that results count. As an amateur, I have seen so much range and quality sometimes, and so few birds. The dog you can run over with a wagon, and that will hunt six days in the week, and find birds, too—that dog is good enough for me and he has my fondest regards when I am out of meat or out for sport. When I am in need of a poem or a rhapsody, I might get along with range and quality. There will be more who will come to this notion in the next ten years.

Club Banquet.

The Chicago Fly-Casting Club will banquet at the Lakeside restaurant, evening of Feb. 23, and hold an enjoyable reunion. The invitation states that two menus are offered, one of which is an "old-fashioned fish dinner, chowder, red snapper, baked pig, black bass, etc., etc." Isn't baked pig really a little out of its class there?

An Old Story.

Mr. W. C. Thomas, of Sheboygan Falls, Wis., writes as follows: "I inclose a communication that appeared in our paper, the *News*, which readers of the *FOREST AND STREAM* hereabouts have requested me to send to you and ask if you feel so disposed to publish in part or entire in the *FOREST AND STREAM* with comments as you may see fit." The clipping inclosed is too long to reprint in full. It tells of much venison left to waste by "gentlemen sportsmen," which class it supposes to be arrayed against the "pot-hunters." It goes on to recite the wrongs of the latter class, and to show the injuries inflicted on the public by sportsmen's clubs. After duly roasting the Caw-Caw Club of Puckaway Lake, the writer of the article, W. J. Mozley, of Princeton, Wis., pays his respects to the Nee-pe-nauk Club as follows:

In the course of two or three years the Nee-pe-nauk Club began to buy all the land bordering on Grand River and the old Fox River, and what they couldn't buy they leased. As long as they leased, they could persuade the farmers to grant, telling the farmer to obtain the lease, that they would never interfere with any of the inhabitants of the surrounding country. As soon as they got a firm hold of these valuable (?) lands, worth from 25 cents to \$1 per acre, they at once posted their lands with notices for all persons to keep off, under penalty of the law. The club also hired two men to patrol the waters by boat to enforce the law. One of our oldest citizens went down Grand River, there being thousands of them there. We were all met by the club's police and ordered off. He refused to go, whereupon the police told him they had orders to take away his gun, smash his boat, and there was \$50,000 to back them. However, the party was allowed to return unmolested. This season several Marquette boys, a party from Kingston and also a party from Marquette went down Grand River into Mud Lake to have a quiet hunt and bag some mallards, there being thousands of them there. We were all met by the club's police and ordered off. "Off of what?" "Government water." We refused to go, whereupon we were all sued in the Circuit Court at Dartford and will have a hearing in January, 1894. The club claim they are keeping people off Mud Lake to protect the ducks from the ravages of the infernal pot-hunters, and also get the birds wotted to the lake "so they will breed there, you know." In from 4 in. to 3 ft. of water in the nesting season! During the month of October, 1893, the Nee-pe-nauk Club of sports buried over 200 mallard ducks; they could not use before they spoiled. They were watched so closely by some of the pot-hunters they couldn't ship the game out of the State, as has been their practice since their organization.

If an efficient State Game Warden would spend part of his time looking after the clubs instead of trying to jump on some resident who utilizes every duck killed either for food or sale, to support his family, we would have better service—"But the appointment and tips, you know." One leading Nee-pe-nauk man told one of our citizens this fall, that the club was not positive they could control Mud Lake, but the club would make it cost this man \$100 if he didn't keep out.

What are we coming to if this goes on? Are we slaves in bondage? Are we to be downtrodden? What will become of our posterity if we do not defend our rights? I trust every reader of this will think the time has come to candidly use his influence in the future toward securing the rights of his fellow-men.

This is the same old story, the cry of the "people" against the sportsmen's preserves, a cry which will never be fully silenced until all the game is practically gone. All experience, all reason, all common sense show that when the "people" are left to exercise their "rights" to shoot as they like, they ruin their privileges. The depleted covers of the country show this too sadly and too surely. The game of this country will be preserved from extinction only through the action of the law of trespass. The clubs may be selfish, and many have among them poor specimens of men, but the work they have in view is a good one, and its benefits do not accrue to the club alone. The "people" are benefitted in spite of themselves by the increased, or rather the continued quantity of game.

The law of trespass sits hard in America, but it is as good law as any of the whole common law system to which we must come in the regulation of our social compact. We have got to recognize this law of trespass or see the game go. You pay your money and you take your choice. At a guess, I should say that eventually the law of trespass will save the game in this country as it has done in England. It is no guess at all to say that meantime there will occur with unvarying regularity this same old story, these same old kicks from the "downtrodden people," so many of whom want to eat the cake of the whole actual people, and to eat it right away.

I should need better proof before believing that the Nee-pe-nauk men buried 200 mallards. If they have been killing more game than they could use, they deserve the hearty censure of every sportsman in or out of the clubs. The latter point makes no difference whatever, for a sportsman is a sportsman, whether poor or rich, whether belonging to a club or not, and a spotted sportsman doesn't change his spots when he buys a club share.

Some More Down-Trodden Ones.

The sportsmen of Dubuque, Iowa, are rising against the "down-trodden" market-fishermen, who are practically depopulating the waters of the Mississippi and tributaries thereabout. One paper, the *Lansing Mirror*, mentions a haul of a large seine in which 10,000 lbs. of fish were taken, of this 600 lbs. being of black bass. Another paper speaks of a haul made under the ice of Frenness Lake, which netted 1,000 lbs. The *Dubuque Trade Journal* speaks of angling as a pastime soon to become impossible. The sportsmen have organized, held meetings and prepared a bill which they are endeavoring to have passed. The measure is a strong one. It prohibits all fishing in any public water of Iowa or in the Mississippi or Missouri rivers along the eastern and western boundaries of the State, in any manner whatever, except with hook and line. It makes it unlawful to have a net or seine in possession, and gives police powers to any person to seize without warrant any seine or net, and to deposit the same with a justice of the peace, who shall cite the owner to

appear and show cause why the seine or net should not be destroyed.

A bill so strong as the above will be hard to pass, but if once on the statutes we might indeed have, for once in a way, a game law which could be enforced and which would have some show of being put in practice.

Michigan and Canada.

A Chicago inquirer is advised that the C. & N. W., the Wisconsin Central, Lake Shore & Western or Milwaukee & Northern railroads can manage to land a traveler in good trout or deer country in the North Peninsula of Michigan, in proper season. The Grand Trunk can take him to the Muskoka district in Canada, where he can pay a license of \$25 and kill three deer only. The last question I cannot answer.

Can Get His Trapping Country.

Sometimes one is asked questions difficult to answer, but by referring the matter to the readers of *FOREST AND STREAM* it shall go hard if one does not learn what he wishes. The following I offer not so much because I am after trapping country, as because I want to show a hard question answered definitely and concisely. My letter comes from Mr. J. W. Gray, Westboro, Taylor Co., Wis., and reads as below.

"I see by *FOREST AND STREAM* that Mr. O. Goode inquires in regard to fur-bearing animals in Taylor and Price counties, this State. I think I can answer his question. At the present time hunting would not be profitable with thirty inches of snow in the woods. If he were to come, say, in early October and study the country and get a good location for the winter, trapping would be reasonably remunerative. Mink are quite plenty. A good deal of territory should be covered to make it profitable. Rats are scarce except in one or two lakes just south and east of Prentice. Martin are found east of Medford north of State road. Beaver are scarce and protected by law. Otter are scarce, but a few are found on Jump River and tributaries. Wildcats are quite numerous and bring a bounty of \$6 in this county and \$3 in Price. Cats are most numerous in the swamps in Town 33, Range 2 west and on Mondeau Creek, just west of this place. Elk River, just west of Phillips, would be a good location. Can give further information if necessary."

Wants Live Wild Ducks.

Mr. Fred Mather, superintendent of the New York State Fishery Commission, is in need of a few live wild ducks, so he says. Can any one tell where he can get them? We are just out of live wild ducks.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

MAINE AND MASSACHUSETTS.

Control of the Wilderness.

THE Maine newspapers are discussing, with a good deal of interest, the rights of clubs made up of non-residents to control hunting and fishing rights in that State. The discussion has grown out of the attempt of the Megantic Club to prevent hunters and trappers from invading their preserve without permission. These papers are generally setting up the claim that the fish and game are the property of the State, and hence the property of any citizen of the State; that any citizen of the State has a right to hunt for his own on any unimproved land or on any of the waters of the State; that no owner or lessee of wild lands can prevent this; that camping and the building of necessary fires on wild lands cannot be prevented by the owners or lessees of wild lands in the State. An interesting question for the courts to settle is likely to grow out of this discussion, and it is also proposed to ask the Legislature, which convenes next winter, to fix the matter. The question is a very important one, and I have the promise of some fact for the *FOREST AND STREAM* concerning what the Megantic Club and other clubs and lessees of camp and cottage lots have done in the State.

The Massachusetts Fish and Game Protective Association

is still greatly interested in the stocking of the woods of the State with quail and other game birds. The association, through its president, Mr. Edward Brooks, has lately ordered over 1,000 quail from Tennessee. These will be liberated in the eastern part of the State and near the coast, where it is hoped that they can better withstand the severity of the New England climate. It is feared that many of the quail liberated in former seasons in the northern and western part of the State were a total loss. The association will spend all of the available funds of the organization on quail this year, the opinion prevailing that the result will be better than from the putting out of Western grouse.

SPECIAL.

Deer, Untimely Taken Off.

ACCORDING to the *Game Laws in Brief*, deer are protected in Connecticut for ten years from 1893; yet the South Norwalk *Sentinel* recorded the other day: "The famous deer which has been seen several times during the past few weeks in the section of country lying south of South Norwalk, is no more. Yesterday, while out after rabbits, Ira Petty and William Broadhurst, of Rowayton, sighted the fleet-footed quadruped. Mr. Petty fired; the shot taking effect, but the deer kept running at quite a lively pace. When near Dr. Kindred's sanitarium in Darien, the animal turned and began retracing his tracks. This brought him in near Mr. Petty, who fired, the shot taking effect behind one of the animal's forelegs. He gave one bound and fell dead. The deer was a fine specimen, weighing 180 lbs. dressed." This is a case which should have attention from the Rod and Gun Club of South Norwalk.

A Catskill, N. Y., correspondent sends us a note saying that of the deer released from the Catskill State Park, last fall, three or more have been seen this month in the vicinity of Austin's Glen, two miles from Catskill; and it is reported that some miscreant had shot and wounded one of them. The district game protector has been called on to investigate the case.

Canvasbacks are Horse Ducks.

NORFOLK, Va., Feb. 8.—There is a New Orleans Frenchman on the Cotton Exchange here in Norfolk who speaks of canvasback ducks as *canard chevaux*, or horse ducks. This synonym is new to me. I do not recollect that Trumbull gives it in his "Names and Portraits of Birds."

CHARLES HALLOCK.

### The Quail and Hard Winters.

HOLLAND, Mich., Feb. 3.—*Editor Forest and Stream:* I agree with Mr. Mershon, in your issue of Jan. 27, as to the scarcity of quail before the last three-year close season and to their abundance thereafter. Their scarcity in '93 was, undoubtedly, due, at least in this section, to the deep snows of our last severe winter. I found quail just as plentiful Dec. 15, 1892, the last day of the season that year, as on opening day. From Dec. 15 until the second week in January I was afield without my gun, but with my pointer, two or three times a week, and found large numbers of bevies which had apparently not been disturbed at all during the season. This shows that over-shooting was not the cause of the depletion.

Then came the deep snows and I did not go afield again until spring, but could not find a single bird, and I hunted through good cover. This was also the experience of others interested in this grand game bird. I have it on good authority that farmers found many dead quail under logs, brush piles and corn shocks when the snow left. Last fall ('93) I was out eight times, driving out from one to eight miles, through country on which bags of twenty or thirty used to be common, and flushed just three bevies. I shot three birds for my collection of game birds and stopped, as I do not consider it right to kill game when it is so scarce. These three I have mounted.

As every one knows, quail feed almost exclusively on the ground. If they would only take to the trees when the snow is deep and feed on buds like the ruffed grouse, they would easily survive any winter. I have found quail in sumach trees feeding on the seeds, but these seeds are so small and so few that I hardly think a bird could get enough to keep it alive. We shall plant hemp seed quite extensively in the spring, as it seems to be a good feed, and grows to such a height and holds its seed so long, that it would furnish a supply of food all winter.

On account of the detrimental effect the severe winters have, I do not believe in a close season extending over a term of years, but rather in a short open season each year.

I am not very sanguine of having any fair quail shooting here this coming fall, for although the winter so far has been very mild there are very few breeding birds left. Many of the clubs near here have, or will get, birds from the South to turn out in the spring.

A. G. B.

### Pennsylvania Small Game.

AUBURN, Susq. Co., Pa.—*Editor Forest and Stream:* But little game was killed in this locality during the shooting season. Fairly good squirrel shooting was had during early September, but they soon left for the oak and chestnut ridges along the river. Rabbits were never so few, not plenty enough to give the beagles needed exercise. The ten-cent individual with ferret and sack was abroad in the land, and the beagle and gun were not in it.

The covers contained a goodly number of grouse, more than for several years past, and they were abundantly able to look out for themselves. Very few were killed. Most of the shooting in this locality is done by tyros, who shoot them while perched in trees. The last fall the birds were too sharp to allow them such an advantage, seldom treeing. One piece of cover with which I am well acquainted contained twenty birds. But three were killed. Other cover is equally well stocked and with a favorable breeding season there should be a good supply another fall.

I located several coveys of quail, something unusual for this locality. One contained twelve birds, of which but two were killed. I found them on a buckwheat stubble, Jan. 27, and none were missing. So far the winter has been very favorable for game. No low temperatures, and to-day we are getting our first snow storm. Several fine deer were killed in the wilds of Wyoming and Sullivan counties, and bear were numerous.

Of foxes there is an abundance, and farmers have complained bitterly of their depredations. In some neighborhoods the turkey crop was an entire failure, and killed by foxes. To date very little driving has been done owing to unfavorable weather conditions. New Years morning several parties were out and all enjoyed good races. One party with four dogs hunted some ridges along the middle branch of the Meshoppen creek and started eight foxes, two of which were killed and two more wounded and run to earth. With favorable weather, music will be heard on the ridges in every direction.

BON AMI.

### Rhode Island's Defective Law.

PROVIDENCE, R. I., Feb. 16.—*Editor Forest and Stream:* In your issue of Feb. 3 was a short piece signed "Tode," telling of what the State Game Protective Association were going to do. I was with a friend of mine the first of the month coming down street, where we passed a market in which were exposed dead gray squirrels and rabbits. We went over to Mr. Andrews, the president of the association, and called his attention to the same. He looked at the laws and said he could do nothing, as the law did not prohibit selling, as it only said kill or destroy. He was also asked about killing game in close time, and according to his statement the game wardens were afraid to make arrests for fear that their barns would be burnt. Here is one of the few notices that appear in the daily papers to show how the laws are enforced: "Ed Moon and W. G. Greene, of Allenton, recently passed a day shooting in Exeter, during which they bagged 3 coons, 7 rabbits and 10 squirrels."

C. H. HORTON.

[President Andrews is right about the law; it does not forbid possession of hares and squirrels in close time. The New York law has the same defect with respect to hares, but this will be remedied by the present Legislature.]

### A Fox in Town.

NEWARK, N. J.—While sitting in our office at work I was astonished to have one of the yardmen rush in with the announcement that there was a fox in the lumber yard. The yard is in a busy portion of Newark on the Passaic River. I went out, and stooping down and looking under a pile of spruce timber I saw what was undoubtedly the head of a fox. Rushing back to the office I hastily loaded a couple of "Club" shells; and hurriedly cramming them into my breachloader, ran back. The fox had shifted his position, but after a short hunt was started and a well directed shot laid him low. He proved to be a handsome red fox; and now adorns the desk at which I write. How is that, a wild fox hunt in a city of 200,000 inhabitants

EDGAR BAILEY.

### A Bit of Sport in Maryland.

It was late in the afternoon of a bright January day when, as my host and myself were talking in the rear of his comfortable farm dwelling, our ears were saluted by four shots fired in such rapid succession as to indicate the discharge of two double guns. Other shots followed at short intervals, and our fears for the safety of a covey of quail known to be in vicinity of the many reports decided us to investigate the cause of so much shooting. As the season for quail was over, and we were anxious to catch red-handed any one who might be violating the law, we advanced cautiously through a piece of woods to find just at its edge an outfit consisting of a dandy, two squirrel dogs, and a pot-metal gun with dislocated plunger. At the base of a tree within a circle of less than fifteen feet lay six dead squirrels, fine and fat, all killed by this son of Ham from a single oak. In response to a question from Mr. W. as to what had occasioned so much shooting, Sambo replied: "Reckon I done right smart lot of it; 'spect I fired about seventeen times."

"Is that all you had treed?" said W. quietly, as he winked at me.

"No, Mr. Charles, one done got away, and 'nudder jumped de dogs."

But even six squirrels out of one tree served to rouse our sportsman's blood, so when the dandy, doubtless with an eye to future favors as well as to permission to gun in Mr. Charles's woods, offered to show us some squirrels if we would get our guns, we quickly closed with his offer. Scarcely were we well in the woods before the barking of the dogs called us to a tree where we found two fine grays, one well in the top, the other lower down. My host, with genuine Southern courtesy, insisted on my taking first shot, which I did, easily killing the first one, but the second proved a more difficult customer, and three shots were necessary to bring him to bag. By the time we were loaded and ready to proceed the dandy announced "he 'spect day got a couple treed down in the holler." Such proved to be the case, and from that time the fun was fast and hard on all the time. The sun had already set, and the lengthening shadows proclaimed we had not long to stay, but what time we did remain we were "strictly in it." Notwithstanding that two badly wounded squirrels managed to draw themselves into hollow trees, and another fell dead in a nest, we had over a dozen when we were compelled to desist on account of darkness. Taking it all in all, we agreed in voting it the liveliest half hour's sport with the squirrels that we have had for many a day.

DEACON H.

### Massachusetts Game.

In their annual report the Commissioners of Fisheries and Game say: "Ground game has been fairly plentiful this year. It is scourged and decimated by increased vermin. The low price of peltries decreases the number of persons who trap for predatory animals, hence the increase of creatures that are destructive both of the game and the feathered product of the farms. For several years we have with emphasis recommended the payment of bounties for the destruction of these animals and yearly the measures fail, as we believe, through lack of appreciation both of the fact of the existence of these animals in large numbers, and the damage and mischief done by them. In the agricultural places of the State, and even in proximity to our middle and western cities and large towns, and the towns and villages of the Cape, these nocturnal marauders pursue their work and increase their numbers with little disturbance or fear. "Foxes, wildcats, skunks, weasels and other like vermin are more plentiful than they were twenty years ago, notwithstanding the increase of the population. Measures for the abatement of these pests are necessary and we renew again, earnestly, our recommendation of several preceding years that a law providing bounties be passed. Such laws for the killing of destructive seals have been in successful operation for several years in one or more of the counties of the Commonwealth."

"The importation and successful acclimatization in other States of several varieties of European grouse and pheasants demonstrate the entire feasibility of stocking nearly, if not all, New England with one or more varieties of these birds. Private endeavor and enterprise in our own State by public spirited and interested citizens have done much toward replenishing our depleted covers with native and foreign birds. The authorized expenditure by the Commission of a small sum each year, especially in co-operation with private effort, would be justifiable and is advisable."

### Louisiana Snipe and Quail.

FRANKLIN, La.—Your correspondent met the other day a thorough sportsman, Mr. Fred A. Freres, of this place, son of Sheriff A. G. Freres, who reports having had two splendid days shooting about Abbeville. Mr. Freres was accompanied by Messrs. D. Berwick and G. Batterbee. The combination bagged 34 snipe and quail, which I think a very pretty hunt considering the days were warm and sultry. They left this place for Abbeville Jan. 24 and returned on the 26th. Mr. Freres is quite a lover of the beagle and is now raising several which promise to be very fine.

I managed to get a whack at the woodcock last week. Considering the bad weather, a cur dog and bad shooting, I figured I done pretty well for three hours' sport, bagging 14, and ducks are still plentiful about Spanish Lake.

Mr. John Coon, of New Iberia, had a very pretty catch of green trout (black bass) last Friday. Among them were one of 5lbs. 4oz. and one of 6lbs. 1oz.

A. CARDONA, JR.

### An Ohio Party in Texas.

VELASCO, Tex., Feb. 3.—Messrs. and Mesdames John and W. L. Gardener, C. H. Stewart and W. W. Graham of Norwalk, O., left Velasco for home yesterday after spending their second hunting holiday of several weeks on the prairies along this coast. They had very nearly as good luck as they enjoyed last winter on quail, mallard and pintail ducks, jacksnipe and prairie chickens. Drs. McGregor of Houston and J. M. Nash of Brenham came down last week and got eleven deer in four days. John Weems and Ed. Sweeney of Columbia, Tex., have returned from their annual bear hunt in the wild peach brakes on the San Bernard River, ten miles from Velasco. They brought back three bears weighing over 400lbs. each. The Ohio sportsmen promise to return in the summer for tarpon fishing at the mouth of the Brazos.

R. M. C.

### Hunters' Luck.

BLOOMINGDALE, N. Y.—During the season we engaged in several deer hunts, the guides putting the hounds out at the base of the chain of mountains connecting with Whiteface and watchers being stationed at the rapids at different points along the Saranac River. The photograph I send you was taken at the conclusion of one of these expeditions in which we secured two large does, one of the party having wounded a third, a fine buck that escaped after he had presented himself long enough for the gentleman to empty a full magazine from a Winchester at him. The sportsman in question has been extremely unlucky, as your readers will also think after reading the following incident: On one of our hunts my friend and I took our positions several rods apart in order to cover the runway that crossed a highway; we had not waited long before the hound was heard in a tamarack swamp not far distant. We first thought that some dog had routed out a fox, but our theory as to this proved untrue, for a farm hand plowing near by came running up the road and said two deer had just crossed below our station, and asked my companion to loan him his rifle, as he thought he could head them off, for they were not coming toward us. Alas! the rifle was loaned, and no sooner had our worthy intruder disappeared from view than the deer walked out from the woods near by and there stood not over five rods from the "would-be" hunter, who, seeing that he was in a direct line between me and the deer, slowly sank to the ground, doubtless in utter despair. The two deer kept on advancing until they were actually within two rods of our prostrate sportsman. Buck fever evidently had complete possession of me, for I fired and missed as fine a shot as one could wish for. After a few bounds they were soon lost to view; our feelings at the conclusion of this episode can be better imagined than described.

J. T. G.

### An Association for New York City.

NEW YORK, Feb. 12.—*Editor Forest and Stream:* Your editorial in last week's issue, setting forth the fact of the great necessity for a live game protective organization in this city, strikes the right chord. Why of all the cities, towns and villages in this vast country with their local game protective clubs, should this great market and depot be exempt (practically) as far as active organized and concerted protection is concerned? For seventeen years I have watched the gradual, but sure, disappearance of our game birds, and have in a quiet way done my mite in endeavoring to assist protection by printing the laws, posting same in conspicuous places, and giving information of the closed seasons through the local press in various localities, but have reached the one conclusion after long deliberation, and that is: The storage system must go. Here within the past three weeks, having had the Spaniel Club dinner to arrange for, no less than two caterers out of the three that I visited offered me quail for a February dinner, and intimated that they could give us anything in spite of the season being closed. Now, it is very patent to anybody that this is where the trouble lies, and I think it would be well if your paper would endeavor to enlist the interests of live New York sportsmen, and call a meeting for the proper organization of a club with no axes to grind, and but the one aim in view, viz., the protection of game, and you can rest assured that there will be a meeting, and good results will accrue therefrom.

A. CLINTON WILMERDING.

### About Loading Nitros.

RED BANK, N. J., Feb. 12.—*Editor Forest and Stream:* I will answer the false impression which Mr. von Lengerke is trying to create in his attack on my instructions, in telling American sportsmen in a plain, comprehensive way how to avoid all possible danger with excessive charges, by stating that the proof-house charge for 12 bore guns, which any gun is required to withstand, is 40grs. Walsrode, the recommended standard load, 29grs., thus leaving ample margin.

I consider it my duty to acquaint sportsmen desiring our powder in bulk, with its nature in plain, every-day English, and every one acquainted with the subject will uphold me in this, and knows that I have stated the case correctly.

The modern sportsman using nitros is not the 8-dram fiend of years ago, and does not care the snap of his fingers what overloads will do, as long as the recommended standard loads are reliably safe and will do the work required under any climatic conditions.

O. HESSE.

### Up in Alaska.

SITKA, Alaska, Jan. 21.—Having been a regular reader of the FOREST AND STREAM for over fifteen years, I find it quite impossible to be without it now. There is very little news to report now, as we are very much shut in with the snow (waist deep), and at the present writing it is snowing heavily, and the mercury very low. The ptarmigan are very conspicuous by their absence this season in and around Sitka, and it is difficult to account for their scarcity. Large numbers were hatched last spring, but they do not seem to have come out from the timber into the lowland flats, as is their usual custom. Deer are very plentiful. The harlequin and mallard ducks are wintering in fairly good numbers and I am daily looking for the arrival of the eiders.

G. M.

### Four Bears in One Day With One Hand.

WARREN, Pa.—There is very little game around here this winter. Partridges were usually very plenty, but there seem to be very few this winter. I have heard of but few deer being killed and to my knowledge there has not been any in the Warren markets this winter. Bears, however, seem to be very numerous, seven or eight having been killed within from fifteen to sixteen miles of here. One killed on Farnsworth Creek weighed over 325lbs. and was sold for \$75. A few weeks ago four were killed in one day on Morrison's Run, by a man with one hand.

W. VAN O.

### Devil's Lake Goose Country.

LAST season I visited the goose country near Devil's Lake, N. D., and had several days' good shooting among geese, brant and ducks, no day getting big bags, but plenty for camp use and a few left over to send to friends. For goose shooting Minnewaukan, N. D., will prove a rich field for men who do not have to look too closely after the dollars.

L.

## A Georgia Quail Country.

THOMASVILLE, Ga.—*Editor Forest and Stream:* Count me one against the market-hunter, and when you get through with him, then there is another man who is just as bad, and I sometimes think worse, who wants looking after badly. He does not go around with an "muzzle-loader and yaller dog." On the contrary, he generally has the finest of outfits, and is a good shot. He is the man who kills 100 ducks in a day and boasts about it. But perhaps we can educate him to better things without resorting to the lawmakers, for I see you are calling attention to the fact, and perhaps they can be shamed out of it.

There is a limit here on quail, but no one ever thinks of stopping at twenty-five quail when they can kill that number in half a day. Quail are so plenty here (and I suppose all through the South) that it does not seem to make much difference; but up North, where they are so much more rare, it does make quite a difference. The negroes here trap quail by the thousands; and everybody hunts them, both natives and Yankees. Sometimes one will see a dozen wagons full of men and dogs starting out every morning from the hotel and other places; and yet it does not seem to make any difference with the numbers, for I often go out on the edge of town and find full, large coveys of birds that seem to have never seen a dog or man. By the way, fresh coveys never seem to hold to the dog so well as they do after they have been shot into several times, at least that is my experience. I have been in places twelve or fourteen miles from town, where quail were so plenty that one hardly needed a dog; in fact, they would wait for the dogs, but would flush wild, and we would have to put the dogs in the wagons and flush them out of the broom sage the same as you do meadow larks. Now, this may seem a little fishy, but I have got the papers to show for it. I have no interests here, no axe to grind, but as far as I know, this is one of the best quail sections in the country, North or South; and the strangest thing about it is (to me) that we generally find the birds in the pine woods, feeding on the pine masts; and it is not a bad place to shoot them, for the trees are so wide apart here that one can get plenty of opportunity.

You can shoot in this locality as late as the 1st of April. Another strange thing is, that birds of all kinds do not go to breeding any sooner than they do in Illinois, in spite of the fact that there is practically no winter at all, and it would be warm enough for them any time of the year.

H. C. S.

## Game in Iowa.

MATLOCK, Iowa, Feb. 11.—Considerable interest is being manifested in the Legislature in regard to game protection, and no doubt it will result in better laws. A bill by Senator Baldwin makes the fish commissioner game warden and gives him authority to appoint a deputy in each county of the State. The deputies are to receive no salary but are given one-half of fines, the other half to go for the support of the commission.

A bill by Senator Harper changes the open date on ducks from Aug. 15 to Sept. 1.

Senator Funk has a bill extending the closed season on fish (except salmon and trout) from April 1 to May 15. These bills have all been referred to the committee on fish and game, and no doubt will be recommended for passage. The only objection to Senator Baldwin's bill is that it places a considerable burden upon the fish commissioner. A deputy game warden in each county is the very thing that is needed; all will receive the support of all true sportsmen.

Rabbits have been very plentiful this winter, perhaps more so than ever before. The country is full of chickens, most of which have migrated hither from Minnesota and Dakota. Thousands of chickens and quail have been trapped along the Missouri and Big Sioux rivers in this State and South Dakota this winter, most of them shipped to Sioux City, Chicago, and some to Minneapolis. An effort is being made to stop it at this time; the gun clubs of Iowa and South Dakota are the prime factors in this movement. Quail are increasing largely every year. I know of eight large coveys that are wintering within a mile of here, and according to reports they are as thick in other parts of the State. If they are protected we will have fine quail shooting here in a couple more years. The winter has been very severe here, but game of all kinds is doing well.

P. C. BISHOP.

## Notes from a Washington Ranch.

SILVERDALE, Wash., Feb. 6.—I brought a pair of quail here from Nebraska, and have made a large pen for them and keep them confined. I am going to try to raise a covey for stocking this vicinity. The change of climate does not seem to affect them in the least, and they seem to be in first-class condition after a month in this State. I also brought a pair of opossums from Washington, D. C., and have liberated them on the ranch. I have seen nothing of them since.

Ducks and other aquatic birds are very plentiful, and there is comparatively little shooting done on this bay—Port Washington—so they are not very hard to get within range of. Pheasants and grouse are numerous and are beginning to leave the thickets and mate. I have started fourteen deer since I have been here, just in walking through the timber from one place to another. These were from a quarter mile to two miles from my house. A large cougar has been seen in the neighborhood several times within the last two weeks, but no one has had a shot at him yet.

There are three trout streams emptying into the bay, and all are full of fish from 16in. down. The Indians get them at all times and pay no attention to game laws.

The Olympic Mountains are only about twenty miles away, and there are plenty of elk and deer all through them.

FOREST AND STREAM comes as regular as clock work, and is the most welcome visitor that calls at our ranch.

EL COMANCHO.

## Wild Turkeys on Dutch Mountain.

TOWANDA, Pa.—Dove Brown, a noted deer and bear hunter, reports seeing wild turkey tracks on Dutch Mountain, 20 miles from here. These are the first signs of turkeys in this vicinity for many years. Other parties report seeing the tracks, but none have seen the turkeys as far as I can learn. It seems too good to be true. There is plenty of territory for them and lots of food, and if they could be let alone for a few years we might have good turkey hunting.

RRTT.

## Information About Quail Stocking.

SAGINAW, Mich., Feb. 14.—*Editor Forest and Stream:* We are talking about getting a lot of live quail for stocking purposes and distributing them in good localities around Saginaw. Will some of your correspondents kindly give us the benefit of their experience in this direction? What localities would furnish quail best adapted to this region, when should they be ordered and at what time should they be liberated? And in putting them out, how should they be distributed—in pairs or several in one place? I am anxious to have the experience of my brother sportsmen in this matter as a guide, and have no doubt that some of them will let me know about this without delay.

W. B. MERSHON.

## Geese Flying North.

NEBRASKA, Feb. 10.—We have been having regular spring weather, and everything bids fair for a good game crop. Geese have been passing north for the past week.

DIAMOND WALT.

CENTRAL LAKE, Mich., Feb. 15.—It is credibly reported that on Monday and Tuesday of last week flocks of wild geese were seen passing over Kalkaska and Mancelona, on the G. R. & I. R. R. They were going north, probably to the Straits of Mackinaw.

KELPIE.

## Attractions of the "Land of the Sky" and Florida Beautifully Shown.

"The Land of the Sky," as the Piedmont region of western North Carolina has been fittingly named, is the title given to an exceedingly well-written handbook, and presented with the compliments of the Richmond & Danville Railroad, the only railroad which reaches this enchanted country, where nature has bestowed with lavish hand her choicest gems, where health and climate are in accord, and the eye turns from one ravishing scene to another still more attractive.

There is but one way to reach this "Land of the Sky," and that is by the Richmond & Danville Railroad on the Washington & Southwestern Vestibule Limited train, operated by this road in connection with the Pennsylvania R. R. between New York, Philadelphia, Baltimore, Washington, Atlanta, Montgomery, Birmingham, Memphis and New Orleans, conveys its passengers there in comfort and safety. This train, composed entirely of Pullmans, including buffet and dining cars, is one of the masterpieces of railroad construction and operation. It leaves New York daily at 4 P. M., arriving at Asheville in time for dinner for next day, just twenty-four hours out, and New Orleans in thirty-nine hours.

## New Florida Short Line.

Another beautifully illustrated book entitled "Snowball and Oranges," written by Helen K. Ingram, describing the New Short Line to Florida, attractions en route, facilities of the 28-hour flyer between New York and Jacksonville. Copies of this handsome illustrated handbook, giving full particulars of the Southern resorts, can be had upon personal application or by letter addressed to Alex. S. Thwaites, Eastern Passenger Agent of the Richmond & Danville System, 229 Broadway, New York, or to Mr. W. A. Turk, General Passenger Agent, Washington, D. C.—*Adv.*

## Sea and River Fishing.

## ANGLING NOTES.

Tell It Not in Albion.

LAST November a London editor wrote me that he was coming to this country in January to remain until the first of April, and wished to know if during his stay he could find fishing of any kind. He was willing to go from Maine to California for the fishing if it was to be obtained. I suggested tarpon fishing in Florida, and told him about the fish and the fishing, and he then asked about the tackle and if he should bring it with him or get it in this country. I advised that he get it here, where a specialty is made of tackle for the big silver herring. When the gentleman arrived early in January, I directed him to a tackle dealer in New York city, one of the advertisers in FOREST AND STREAM, where he procured an outfit. Of this he said:

"I am, I think, now fairly fixed for Florida. Mr. Blank has supplied me with tackle, all of which will be useful again. The tarpon rod for Mahseer fishing in India. His reels are splendid, and his tackle cheap by comparison with a similar house on our side."

This was rather surprising, in view of statements that we read in the newspapers made by our statesmen—or should I say politicians?—and I wished to know more about the matter, and more specific information came to me when the gentleman reached Quebec, where he went to attend the carnival before he turned his face to Tampa and Charlotte Harbor. He wrote:

"I shall certainly come over to America in trout fishing season. There is a fine show of them here from a neighboring lake. I thought our Kentish Stour trout, which run up to 8½ and 9lbs., were large, but those here scale 10lbs. Much of the tackle I got of our friend in New York will be useful at home. Many of his goods are much cheaper than ours. For \$15 I got from him what would most certainly have cost \$150 at Blank's in London."

## Smelt Eggs.

A correspondent asks: "Can you give me the address of any one of whom I can get the eggs of the fresh-water smelt, and the probable cost per thousand; eggs to be fertile, of course, and to be packed in good condition?"

I cannot give the address asked for, and if I could give the address of a person who would furnish the eggs the correspondent would not thank me after he had seen the eggs, for however well they might be packed he could go into court and swear they were not in good condition, as they are the most difficult of all fish eggs to handle.

Mr. Charles G. Atkins has taken the eggs of the fresh-water smelt and hatched them, but I believe it was only in an experimental way. The late Prof. H. J. Rice hatched the salt-water smelt in New Jersey, and Mr. Geo. Ricardo also, but Mr. Fred Mather, Superintendent of the New York Fish Commission, has hatched more smelt artificially than any of our pisciculturists, as he turns out millions annually at the Cold Spring Harbor station on Long Island, but they, too, are smelt that run up the streams from salt water. Mr. Mather says that he hatches only from forty to fifty per cent. of the eggs taken, although in one instance he hatched as high as sixty per cent. The eggs develop fungus very rapidly, and as they form in bunches they soon seem to be a rotten, utterly worthless mass, but from these bunches of fungused eggs come such smelt as are hatched. The only shipment of smelt eggs that I have noticed is one that Mr. Mather made to Mr. Fred Clark, Superintendent of the U. S. Fish Commission Station at Northville, Mich. Mr. Clark said before the American Fisheries Society that he found the eggs just as

bad as Mr. Mather said they would be, but by digging into them he got fifteen or twenty per cent of good eggs. I am in error, Mr. Mather did make another shipment of eggs to Saranac Lake, N. Y., but I do not know how they turned out. I have noticed also in the last report of the U. S. Fish Commission, 1889-91, that some smelt fry, 10,000, were planted in the Potomac River.

On Long Island the smelt "run" the last of February. In New Hampshire the fresh-water smelt run about the first of May, and if it is desired to stock new waters with smelt the better way would be to stock with the adult fish rather than attempt to procure the eggs and hatch them. I presume that Charles Davis, New London, New Hampshire, would undertake to catch smelt for stocking. The cans containing the fish would require an attendant during transportation, as the water must be kept cold to insure success.

## Dry Fly-Fishing.

The Edinburgh Review for January contains an excellent article of twenty pages upon "The Progress of Angling." One portion of the article is prophetic and abounds in so much that must appeal to every high-class angler in this country that I quote it: "In the south of England dry fly-fishing has been within the last fifteen or twenty years, in some senses, almost created; at any rate, has vastly increased, and its followers have reduced fly-fishing to a fine art. \* \* \* It is only a question of time when it will be more extensively practiced in the North, and it is equally certain that it will eventually spread to America and New Zealand, where trout fishing is now becoming a recognized pastime."

"When trout become shy in clear and comparatively smooth water, dry fly-fishing is the only means of taking them with a fly. With the increase of anglers it is impossible to prevent an increase in the wariness of the fish. There is nothing, indeed, which is more clearly established than the ease with which trout may be taken when unaccustomed to artificial hues as compared with the difficulties of their capture in a stream along which the angler, week by week, day by day, wends his way. Hence the very popularity of fly-fishing renders it every year a more skillful pastime, if success is to attend the efforts of the angler."

"It is certain that no more delicate and skillful method of capturing a created thing, no more difficult exercise, if we regard it in comparison with other physical pursuits, has ever existed than that of dry fly fishing. It is not only the nicety of the operation at the time of casting a single fly so that it alights—whatever may be the difficulties of place or wind—in a particular spot with complete certainty, and proceeds to float down over a rising trout absolutely imitative of the living insect, with wings erect and natural motion, but there is also the beautiful perfection with which the insect is imitated by the fly-dresser, and the slightness of the tackle to which it is attached. Lastly, there is the skill which is required to land a fish of some size on such slight tackle."

## Canadian Salmon.

My friend John Mowat, the veteran salmon fisherman, writes me from Campbellton, N. B., under date of Feb. 5, about various matters pertaining to salmon and salmon fishing in Canada: "We were very successful at the St. John and Restigouche hatcheries last fall, obtaining nearly 3,000,000 of ova, all Atlantic salmon and now all eyed. We proved last fall that Atlantic salmon will thrive in fresh water entirely debarred from the sea, having caught them of 1½lbs. the second year. They take the fly beautifully, never ceasing their leaps until exhausted. They have handsome red meat and shine like silver in September. Whether or not they will breed in the lake has yet to be determined, but a couple of years will solve that problem. Years ago in a lake at Tadoussac, near the hatcheries, I caught six salmon that had not been to salt water. I found that the care taken in cleaning up the hatchery would have a few salmon fry left, and it was his habit to carry them up into the lake. What I got came over the dam in a fresh, and made their way down to the pond among the confined parent fish. They had been seen on their voyage down and one had been killed in a small stream. Those that I got weighed, some 6, some 8lbs., and were in first-class condition and fine eating, but not so fat as a spring salmon. I opened them, but could not detect signs of milt or ova, and it was pure guess work to determine the sex, the best guide being length of head. I judged them to be four or five years old, but the man at the hatchery had put fry into the lake for eight years previous."

"Lots of snow here and very cold; the lack of it last year hurt our lower angling pools on the salmon rivers, but it will give plenty of water the coming summer."

## Salmon in the Second Year.

It will be observed that Mr. Mowat speaks of salmon of "one and one-half pounds in the second year." This is not the first time that I have had my attention called to what I consider the remarkable growth of young salmon in Canadian waters, compared with the same fish of same age in the waters of New York. For instance, I planted some salmon fry on May 31 in a stream that never before under any circumstances contained this species of fish. Say that they were three months old at the time, which would make the date of their birth the latter part of February. In October of the next year, at which time the salmon were eighteen months old, I caught, at the request of the late Prof. Baird, half a dozen or such a matter of the fish, and they were sent to Washington and are now catalogued in the Smithsonian Institution and can be produced. I think none of them were over eight inches long, and the largest one may have weighed a little over two ounces. The brook was fairly swarming with the baby salmon and so far as I could observe none had left the stream to go to sea. I caught these with a fly, and at every catch half a dozen or more salmon would rise to the lure. Some showed the parr marks plainly, but one bright-colored smolt with sea livery on gave milt into my hand as I was taking him from the hook. I concluded that some would go to sea that winter and that others would not go down to sea until the following spring, when they were fully two years old. In fact, all the smolt that have been caught in the river on their way to sea, so far as reported, have been caught in the spring. I observed the same thing in another brook, that is, that the young salmon had not left the stream in the fall of the second year after planting the fry, and this brook, too, had no salmon in or near it until I planted it. This is quite different from the habits of the salmon in Europe.

Two years ago the *Fishing Gazette*, London, contained a supplement showing salmon from the egg ready to hatch, one day old, two months old, and so on to twelve months old, when the fish had reached the smolt stage and put on a silver coat over its parr marks and was ready to go to sea. Mr. Andrew Young was quoted as follows: "The last figure is that of a smolt or salmon fry one year old. \* \* \* The young fish, 'clean as a smelt,' has assumed its migratory coat. \* \* \* The length of the specimen here represented was 5 1/2 in. \* \* \* They are fully prepared to leave the streams of their nativity for the trackless ocean. \* \* \* We have various accounts of their size at this age. Some make the smolts in general 8 in. long; some allege to have seen them 10 in., while others have ventured even as high as 14 in."

Even in England there seems to have been a question as to when or at what age the salmon becomes a smolt and goes to sea, judging by what Mr. Young says further:

"On the contrary, the experiments of Mr. Shaw were made with ova and fry taken from the waters of the river Nith and removed to experimental basins of pure spring water. \* \* \* His 'converted parr,' as he designates it, or smolt, being two years old, while ours is only one. At two years his smolt measures about 6 in. in length; ours at the age of one year measures 5 1/2 in., and at the age of two years will be most probably a well conditioned salmon weighing from 9 to 14 lbs. \* \* \* At this age of eighteen months Mr. Shaw's engraved specimen is about 5 1/2 in. long. \* \* \* It could barely weigh 6 oz. \* \* \* A great error exists somewhere."

Sure enough, a great error exists somewhere. The size of young salmon is no sure guide, for yearlings on Long Island have been taken 7 in. long, while yearlings from the upper Hudson measure but 5 in. As to a 5 in. salmon weighing "barely 6 oz.," it would not weigh 2 oz. A brook trout in good condition and 5 1/2 in. long, excluding the tail, or a trout which by measuring the tail would just about save a man from breaking the 6 in. trout law, weighs 1 1/2 oz. Salmon weighing 1 lb. and 1 1/2 lbs. have been taken in the lower Hudson in September, and were supposed to be about 18 months old, but are they not older? Who will tell? One thing I do know and that is that some salmon are in the brooks where planted, 75 to 100 miles above tidewater, when they are 18 months old.

A. N. CHENEY.

## BOSTON AND MAINE

### February Trout Fishing in Maine.

HARDLY does one close season on game and fish begin when another opens. The legal close season on trout, togue and landlocked salmon in Maine is ostensibly from Oct. 1 to May 1, but there is a provision to the law that has caused a good deal of discussion. It reads: "Provided, however, during February, March and April citizens of the State may fish for and take trout, togue and landlocked salmon, and convey the same to their own homes, but not otherwise." This provision makes the open season in that State begin on Feb. 1, though it does not apply to all lakes and ponds. But it opens ice fishing in a way that is not agreeable to those most interested in the fisheries of the State. It would seem to apply only to citizens of the State, but the law is easily got over. I know of two or three parties that go every year for ice fishing for trout into the State of Maine in February and March. They are mainly citizens of Massachusetts, but are interested in clubs and club houses in Maine. They employ Maine guides and help at their camps, and the fish taken are generally taken to their camps to be used there. Maine guides cut the holes and bait the hooks, if the Massachusetts sportsmen desire them to do so. But the fishing is run entirely in the interest of the Massachusetts sportsmen and they calculate to get all the fun out of it. A Boston salesman who came through from Lewiston, Me., on Saturday mentions a fine string of fish he saw at the latter city. The fish came from Cobbosseecontee Lake. Among the rest was one trout that weighed 3 lbs., with a number of white perch and pickerel.

### Some Maine Personals.

It seems that Capt. Fred. C. Barker, so well known at the Rangeley Lakes, and mentioned in the *FOREST AND STREAM* last week as on his way to New York and Florida, has gone to California, after all. He will doubtless be back to Maine in season for the earliest fishermen at Bemis and the Birches, on Lake Mooselucmaguntic. I understand that Mr. Rowell, also well known as a steamboat man on the Rangeley Lakes, has built a new hull for Dr. Haven's steamer the past winter, and that he will have it all ready to launch when the ice goes out in the spring. News also comes from the same source that J. Parker Whitney, the writer of those charming letters in the *FOREST AND STREAM* on salmon fishing in salt water, etc., will occupy his beautiful camps at Mosquito Brook, Richardson Lake, this summer. Mr. Whitney spent the greater part of last year on the Pacific coast, and it was the first season for many years that he has not been at his Maine camps, at least a part of the time. It is also understood that Mr. S. Betton, of Philadelphia, will occupy his splendid camps at Upper Dam this year. Mr. Betton's only son died at those camps a year ago last fall, and it was then understood that the father never wished to visit the scene of so great an affliction again. But the old loves are strong; Mr. Betton has been a regular visitor to his camps for over thirty years till last year. That these two men are coming back will be good news to the people of Andover, Me. Mr. Betton owns a handsome house there, and Mr. Whitney is one of the most liberal employers of Andover guides. Mr. Milton Cutting has worked for him regularly every season till last year for nearly forty years.

SPECIAL.

### Bass in Northern Minnesota.

WEST DULUTH, Minn.—I believe northern Minnesota offers the best bass fishing of any locality in the country, and I would be happy to see any true lovers of the piscatorial art from the effete East come among us. Can promise them lots of sport, and if they so desire, take them to lakes rarely visited by white men. I am not a guide, but an ardent fisherman.

I still continue to look upon *FOREST AND STREAM* as the best sportsman's journal, and could not do without it. I have copies of it saved since 1878 and for the past four years have kept complete files. They are invaluable as reference books.

L.

### Bass Taken Through the Ice.

AUBURN, Pa.—*Editor Forest and Stream:* Ice fishing for pickerel was diligently followed through January and with remarkable success. From the time the ice first formed to Jan. 20, all who went fishing got fish in abundance; and the fish taken averaged exceptionally large. One party took six from White's Pond weighing 25 lbs. The largest weighed 5 1/2. On Jan. 20 the fish ceased biting and all attempts since proved failures. All who regard the future supply were glad when they ceased biting. Another ten days of such slaughter would have stripped the ponds bare. At the close of the month the fish were distended with spawn, and it was a shame to destroy them.

It was claimed by those who advocated the change in the law allowing ice fishing for pickerel that bass never took the hook in winter. The argument has been disproved by the taking of large numbers of bass by pickerel fishermen at Lake Carey; and not even a protest has been entered against such illegal taking. Lake Carey is a popular summer resort, and many are drawn there by the fishing, and self-interest should prompt the hotel people to frown down all violations of law. BON AMI.

### A History of Scandinavian Fishes

First published in 1836, with colored plates, by W. von Wright, is soon to be reissued by Sampson Low, Marston & Co. The new edition will be prepared by Prof. F. A. Smitt, now director of the Zoological Museum at Stockholm. He has studied the Arctic fishes collected by the Vega and other exploring parties, and will probably include these and other fishes of high latitudes with the Scandinavian species. The new work will be about four times as large as the first edition, embracing about 230 kinds of fishes. Prof. Smitt's folio work on the *Salmonidae* of the Riksb Museum, a work involving prodigious patience, but unfortunately serving no very useful purpose, has, however, the best illustrations known of the salibling and some other famous species of the *Salmonidae*. It is to be expected that the colored plates of Scandinavian fishes will reach the highest standard of excellence.

### Bass in a Well.

WARREN, Pa.—Some time last June an old mill race here went dry and great numbers of small fish were left in the shallow pools. I caught a couple of dozen of sunfish and small black bass, which I took home and put in the conductor hole of our well. The hole is tightly closed with boards and is very dark. The fish have had no light and nothing to eat, but what they got themselves. To-day when I opened the hole they were as lively as ever, playfully chasing each other around. They have also increased greatly in size. They appear to be very hardy.

### Percy Summer Club.

WILL the correspondent who sent us some notes on this club kindly supply his address that we may communicate with him?

## Fishculture and Fish Protection.

### Pennsylvania Fish Protective Association.

In the annual report, prepared by Secretary Sellers, the Executive Committee say:

For submitting a report of its proceedings during the year 1893, your committee desires to congratulate the Association upon the large amount of work it has been able to perform; the constant accessions to the membership, and further, upon the substantial condition of the finances of the Association, as well as the generally healthful condition, in which it enters upon the twelfth year of its existence, giving conclusive evidence of the salutary results, following energetic and well directed effort, in a cause which is gradually, but most surely becoming recognized as a public benefaction. As the primary purposes of the Association are well known, it is doubtless unnecessary to state, that a year in which the sessions of the State Legislature are held, must be one of great moment and marked activity. The enactment of restrictive laws for the better protection of fish, and the necessary vigilance to protest against measures detrimental to their preservation, are actions which become obligatory on the part of the Association.

Never was this more clearly exemplified than during the past year, when the very existence of the Pennsylvania State Fish Commission was threatened, by the passage of a measure legalizing eel baskets in the rivers and streams of this commonwealth.

As stated by the chairman of your committee, it was owing to the abolition of these illegal devices, that the annual valuation of the catch of shad in the Delaware River, had risen from \$81,000 in 1882, to over half a million dollars in 1892. In accordance with the expressed sentiment of the Association, your committee strongly opposed this measure, adopted and forwarded resolutions to the Legislature urging its defeat, and on Feb. 3, in special session, authorized a committee to proceed to Harrisburg to oppose its passage, but all the efforts of the Association proved unavailing, until finally, a resolution strenuously praying upon Governor Robt. E. Pattison to veto the measure was forwarded by your committee.

That this action evoked favorable consideration, is assured in the fact that the bill failed to secure his approval, therefore did not become a law, and it is most gratifying to record it, not only to the Association, the State Fish Commission, but to every individual actuated with a spirit of public good.

Having learned of the commendable action of the Legislature in appointing a standing committee on fish and game, one of the first duties of your committee was the appointment of a sub-committee on propagation and distribution of fish, to co-operate with the State Commissioners, in bringing such influence to bear upon the committee of the Legislature as would aid in the protection of fish and game in this commonwealth.

This committee immediately placed themselves in communication with Hon. Joseph G. West, chairman of the fish and game commission and tendered their assistance to the State Commission in behalf of any measures sought to be enacted or approved by them.

Stimulated by the action of the Legislature in appointing this committee, with its consequent indication of encouraging results, your committee next directed its attention to the growing necessity for the passage of a law to prevent the catching of brook trout for barter and sale in this State. A special law of this character had been in force in the counties of Potter, Lycoming, Tioga, Clinton and Sullivan since 1870.

As the necessity for its general application had been urged upon the Association, your committee accordingly deemed it

advisable to frame a bill to that effect, embodying a protective limit of 6 in., which was undertaken and presented to the Legislature.

While the work of your committee has been characterized by earnest endeavor in the form of petitions, seeking legislative consideration upon measures calculated to further the fishing interests of the State, with the necessity and importance for their enactment, it is to be regretted, that notwithstanding the persistent effort in supplementing the aims and wishes of the State Fish Commission in this direction, much desirable legislation failed of passage.

Prominent among this was the bill in regard to polluting the streams of the commonwealth with culm, coal washings, acids and tannery refuse. It is a fact worthy of record that the State Commission has labored faithfully for years to secure the passage of such a measure without success, and it is not improbable to affirm that the large invested interests involved exert a powerful influence in its consideration.

The destructive effect of this pollution upon fish life in our streams is an abuse not conducive in furthering the efficiency of our State board, and the necessity for its immediate correction is clearly demonstrated in the fact that the Association is in constant receipt of protests concerning it from all sections. It is therefore earnestly hoped this continual agitation will ultimately bring about the needed reformation.

Other equally important measures, which were separately considered and acted upon by your committee in this connection, were the subjects of fishing in trout streams for such other varieties of fish as may inhabit these waters after the close of the season as fixed by law; the unlawful taking of trout under size; the excessive weight of trout taken and the possible adoption of means by which this evil could be limited.

Actuated by a desire to have the law of Pennsylvania conform in some degree with that of adjacent States, and as such would work no possible detriment to the fishery interest, the extension of the open season for taking brook trout in this State to Aug. 1 was also recommended.

The fact that a bill has been introduced to the Legislature authorizing the erection of a dam in the Delaware River in the vicinity of Easton, a similar bill having passed the Legislature of the State of New Jersey, the sentiment of the Association earnestly condemning the provision of this act was forwarded to the Legislature in the form of a resolution, drafted by a special committee appointed for that purpose. This action of the Association was given publicity through the agency of the press, and in conjunction with the efforts of the State Fish Commissioners, the vital importance for its defeat made apparent, which combined influence happily effected the desired result.

Through the continued and increasing efficiency of the State Board of Fish Commissioners, your committee is gratified in being able to record the complete cleaning out of fish baskets, weirs and other illegal devices in the Delaware River, the North Branch of the Susquehanna, a large portion of the Juniata and other streams in the interior of the State. This commendable work is being carried on with unabated vigor along the lower Susquehanna River.

This brief summary can give no measurable idea of the hard and persistent effort by which it has been brought about, the strongest opposition being encountered, and many fines imposed. The gratifying announcement therefore follows that the Association has been largely instrumental in bringing about the improved condition of our streams. In the work of restocking much has been accomplished; large numbers of brook trout, brown trout and hybrids have, through the efforts of the Association, been placed in the streams in the eastern part of the State. Through the agency of the State Fish Commission, a considerable number of black, rock and white bass were deposited in the Schuylkill, lower Susquehanna and tributaries, as well as some 6,000 yellow perch in the streams of Philadelphia, Chester, Lancaster and Delaware counties.

The distribution of trout fry for the year 1893 reached the enormous total of 3,400,000 fish with the facilities at command; this extraordinary result has told largely and advantageously upon the efficiency of the State Fish Commissioners, as evinced in the corresponding increase in the demand for applications, which has largely engaged the attention of your committee as in former years.

Most encouraging reports have been received of the planting of wall-eyed pike in the Delaware River, giving positive assurance of the success of their introduction in those waters. Your committee is able to report with much satisfaction that the influence of the Association has been felt in stimulating the steady increase of organizations of kindred character throughout the State. In view of the importance of united action in behalf of the enforcement of our fishery laws, special attention has been given this subject with encouraging results, letters expressing assurance of co-operation in this respect having been received from the Game and Fish League of Williamsport, the Clinton County Game and Fish Protective Society and others.

A well attended meeting of the Pennsylvania Fish Protective Association was held on Saturday evening, Feb. 10, at the rooms, 1020 Arch street, Philadelphia. Mr. H. O. Wilbur, upon assuming the duties of president, addressed the meeting as follows:

GENTLEMEN OF THE PENNSYLVANIA FISH PROTECTIVE ASSOCIATION—Before assuming the duties of the office of president, to which you have almost unanimously elected me, I wish to thank you most cordially and earnestly for the honor conferred, and say I cheerfully accept, and promise to do all I can to promote the interests of your organization.

Gladly would I make a nice speech to you if I could, but I am a silent man, having learned from long experience as a fisherman that the successful angler is he who is most quiet, and after learning the waters casts his line so scientifically and carefully as to avoid all snags and reach the best fish.

Now, as we are all anglers, let us resolve to do some good work this year by quietly watching every opportunity and casting our lines most judiciously and effectively.

Let us fish for men good and true, for we need such to increase our membership and assist in our work. For these we must wisely and carefully cast a lure in the form of a seductive fly or wholesome bait—proudly tell them of the good we are doing, of the blessings to come upon future generations. If this lure does not win them try the bait—speak of our grand banquets, with feast of reason and flow of soul.

Let us fish for men who disregard the laws of God and man, they who use every appliance from spear to dynamite to fill their basket. For these I recommend the strong grapnel hook of the law, and nothing else will hold them. No bait required.

Let us fish for the men, too, who make our laws, for we need their services to help overthrow the fish hog and the law breaker. For these I recommend the greatest quiet and the finest of tackle. It is better to have a delicate line of silver and a hook of gold—no flies needed here, for most legislative bodies are too wise to jump at any such lures.

Now, gentlemen, this is but a portion of our work. With a very excellent executive board, as well as sub-committees, I feel, by working hand in hand, we shall be able to carry on and perhaps enlarge the work so nobly begun and continued up to the present time by this Association.

Many of you understand much better than I how many waters are depleted and how sadly they need replanting and protecting.

We should disseminate literature which will educate the ignorant on this point, teaching them that we are their friends and our work is for their ultimate gain and pleasure,

and every fish taken out of season (so often full of ripe spawn) is lessening the future supply by thousands.

Again, we must not lose sight of the salt-water fishing, although the net fishermen would have us believe, and in fact try to prove by wonderful statistics, that their methods do not destroy or lessen the supply of food fish. We all know by sad experience that fish can no longer be caught where once they were plentiful, and all along our coasts the same cry is heard. I have taken pains to inquire wherever I have been, from the Carolinas to New Foundland, and the same cry comes to me, "We must go farther and work harder."

"The end is not yet," but will soon come unless some measures are taken very soon to stop the despoilers. It is our privilege, and I may say duty, to aid in this grand work. Our Association has already made a name for itself, and we wield a power for good second to no other similar organization.

The work is unselfish, beneficent, glorious. Let us go on with renewed vigor, and our children and children's children will bless the memory of every member of the Pennsylvania Fish Protective Association.

Measures were adopted to give wide distribution to a notice containing information that blank applications for brook trout, bass and other fish could be procured upon application to the Association.

The destructive methods of the menhaden interests were again discussed. Preliminary action was taken for the creation of a Board of Trustees to take charge of the permanent fund of the Association.

M. G. SELLERS, Sec'y.

### Look out for the Carr when the Bell Rings.

SYRACUSE, N. Y., Feb. 17.—*Editor Forest and Stream.* Onondaga Lake, in portion within the limits of the city of Syracuse, is about six miles in length, and three quarter mile in width, and is reached by electric cars within twenty minutes, and contains bass, pike, pickerel, perch and other fish. Prior to the enactment of the present game laws, the use of nets in this lake had despoiled it of nearly all desirable fish. From the absolute necessity of protecting this lake and other waters, came the organization of the "Anglers' Association of Onondaga," that since 1890 has by its own paid detective, with occasional assistance from the State, so materially guarded this lake that I can send you as a fact, the catch last Thursday of three pickered through the ice in this lake weighing respectively 13½, 11½ and 7¾ lbs., also nearly a bushel of perch from ½ lb. to 1½ lbs. They were all taken with hook and line, and I am pleased to say the largest pickerel was caught by a member of the Anglers' Association. Now, you who read this can have plenty of fish in waters near you if you will protect them; you should do this for your friends and the public as well as yourself; and can do so if you will; and you must if you want fish.

Netters care nothing for you nor the public. They want fish for what they will bring in market, and they want them all just as soon as they can get them in any way.

Have a bell hung at the crossing and tell these netters there is a "Carr" coming.

SYRACUSE.

### A Great Satisfaction.

ROUSE'S POINT, N. Y., Feb. 10.—*Editor Forest and Stream.* Is it not a great satisfaction to be able to clip now and then from the local papers an item such as this: "Game Protector Charles Barber made a trip along Lake Champlain last week and confiscated 31 nets between Whitehall and Addison Junction, and released over six tons of fish. Since Oct. 1 he has destroyed over 50 nets in the lake, the value of which is nearly \$400."

W.

### NEW YORK GAME AND FISH BILLS.

[From Our Special Albany Correspondent.]

ALBANY, Feb. 17.—Following is a summary of the game and fish bills introduced:

#### ASSEMBLY.

- No. 14. By Mr. Thornton.—Amends Sec. 115 by making lawful size of mesh of nets 1½ in. instead of 1¼ in.
- No. 15. By Mr. Thornton.—Add to Sec. 136: "Between June first and September first, sturgeon may be also taken in the waters of the Hudson river with sturgeon nets of meshes not less than seven inches."
- No. 38. By Mr. Thornton.—Amends Sec. 70 by substituting "first of May" for "first of March" as beginning of wildfowl close season.
- No. 43. By Mr. Horton.—Amends Sec. 103 by providing that "it shall be lawful to fish for bull-heads, eels, suckers, catfish, pickerel and pike, with spear, in the bays and streams of Wayne county which empty into Lake Ontario."
- No. 55. By Mr. Ryder.—Amends Sec. 136 by providing as to shad nets that "in the Hudson river below the northern boundary line of Westchester county said nets may be allowed in the river from sunset Saturday until sunrise on the following Monday."
- No. 94. By Mr. Messiter.—To authorize towns to purchase or to seize by eminent domain private fish ponds. (See FOREST AND STREAM of Feb. 17.)
- No. 116. By Mr. Ryder.—Amends Sec. 141 by adding "also in Croton Lake and its tributaries in Westchester county, set lines may be used."
- No. 191. By Mr. Higbie.—Amends Sec. 52 by omitting a bounty on bears.
- No. 194. By Mr. Thornton.—Relates to expenses of actions, etc.
- No. 210. By Mr. Hennessy.—Amend Sec. 47 by prohibiting jacking or floating deer.
- No. 228. By Mr. O'Grady.—Amends Sec. 26 by giving game protectors power to serve subpoenas.
- Amends Sec. 33 by substituting "actual expense," for "reasonable expense."
- Amends Sec. 20 by providing that special protectors shall be paid \$3 per day for actual service, the same to be a county charge.
- Amends Sec. 49 by substituting for "rabbits," "hares and rabbits," and forbidding their possession in close season.
- Amends Sec. 244 by adding: "And said courts shall have jurisdiction of all said offenses committed within the county where said courts are held, in the same manner as though the defendant had been taken before a magistrate of the town where the offense was committed."
- No. 239. By Mr. Horton.—Exempts from the provisions of Sec. 132 the waters of Lake Ontario, "in the county of Wayne, except within one-fourth of a mile from any outlet or stream emptying therein."
- No. 257. By Mr. Ainsworth.—Amends Sec. 292 to read: "Nets or devices of a kind ordinarily used for catching fish shall not be placed in, drawn or used, in any of the inland fresh waters of this State, nor shall fish be caught or taken from said waters by any device, except angling, save only as provided by sections 136, 141, 143, 145 and 150. The use of dynamite or other explosives in any of the waters of the State is prohibited, except for mining and mechanical purposes. Fish taken contrary to the provisions of this section shall not be knowingly possessed."
- And adds a new Sec. 159: "Exceptions as to Oneida Lake and Oneida River.—It shall be lawful for any person or persons to possess and use in the waters of Oneida Lake and Oneida River, during the months of October, November and December, nets, pound nets, seines, trap-nets, gills and other devices of a depth not to exceed six feet, the meshes of which shall not be less than of a one-inch bar."
- No. 279. By Mr. Messiter.—Amends Sec. 103 by adding: "And the provisions of Article nine of this act shall not apply to any stream or pond stocked wholly or in part from State waters or State fish hatcheries."
- No. 323. By Mr. Stevens.—Amends Sec. 116 by adding: "No trout of any kind, including salmon trout, caught in any of the inland waters of this State, except in the counties of Kings, Queens and Suffolk, shall be purchased, sold or offered for sale within this State."
- No. 327. By Mr. Snyder.—Amends Sec. 104 by adding: "But nothing in this act shall prevent fish of all kinds from being caught through the ice with hooks and lines, in lakes Waureta and Ganoga, formerly known as "Little" and "Mud" lakes, in the town of Tyrone, in Schuyler county, up to and including February tenth of every year; nor the taking and catching in said lakes of the following named fish, with spear, to wit: Striped or Oswego bass, bullheads, eels, suckers and perch."
- No. 328. By Mr. Thornton.—Amends Sec. 49 by substituting "hares and rabbits" for "rabbits," and forbidding possession in close season.
- Amends Sec. 70 by substituting "first day of May" for "first day of March" as close of open season. Repeals permission to use floating devices on the Hudson south of Iona Island.
- Amends Sec. 105 by substituting "first day of April" in place of "fifteenth day of April" as opening of trout season; and omits exception as to Spring Brook Creek.]

Amends Sec. 136 by substituting in place of "Honk Falls" "the dam at Eddyville."

No. 331. By Mr. Gray.—Amends Sec. 149 by adding Tioga, Dutchess, Columbia, Madison and Washington counties to those in which ice-fishing is allowed in waters not inhabited by trout.

No. 375. By Mr. Glenn.—Amends Sec. 136 relative to fishing in Hudson and Delaware rivers. Amends Sec. 140 by omitting the clause which now permits use of nets in the Seneca River.

No. 391. By Mr. Horton.—Amends Sec. 149 so as to permit ice-fishing also "in the waters in the northern part of Wayne county, contiguous to, and which empty into Lake Ontario."

No. 394. By Mr. Nixon.—To amend Sec. 132 by repealing present exemption of Lake Ontario waters in Jefferson county.

No. 389. By Mr. Rider.—To amend Sec. 141 by adding: "But such fishing through the ice shall be permitted in the waters of Otsego Lake and also in the waters of the county of Onondaga, with hook and line in hand, for any fish that inhabit the said waters, and to fish with what is known and commonly called tipdowns, for pickerel."

No. 468. By Mr. Thornton.—Amends Sec. 149 to read: "Pickerel, bullheads, catfish, eels, perch and sunfish may be fished for through the ice with set lines and tip-downs, in any of the waters of the State not inhabited by trout; and suckers may be caught by means of rake hooks, in any of the waters of the county of Schoharie, etc."

No. 469. By Mr. Thornton.—Amends Sec. 70 by substituting "first day of May" for "first day of March" as opening of wildfowl season.

Amends Sec. 136 by providing: "Between the fifteenth day of March and the fifteenth day of September, sturgeon weighing over 25lbs. may be taken by nets in the Hudson River below Albany."

Amends Sec. 149 by adding county of Greene.

No. 618. By Mr. Higbie.—Adds new Sec. 131. "Salt-water striped bass, blue crabs, and other fish, and also the eight inches in length shall be intentionally taken from any of the waters of this State not possessed; and in case any such fish is taken, the person taking shall immediately place such fish back into the water from which it was taken without necessary injury. A violation of this section is a misdemeanor, etc."

No. 642. By Mr. Gould.—Amends Sec. 149 by omitting Ontario county and adding Dutchess, Ulster, and Schoharie counties, and for the purpose of this act, the Delaware River and the east and west branches thereof shall be deemed waters not inhabited by trout."

Noted by sections the foregoing amendments are as follows: Sec. 26 is amended by bill No. 228. Sec. 30 by No. 228. Sec. 33 by 228. Sec. 47-210. Sec. 49-223, 323. Sec. 52-191. Sec. 70-38, 328, 599. Sec. 102-48. Sec. 103-279. Sec. 104-327. Sec. 105-328. Sec. 115-14. Sec. 116-323. Sec. 132-329, 394. Sec. 136-15, 65, 323, 375, 599. Sec. 140-375. Sec. 141-16, 389. Sec. 149-331, 351, 468, 599, 642. Sec. 194-191. Sec. 202-257. Sec. 244-238.

### THE PUBLISHER'S DESK.

The H. H. Kiffe Company moved on Feb. 1, from 473 Broadway to 523 Broadway, New York.

The loss to the Colt Company is between \$80,000 and \$90,000, which is almost wholly covered by insurance. The fire will cause but little delay in the company's business.

The Bridgeport Gun Implement Company has issued a neat little 1894 catalog of trade goods, and which may be had for the asking. It includes descriptions of the new Bridgeport cyclometer, as well as tools, oilers, whistles, etc., manufactured by the company.

Montgomery Ward & Co., of Chicago, have an enormous mail business and are undoubtedly the largest patrons of the post office department in the United States. During the year 1893 they received letters, postals, newspapers, etc., to the amount of 1,417,318 pieces. The largest single day's receipt was 13,208, and the smallest 3,540. The firm mailed during the year over 4,425,000 pieces of mail, on which the postage alone exceeded \$200,000. In addition to this 421,300 packages were shipped by express, and \$88,861 by freight.

Paul North, of the Cleveland Target Company, reports business in his line good. He is selling more traps than ever before. He credits the condition of affairs directly to the general dullness of business. Most men have more time to gratify their trap shooting inclinations, and if on salary, their money has a larger purchasing power than ever before. It's an ill wind that blows nobody good.

### Increased Train Service to Atlantic City.

The Pennsylvania Railroad Company announces that, beginning Saturday, Feb. 10, an increased train service will be placed in effect to Atlantic City, as follows:

Express trains will leave foot of Market street, Philadelphia, for Atlantic City at 8:50 A. M., 4:10 P. M., and 5:00 P. M. week days, 9:15 A. M. Sundays, and 2:00 P. M. Saturdays only. Returning, leave Atlantic City at 7:35 A. M., 9:00 A. M., and 3:55 P. M. week days; 4:00 P. M. and 8:10 P. M. Sundays. There will be no change in accommodation trains.

Beginning same date, the through New York and Atlantic City Express will be placed in service, to run substantially on the same schedule as last year, leaving New York, week days, at 1:50 P. M., stopping at Newark, Elizabeth, and Trenton, arriving at Atlantic City 5:35 P. M.; returning, leave Atlantic City at 9:00 A. M. week days, arriving New York at 12:43 P. M., stopping at Trenton, Elizabeth, and Newark. The train will be composed of combined car and Pullman buffet parlor car, running through between Jersey City and Atlantic City in each direction.—Adv.

## The Kennel.

All those who love a dog because it is a dog, and not merely a medium for the accumulation of dollars and cents, are invited by the editor to consider this department as one in which they can discuss amicably any subject that is of interest to the canine fancy, without fear of their communications being subjected to personal comment or ridicule.

### FIXTURES.

#### DOG SHOWS.

- Feb. 20 to 23.—Westminster Kennel Club, at New York. James Mortimer, Superintendent.
- Feb. 24 to March 2.—Columbus Fanciers' Club, at Columbus, O. G. F. Mooney, Sec'y. Entries close Feb. 20.
- March 7 to 10.—City of Straits Kennel Club, at Detroit, Mich. Guy D. Welton, Sec'y. Entries close Feb. 21.
- March 13 to 16.—Mascoutah Kennel Club, at Chicago, Ill. J. L. Lincoln, Sec'y. Entries close Feb. 24.
- March 27-30.—Philadelphia Kennel Club, at Philadelphia, Pa., Dr. D. B. Darby, Sec'y.
- April 3 to 6.—New England Kennel Club, at Boston, Mass. D. E. Loveland, Sec'y.
- April 18 to 21.—Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.
- May 2 to 5.—Pacific Kennel Club, at San Francisco, Cal. H. W. Orey, Sec'y.
- May 15.—Portland Kennel Club, at Portland, Ore. D. L. Williams, Sec'y.

#### FIELD TRIALS.

Sept. 5.—Manitoba Field Trials Club, at Morris, Man. R. J. Gallaugher, Winnipeg, Sec'y.

Chicago entries close to-day, with John L. Lincoln, Room 952, 276 Dearborn street, Chicago.

Mr. E. H. Seehusen showed us last week some very artistic and novel pictures of noted dogs. The dogs are cut—die-sinking fashion—in an oval shaped crystal 1½ in. long and ¾ in. thick. The coloring is then put on at the back of the crystal, and the result is a charming picture, for seen through the thick part of the crystal the rounded contour of the dog appears like a bas-relief and very natural. Mr. Seehusen shows us crystals in which Sir Bedivere, Duke of Hesse and Beaumont, the Gordon, were beautifully executed. Their cost, we are afraid, however, will prevent there being any great demand for them among dogmen.

### SOUTHERN FIELD TRIALS.

#### The All-Age Stake.

THIS stake was handled quite skillfully, with the exception that the judges kept in some dogs from series to series which could profitably and justly have been left out.

This stake was for pointers and setters which had never won a first in an All-Age Stake at a recognized trial. The prizes were \$300 to first, \$200 to second and \$150 to third. There was much interest manifested throughout, and a fine class of dogs competed.

Count Gladstone is now a well known winner. He ran a well-sustained race, the best he has shown in competition, although it still requires a good deal of noise to handle him.

Gleam's Pink made a very close competition for first. He, too, ran a strong race.

Lillian Russell in the last heat did not work up to her best form and Miss Ruby, too, fell off from her best capabilities.

Maj. Murnan lives at Keeling, Tenn., instead of Huling. The following sportsmen were also present, in addition to those named last week: Messrs. Scale, Rogers, King and Person, of Jackson, Tenn.; Mr. Whyte Bedford, Horn Lake, Miss.; D. Arnold, Montpelier, Ind., and Clair Foster, Chicago. The stake was drawn as follows:

Whyte Bedford's b. w. & t. dog De Soto (Count Noble—Florence Gladstone), J. A. McCargo, handler, with Jackson Denmark Kennels' b. w. & t. bitch Lillian Russell (Philip Gladstone—Lou G.), Thos. Bond, handler.

P. Lorillard, Jr.'s, liv. & w. bitch Antevolo (Count Noble—Trinkett II.), C. Tucker, handler, with T. T. Ashford's liv. & w. pointer dog Kent Elgin (King of Kent—Vera Bang), J. M. Avent, handler.

J. R. Purcell's liv. & w. pointer bitch Lady Margaret (Dick Swiveller—Countess Band), owner, handler, with Avent & Thayer Kennels' b. w. & t. dog Chevalier (Jean Val Jean—Lucy Avent), J. M. Avent, handler.

Bryson & Bedford's b. w. & t. dog Tremont (Gladstone's Boy—Speckle Gown), J. A. McCargo, handler, with Will Wilson's b. w. & t. dog Bombay (Chance—Nettie Bevan), H. S. Bevan, handler.

Blue Ridge Kennels' b. w. & t. dog Dick Fox (Chance—Countess Rush), D. E. Rose, handler, with Manchester Kennel Co.'s o. & w. dog Gleam's Sport (Vanguard—Georgia Belle), A. P. Gilliam, handler.

Blue Ridge Kennels' o. & w. bitch Hope's Mint (Gath's Hope—Dashing Lady), D. E. Rose, handler, with P. Lorillard, Jr.'s, b. w. & t. dog Eugene T. (Count Noble—Ruby's Girl).

P. Lorillard, Jr.'s, o. & w. bitch Miss Ruby (Gladstone's Boy—Ruby D.), C. Tucker, handler, with Whyte Bedford's o. & w. bitch Zulu M. (Toledo Blade—Rhett), J. A. McCargo, handler.

P. Lorillard, Jr.'s b. w. & t. bitch Dot Rogers (Roderigo—Gladstone's Girl), C. Tucker, handler, with Avent & Hitchcock's b. w. & t. dog Count Gladstone IV. (Count Noble—Ruby's Girl), J. M. Avent, handler.

Manchester Kennel Co.'s b. w. & t. dog Gleam's Pink (Vanguard—Georgia Belle), A. P. Gilliam, handler, with J. L. Adams's b. w. & t. dog Cecil H. (Dr. McLin—Cosette), L. W. Blankenbaker, handler.

Manchester Kennel Co.'s lemon belton dog Hope's Direct (Gun—Victoria Laverack), A. P. Gilliam, handler, with Blue Ridge Kennels' b. w. & t. dog Blue Ridge Mark (Gath's Mark—Ollie T.), D. E. Rose, handler.

#### WEDNESDAY.

The All-Age Stake was begun at the conclusion of the Derby. The rain fell still harder after the competition began, settling into a steady downpour. Mr. W. E. Wells took Capt. R. P. McCargo's place in the judging, otherwise the judiciary remained the same. Capt. McCargo retired on account of his brother handling in the stake.

LILLIAN RUSSELL AND DE SOTO began at 8:55. The heat was all in Lillian's favor. De Soto flushed a bevy and appeared to be a little glad of it. Lill found a bevy and ran up a long score of single bird points which she executed quickly and with precision. Each also got a point on the same bevy, and De Soto got a couple of single bird points and some errors. The heat was far away in favor of Lillian.

The rain was so severe that no further competition was attempted.

#### THURSDAY.

The weather was mild and cloudy with a rainstorm threatening. Near the conclusion of the first heat the rain set in, starting gradually, but increasing steadily. It at last became so violent that work for the day was stopped and the party returned to town in all degrees of wetness, generally more wet.

ANTEVOLO AND KENT ELGIN began at 9:23, at Mr. Bias's place. There was a misunderstanding or something of the sort as to where the start was to be made, Mr. Brumby going to one place and the other judges to another, about three-quarters of a mile apart. This occasioned a vexatious delay and was the cause of some unpleasantness. The heat was begun with the two judges in charge of it, and was run more than half out before the judges were again together. Explanations all around and disclaimers of responsibility seemingly made matters all right again, for it was plain that no one was responsible for the mistake. However, there seemed to be an understanding that the judges would act together thereafter. The heat was all one-sided in Antevolo's favor. She first pointed a bevy and Kent drew in, flushed an out-lying single and the bevy then flushed. Next Antevolo pointed a bevy and Kent backed. Antevolo made a flimsy pretext at retrieving and Kent false pointed twice, pointed a single and retrieved. Antevolo pointed another single and a bevy. About 10 o'clock Kent bolted and was not caught again till near night, when he was seen roaming the fields and was taken in charge.

LADY MARGARET and CHEVALIER began at 10:13, and had run but two minutes when the rain fell so heavily that the dogs were ordered up and a run made for shelter. After lunch the clouds broke away so that there were a few rifts and the rain ceased. The brace was again started and had run four minutes when they were again ordered up. The rain had begun as soon as the dogs started. Before the party could reach shelter the storm began in earnest and a high wind set in. Horses and men all took shelter under a cotton gin. The storm increased in violence and it rained furiously nearly an hour. The bottom of the cotton gin was open on all sides, and the force of the wind carried a spray clear through from side to side part of the time, yet it was a most welcome shelter. When the storm had partly ceased all returned to town, with the consolation that the day might have been worse.

#### FRIDAY.

The weather was clear and cool in the morning, gradually getting warmer. After the morning hours the temperature was comfortably warm. Birds were plentiful. A mild, stiff breeze blew all day. The judges managed the competition much better in every respect, both in respect to picking out a route and following it, and in the competition itself.

CHEVALIER and LADY MARGARET were started at 7:43. Chevalier was the wider and faster ranger, though his point work was faulty in that he required a good deal of coaching. He, however, made a good point on a bevy, after having pointed some outlying birds of a bevy, which Lady flushed. Lady made two points on singles and a flush. Up at 8:11.

TREMONT and BOMBAY started at 8:18. The heat was mixed good and poor, and was, too, a very noisy one. Bombay was the better ranger, while Tremont had greater success in finding. He was heavy in stride and a moderate ranger, rather plodding in his manner. Neither one did

work of a character to be worthy of consideration in further competition. There were five bevises found, of which Bombay had one to his credit, and two single bird points. Each had a false point, and Tremont made some flushes in the beginning of the heat. Up at 8:58.

DICK FOX AND GLEAM'S SPORT were started at 9:01. Sport ranged wide and fast for the first third of the heat, after which he fell off somewhat, and Dick was ranging quite as wide or wider. Dick pointed and was backed. Both roamed and pointed alternately. They seemed to lose the trail, but about 100yds. from where the first point was made Dick made a point on a bevy, held it a short time, then abandoned it. Sport coming up, pointed the bevy from the same place that Dick had pointed. On the scattered birds both did somewhat, clean point work, Dick getting two and Sport four, all on singles. The heat ended at 10. Sport had a decided advantage over his competitor.

HOPE'S MINT AND EUGENE T. started at 10:05. Eugene was soon lost, and after quite a long search he was found dropped in sedge grass pointing a bevy. At the same time Mint, 150yds. away, in woods pointed a single. Sent on, they were soon both lost. They were found dropped in sedge near where the spectators flushed a bevy. From the irregularity of the heat, pace and range were difficult to estimate.

MISS RUBY AND ZULU M. began a one sided heat at 10:58. Zulu found and pointed a bevy and followed up with two false points. Miss pointed two bevises nicely, which she found. Miss made a couple of points on scattered birds and Zulu made a false point. Up at 11:42. Miss Ruby was far more skillful in point work and was superior in bird sense.

COUNT GLADSTONE AND DOT ROGERS started at 12:49, after lunch. Count ran what was the best heat he ever ran in a field trial. He ranged wide and took notice of the gun in his estimates, though he was rather hard to handle. He first dropped to a point on a bevy in sedge. Next he false pointed. Dot made a good point on a single bird. Count about ten feet away was dropped and pointed in the opposite direction. Nothing found to his point. Count next pointed a bevy and scored a retrieve. It was said that Dot flushed a bevy, but your reporter did not see it. Up at 1:33 with the heat entirely in Count's favor.

GLEAM'S PINK AND CECIL H. began 1:37. Pink pointed a bevy well. Cecil at the same time about 60yds. away pointed and nothing was found to it. Cecil pointed a bird and Pink next made a point which proved empty. Both roamed on a bevy, which was flushed by the horses. Cecil pointed two bevises and a single, Pink two singles and a false point. Up at 2:21. Both were industrious but moderate workers.

HOPE'S DIRECT AND BLUE RIDGE commenced at 2:23. The heat was rather commonplace. Neither took advantage of the opportunities offered. Up at 3:07. Direct found and pointed two bevises and pointed two singles. Mark made two points on singles, a flush, and a find and point on a bevy.

The judges took twelve into the second series, four more than were reasonably worthy of consideration under a liberal estimate.

LILLIAN RUSSELL AND ANTEVOLO were cast off at 3:28. Lillian found a bevy and pointed it well. It flushed wild. On the scattered birds, she made three good points on single birds. In the meantime Antevolo bolted, and after some delay was caught about a half mile away and brought back, but her chances were destroyed by the act. Lill made two more points, Antevolo one good one and two which proved barren. Up at 4. Lillian was superior in every respect.

CHEVALIER AND TREMONT were cast off at 4:05. Tremont pointed two bevises and some scattered birds, Chevalier one bevy. Chevalier was the wider and faster ranger, but he lacked judgment and was faulty in his bird work.

BOBBY AND MISS RUBY started at 4:40. Miss located a bevy nicely after Bombay had run close by or through it. Miss pointed two singles and another bevy and retrieved. Up at 5:01. Miss was the better in all particulars.

COUNT GLADSTONE AND DICK FOX were cast off at 5:07 and ran about 25 minutes. Dick roamed to a point on a bevy. Count made a false point. The brace was ordered up to be put down again in the morning, and the day's work then ended.

#### SATURDAY

The weather was mild, clear and pleasant. A gentle breeze favored the work. There was some good work done and the competition was conducted quite skillfully, although too many dogs were kept in from one series to the next. This stake throughout was much better contested than the Derby. The start was made near Mr. Bias's place. Birds were in sufficient numbers.

COUNT GLADSTONE AND DICK FOX started at 7:19. The former still held his good form. He took a long cast and pointed a bevy in sedge. Dick caught scent and drew to a point on the same bevy. Dick got two single bird points and each got a point on scattered birds in woods. Count made a good point on a single and retrieved. It was said that he flushed once or twice in woods. Up at 9:50. Count was the wider and faster ranger.

GLEAM'S SPORT AND EUGENE T. began at 9:58. Sport was first to make game. He dropped to a point and was backed. He moved on, roaming, and the bevy flushed wild. Sport next got a point on two birds and retrieved. Another bevy about 100yds. away flushed wild. Eugene pointed a bevy and Sport backed. Sport pointed a single all right but his handler failed to flush it. It was flushed after the dog was ordered on. Up at 10:53. Sport was the better ranger and remained out as his work the better. Eugene came in betimes for orders.

GLEAM'S PINK AND BLUE RIDGE MARK started at 10:59. Pink pointed a bevy and Mark pointed or backed. Next he pointed a single. Mark pointed, nothing found. Pink next got a point on a bevy and a retrieve. He next got a good point on two birds. Up at 11:37.

The next lot after spotting contained eight, about four more than were necessary. Closer pruning would have helped along the competition without nurturing any false hopes.

The running was suspended while the party partook of lunch at the regular place, Mr. Bias's, and as it was the last day there were extra efforts made to regale the sportsmen.

COUNT GLADSTONE AND LILLIAN RUSSELL were started at 12:45. Lillian soon made game, but not having the wind right she was puzzled a bit to locate, she finally located and pointed the bevy. Count coming in got the wind better and pointed the same bevy independently. Sent on, he found and pointed another bevy well. Next Count pointed the scattered birds. On scattered birds neither took advantage of the opportunities. Lillian did some awkward work and flushed two or three times. She did not range so well as at first. Up at 1:26 with the heat in Count's favor.

GLEAM'S PINK AND MISS RUBY started at 1:30. There were signs which indicated that Miss in woods flushed a bevy. Each made a flush. Each made a point on a single. Up at 1:56. Gleam's Pink had the advantage in speed and range.

EUGENE T. AND DICK FOX started at 2:02. The heat was very ordinary. Eugene dropped to a point where a single had been seen and was backed. Neither showed merit enough to have a chance to win a place. Up at 2:39.

TREMONT AND GLEAM'S SPORT were started at 2:34. Sport had met with an accident on Friday, injuring his foreleg. It cut down his range very much. Neither had any show in the competition, and Tremont in particular was out of the race. They succeeded in finding a fair number of birds.]

#### Final

COUNT GLADSTONE AND GLEAM'S PINK began the final heat at 3:36 and ended it at 3:30. Count pointed a bevy and each

got a good point on a single. Both had run a strong competition from start to finish.

First, Count Gladstone; second, Gleam's Pink; third, Miss Ruby and Lillian Russell.

The heavy rains had swollen the streams a great deal about New Albany, Miss. On Monday, on the return trip to town from the trials, Mr. A. P. Gilliam took a road which crosses a creek near town. The water was high and threatening, but he drove on to cross it. The water reached high enough to float the dog crate and the dogs in it out of the wagon and some yards down stream before Mr. Gilliam succeeded in rescuing the dogs from their perilous situation.

Mr. C. W. Tway has suffered from a severe illness at Lamar, Miss., where he is located with a large string of dogs. He was in attendance at the trials, though looking thin and still somewhat weak. Had his health been good, he would have run some dogs.

B. WATERS.

#### Type of Russian Wolfhounds.

Editor Forest and Stream:

I have read the letter which appeared in the FOREST AND STREAM two weeks ago on the subject of the "Type of Russian Wolfhound," and though Mr. Hanks did me the honor of writing two personal letters asking me to express my views on the subject in question I felt compelled to decline complying with his request. I have three reasons for doing so.

Some months ago an article by Mr. Innis appeared in one of the papers regarding Mr. Hanks's dogs wherein it was stated that he was afraid to turn his back on his own dogs when in their kennels. I called his attention to this article and stated that I considered, if the statement was false, he should deny it. He gave his reasons for not doing so. Irreparable damage has been done the breed through this statement, which, while it may apply and be true so far as his dogs are concerned, certainly is not true of any of the dogs in the Marlboro Kennels or of any of the full bred pedigreed dogs that have been exhibited in England. While the false impression exists that these are ferocious animals, the question of "type" is of no earthly importance, for no one with a grain of common sense wishes to own or perpetuate a breed of dogs which is not only ferocious but unreliable, and this is the impression which Mr. Hanks has allowed the public to have of his dogs. Until this statement is either confirmed or refuted by Mr. Hanks I am unwilling to discuss the "type" or merits of this breed.

My second reason is that I do not consider the very eve of a great show like the Westminster Kennel Club's the proper time to discuss any weighty subject of "type," but as soon as the shows are over I shall be pleased to discuss with Mr. Hanks or anybody else, breed, "type" or anything tending to the improvement of the Russian wolfhound, provided he refutes the unjust aspersions on the temper of the breed that he has been made sponsor for.

My third reason is that I consider the question of "type" settled in this country. We have here the progeny of champion Krlitt, who is without question the greatest wolfhound living, having won everything in England, and against Russia's best dogs. We also have in this country a stud dog who has won the grand medal at Moscow, and who transmits to his progeny his characteristics, which show his perfect breeding. The fact that the above stock is in this country no doubt accounts for Mr. Hanks having given away the stud services of his dogs for nothing, whereas other kennels ask \$50 and get it, too. When we have stock in this country that has won everything in England, I see but little use discussing the question of "type," especially when other specimens exist here which have no record either in Russia or England.

To gentlemen who breed dogs and not pedigrees, the statement that "Prince This" or "Duke That" breeds such and such type (my type) means absolutely nothing.

The fact that a man has a handle to his name does not make him a successful breeder. Let us import and have fewer dogs bred by the nobility and more bred by intelligent fanciers, and the question of "type," amiability and temper will not have to be discussed in our papers.

H. W. HUNTINGTON.

BROOKLYN, N. Y., Feb. 10.

#### English Foxhounds at New York Show.

Editor Forest and Stream:

I have received your favor asking for a report on the exhibit of English foxhounds at the New York show, and appreciating the importance, to you, of getting in all such "copy" as early as possible, I send in my report as judge of English foxhounds at the coming show, and trust it may be of use to you.

Although I expected that the collection of animals I was called upon to either immortalize or doom to everlasting oblivion would be select and of the rarest recognized type, I was astonished both at the rarity and absolute faultlessness of the exhibit.

Never in my long and uneventful judicial career have I been so hopelessly at fault in the selection of the proper recipient of the blue ribbon, so that my awards would meet with the universal approbation they have never failed in creating heretofore.

You know, I hold, with "Stonehenge," that to judge by "rule of thumb" is injudicious and misleading, being calculated to deceive even the most unbiased minds by the natural tendency to overvalue condition, style and peculiarities of type, and to overlook the more really essential characteristics of shape.

This is especially the case after luncheon, and sometimes even before that (in these hard times) uncertain meal.

I prefer, therefore, to judge by "points."

There are cases, however, when it becomes necessary, in order to arrive at any conclusion at all, to reverse the order of things and score on the absence of "points," and then I rise to the emergency, as in this instance.

With regard to the photograph you ask for. I regret that my contract with the firm of photographers that has copyrighted my pictures prevents my giving them away.

In all other respects I am, dear sir, yours very truly,

GARDEN CITY, L. I., Feb. 12.

A. BELMONT PURDY.

[No English foxhounds were "entered" at New York show.]

#### Brampton Beauty.

Editor Forest and Stream:

Allow me to thank Mr. Bunn through your paper for referring to the two very remarkable wins made by Mr. Higgs's mastiff bitch Brampton Beauty when 7 and 10 months old, which I did not know of before. The first was at Crystal Palace, at that time the largest show of England, where she won equal third with Mr. Higgs's grand bitch Lady Cameron in a class of dogs and bitches when only seven months old. The other win he refers to was at Liverpool in the strongest class of bitches of the year, being only beaten by two of the best in England, Coomb Baroness and Lady Florida, when less than 10 months old. I cannot agree with him when he says these wins do not in the least add or detract from the bitch. I think it adds, if possible, to her record. Of course the 20 firsts and specials she won at such shows as Crufts, Crystal Palace, Birmingham, etc., being unbeaten in her classes, give her a fair record without the two which I did not know of.

FAIR HAVEN, VT.

#### As Others See Us.

MR. SAMUEL JAGGER, the owner of the St. Bernard bitch Lady Mignon and dog Concorillor Joe, having returned to England safe and sound, takes occasion, in the *British Fancier*, to give his impressions of some of the St. Bernards and kennels over here. Mr. Jagger did not take back with him a very exalted opinion of our stock, and gives a thrust or two that, while unpalatable, should prove beneficial. While here he saw Messrs. Kelok's and Moore's, Col. Ruppert's and Mrs. Smyth's kennels. Princess Florence he thinks the largest bitch he has seen, and while color, etc., are correct, she lacks quality and her type is wrong, and further doubts if she could walk a mile. Of Marvel he has all manner of nice things to say, though at the same time deprecates his wretched (to him) condition.

He writes very nicely of Mrs. Smyth's dogs, and while admitting Scottish Leader to be a good dog, says he is not a Pilot or a Keeper. (He may not be as far as head goes, but how about body, legs and action?) Col. Ruppert's stock is termed second-rate, although big prices have been paid for the stock he has, averring that "a pen would not have a look in at our leading shows." From his remarks one would surmise that Mr. Moore now keeps his dogs in the fine kennels which Mr. Sears built and formerly owned. Mr. Moore "has some very good smooth-coated St. Bernards, but nothing to come up to our best smooths in England."

He then goes on to express surprise at the large prices that Americans have paid for this imported stock, and thinks that they have purchased not wisely but too well. We are pleased to see a perfectly independent opinion given, which bears out what we have continually contended for, when he says:

A deplorable circumstance also to note is the craze for size. Type, beauty, character are last, and size is the one cardinal virtue with Americans. One would think that this was analogous with the high buildings of America, if one did not know that this fashion had been set in England. A dog of the most intense St. Bernard character, and of the standard height, has very often to take a back seat at our leading shows in favor of an elongated giraffe of any color or markings, providing it is big enough. No wonder, then, that our American cousins should follow suit. Such a fashion cannot continue much longer, unless the original type has to be lost altogether. I think it speaks well for the fancy of America, when they have given such enormous sums for what they thought the best of our animals where-with to stock their kennels. Still, if they mean to develop their particular breed, it will have to be from love and not money. The "almighty dollar" may obtain the best specimens but it does not breed them. They must study the producing power as well as the purchasing power.

He closes his interesting letter by finding some excuse for our breeders on account of the long distances between kennels, the few shows and the lack of a number of competent judges.

#### DOG CHAT.

##### New York Poultry Show.

At the New York Poultry show, held Feb. 8 to 13, we noticed a number of New York "cynoculturists" who seemed to be greatly interested in the feathered fancy. A number of our dog breeders are also devoted to fowl culture, and difficult as breeding to feather seems to be, they succeeded in carrying off a number of the best prizes and specials. Mr. Thos. Terry we saw several times, and Mr. Mortimer spared a few minutes from counting dog show entries and banking checks to see how it was their Langshans, both black and white, won so many prizes. The Hempstead Farm seems to hold things safe in this breed. Another field dogman we saw was Mr. A. R. Sharpe, of Taunton, Mass., who, with his brother, John Sharpe, controls the destinies of the Oakland Farm, Taunton, Mass. Their buff Cochins and Brahmas won any number of prizes, one buff Cochin winning outright the cup for best male or female: another fine bird, winner at the principal English shows, arrived too late for competition. To show the value of some of these birds we may say that Mr. Sharpe refused \$350 for one of their cockerels on Saturday last. Mr. Van Zandt, the Irish and Gordon setter breeder, meandered through the game fowl alleys and pointed out here and there a winner that hails from his yards. Mr. Blunck was another proud man, for his recently imported black and red game cock carried all before it, winning several valuable specials, and a hen he owns too, followed suit. Mr. F. B. Zimmer, owner of the Debonair Beagle Kennels, was a busy man, for on him fell the duty of picking the winners in the game bantam classes, acknowledged to be the hottest competition ever seen in America. Mr. R. P. Keasbey, the spaniel man, took a prize in these breeds too. Among others we saw were Mr. Albion L. Page, who intends to spare a moment or two from his trotters and deerhounds to devote to bronze turkeys, several of which he purchased. A. C. Bradbury, manager of the Maywood Kennels, also had an opportunity to crow over some of his less fortunate competitors, though he says the types are different over here. Mr. C. F. R. Drake also amused himself among the stalls, principally in making remarks derogatory to the cassowaries. Messrs. A. D. Lewis and H. B. Cromwell left the A. K. C. to take care of itself on Saturday afternoon, and "did the chickens" to their hearts' content. Two other Boston "cynos" were Messrs. Ed. Brooks and W. C. Baylis, who carried off a number of prizes. John Read was nearly as busy as at a dog show, for Spratts benched over 2,000 birds and fed over 3,000.

While this department is devoted to the advancement of the dog both in the field and on the bench in a professional sense, the editor bears in mind the fact that there are a number of readers who are dog lovers without being identified with dog shows or field trials. These, although they may not appreciate so keenly the outward and visible form by which "fancy" breeders and exhibitors gauge a dog, look more for the innate qualities which make the dog what he is—man's closest friend in the brute creation. We do not wish this department to be merely a medium to chronicle the professional's side of dogdom, and bearing this in mind we invite amateurs to seek information, and by friendly discussions among themselves on matters of interest to the breed they fancy, be the means of both instructing and interesting the large body of our readers who do not pretend to be all dog-wise. It has been said by amateurs in the fancy that they would often like to write about their dogs but refrain from doing so from fear of being ridiculed or made to "look small" by those would-be know-alls who have in recent years amused themselves and disgusted others by questioning or ridiculing in an offensive way nearly every assertion when made by others than those in their own select circle. That this sort of thing is not allowed in FOREST AND STREAM should be evidence that we invite amateurs as well as the professional element to discuss such subjects as will tend to bring dog lovers closer and increase the knowledge of the ways and habits of their pets. The heading under fixtures will explain concisely our meaning.

##### Philadelphia Show.

Now that St. Louis has dropped out of the circuit, from what we hear, we believe it would be good policy on the part of the Philadelphia Kennel Club to claim the dates left vacant. The dogs could then come on from Chicago and finish the circuit, leaving the week now claimed by the Philadelphians for rest and recuperation needed to tackle Boston April 3 to 6. The whole matter will resolve itself into this question: Is Philadelphia a more important show than Boston? If there is a week to wait over between Chicago

and Philadelphia, many of the dogs will return home for a rest and give the Quaker city the go-by. If the Philadelphia people canvas the opinions of exhibitors at New York this week, they will probably find that this plan will suit the dogmen and a large entry be the result.

We believe that if more Irish setter dogs possessing field working qualities were placed at stud and judiciously mated the Irish setter would soon take a better place in the public field trials.

**Topsy's Rod and Count Gladstone IV. in the Field.**

This week we present another charming field scene from the artist pen of G. Muss-Arnolt. It represents a scene in the Subscription Stake at Eastern field trials last fall, at Newton, N. C. It is drawn from a photograph taken by Mr. Arnolt, but which, unfortunately, did not develop clearly enough to print. The picture is peculiarly appropriate at this time, as it represents the winners of the Derby and All-Age Stakes at the Southern field trials two weeks since.

The Swiss Mountain Kennels have repurchased the St. Bernard King Regent from Dr. L. C. Sauvage, owner of the Seminole Kennels. He throws good pups and has never sired a badly marked one, and that he is well bred all St. Bernardism knows. Mrs. Smythe is getting out a superb catalogue, descriptive of the kennels and the well-known dogs it contains. There are capital half-tones of the five stud cockers, groups of spaniel and St. Bernard puppies, together with pictures of Scottish Leader, Eboracum and King Regent; several brood bitches will also be portrayed. This is such an expensive work that the owner thinks a charge of 25 cents for the catalogue is not too much. It is not stated whether this will be returned in purchases of \$10 or upward.

As stated before, Mr. Booth leaves the Dutchess Kennels after New York show, and, singular to say, he will leave them with more young stock than they have ever succeeded in "hatching out" before at one time. Within the past four weeks Kingstonian Beauty whelped 13, Altonette 12, the first time she has whelped since Col. Rupert purchased her; Vinnie 11 and Bellegarde 5, all by Kingstonian Count. The kennels will be in charge of "Albert" after Mr. Booth's departure. We trust Mr. Booth will not leave the fancy altogether. He has always conducted himself in a quiet and gentlemanly manner, and has thus gained the respect of all who have been brought in contact with him at shows and at home.

The Detroit show committee will make additional classes, as follows: Class 15A, Russian wolfhounds, challenge dogs, prizes \$10; class 15B, bitches, \$10. Class 66, Irish water spaniels, open dogs, prizes \$10 and \$5; class 66½, bitches, prizes \$10 and \$5. Class 102½, Scotch terriers, challenge dogs and bitches, prizes \$10. The above was received too late for insertion in our last issue. The entries close the second day of New York show.

**Toy Spaniel Importations.**

Edwin H. Morris is importing pet dogs in earnest, for in addition to two Blenheim, one Prince Charles and one King Charles that came a month or two since, he has now on the water the celebrated Blenheim Chiselhurst Hero (E. 32,629), by Jolly Country Squire out of Jessie. This dog has won ten prizes at English shows, including firsts under the best judges, and he is the sire of many winners, including Golden Prince, a prize taker at the Toy Spaniel show in London, where he was sold for America. It is expected that Hero will be in time for the New York show. Another Blenheim on the same vessel is Daisy, by Squire, a first prize winner, out of Oldacre's Queen. As she is expected to whelp to a son of champion Excelsior soon after arrival she is not entered for New York.

**Esquimaux at the Show.**

A pleasing innovation at the New York show is the group of Esquimaux dogs, which have all seen service in exploring work in the Far North. They are exhibited by Dr. Cook, who was a member of Lieut. Peary's expedition. He returned to the Arctic regions last summer and brought back the dogs. No less interesting to the "boys" are the two fur-clad Esquimaux who have charge of the dogs and sledges, harness, reindeer-skin sleeping-bags, kayaks, implements of the chase, etc. One of the Esquimaux is a girl of seventeen, Kahlah Katak by name, and the other is Mikok, a boy fifteen years old. A picture of the exhibit will prove an interesting feature of our report next week.

**Chicago Show.**

The Mascoutah Kennel Club makes the following announcements of additional classes: Skye terriers, class 173½, novice dogs and bitches, prize, \$10 and \$15. Chesapeake Bay dogs, class 85½, puppies 6 to 12 months old, dogs and bitches, prize, \$5 and \$3. On account of the large number of classes to be judged by Mr. James Mortimer, the club has decided to relieve him of the Italian greyhound classes, which will be judged by Mr. Roger D. Williams. Arrangements are being perfected

with the customs department, by which dogs from Canada will be allowed to enter in bond, and duty free, except in case of sale, full particulars of which will be announced in our next week's issue.

**That Beagle Challenge.**

We publish in another column a challenge by the Hornell-Harmony Kennels to show five beagles at the Philadelphia show against any other five owned by one kennel, but more particularly those owned by Mr. Dorsey. The challenge is the result of the wording of Mr. Dorsey's advertisement in our business columns, but, in view of Mr. Dorsey's expressions of late, we believe his claim to have the best kennel of beagle stud dogs related more particularly to their ability as

year. This is most unfortunate considering the improvement in dogs that has been steadily going on during the past year or two. The more shows they can hold the better it will be for kennel interests on the Pacific coast. It seems strange that in a city like San Francisco a building cannot be secured sufficiently large to bench two or three hundred dogs. It's an ill wind that blows no good, and Los Angeles and Portland will probably reap the benefit. Mr. H. W. Lacy has been invited to judge at Los Angeles, but has not yet accepted.

**Glenmore Kennels.**

Mr. L. C. Campbell writes us that having purchased several dogs from the Glenmore Kennels when they were owned by Mr. E. B. Bishop, the latter has transferred the right and title to the prefix and kennel name "Glenmore" to him. This transfer has been recorded in the *Kennel Gazette*, and hereafter the Bay View Kennels, of West Berkeley, Cal., will be known as the Glenmore Kennels. The announcement that Mr. Bishop had retired from the fancy was received in California with many regrets. The Irish setter fanciers of California have lost much by his retirement. They knew by past experience that in him they had at least one man they could rely upon. Every dog purchased of him was as good as represented and some better.

Some time since we had a letter asking if eleven pups was not a large litter for a greyhound bitch to bear. This certainly was a large litter, but Mr. James Black, of Sheephead Bay, L. I., wrote us last July that his Grace Briant, by Aberbriant ex Grace Riley, had just whelped thirteen, nine of which were dogs, to his Flash, by Huic Halloo. He then stated that he had been breeding greyhounds since 1868 and never had a bitch that equalled this, excepting one in 1873, that whelped thirteen, seven dogs, to Mr. Fowler's Fandango, who won a sixty-four dog stake at Ashdown Park about that time.

The Columbus show committee have provided two additional classes for Russian wolfhounds. Class 18A challenge dogs and bitches, Class 20A, puppies under 12 months, dogs and bitches. We regret that we did not receive this information before going to press last week, so that we could have drawn attention to the fact that Mr. Mooney, the secretary, would be at New York show to receive entries, which closed Feb. 20.

Our correspondents and especially secretaries of shows and clubs, should bear in mind that as we go to press on Tuesdays now, all communications must be received in this office on Monday to insure insertion. Advertisements should not come in later than Saturday.

Mr. Peck writes us from Akron, O., that the little show held there in December last has stirred up quite an interest in well bred dogs, and he has orders to buy dogs for several good people out there. Thus doth the good work progress.

The judges at New York have a good deal to contend with, but nothing we should say hurts their self respect more, not even an adverse criticism, than a sight of their portraits in some of the daily papers.

We draw the attention of Irish setter breeders to Mr. Blossom's announcement of his dog Bedford at stud in our business columns. This dog should get good field workers, for he is himself a worker, having beaten nineteen other starters at the trials, at Lexington, N. C., in 1892, and among them were the noted Coleraine and Finglas, the latter having won two weeks before the All-Age Absolute in the American field trials.

**Polk Miller.**

Dogmen know Polk Miller in a general way merely through his connection with Sergeant's Dog Remedies, although he is known to his personal friends as a whole-souled, enthusiastic sportsman, and one who can tell you, to a field, where the quail lie in any part of "Old Virginia." The mention of Old Virginia reminds one that among Mr. Miller's accomplishments is his great faculty for imitating in dialogue and recitation the old negro dialect. In this particular forte he stands *facile princeps*, and his repertoire includes both the pathetic and the amusing sides of plantation life, interspersed with negro melodies which never fail to bring a laugh or a tear as occasion demands.

The delegates from the Canadian Kennel Club are all at the show ready to confer with the A. K. C. Their "plank" is reciprocity and an acknowledgment of a standing, equal in a sense to the A. K. C. The plan on which they propose to act is that both clubs shall have their stud books, and that a registration in either should be recognized by the other and Canadian exhibitors not registered in American stud books shall list their dogs and vice versa, for which purpose the Canadians will institute a listing fee of 25 cents. If some such reciprocity treaty is not agreed upon, the chances are that an international club will be formed, the clubs in the West representing this side of the border. We trust that such action will not become necessary.

J. M. AVENT WITH TOPSY'S ROD BACKING COUNT GLADSTONE IV

Subscription Stake, E. F. T., 1893.

field workers and their potency to beget good hunters. A challenge that would result in bringing together the best four beagle sires showing both bench and field qualities, would be more to the point and of more service to the breed. This reminds us that in regard to the Pade disqualification we have been accused both privately and publicly by Mr. Dorsey of taking a one sided view of the case and that against Mr. Dorsey and his dog. It was for the purpose of defending the principle of the thing that we took up the cudgels in defence of the club's action, and although we have received letters privately from members of the Beagle Club indorsing our views, at the same time we should have been better satisfied had the beagle men stated their views publicly. In regard to partiality on our part, for Mr. Dorsey's information we may state that at the meeting in which his dog was disqualified we maintained that the field trial committee, after having measured the dog and allowed him to start, should also allow him to receive any prize he was entitled to, and this view of the case we should have stated at the time of reporting the field trials had not the case been then *sub judice*. Had we been present at the time the dogs were measured, as one of the field trial committee, and an official judge of the club, we should have protested him then and there, but as long as he was allowed to run and was practically indorsed as a true beagle by the judges and the field trial committee present, he was entitled to his prize. This closes the discussion as far as this journal is concerned.

A competition that will prove of great interest to collie fanciers the world over, if it ever takes place, is foreshadowed in a challenge which Mr. W. E. Mason issues on behalf of his collie Southport Perfection, in order to set at rest which really is the best collie now before the English public. At Derby show the renowned Rufford Ormonde was placed ahead of all others for a valuable special, but a week or two following the tables were turned and Southport Perfection gained the verdict. This has given rise to a good deal of collie chatter, and Mr. Mason having faith in his dog offers to show him against any other collie dog, rough or smooth, before a recognized collie judge, in an open field, either on or off the chain. If, as suggested, a sweepstake is made of \$50 a side to include such cracks as Rufford Ormonde, Great Gun and Southport Pilot, the result will be awaited with considerable interest, especially as one of the conditions is that the judge is to publish the reasons for his award.

Not being able to secure the Mechanics' Pavillion, the Pacific Kennel Club is compelled to abandon its show this

## Cruff's 1894 Show.

Mr. Cruff, the "English Barnum," as he is dubbed among the fanciers, has just scored another huge success with his show in Agricultural Hall, London. Fancy an entry twice the size of New York gathering this week and one has some slight conception of the work such a show entails. The entries numbered 3,000 and the quality on the whole was good. No startling debuts were made and lack of space forbids our dipping very largely into any account of the show. The best sections were St. Bernards, Newfoundlanders, Spaniels, fox-terriers, bulldogs, bull-terriers and Skyes. Mr. Stephens, the owner of the Acton Fox-Terrier Kennels, had what is euphoniously termed in this country a "hog killing," winning in all twelve firsts, five seconds and two fourths, the president's cup, the London Fox-Terrier Club's cup, Ally Sloper's cup, the breeders' challenge cup and nine other specials.

The war between the Portland Kennel Club and the Oregon Kennel Club, which threatened at one time to result in a good deal of ill-feeling, we understand has been brought amicably to a close by the amalgamation of the two clubs under the name of the Columbia Kennel Club. The Portland Kennel Club secretary has notified the A. K. C. to that effect and asking that the new club be admitted and acknowledged in place of the old Portland Kennel Club, which was admitted to membership last year. This is a very satisfactory outcome and relieves every one concerned from what promised to be a painful position. Now, the preparations for a good show in May next should receive every encouragement from California and Oregon fanciers. There is a movement on foot to have the Portland people take the dates claimed by Pacific Kennel Club, so that their show will follow soon after Los Angeles, and the same judges officiate at both places.

The idea has been advanced that in view of the great distance from the center of operations, New York, the Pacific Coast clubs and those in the far West, such as Denver, Omaha, etc., should form a club of their own on the principle of the A. K. C., in order to regulate their own affairs and bench shows. A dog out there at present, for instance, has little or no chance of ever becoming a champion under the 500 entry rule. There are many other reasons for such a move.

That energetic and important specialty club, the American Spaniel Club, never does anything by halves. They have engaged Mr. J. Otis Fellows to take charge of the dogs shown at New York belonging to members.

The s.s. Runic, of the White Star Line, which left Liverpool on the 9th and due here Wednesday, Feb. 21, has on board two collie dogs for Mr. J. Keddie, of Kearney, N. J.

## NEW YORK DOG SHOW.

ONCE more the whirl of time has brought us face to face with another W. K. C. dog show. The present one differs little from its immediate predecessors. One sees the same old faces both in dogs and men intermingled with a few novices whose bearing and enthusiasm easily proclaim their novitiate. How they must enjoy it all, though they do cast an anathema now and then when the din becomes louder than usual. New York, however, is fortunate in the latter respect, for the high-domed roof of the Garden absorbs the noise and does not throw it back again upon the tired nerves of the visitors.

Although there are more dogs benched this year than last, never do we remember seeing so much floor space since the new building was put up. The arrangement of benches is greatly altered, and the rings, six in number, form almost a square in the center of the big hall. The toy dogs and those known to women as pets are, as we intimated last week they would be, arranged along the sides of the amphitheater, above the ground floor boxes. Thus there is plenty of room for every one this year, and the ladies can congregate round the cages of their darlings without fear of their toes being trodden on or toilets disarranged. Then in the dining hall the arrangements are better this year and the bar is screened from the un-thirsty who want to eat.

On Monday night a number of veteran fanciers had arrived with their charges. Mr. Winchell was on hand with his B. B. Prince, Mr. Higgs's Brampton Beauty, and the bloodhounds of his own kennel. Dr. Lougest, though he has his well-known team of mastiffs here, was bewailing the fact that the steamship Europe was so tardy, for on board are his noted bloodhound importations. However, he has Belhus with him, and had just purchased from Mr. G. E. Berry his Bradshaw, by Belhus out of Bemison. The St. Bernard folks were very busy on Monday night. We saw Mrs. Lee, from Toledo, with her good dogs Grandmaster and Lady Judith; Mrs. Meacham had Eboracum from the Swiss Mountain Kennels, but Scottish Leader is not entered. "Arthur" comes all the way from Little Rock, Ark., and has Sir Bedivere, Rustic Beauty, etc., entered. The rough dog open class has about forty entries, and will be a hard one to judge. A number of new faces are to be seen on these benches, but we fail to find much advance in quality or any embryo cracks.

The wolfhounds make a handsome showing, and there is much fear and trembling as to how the judge will judge, and which type will get there. Mr. Lawrence brought his great Danes on early from Columbus, O., and makes a very sorry showing. Mr. John E. Thayer is here to see his deerhounds scoop up the prizes; all but four entries belong to him. There are five challenge dogs in greyhounds and the open classes promise some very interesting and open competition, though we see no great improvement in quality.

Pointers are probably the hottest lot yet seen, the light weights being particularly strong in quality. Mr. Davey landed with Lady Gay Spanker, Josie Brackett and others known to fame; Rinada Kennels was very busy showing off some home bred ones and Billy had the Springside team looking very fit to the joy of the Lewis brothers. Hempstead Farm was busy too, and will show some good old stand-bys, though the field trials will interfere with some of their younger entries. English setters have nothing that will create a furore, though the classes are well filled. Irish setter dogs show a challenge class of nine and some fair youngsters are coming out.

Collies are very strong and Mr. Jarrett has Christopher looking tip top and a new bitch that looks a replica of Roslyn Dolly; the Hempstead Farm Kennels show up well, and our old beagle friend, Monsieur Phœbus seemed to have had a say in their condition, and some new faces will speak for themselves. Bob Armstrong, with the Cragstone Kennels was not in any hurry to bench, and so we did not see his crack team. Gordon setters make a capital appearance, and competition is keen. One need not envy the spaniel judge, for his task is no insecure though there is no great advance in quality. Messrs. Hunnewell and H. G. Trevor, champions of the brown and black poodles respectively, make a grand exhibit and better than ever seen in New York, though we should like to see a few more corded ones, Lion being the only one entered.

Space will not permit us to speak of the grand showing of bulldogs, bull-terriers, fox-terriers and the different rough 'uns. Mr. H. W. Smith was playing a game of "Cribbage" and looked confident, while Messrs. E. & H. Brooks wore that serene look of contentment that comes with the knowledge that they have the best there. There is a falling off in some of the toy spaniel classes, notably in the Japs, only five being entered this time, though they are the best we have almost,

but we miss Mrs. Clarke's beautiful cages and pretty dogs. Mrs. F. Senn, Mrs. Crawford and Miss Lacy furnish the entries. Prof. Hampton will furnish the evening exercises, the judges will be the cause of the others. The catalogue is well arranged and an innovation that is particularly happy is an asterisk after the name of an owner who is also a member of the specialty club devoted to the breed which he exhibits. Judges and others will appreciate this great help in making their special awards.

The entries in the catalogue number 1,344, numbers being duplicated as follows: Mastiffs 1, St. Bernards 20, wolfhounds 1, greyhounds 8, foxhounds 4, pointers 30, English setters 13, Irish setters 8, Gordon setters 6, collies 28, cockers 12, poodles 4, bulldogs 7, bull-terriers 10, dachshunds 2, beagles 6, fox-terriers (smooth) 15, wire-hair 9, Irish terriers 6, Scotch terriers 1.

Judging commenced promptly on Tuesday, and as we go to press an hour or two later, we are unable for the first time in many years, to publish the list of awards the same week. Our report next week will be very complete and valuable, as in the majority of the breeds the judges have consented to write for FOREST AND STREAM the reasons for their awards. Already the experienced management shows that the veterans, James Mortimer and John Read, are at the helm, and Messrs. Cromwell and Terry are busy on a sort of all-round reception and executive committee. The weather is fine and the show promises to be a success. H. W. L.

## UNITED STATES FIELD TRIALS.

Trials B of the United States Field Trials Club were run at Grand Junction, Tenn., beginning on Feb. 12. The competition dragged somewhat owing to obstructive delays caused by bad weather. These were the third annual trials.

The judges were Messrs. Royal Robinson, Indianapolis, Ind., J. A. Balmer, Vincennes, Ind., and W. W. Titus, Waverly Miss. They were painstaking and skillful, and managed the competition quite satisfactory. Much of the grounds was not favorable for new competition. They were cut up badly in places with gullies and washouts, some side-hills being so seamed as to be useless for field trials. The cover, too, was thin and light. In short, in the large area of ground used, but a small ratio was available for trial purposes. There were many sportsmen in attendance, particularly in the first days. Amongst those in attendance were Mr. Pierre Lorillard, Jr., W. C. Foster, L. A. Rice, Chicago, P. H. Bryson, Memphis, J. M. Freeman, Bicknell, Ind., C. W. Tway, Irwin, O., W. J. Speares, Byhalia, Miss., C. A. Draper and H. C. Hatcher, Toledo, O., Dr. J. N. Maclin, Mason, Tenn., Edgar Huidecoper, Meadville, Pa., Geo. W. Powell, St. Louis, Mo., W. A. Beabrook, Chicago, J. N. Seale, Jackson, Tenn., and many others. On Tuesday, there were between sixty and seventy horsemen following the trials.

The grounds used were those which are historic in field trial annals. Each hill and dale brought up reminiscences of where one dog made a famous point, where another was beaten, or where an important stake was decided. The famous Lit-Grouse dale race was run on them. In the earlier day of trials, those of the National Club were run in December, when the cover was better than it was later in the winter. Pasture, cultivation and a poor soil results in thin vegetation in February on those grounds. Withal, the grounds evoked many objections. The hotel accommodations were insufficient, most of it being of the sixteenth class with collateral makeshifts several classes lower. The food was uniform in grade and consistency, from meal to meal. The bill was prompt and faultlessly perfect. The strongest objections, however, were made against the grounds being situated so near Hickory Valley. As to whether the objections are sound or not, this report does not deal. It relates to the mere matter of fact. The grounds themselves are hardly fitted for a late winter trial. The grass is too thin both from a scanty growth and from pasturing it. Large areas are washed and cut up with gullies, and deep gullies obstructed the course at frequent intervals. Birds were found in ample numbers. Mr. J. M. Aven furnished a large number of excellent horses, and was a most efficient guide over the grounds, he being perfectly acquainted with them and the best routes for competition. Wire fences obstructed the course at times, and the most strenuous objections were raised against riding on any ground which was under cultivation. As a whole, the experience at Grand Junction was most unsatisfactory, considering it as a field trial ground, or a place wherein a man would flourish in the absence of every-day comforts. As this is probably the last field trials which will be held there, further comment is unnecessary.

## The Pointer Derby.

## MONDAY.

The night of Sunday was rainy, the storm lasting into the forenoon. The weather gradually turned colder and was near the freezing point in the morning, while a strong wind blew steadily from the northwest. The grounds were wet and soft. Birds were found in fairly good numbers and, notwithstanding what were apparently unfavorable conditions, the scent was good. Owing to the unfavorable character of the ground on this day, the heats were run under greatly different conditions, some through sections of grounds washed out and seamed with gullies and containing thin, patchy, and insufficient cover, while others were run in fairly good going and cover, while others again were largely in cover. The drawing took place on Monday morning. There were ten starters, namely:

E. M. Beale's b. w. & t. bitch Alice Leslie (King of Kent—Belle Randolph), S. J. McCarty, handler, with T. H. Gibb's liv. & w. dog, Lad's Rush (Rush of Lad—Devonshire Belle of the Ball), L. W. Blankenbaker, handler.

B. M. Stephenson's liv. & w. dog Flying Jib (Tribulation—Lalia), owner handler, with Hempstead Farm Kennels' liv. & w. dog Hempstead Drake (Duke of Hessen—Woolton Game), A. Cameron, handler.

W. B. Stafford's liv. & w. dog Kent H. (King of Kent—Duchess), owner, handler, with E. O. Damon's liv. & w. dog Strideaway (King of Kent—Pearl's Dot), Geo. E. Gray, handler.

G. R. Howse's liv. & w. dog Lula K. (Ossian—Pearl's Pride), owner, handler, with D. P. Ritchey's liv. & w. dog Don (Trinket's Coin—Molton Patti), L. W. Blankenbaker, handler.

Hempstead Farm Kennels' liv. & w. dog Hempstead Beau (Duke of Hessen—Woolton Game), A. Cameron, handler, with L. W. Blankenbaker's blk. & w. bitch Fly B. (Buck—Jilt II.), owner handler.

This stake was for pointers whelped on or after Jan. 1, 1892. First \$250, second \$200, third \$150.

The competition was but moderately good, even considering the disadvantages of the grounds.

Strideaway, winner of first, was not running up to his best form. Don, winner of second, showed good, honest work on birds; he needed more range and speed. Hempstead Beau made an average exhibition.

ALICE LESLIE AND LAD'S RUSH began at 12:46. They ran 33m. Rush was easily the better performer of the two. Alice made a point on a bevy, left the point and went on; she came back and pointed. The birds were flushed and she showed timidity when the gun was discharged, although there was only powder enough to make a very slight report. She next flushed a single in the woods. Lad pointed, probably on footscent. The heat was ordinary.

FLYING JIB AND HEMPSTEAD DUKE began at 1:24. Duke made a point and a bevy was flushed 20 or 30yds. behind him. He pointed a single and made two flushes. Jib pointed a bevy well and was steady to shot. The heat was run over very difficult grounds, and it was unfavorable for a display of speed or range. Up at 1:53.

KENT H. AND STRIDEAWAY started at 1:58. Strideaway pointed a bevy. Kent flushed a single bird of it and the remainder flushed wild. Kent drew to a flush on a bevy in woods. Strideaway pointed a bevy in open sedge and next got a point on a single. Up at 2:31. Strideaway had some advantage in range, such range at least as the grounds admitted of. The heat was not remarkable for good work.

LULA K. AND DON started at 2:40. Don had the advantage in range and speed, and was an honest worker on his birds. Lula pointed a bevy in a plum thicket and Don backed. Don pointed some scattered birds. Lula backed, broke it and flushed the birds. Don made a flush on some birds. Up at 3:13.

HEMPSTEAD BEAU AND FLY B. began at 3:15. Beau made a good point on a bevy on bare ground. Fly backed, but caught scent and pointed. Fly made a point on a single and another at the moment the bird flushed. To another point she made there was nothing. Beau made a point on a single on the trail of which Fly made a point. Up at 3:46, and the work for the day ended.

In the evening the judges announced that Strideaway, Don, Lad's Rush and Hempstead Beau would run in the second series.

## TUESDAY.

A sharper cold had set in during the night and the ground was frozen lightly in the morning. Clouds covered the sky, and the prospect was not agreeable in respect to weather conditions. The temperature gradually grew warmer. The mid-day hours were pleasant and temperature comfortable. The grounds used after the Pointer Derby ended were the old field trial grounds of the National Club in past years prior to 1887. Birds were found in numbers sufficient to afford a good competition. All the condition were far more favorable than those of yesterday.

STRIDEAWAY AND DON began at 9:18 about two miles from Hickory Valley. Don caught scent, made a point, then drew off to the left to locate. Strideaway coming in further ahead and across, pointed the bevy. When the gun was fired Strideaway was steady to caution. On scattered birds the work of Strideaway was a bit ragged. He made two points on them, one on a bevy and he made two flushes. Don made four points on scattered birds and one on a bevy. His work on birds was the cleaner, and while it was not so dashing as that of his competitor, it was more accurate. Strideaway was much the wider in range and the better in speed. Up at 10:04.

LAD'S RUSH AND HEMPSTEAD BEAU began at 10:09. Lad pointed to his flush of a bevy. Beau pointed a bevy in a hollow in woods. He next flushed a bird up wind. Rush flushed a bird, pointed one, and Beau made a point on a bevy and a single. Up at 11:00 with the heat in Beau's favor.

The judges then consulted and soon announced their decision: First, Strideaway; second, Don; third, Hempstead Beau.

The competition in this stake was not of the first class, though some of the dogs made quite a good showing.

## The Setter Derby.

There were sixteen starters in this stake. Some of the work, particularly in first series, was quite good. The dogs were drawn to run in the following order:

Chas. P. Stokes's b. w. & t. bitch Allene (Gath's Mark—Ruby's Girl), D. E. Rose, handler, with P. Lorillard, Jr.'s, b. & w. bitch Ightfield Rosalie (Fred—Ross), C. Tucker, handler.

Chas. P. Stokes's b. w. & t. bitch Bessie Shoupe (Gath's Hope—Countess Rush), D. E. Rose, handler, with Aven & Thayer's b. w. & t. dog Topsy's Rod (Roderigo—Topsy Aven), J. M. Aven, handler.

Manchester Kennel Co.'s b. w. & t. bitch Callie White (Gath's Mark—Georgia Belle), A. P. Gilliam, handler, with P. Lorillard, Jr.'s, b. w. & t. bitch Antoinette (Antonio—Daisy Hunter), C. Tucker, handler.

F. E. White's Irish setter bitch Maid (Duke Elcho—Aurore), J. Mayfield, handler, with Chas. F. Field's b. w. & t. bitch Misty Morning (Antonio—Field's Cosette), H. M. Short, handler.

Chas. F. Field's b. w. & t. dog Markell (Antonio—Field's Cosette), H. M. Short, handler, with P. Lorillard, Jr.'s, o. & w. bitch Beryl (Gladstone's Boy—Ruby D.), C. Tucker, handler.

Blue Ridge Kennels' b. w. & t. dog Blue Ridge Mark (Gath's Mark—Ollie T.), D. E. Rose, handler, with John A. Gude's (agt.) b. w. & t. dog San Antonio (Antonio—Nellie Hope), J. Mayfield, handler.

F. R. Hitchcock's b. w. & t. bitch Topaz (Count Gladstone—Tory Diamond), J. M. Aven, handler, with Bevan & Moss's b. w. & t. bitch Dame Durden (Eugene T.—Dell Rivers), H. S. Bevan, handler.

Aven & Thayer's b. w. & t. dog Thalia (Jean Val Jean—Lucy Aven), J. M. Aven, handler, with P. Lorillard, Jr.'s, b. w. & t. bitch Leona (Eugene T.—Bess of Hatchie), C. Tucker, handler.

The prizes and conditions are the same as in the pointer Derby.

ALLENE AND IIGHTFIELD ROSALIE began at 11:14. The first piece of work was quite spectacular, Rosalie pointing prettily and Allene, standing in open sedge on a side hill, backing stylishly fully 50yds. away. Both ranged wide and fast, covering nearly the same quantity of ground, although Allene was somewhat the better. The latter made a point; nothing found. Up at 11:45.

Lunch was eaten in the open woods, the hotels sending out a lunch to their guests.

After lunch the heat was resumed. Time, 1:12. Allene found and pointed a bevy and Rosalie backed well. On scattered birds, Allene pointed, Rose failed to flush. Allene ordered to go on roaded them to a flush. Sent on he made two more good sharp points on single birds in dry leaves and Rosalie one. Allene was sharper and quicker in her work on scattered birds. Up at 1:31.

TOPSY'S ROD AND BESSIE SHOUP began at 1:28. They ran an excellent heat. Rod pointed a bevy and Bessie backed well. The bevy was followed. Bessie pointed it. Next, each got a joint point on scattered birds. Bessie got two more points on singles and Rod one. Up at 1:45. Their work on birds was clean and good and nearly equal. Rod had the wider range.

CALLIE WHITE AND ANTOINETTE ran a patchy heat. Antoinette pointed on the footscent of a bevy. Callie refused to back, drew in ahead, pointed, then went in and flushed. Next callie made a good point on a bevy. Antoinette made a point to which nothing was found, Callie backing promptly and prettily this time. She next made a barren point. Antoinette roaded to a flush on a bevy. In scrub oaks Antoinette made a good point on two birds. Next she flushed a bird, and next she pointed a bevy. Callie pointed well on a single. Up at 2:31. Neither beat out the ground with regularity or judgment.

MAID AND MISTY MORNING started at 2:41. Maid flushed several times in succession. Misty pointed a bevy and flushed a single, and it was said that she flushed a bevy in the early part of the heat. Their range was common place. Up at 3:08.

BERYL AND BERYL began at 3:15. Beryl made a point at the moment the bird flushed. Next she dropped to a point on a single. They were taken to new and better ground, fourteen minutes being thus occupied. They were ordered up at 4:10 without any further finding. Neither ranged more than middling.

BLUE RIDGE MARK AND SAN ANTONIO were cast off 4:18. San flushed an outlying bird of a bevy, and Mark in woods flushed a bird excusably. Mark made a point in woods; nothing found. A long search was without any find,

Up at 5:00. Though the dogs worked diligently they could not succeed in finding. Mark was the better ranger. This heat ended the day's work.

WEDNESDAY.

The weather was raw and cloudy. Snow squalls set in soon after the competition began, settling at last into a steady snow fall, which at last, after lunch, became so heavy that the competition was suspended and the party returned to town. The work was good considering the unfavorable conditions.

DAME DURDEN AND TOPAZ were cast off at 8:42. Topaz pointed a bevy and got another point on the scattered birds. Dame then began to score, she finding and pointing two beves and making three points on singles. Up at 9:10, with the heat in Dame's favor.

Beryl and Markell and Blue Ridge Mark and San Antonio were given another short trial without materially adding anything to their chances of a place in the competition.

LEONA AND THALIA were started at 9:56. Both ranged well, yet their work on birds were ordinary. Leona pointed rabbits and Thalia had a difficulty with a tame goose which was much to the bodily discomfort and peace of mind of the latter. Thalia next pointed a bevy quite nicely. Leona pointed to a flush of a single bird. Next she made a good point. The heat was an ordinary one.

Six were kept in the next series.

TOPSY'S ROD AND ALLENE were cast off at 10:59. Rod never ran better. He was more in his form of last fall than he has been since. He first pointed on the trail of a bevy, Allene backing. He moved on, and in locating he outclassed Allene in quickness and sharpness. On scattered birds he made four points in woods, also one point which had nothing to it, and he made one flush. Next he pointed a bevy, Allene backed. The heat ended at 11:22 with everything in Rod's favor.

DAME DURDEN AND BESSIE SHOUBE started at 11:26. Bessie pointed a bevy in a slack manner, she wiggling her tail while pointing. Next she got a point on a single in woods. Dame pointed a bevy in the open sedge and was backed. Up at 11:43. Bessie was the wider ranger in this heat. Neither worked up to the grade of their previous performances.

IGHTFIELD ROSALIE AND TOPAZ were started at 11:54. Rosalie flushed two birds of an outlying bevy, then pointed it. Sent on, she found and pointed another bevy. Her range was narrow, with a cast out now and then, but she was decidedly the superior in bird work. Up at 12:23.

Lunch was eaten in the woods in a snow storm.

ROSALIE AND BESSIE SHOUBE were started off at 1:12, and ran till 1:28. Rosalie pointed and Bessie backed. Nothing found. The snow storm had so thickened that work was suspended and the party went to town. The competition of the stake, however, was over.

The judges announced the winners soon after the return to town.

Topsy's Rod first; Allene second; third was divided between Ightfield Rosalie and Bessie Shoupe.

The All-Aged Pointer Stake.

There were eleven starters in this stake, as follows:

T. H. Gibb's b. & w. dog Lad's Rush (Lad of Rush—Devonshire Belle of the Ball), L. W. Blankenbaker, handler, with John E. Gill's l. & w. bitch Kent's Maid (King of Kent—Galena), Ed. Garr, handler.

T. T. Ashford's blk. & w. Kent Elgin (King of Kent—Vera Bang), J. M. Arent, handler, with Hempstead Farm's l. & w. dog Hempstead Duke (Duke of Hessen—Lass of Bow), A. Cameron, handler.

N. T. Harris's l. & w. Rod's Graphic (Lord Graphic—Winning Ways), L. W. Blankenbaker, handler, with E. O. Damon's l. & w. dog Strideaway (King of Kent—Pearl's Dot), Geo. E. Gray, handler.

OVERWEIGHT.

Jackson-Denmark Kennels' lem. & w. dog Lehman (Gordon—Faun), T. Bond, handler, with Hempstead Farm's b. & w. dog Sandford Druid (Econ Don—Sandford Quince), A. Cameron, handler.

Major J. R. Purcell's b. & w. bitch Lady Margaret (Dick Swiveler—Countess Bang), owner, handler, with R. L. Shannon's l. & w. bitch Mame S. (Brown Stout—Pearl's Pride), G. R. Howse, handler.

G. W. Amory's blk. & w. dog Mainstay (Mainspring—Barmad), a bye, T. W. Poindexter, handler.

This stake was for pointers which had never been first in an All-Aged Stake in any recognized field trial in America. The prizes were \$200 to first, \$175 to second and \$125 to third.

THURSDAY.

The morning was so unfavorable for the competition that a start was not made till afternoon. A light fall of snow covered the ground and the weather was cold and uncomfortable. A start was made after lunch. A cold, stiff, disagreeable wind blew from the northwest steadily during the afternoon. While the conditions seemed most unfavorable for clean work, they proved the contrary. Birds were found in sufficient numbers and were not wild as they commonly are after a sudden and severe change of weather.

LAD'S RUSH AND KENT'S MAID started at 1:18. Maid pointed a bevy in the open. On the scattered birds, Lad pointed a bird and Maid flushed some of the scattered birds. Lad pointed a bird in woods and was well backed. Maid roared to a point on a single, locating it nicely. Lad going

down wind flushed an outlying bird of a bevy. Moving on down wind he turned to a point on the rest of the birds and they flushed wild. Neither showed much range and they potted sometimes. Up at 1:47.

KENT ELGIN AND HEMPSTEAD DUKE were cast off at 1:55. Duke pointed in sedge grass and Kent coming in from another direction pointed independently. In locating to a find, Kent proved the better. He next pointed a single well. Going down wind, he flushed the rest of the bevy excusably. Duke had an opportunity to point it but did not do so. Kea made two points on singles. Both next pointed on foot scent apparently. Both ranged wide and fast, beating out a great deal of ground. Kent showing the best judgment and point work. Up at 2:23.

ROD'S GRAPHIC AND STRIDEAWAY began at 2:26. Graphic flushed a single and the rest of the bevy flushed wild. Strideaway pointed a bevy at the edge of woods. Graphic next pointed a single. Up at 3:01. Strideaway was the better, though the heat was but little above the ordinary. Each backed promptly and well.

LEHMAN AND SANFORD DRUID began at 3:04. Lehman found and pointed a bevy and was backed. Each got a point on scattered birds and each also got a point separately

PAPA WOULDN'T BUY ME A BOW-WOW.

on single birds. Druid ran without much style and was irregular in range. Lehman had the better of the heat. Up at 3:36.

MAME S. AND LADY MARGARET began at 3:48. Lady found and pointed a bevy nicely on a side hill in sedge. Mame made a couple of false points, Lady flushed one bird and pointed another, and Mame got a point on a single and one on a bevy. She ranged poorly and came back frequently from her range, which was not wide. The heat lasted 30m.

MAINSTAY had a bye and ran 30m., beginning at 4:15. No birds found. Range ordinary.

Six were kept in the next series.

FRIDAY.

The atmosphere had a bracing coolness in the morning, gradually growing warmer. The frozen ground was soon changed to mud by the warmth. Birds were found sufficiently numerous for field trial competition. The work of the day, save in a few heats, was commonplace.

LAD'S RUSH AND LADY MARGARET were cast off at 9:19. Lad pointed a bevy in the open and Lady backed. Each made game, but failed to locate. Lady pointed a bevy well in a plum thicket and was backed, and soon after starting on Lad pointed a bevy in the open and Lady pointed or backed, both dogs being quite close to the bevy. Lad next got a good point on a single bird, after which Lady pointed one well, then moved on to a flush. Lady was the better ranger, while Lad was a bit better in his point work. Up at 9:40.

KENT ELGIN AND STRIDEAWAY began at 9:45. Both ran to a point together by the edge of woods, and soon a bevy flushed some 60yds. away, the dogs pointing on the footscent or the birds running away from the point. Kent made three more good points on singles and one on a bird which he moved too close on and flushed. He also found skillfully and pointed a bevy in a plum thicket. Strideaway made a good point on a single and broke his back once in a deliberate manner. Kent refused once to back. He, however, was far ahead of his competitor and easily the best performer in the stake. Strideaway showed a tendency to wiggle his tail on point and did not go to his birds with his former dash. Kent was the better ranger. Up at 10:10.

HEMPSTEAD DUKE AND LEHMAN commenced at 10:12. Duke pointed a bevy and was backed. In searching for the scattered birds, Duke pointed a rabbit. Sent on, he soon found and pointed a bevy. Lehman ran without any spirit and had but a moderate range. Hempstead Duke made a good competition and could have made a better showing were he not sometimes encouraged to hold his points too long when he had not located precisely.

This concluded the competition in this stake. First Kent Elgin, second Strideaway, third was divided between Hempstead Duke, Lady Margaret and Lad's Rush.

Kent Elgin was easily the best competitor in the stake, and ran in a superior manner, though heat infrequent times was a bit inattentive to the gun. He was skillful in pointing both beves and single birds, and in range and speed he was superior and worked with excellent judgment.

Strideaway was not in his best form, and his work was sometimes marred by mistakes. He was lacking in the bold decisiveness and clear point work which he exhibited in his best competition.

Hempstead Duke ranged wide and fast and displayed earnest attention to bird finding, and he conducted his efforts with judgment. On birds, he was too painstaking, and while not in the least bit timid, he was over careful. Less coaching of him when on birds would be to his gain.

Lady Margaret ran a good race, she showing much skill in working on birds and in locating beves.

Lad's Rush ran a fair though commonplace race.

The All-Age Setter Stake.

The competition in this stake was begun immediately after the All-Age Pointer Stake was concluded. The prizes and conditions were the same as in that stake.

There were sixteen starters, drawn in the following order: Manchester Kennel Co.'s lem. & w. dog Gleam's Sport (Vanguard—Georgia Belle), A. P. Gilliam, handler, with Blue Ridge Kennels' b. w. & t. dog Dick Fox (Chance—Countess Rush), D. E. Rose, handler.

Avent & Thayer Kennels' b. w. & t. dog Count Gladstone (Count Noble—Miss Ruby), J. M. Arent, handler, with A. Smithuigh's b. w. & t. dog Spot Cash (Vanguard—Georgia Belle), Geo. E. Gray, handler.

R. M. Stephenson's blue belton dog Tennessee Rod (Rodrigo—Pet Gladstone), owner, handler, with Pierre Lorillard, Jr.'s, o. & w. bitch Miss Ruby (Gladstone's Boy—Ruby D.), C. Tucker, handler.

P. T. Madison's b. w. & t. dog Rod Field (Antonio—Nellie

Hope), J. Mayfield, handler, with Avent & Thayer Kennels' b. w. & t. dog Lochinvar (Chance—Bessie Avent), J. M. Arent, handler.

Avent & Thayer Kennels b. w. & t. dog Chevalier (Jean Val Jean—Lucy Avent), J. M. Arent, handler, with L. A. Rice's b. w. & t. dog Pembroke's Blue Grouse (Pembroke's Son—Sue of Hatchie), owner, handler.

Hempstead Farm's liv. & w. dog Bob Cooper (Roi d'Or—Miss Nellie Y.), A. Cameron, handler, with P. Lorillard Jr.'s liv. & w. bitch Antevolo (Count Noble—Trinkett II), C. Tucker, handler.

Pierre Lorillard Jr.'s b. w. & t. dog Eugene T. (Count Noble—Gladstone's Girl), C. Tucker, handler, with B. M. Stephenson's b. w. & t. dog Tennessee Axtel (Rodrigo—Pet Gladstone), owner, handler.

J. M. Freeman's b. w. & t. dog Dan Burgess (Dan Gladstone—Lily Burgess), J. Mayfield, handler, with Jackson Denmark Kennels' b. w. & t. bitch Lillian Russell (Philip Gladstone—Lou G.), T. Bond, handler.

DICK FOX AND GLEAM'S SPORT were called to start. Sport was plainly too ill to start, and on request of his handler the Board of Governors permitted his withdrawal. Dick was run alone, beginning at 10:54. His heat was rather indifferent so far as bird work is concerned, though in speed and range he was quite good. He found and pointed a bevy, dropped to a point on a single and flushed twice. He was run 30 minutes.

COUNT GLADSTONE AND SPOT CASH were cast off at 11:29. Count ranged wide and at high speed. He was lost for a while. When found he was pointing a bevy in open sedge in which he had dropped to his point. He made a good point on a single bird and a point to which there was nothing found. Spot made a good point on a bird. Count was the superior worker in every detail. Up at 11:54, and the party went to lunch.

TENNESSEE ROD AND MISS RUBY started at 12:46. The handlers rode during the heat. Tucker was suffering from symptoms of pneumonia. Miss Ruby beat out her ground with the better judgment, though both ranged wide and covered a lot of ground. Miss Ruby found and pointed a bevy and made one point and one flush on single birds. She also found a bevy which she drew too close to, and as she was about to point the bevy flushed. Rod made four points on singles and a good find and point on a bevy. He stopped to a flush on a single, and another bird was flushed ahead of him. Up at 1:17.

ROD FIELD AND LOCHINVAR started at 1:20. They ran an indifferent heat, the bird work being ragged. Lochinvar pointed a bevy. Rod was not near to back. They both made some points to which no birds could be produced. Rod pointed a single which flushed wild in woods. Avent called the judges' attention to Lochinvar pointing in a thicket. Before they could get near to see the bevy flushed. Rod made a point and after the dog had been sent on a bird was flushed close by. Neither dog took advantage of his opportunities. Up at 1:52.

CHEVALIER AND PEMBROKE'S BLUE GROUSE started at 1:56. The heat was a poor one, the point work being faulty and many good opportunities to display skill in pointing were lost. Chevalier was decidedly superior in every way. Grouse made a poor showing.

ANTEVOLO AND BOB COOPER had abundance of opportunities in the 31 minutes in which they ran, commencing at 2:25. Antevolo, though her point work was not free from flushes, far surpassed her competitor. She took a long cast, found and pointed a bevy. On scattered birds she made three points and three flushes, one down wind excusably, and made a point also on a bevy. She was the wider ranger. Bob made a point on footscent. He did not take advantage of the opportunities offered.

FIRST IN PUPPY CLASS.

TENNESSEE AXTEL AND EUGENE T. started to run a heat, but soon after starting the latter was lost and was not found till after the heat had ended, when he, it was claimed, was found on point on a bevy not far from where he was first missed. Axtel ran alone. He pointed, then nosed up the bird. He next pointed a bevy, which he had not accurately located, it flushing some distance from him. He made two more points on singles. He ranged fairly well. He was started at 3:40 and ran 35 minutes.

LILLIAN RUSSELL AND DAN BURGESS began at 3:50. Lill pointed a bevy and Dan refused to back. Lill had been holding her point some time. Sent on to locate several were flushed by the dogs and handlers in the heavy sedge grass, the birds apparently being scattered about feeding. Dan got a point on a single. Lill was the better ranger and worker. Up at 4:25.

This ended the day's competition.

Eight dogs were retained in the second series.

SATURDAY.

The weather again turned most unfavorable for the competition. A strong southeast wind prevailed during the day, and the sky was heavily overcast with clouds. There was a raw dampness in the atmosphere which made a discomfort of watching the trials. Birds were wild and consequently difficult to work. Nevertheless, some excellent exhibitions of skillful ranging, finding and pointing were witnessed. Rain fell during the latter part of the competition.

COUNT GLADSTONE AND ANTEVOLO began the work at 8:32. Count was superior in every way to his competitor, he ranging better and with more judgment, besides exhibiting more

skill in his bird work. He found and pointed two beavies nicely and made a good point on a single bird. He made one point and nothing was found. Antevolo pointed inaccurately twice and pointed a single and flushed one in woods. Down 28m.

TENNESSEE ROD AND LILLIAN RUSSELL were cast off at 9:02. On the scattered birds of a bevy flushed by spectators Rod flushed a single and Lill roared to a point on scattered birds. They were then taken to new grounds. Rod pointed and Lill backed well. They both roared here and there and pointed in the open. Turning into the woods Lill pointed the bevy. Both were steady to shot. Up at 9:40. Both ranged well and made a creditable competition, though their work did not class with that of Count Gladstone, Eugene T. and some others.

MISS RUBY AND DAN BURGESS began at 9:56. Dan pointed a bevy and Miss Ruby backed or pointed. From the positions of the dogs it seemed to be Miss's point, but Dan was entitled to it, as he made it first. Miss next pointed a bevy in a cornfield, and there being no cover the birds soon flushed wild. On a side hill in woods Miss made a staunch point and nothing was found. Dan ran far the better heat.

CHEVALIER AND EUGENE T. were cast off at 10:50. Chevalier pointed a bevy well, and Eugene going in pointed the same bevy. On single birds, Chevalier pointed two, Eugene one. The latter next made a good point on a bevy in woods and another in open brush. He was better on his birds than Chevalier, the latter needing a toot of the whistle to test his accuracy. Chevalier flushed a bevy down wind. Eugene led in range, Chevalier sometimes tagging. My opinion was that Eugene was the better, though he is uncertain in backing.

The Derby Absolute was next started, an account of which is hereinafter.

CHEVALIER AND DAN BURGESS were cast off at 12:00, and ran 23 minutes. Each, quite a distance apart, made a point on a bevy. Chevalier got in among the scattered birds and made four points in rapid succession. Dan at the same time got in a part where there were a few crows, which were disturbed, and moving about flushed several birds. Dan fell off somewhat in range.

The party then went to lunch.

COUNT GLADSTONE AND CHEVALIER ran a heat which lasted four minutes, beginning at 1:33. It was ample time for Count to show his superiority. He pointed a bevy, and beat his competitor in pace, range and judgment.

MISS RUBY ran alone, from 1:38 to 1:52. She made a sad inroad into her chances by roading up a single bird in open sedge with the wind in her favor and chasing it to her satisfaction. She had narrowed her range also.

The judges announced the winners as follows: First, Count Gladstone; second, Chevalier; third, Dan Burgess.

#### The All-Age Stake Absolute.

COUNT GLADSTONE AND KENT ELGIN beginning at 2:02, ran a heat well worth seeing. It was a very superior exhibition of good field trial work. Both dogs ranged wide and fast, a bit too wide at times. They conducted their search with kill. The competition was very close, and while the setter beat the pointer he had nothing to spare, nor did he have any time to waste in doing it. Kent was first to find, he pointing a bevy well and Count backed. The next bevy was found by Count in open sedge. At that time Count was lost in woods. He was found on a point, but moved on before his handler reached him. Count pointed a rabbit. He next pointed and nothing was found. Count backed nicely. Kent took a long cast to the rear and pointed, holding the point staunchly, but moved on before his handler reached him. Count found and pointed a bevy well in open sedge and was backed. Next he pointed a single in woods. Each made a point, apparently on footscents. Another point on a single bird for Count and the heat ended. Time 2:50. Count was the winner.

#### The Derby Absolute.

STRIDEAWAY AND TOPSY'S ROD were started next after the heat between Chevalier and Eugene T. They began at 11:40 and ran 10 minutes. Strideaway pointed a single bird and Topsy's Rod made a false point. Before starting Mr. Avert explained to the judges that his dogs had been let out on the previous night from the room in which they were confined; that some one had fed Topsy's Rod a heavy meal, probably with a view to his defeat. The appearance of the dog fully confirmed the statement that he was heavily over-fed. Soon after starting he reached water and drank eagerly. Sent on he ran but a short distance when he again drank. In short, he drank to his utmost capacity, which denoted that his food was very salty as well as plentiful. He was so laden that his range was shortened, his stride short and heavy and he worked reluctantly, though when ordered he would start off with spirit and his dog.

Mr. Avert took the dog up at the end of ten minutes, and entered a protest against further running of Topsy's Rod in his then condition on the grounds that he had been tampered with, by overfeeding him, to insure his defeat in the Derby. That it was not by any negligence on his part as the dog was securely housed, and to reach him two doors had to be opened. That men in an adjoining room heard the entrance of persons unknown, into the room where the dogs were housed. Soon after the dogs were ordered up, Topsy's Rod vomited a large quantity of fat pork, presumably salty.

The board of governors immediately met to consider the protest. As the matter was complicated and it was useless to continue the heat, as Rod was already beaten, the board decided to postpone the heat till a later period. It was so announced, which was unfortunate, as it would have been better to announce that the matter was for further consideration. There was a palpable injustice in running Rod further, as he was unfit to run, as there was a suspicion of trickery, and as there was a protest which needed passing upon before the running was continued.

In the evening the judges decided the heat in favor of Strideaway. This made rather an awkward complication, since the announcement was that the heat was postponed. Under the conditions the competition was purely technical, as Rod was incapacitated. There was the honor of winning over him under the circumstances. Fair play and a postponement to hear all the evidence to the end that the guilt be fixed on the guilty parties if possible, if such there were, or at least to show that it was done by persons unknown, would seem to be equitable and just. On the other hand, the judges could not remain over till Monday. Mr. Titus was suffering from a severe cold and really was not prudent in exposing himself on Saturday. Final action on the protest was deferred to the club's meeting at Chicago, during the Mascoutah Club's show.

#### S. F. T. Club's Meeting.

A KIND of informal meeting of the Southern Field Trials Club was held at New Albany, Miss., on Friday night of the week of the late field trials of that club. As no legal presiding officer was present it is doubtful whether the action of the meeting is binding on the club.

No changes were made in the list of officers, except that Dr. M. F. Rogers, of New Albany, Miss., was elected a vice-president in place of Mr. J. Shelley Hudson. There was a balance of \$600 in the treasury after paying all the expenses of the trials.

There are several members who earnestly desire some important reformatory changes in the club's affairs and policy which, if not made, may seriously impair the chances of the club's holding another field trial, as without such changes all the members may not support it.

The club is an important one and does a great deal of good in behalf of canine interests. It would be a great loss were

it to disorganize. It is to be hoped that all will agree to heed the voice of progress. Much complaint, too, was made on account of the delays and neglect of the secretary in conducting the correspondence and managing its affairs, and particularly in not announcing the names of the judges until after the entries are closed. This is a just grievance. The competitors are in all fairness entitled to know who will judge the competition.

It is a mistake to suppose that more entries will result from withholding the names of the judges from the public. It was said that entries were not filled at the Southern trials for the reason that the judges were not known to the owner. It is said that the club has secured a lease of its grounds for a term of years.

B. WATERS.

#### KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

##### NAMES CLAIMED.

Prepared Blanks sent free on application.

Ned Gladstone. By C. H. Dearborne, Dover, N. H., for white, chestnut and tan English setter dog, whelped Dec. 10, 1892, by Rod's Whim (Roderigo—Florence Gladstone) out of Mary Murnan (Count Noble—Flounce).

Topsy's. By F. C. Snow, Dover, N. H., for white and black English setter bitch, whelped April 25, 1888, by Don Juan II. (Dash III.—Katydid) out of Grace L. (Donzel—).  
Lawn Chieftain. By Lawn Gordon Setter Kennels, Chicago Lawn, Ill., for black English setter dog, whelped Sept. 10, 1892, by Judge S. (Ranger R.—Diana) out of Montrose (Malcolm's Whip—Malcolm's Countess of Devonshire II.).

Rose Lawn Kennels. By W. H. Fendrich, Columbia, for his kennels of fox-terriers.

Ruby Kennels. By A. H. Gilmore, Worcester, Mass., for his kennels of King Charles, Blenheim and ruby spaniels.

##### BRED.

Prepared Blanks sent free on application.

My Queen—Streatham Monarch. H. M. Hoves's (Boston, Mass.) bull-terrier bitch My Queen to John Moorhead, Jr.'s Streatham Monarch (Streatham Flyer—Trentham Baroness), Jan. 13.

Belle—Starden's Prince. C. A. Bowman's (Elmira, N. Y.) fox-terrier bitch Belle to Starden's Prince, Jan. 30.

Lady Dinah—Streatham Monarch. J. C. Mahler's (Allegheny City, Pa.) bull-terrier bitch Lady Dinah to John Moorhead, Jr.'s Streatham Monarch (Streatham Flyer—Trentham Baroness), Jan. 10.

Snoopee—Duke of Alma. E. J. Hearle's (New York City) rough St. Bernard bitch Snoopee (Zoufrou—Corra) to his Duke of Alma (champion Victor Joseph—Princess), Jan. 24.

Nan—Reginald H. Lawn Gordon Setter Kennels (Chicago Lawn, Ill.) Gordon setter bitch Nan (champion Argus—Laura) to their Reginald H. (Leatherstocking—Smith's Rhoda), Jan. 28.

Dot II.—Metchley Wonder, Jr. Maple Grove Kennels (Logan, O.) collie bitch Dot II. (Christopher—Active) to their Metchley Wonder, Jr. (Metchley Wonder—Barby Rose), Dec. 22.

##### WHELPS.

Prepared Blanks sent free on application.

Molly Glendyne II. Glendyne Kennels (Bristol, R. I.) Irish setter bitch Molly Glendyne II. (Glen Jarvis—Molly Glendyne), Dec. 23, nine (eight dogs), by their Glen Jarvis (champion Elcho, Jr.—Maid).  
Krimena. Terra Cotta Kennels (Toronto, Can.) Russian wolfhound bitch Krimena (Philos IX.—Modjeska), Nov. 8, nine (four dogs), by H. W. Huntington's Argoss.

Belle Loraine. W. L. Alexander's (Canton, O.) Gordon setter bitch Belle Loraine (Pilot Loraine—Sabina), Jan. 20, ten (six dogs), by Reginald H. out of Nan, by Lawn Gordon Setter Kennels, Chicago Lawn, Ill., to Harry Fulton, same place.

Seacroft Boaster. W. H. Fendrich's (Columbia, Pa.) fox-terrier bitch Seacroft Boaster, Dec. 11, five (three dogs), by Hillside Kennels' Hillside Rascal.

##### SALES.

Prepared Blanks sent free on application.

Maple Grove Lady. Sable and white collie bitch, whelped Sept. 16, 1892, by Metchley Wonder, Jr. out of Flossie May, by Maple Grove Kennels, Logan, O., to S. C. Madden, Denver, Col.

Mascot Bernie. Orange and white St. Bernard bitch, whelped March 11, 1890, by Sargano out of Floss, by W. S. Diffenderfer, Baltimore, Md., to Woodin & Hoyt, Berwick, Pa.

Leola. White bull-terrier bitch, whelped July 13, 1891, by Boaz out of Elvir II., by J. C. Mahler, Pittsburgh, Pa., to W. J. Higginson, Rochester, N. Y.

Starden's Prince. Fox-terrier dog, whelped May 18, 1893, by Starden's King out of Lady Mixture, by Hillside Kennels, Lancaster, Mass., to C. A. Bowman, Elmira, N. Y.

Rush. Black and tan Gordon setter dog, whelped Aug. 16, 1893, by Reginald H. out of Nan, by Lawn Gordon Setter Kennels, Chicago Lawn, Ill., to Harry Fulton, same place.

Neva II. Black and tan Gordon setter bitch, whelped Aug. 16, 1893, by Reginald H. out of Nan, by Lawn Gordon Setter Kennels, Chicago Lawn, Ill., to J. W. Dubsky, Chicago, Ill.

Norine. Black and tan Gordon setter bitch, whelped Aug. 16, 1893, by Reginald H. out of Nan, by Lawn Gordon Setter Kennels, Chicago Lawn, Ill., to J. W. Shaffer, Clarion, Pa.

Rebus and Norma. Black and tan Gordon setter dog and bitch, whelped Aug. 16, 1893, by Reginald H. out of Nan, by Lawn Gordon Setter Kennels, Chicago Lawn, Ill., to Highland Kennels, Milwaukee, Wis.

#### ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

J. C. C. Wilton, Me.—Mr. Hammond's instructions and the reasons he gives for chaining the dogs two or three times a day are very plain and simple. You can chain your dog in the shop, but at first for a little while only at a time, taking care not to release him while restive or when showing a disposition to be released. Calm him down by petting, and when he is perfectly calm release him at your pleasure, not his. The reason for familiarizing the puppy with chickens are, first, that it gives the puppy an opportunity to show pointing instincts, and the author's directions in this case are plain enough; secondly, that the dog may learn that poultry is not his game and to break him of any propensity to chase and kill them—vide the remarks about the game here. The dead grouse or any other wild game bird does not enter into this consideration at all, and on no account do you propose. The remarks about rabbits, which Mr. Hammond makes on page 33 will show you his meaning still better. We would attach no importance to the dog placing his tail between his legs; when he gets the real scent of the game bird he may be stylish enough in his point. Take notice that the directions in "Training vs. Breaking" very clearly state that the dog must not be allowed to eat the piece of meat he points, even after he has taken it in his mouth; that it must be taken away from him and a piece of liver or something be given him entirely different from the large piece. Read pages 27-28 very carefully and you will be sure to grasp the author's meaning.

L. I. Jersey City.—I. Hylas of Naso (A. K. C. S. B. 15,474), by Nick of Naso (5,533, Vol. IV.), out of Belladonna (7,947, Vol. V.), by Hatha way's Shot out of Fan, by champion Sensation out of Phoenix bitch; Shot by West's Bob out of Miles Johnson's bitch; Nick of Naso by Naso II. out of Pettig, by Tory out of Juno; Naso II. by Lord's Naso out of Miranda II. 2. Winslow's Bang (A. K. C. S. B. 7,028), by Price's Bang out of Satter's Bang, by Francis's Bang out of his Bang, Satcho by Brocton's Bounce out of Francis's Bang; Price's Bang by Colman's Bang out of Price's Vesta, by Brocton's Bounce out of Francis's Bang; Bang by Whitehouse's Hamlet out of Venus I. As Jessica is not registered we cannot help you.

A. C. New York City.—Your inquiry for such a combination is difficult to answer. We should say a Clumber spaniel would do well as a watchdog and hunting dog on land and water. Without the water requirement a pointer or English setter would do. Consult our advertising columns.

Doc, Mount Pleasant, Mich.—Flash and Whirlwind not registered. Ranger II. (A. K. C. S. B. 12,653), by Range out of Wonder, by Roll out of Kit; Ranger by Eunice II. out of Judy. Princess Belle (A. K. C. S. B. 430), by Pilkington's Rufus out of Rose (500).

M. S. Germantown, Pa.—We do not know of a trainer living near Philadelphia. From the number of inquiries received we should say it would be well for such a trainer to make his whereabouts known through this journal.

E. E. E. Duck Lake, Mich.—Will you kindly state the quickest and surest way of ridding a dog of lice? Ans. Dust the dog well with Persian insect powder.

## Hunting and Coursing.

### Beagle Challenge.

Editor Forest and Stream:

In recent issues of your paper an advertisement has appeared, "Having decidedly the best string of stud beagles in America," naming "Lee II., Wanderer, Boston Buck and Pade" as such stud dogs. Philadelphia show occurs March 27-30 and the judges are not yet known. I hereby challenge Mr. Pottinger Dorsey to show the above five dogs against five dogs that I shall enter at Philadelphia for \$200 to \$500 a side, best kennel five stud beagles to be decided by whoever judges beagles at that show. Every dog that I shall show has been my property for over nine months. This challenge to be accepted by March 5 and \$50 forfeit deposited on that date with FOREST AND STREAM. Balance to be deposited with FOREST AND STREAM on or before March 25. This challenge is open to any other party—dogs to be owned by one party or kennel previous to date of this challenge.

C. S. WIXOM.

COVERT, N. Y., Feb. 15.

### Where Foxes Abound.

CAZENOVIA, N. Y., Dec. 23.—Grouse shooting here this fall has not been quite equal to the average season, but never in the remembrance of the oldest sportsmen has the fox been so conspicuous as this year. The fox hunters arrived in October and have kept it up ever since, and still their name is legion. It is owing to these same foxes that our grouse grow scarce, and all unite in killing them. We have had as many as four going at once. Add to the pleasure of seeing four at a time the music of eight or ten hounds and you have something long to remember. The hunters no longer have to joke each other about not staying at the butternut tree or the gap in Jap Farnabin's fence, or at that pair of bars, or in that old stump lot where the two rail fences come together in the shape of a V, and losing a shot, for some one is sure to kill one before the sun sinks to rest these short winter days; and once three brushes were swung in the air and the "hoop-hoop" given as we crossed the village green now covered with snow. Henry Y. Mann killed the most perfect dark red and largest fox shot here in twenty-five years.

WILL H. CRITTENDEN.

### Fox Hunting in Connecticut.

The Hartford Fox Club has been busy this season, and some capital sport has been enjoyed by the hardy sportsmen. The score for the season is: J. C. Capen 5, J. G. Lane 4, Geo. Denning 2, C. C. Goodrich, J. O. Enders and Geo. Darling 1 each. The country hunted over by the club is on Talcott and Cedar mountains, and as far south as the Farmington road. A hunt held last week resulted very disastrously to two of their best dogs, owned by Mr. Lane. The dogs, after carrying the fox along at a hot pace, were led across the river on the ice into Glastonbury, then back again, striking the railroad track toward Rocky Hill. Here three of the hounds were either run into or run down by a train. One was decapitated, while it is doubtful if the other injured will ever recover, the third escaped injury. Mr. Lane was apprised of the disastrous termination of the chase by two overland travelers who were on their way to Middletown. The injured dog they had covered up, all but its head, with leaves and snow, and it remained in that position for nearly two days before Mr. Lane received news of the whereabouts of the dogs. Driver was killed outright, while Gyp, the injured one, is being carefully cared for at Mr. Lane's house, but her days of usefulness are nearly over, as she is badly crippled. This leaves the club with only four or five actually serviceable dogs.

### The Foxhound Standard.

Editor Forest and Stream:

You invite criticism on the standard, as outlined by the Brunswick Fur Club. One very important point has, in our judgment, been overlooked, and that is the voice. It may not make much difference in fur hunting where but a few hounds are run, but in fox hunting where the object is sport alone, and the hounds are followed by riders, the voice is an important factor and should be counted in the scale of points. Within a radius of five miles of where I write there are seven packs of hounds kept, varying in number from ten to thirty-five, and probably averaging 20 to the kennel. These are kept and hunted entirely for sport, being followed always more or less closely by the mounted hunters, and fully one-half of the enjoyment of the hunt is in the music of the hounds. This should be deep, full, and sonorous,

An hundred dogs bayed deep and strong,  
"Clattered an hundred steeds along."

The short "yep, yep, yep" betrays the plebeian blood, as surely as does the squealing voice that of the beagle cross, and both are usually found in connection with a short ear. As to colors, the black and tans have many friends, who claim with some justice, better feet, and less liability to skin diseases. But the tricolors have undoubtedly the call just now.

WEST CHESTER, Pa.

MR. BRADFORD S. TURPIN, secretary of the Brunswick Fur Club, will be pleased to forward copies of the standard for judging American foxhounds proposed, by that club, to all who desire it.

### Cooing in Hector, 1893.

Editor Forest and Stream:

I hardly know where to begin, whether to relate one night's experience or to take them all as one. However, one night in the month of October, when a full moon was shining resplendent, shaded only by an occasional puffy cloud, we congregated at 8:30 P. M. at a rendezvous. Nearly every one has a lantern filled and trimmed, a most important part of our "duffle," as the moon is liable to go out before we reach the much-coveted coon tree and will be wanted to light our path in the deep ravines that we are apt to travel through, for coons have no liking for smooth paths or easy grades, but rather are inclined to seek the most impenetrable jungles, and more especially when pursued by Tang and Dodger.

Upon arriving at a cornfield adjacent to a large stretch of timber the dogs are cast off. "Fill your pipes and let them hunt," Jim has scarcely finished saying before the deep baying of Tang, closely followed by Dodger, tells us that "Mr. Coon" is up and off. In less time than it takes to write it they are "straight" and are leading for the woods. Think what a scramble ensues after the coon, or rather dogs, who are giving tongue finely. Occasionally some one stubs his toe on a pumpkin and a heavy fall follows. Do we stop to see if he is hurt? Well, no! On is the word and, as in all races, some are left behind in the scramble to be in at the death. In "cooning" it often happens that the coon is caught before treeing, but in case he gets to a tree they who were at first so far behind now have an equal chance to see the fun, and this they think it is as they look up a five-foot elm or oak. When all have arrived then you hear various directions for cuttings; one says he leans to the south, another north, and so it goes. But when all are done Fred, with his double-bitted ax, "sights up" the trunk and soon a chip is started; sawing is in order, and after various

directions as to where to start the saw, where to build the fire and where to hold the dogs, all are in their respective stations and places, and from chaos comes harmony.

Relays at the saw and axe is the rule, and willing hands soon have the tree nearly down, then Capt. Jim gives the order to stop fooling and look out for yourselves and dogs. Soon the tree starts, slowly at first, as if loath to leave the roots and stump that have held it upright through so many gales and tempests, but soon with increasing speed the mighty monarch of the forest falls. The instant the tree strikes the dogs are let go and they soon locate "Mr. Coon" in a hole, and give tongue angrily. Shouts of glee, songs and jokes are exchanged, the man at the stump holds a clog and sings out, "Sound at the butt!" No guard being needed there the coon is soon in the top; a sapling is run in to measure the extent of the cavity, and that having been ascertained a hole is cut large enough to extract his or her "coonship." We know it is an old one by the distance run, and numerous other tricks—an open book to old "cooners." When sufficiently large a hole is opened, we let Tang in, a rumpus ensues within, then a mixture of dog and coon comes out, sometimes coon on top, but not for long, as Dodger soon gets in his fine work. "He's got Tang by the ear!" "Stop him and sic 'em!" are cries that contribute to the melee. But with the tenacity of a bull-terrier and with needle-like teeth the coon is a foeman worthy their steel, but at last fatigued by useless fighting with superior numbers, he is dead. Perhaps we get three or more coons, and when this is the case they are despatched with clubs, for to allow two hounds to repeat such work for long would disable them for two or three days to come, and that could not be tolerated, as we go nearly every good night in the season.

There is something weird and startling in the baying of hounds in the dark woods at night when all else is still except perhaps the hoot of the owl or the sounds of purling brooks, and this to the observant eye and thoughtful mind makes one think of the happy hunting grounds from whose bonna no traveler returns. HECTOR.

.....

**Coursing Notes from California.**  
[By a Special Correspondent.]

SAN FRANCISCO, Cal., Feb. 6.—Coursing during the last two months has been pretty lively in many parts of this State, such as Los Angeles, San Jose, Sacramento and of course in the vicinity of San Francisco. There is scarcely a week that the leashmen are not out with their dogs running for pleasure or in small matches, and now from the continued meetings and the many opportunities afforded the owners of greyhounds of turning them to some account they have risen fully 35 or 40 per cent. in value. Indeed well bred hounds are scarcely to be purchased just now in this State. An acquaintance of mine offered \$100 for an imported bitch the other day that has as yet done nothing, but the offer was indignantly refused. Mr. T. J. Cronin, too, one of our principal leashmen, also refused \$100 for one of his dogs this week, and Dominick Shannon, president of the San Francisco Coursing Club, refused \$150 for his young dog out of Verdure Clad, by El Rey. Mr. Shannon would not listen to anything short of \$200.

On Sunday last there was a very fine meeting in Newark Park in which 32 of the best dogs in the State took part. Indeed, only two of the racks were absent, viz., Skyrrocket and Little Banshee. The day was very fine—one of California's beautiful days—and the grounds and hares were all that could be desired. The occasion of the meet was the complimentary benefit given by the San Francisco Club to the veteran coursing man, Mr. J. R. Dickson. All the lovers of the leash in the city to the number of 200 and many from the surrounding country were in attendance, and a more enjoyable day has seldom been seen in Newark Park. Of course California's judge was in the saddle, and certain it is that his great powers were taxed to the very utmost. The dogs and hares were flyers, and were it not that he was splendidly mounted he must have had many a stern chase during the day. The dogs showed extraordinary speed, and especially after the first round they were singularly well matched, making it very difficult to separate them in many of the courses, and consequently in five or six of the trials they were ordered again to slips, and in the case of one pair—Dottie Dimple and Wee Lassie—they were sent up three times before the flag flew and then Dottie only got the verdict by two points. The crowd on the stand went frantic with delight, and Mr. Grace was cheered again and again as he rode by the stand. Slipper Wren, too, was in great form and delivered his dogs in admirable style, causing the Australian sportsman, R. E. de B. Lopez, to say that he was unquestionably the most perfect slipper he ever saw.

The many undecideds, however, caused the stake to be ultimately divided, as it could not be finished before train time, between four of the finest greyhounds possibly in the stake, and fit to go to slips against a similar number in any country, viz., M. Tierman's Long John, B. Doherty's Daisy, J. Cranston's Marvelous and T. J. Cronin's Dottie Dimple.

The following is the summary of the course after the first round: Second round—Long John beat Garryowen, Dashaway beat Moondyne, Tom Hayes beat Pennyroyal, Daisy beat Mary Ann, Jennie G. beat Regent, Marvelous beat Exlex, Wee Lassie beat Maggie M., Dottie Dimple beat White Cloud. Third round—Long John beat Dashaway, Daisy beat Tom Hayes, Marvelous beat Jennie G., Dottie Dimple beat Wee Lassie. The stake was then divided between Long John, Daisy, Marvelous and Dottie Dimple—\$32 each.

During the luncheon hour a match for \$10 a side was run between M. Doherty's sapling Mand S. (Royal Crest—Daisy) and J. McBride's puppy Tempest (Play Boy—Rockland Maid).

On the dogs being slipped Maud S. shot out to the front in dashing style, and after a good run got the first turn, letting in Tempest for a turn and a kill. They were again put in slips and a rattling hare jumped up. Maud went off with a dash and never allowed her opponent within a length until she got the turn, came round like a top and got the second when Tempest made play for two points; here again Maud cut in for two or three good points more when puss broke away again and both dogs had a close run, Maud having the best of it and drove the hare around to Tempest, who rushed in and killed, leaving Maud S. a good winner. The course was a fine one, especially for such young dogs, Maud wanting four days of being 12 mos. old, while Tempest has just turned her 18th month. The sire of Maud S. is Royal Crest, owned by J. Herbert Watson, of Brooklyn, N. Y., and is by the celebrated Greentick, the sire of the renowned Fullerton; Daisy, the dam of Maud S. is one of the four that divided the 32-dog stake during the same day. This shows that Mr. Watson's dog is likely to become one of the great sires of the country. Daisy too is grandly bred, being by Midnight (sire of the great Skyrrocket) out of Old Daisy.

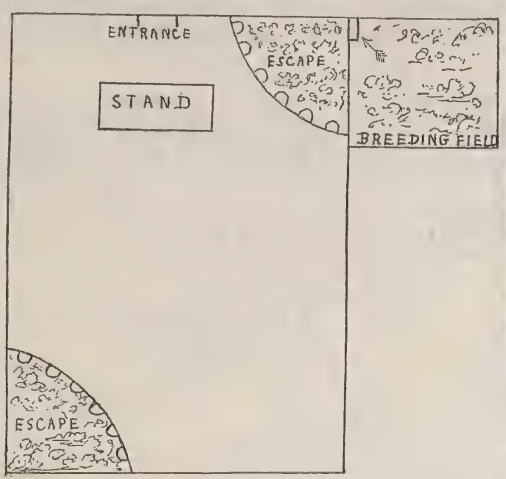

It is possible that many of your readers would like to know something about Newark Park and how it is worked. Well, the running or coursing field is 720 yds. in length by 436 in width, surrounded by a close fence some 8 ft. high, and is something of this shape:

The hares are caught in various parts of the State, but principally in the San Joaquin Valley, where they are to be found in thousands. The trappers catch them with nets, put them in crates that are specially made for the purpose, about 6 ft. x 4 ft., and divided into small compartments just big enough to allow a hare to sit in, and not more than 8 or 10 in. in height, for if the hares had room to jump or turn themselves around, they would kill themselves against the bars of the case or cage. They are then sent by rail to Newark, and about thirty or forty are placed in the running fields and the surplus are put in the smaller or breeding fields attached to

the main grounds. In a few days they settle down and in a very short time they find the escapes out, and when pressed by the dogs during the coursing, many of them save their lives by getting into these havens of refuge.

It has been found from experience that it is much better to allow the hares to be at large in the fields than to run them from shoots, as is done in England. When there are not too many of them in the same field they lay far apart, and when scared from their lairs they have much more life and dash in them than if run from a shoot; in fact, they feel as it were quite at home—something like what they do on their native plains. It is astonishing to see how quiet they remain on coursing days, frequently one could walk over them before they would jump up—so it is seldom that a dog gets a second hare in any of our meetings; at all events, there is not half the danger of getting a second hare as there is when coursing in the open plain. When all the hares in the running field are killed off or gone into the escapes we turn fresh ones out of the breeding field, as it is called, and continue the coursing until the stake is finished. For every good and healthy hare supplied by the catchers the club pays \$1, but the freight is paid by the catchers.

The hares are brought to the field generally about fifteen or twenty days before the coursing so as to give them time to rest and find out the places of safety in the park to

which they can retreat when pressed by the hounds. There is always sufficient feed for them in the grounds during the coursing season, which lasts in Newark, generally speaking, from December till the middle of May, but after that the ground gets too dry and hard for dogs to run on.

The expenses in running the park are considerable, especially from the loss of hares, as many of them after being placed in the grounds get killed in various ways, and this is made up by the sale of pools, rebates from the railway company and the gate charges—twenty-five cents. Newark is about thirty miles from the city and the round trip by rail is only \$1, on which the railway company allows a rebate to the club of twenty-five per cent. The rent of the park per annum is \$100.

.....

**Deer Hunting in Louisiana.**  
Editor Forest and Stream:

I thought I would write you a short account of our hunt the week before Christmas. Some of my friends from Mississippi were over for a few days' hunt, and we hunted from Wednesday until the following Monday and killed 10 deer.

I notice a hunt that took place in Virginia, but our dogs must be faster or our deer slower, for we can run a deer down and catch it in less time than it took the Virginia hunters to catch theirs.

I only wish I were so placed that I could send you a photograph of some of our best dogs; but as we live so far from any city, it is a matter of impossibility. I often notice photographs in your paper of noted dogs, but I do not think they compare with our dogs. I refer to the hounds. Our dogs are trained so that they will not stop at anything. They sometimes swim the Mississippi River and bring the deer back. I wish you a happy New Year. D. MUIR.

POINT PLEASANT, La., Jan. 18.

.....

**HUNTING AND COURSING NOTES.**

Admiral Jouett, president of the National Fox Hunters' Association, has appointed Messrs. Roger Williams, W. S. Walker, F. G. Fagan, W. C. Goodman, W. Wade and Dr. A. C. Heffenger a committee on organization. The duties of the committee will be to draft a constitution and by-laws, running rules and a foxhound standard. Mr. Williams is chairman.

.....

The Merced coursing meeting, which was to have taken place Feb. 23, has been postponed till fall.

.....

A jack has been procured and a little coursing match will take place on Long Island, this afternoon (Feb. 24), between Mr. Watson's Royal Crest and a bitch that Mr. Raper sent over, now owned by Mr. Huntington.

her crew and ballast. As originally discussed by the *Field* the question was stated within these narrow limits, which, however, covered the case thoroughly. After the correctness of its first figures were disputed by us, the *Field* began to introduce new and irrelevant issues, the general stability of a vessel as affected by change of ballast, and the effects of ballast placed under the keel at extreme depths, even to that of 18 ft. The sole object of this course seems to be to so confuse the reader as to disguise the true question and conceal its own blunders; a course unworthy of the high reputation of the *Field* as a yachting journal. We have no fear that our readers will misunderstand our motives for avoiding the persona and offensive shape which one side of the controversy has assumed and for adhering closely to the technical points of the original question—the value of Vigilant's large crew as ballast compared with lead stowed as it must have been had her crew been limited by a decision of the committee.

The Brazilian insurgents have unwittingly placed American yachtsmen under obligations by indirectly removing two of the alleged fast steam yachts and putting a stop, for a time, to newspaper racing and fake trials. No doubt the spring will bring a renewal of the wild talk and reckless challenges with the usual results, but for the present steam yacht racing is not heard of. We would not connect the American Y. C. with the individual owners who have done so much to bring discredit to this branch of sport, as the club has for years made an honest effort for its encouragement; but we doubt very much whether the club will be able to arrange a race, as now proposed, for its valuable cup. There is, as the club has found by experience, one insuperable obstacle to the general racing of steam yachts. The speed over a measured course, after expensive preparation, and under the most favorable conditions, is actually less than most owners claim as practicable cruising speed of their yachts. The owner who modestly claims 17 knots, not miles, in running about the Sound, is not going to risk an official record of 15 to 16 knots from Larchmont to New London.

ALL things considered, the prospects of racing in British waters are comparatively good. Of course nobody has ordered a 90-footer or anything nearly as large, but what is really much more to the purpose, a strong 30-rating class is now under way—two Fife boats, one Watson boat and one by C. E. Nicholson, designer of Vigornia, the unsuccessful 20 of last year. With these four, and possibly Dragon III. and Zinita of last year, the class is assured, and it is most probable that this fact will lead to other new boats. Thanks to Mr. Henry Allan's order for a Herreshoff 10 later, that class is also building up; and with two live classes a certain amount of sport is provided for. In the largest class the racing is likely to be confined solely to last year's craft—Britannia, Valkyrie and Satanita, Calluna's future being still in doubt. The 40-rating class is likely to be weak. Lais has been sold to a German yachtsman, and but one new boat is building, designed by Watson for Admiral Montague.

THE prospects on this side are by no means encouraging, and from present indications we shall have no racing at all through the season. The New York cruise will of course bring out a large fleet and set most of them racing for a week or ten days, but as for sustained class racing throughout the season, none is likely to be seen. The fate of the large class is uncertain, but it is quite possible that Navahoe alone may fit out; and at the best only Jubilee and Vigilant are likely to join her, as the Colonia syndicate will not remodel or race her. Gen. Paine has lately stated that he had no plans for the season, and would probably not race Jubilee, and thus far Vigilant, is still in the hands of the syndicate, who have nothing to gain and everything to lose by racing against Valkyrie and the others. It seems quite likely that there will be no class in the June regatta, in which case, Valkyrie will return home early without racing here. With a good fleet of 40-footers on the stocks, and a local class of 21 or 25-footers in New York and Boston, the absence of spectacular racing by a few "world beaters" would not be so keenly felt, but this important branch of racing, in the smaller and more popular craft, is to all appearances dead for an indefinite time. The old racing classes, such as the 70-footers, have also passed away, leaving nothing in their places. Doubtless there will be plenty of cruising and secondary racing throughout the country, but yachting has reached a sorry pass when not one keel is laid in a winter for a racing boat, even of the smaller sizes.

.....

**Shifting and Fixed Ballast.**

The obstacles in the way of a newspaper controversy across the Atlantic are serious enough in the summer season when the steamship companies are all striving to cut the record down to five days, and they are materially increased during the half year when these same companies are satisfied with ten or twelve day passages. We had intended to carry no further our controversy with the *Field*, but two letters have recently reached us which we believe will be of interest to yachtsmen abroad as well as on this side.

The first of these letters was called forth by the following editoria comments in the *Field* of Jan. 27:

"The subject of ballast crews is still occupying the attention of yachtsmen on this side of the Atlantic, but, happily, no longer in reference to the small classes, as in this case crews have already been limited. On Oct. 28 and Dec. 9 last we described the correct manner of determining the effect of a large weight or crew on deck by the well-known equations employed by trained naval architects, and went on to show that, where draft is practically unlimited, the advantage of ballast on the weather deck over the same weight on keel is not great, but pointed out its disadvantages and the bad type of vessel it engenders. We took this trouble partly because *FOREST AND STREAM* started an empirical method of comparison which would not determine the relative effect of the two situations, and which might be dangerously misleading. A writer, under the signature of 'Bobstay,' now comes to the rescue of *FOREST AND STREAM*, but he has not more clearly presented the problem than did the paper itself, and apparently misunderstands the use of the sine of the angle of heel in the well-known expression for length of righting lever,  $G M \sin A$ , for small angles of heel. We would advise 'Bobstay' to study some text book on statical stability, and the best perhaps would be that by Mr. W. H. White, C.B., Director of Naval Construction."

Editor Forest and Stream:

Shortly after the races last fall between Vigilant and Valkyrie the *Field* took up, with special reference to the Vigilant, the subject of the effectiveness, as ballast, of men carried on deck to windward, and announced as its conclusion that a corresponding weight carried under the keel was just as effective, and on the whole better. You took exception to this representation and by means of a diagram, more correctly showing the Vigilant's midship section than a similar one which had been used by the *Field*, you showed that two tons of weight carried on deck to windward would be about three times as effective as an ordinary sailing angle as if carried near the keel at the lowest point practicable.

The *Field* then objected to your method of comparison as incapable of showing the general stability of the yacht, used your midship section, and by a formula which it approves for this purpose (and which has for such and similar purposes general acceptance) made its own calculation and announced as the result that the ratio of effective-ness of 18" inclining list was as 1 for ballast placed under the keel to 1.4 for that placed to windward on deck, but it lacked strict accuracy in its method and very much more in its final comparison of figures. In the first instance it used half the width of deck=12 ft., when inclined 15°, instead of the cosine of that distance=11.59.

The next instance shows a jugglery with figures which is most extraordinary, and which aptly exhibits the truth of the adage that nothing can falsify like figures, excepting facts. Before the ballast was moved the length of righting arm is shown to have been 1.813. When moved to the under side of keel it becomes 1.851, and when placed upon the weather side of deck it is 1.945. Now, a subtraction of the original length of arm from the figures of the other two shows a gain for the keel position of .038 and for the deck position of .132. That is, the gain for the keel position would need to be multiplied by 3.47 to make it equal to the advantage of the weight placed upon the weather side of the deck.

aw Committee—Chas. W. Voltz, John F. Lambden.

The long lawsuit between Henry Piegrass and the Hunters over the ownership of land under water at City Island, has just been decided against Mr. Piegrass on the strength of certain grants made during the last century. Mr. Piegrass purchased the old yard of David Carll in 1886, in ignorance of these grants, and the suits since instituted have put him to very heavy expense, and finally for the past six months have deprived him of the use of the beach in front of his yard and prevented all laying out and similar work. Since the case has been decided, a compromise has been made by which he secures a title to the land, placing the yard once more in a condition to carry on its regular work.

A meeting of the Brooklyn Y. C. was held on Feb. 14 at the town quarters, in Brooklyn, with Pres. P. H. Jeannot presiding. The question of withdrawing from the New York Yacht Racing Association was discussed in view of the amendment proposed by members of the Association, providing for the punishment of clubs holding open regattas under other than the N. Y. R. A. rule. The club finally decided to withdraw, the vote being 29 to 1. The date of the annual regatta was fixed for June 4.

A very convenient and handy craft for yachtsmen, is a new duck-boat just introduced by J. H. Rushton. It is but 9 ft. long by 3 ft. wide and 9 in. deep, and in form very similar to the shell of a turtle, the deck and bottom being alike. It is strong, light and very compact for storage, with hardly any draft, and a bottom that allows it to slide over mud and grass where water is scarce. The boat is intended primarily for ducking, but will be found useful for many purposes.

The annual meeting of the Eastern Y. C. was held on Feb. 14, the following officers being elected: Com., Wm. A. Gardner, schr. Mayflower; Vice-Com., Chas. F. Adams, 2d. slip. Harpoon; Rear Com., H. W. Lamb, schr. Marguerite; Sec., Wm. S. Eaton, Jr.; Treas., P. T. Jackson; Meas., Henry Taggart; Regatta Committee—Wm. S. Eaton, Jr., A. N. Rantoul, P. T. Jackson, Thos. Nelson, Henry H. Buck.

The Quincy Y. C. elected the following officers on Feb. 3: Com., H. M. Faxon; Vice-Com., W. H. Shaw; Sec., Treas., G. E. Pfaffman; Meas., Geo. Crane; Executive Committee—W. P. Baker, W. T. Whitmarsh, H. E. Drinkwater, H. L. Rice; House Committee—A. J. Shaw, F. B. Rice, J. S. Whiting, W. C. Harrison, W. B. Wilson, J. T. Cavanagh, J. S. Murray.

The Hull Corinthian Y. C. on Feb. 3 elected the following officers: Com., H. O. Stetson; Vice-Com., H. P. Cook; Sec., E. R. Field; Treas., C. V. Souther; Meas., W. E. Sherriff; Executive Committee—Com., Vice-Com., Sec. and Treas., G. W. Bouve, F. H. Smith, Jr., W. A. Rudick; Membership Committee—Com., Vice-Com. and Sec., and A. Stone, Jr.

Mr. George E. Chisholm, of New York, will replace the condemned Enigma by a new schooner now building by James M. Bayles & Son, at Port Jefferson. She will be a centerboard boat, of wood, 34 ft. 6 in. over all, 2 ft. beam and 3 ft. 3 in. The late Enigma was formerly the Lancer. Her new name was very suggestive in view of her cost and condition at the time she was rebuilt and re-rigged a year ago.

At the annual meeting of the Corinthian Y. C. of San Francisco on Jan. 20 the following officers were elected: Com., T. F. Tracy; Vice-Com., A. L. Lyons; Treas., W. F. Dixey; Sec., F. E. Baker; Directors, F. M. Thornton, M. A. Newell; Port Captain, J. H. Keefe; Meas., Wm. F. Stone.

Natalie, steam yacht, whose movements for the past two months have been involved in so much mystery, has turned up at Nassau, New Providence, with a cargo of arms which she shipped at Savannah intended for the Haytian revolutionists.

The new Pittsburgh Y. C., of Pittsburgh, Pa., is devoted to steam yachts and steam yacht racing, and will open the season with a fine new house and a large fleet of steam craft from 30 to 75 ft. long. The club had its origin in some races last season.

The Staten Island Y. C. has elected the following officers: Com., W. H. Ludlum; Vice-Com., M. S. Taylor, Jr.; Treas., E. W. Simonson; Sec., C. C. Martin; Meas., Adolph Panick. Trustees—C. Y. Van Duzer, H. Lindemann and Mark De Jonge.

The Southwork Y. C. has elected the following officers: Com., Jas. Irvin; Vice-Com., S. McEvoy; Rear Com., A. Bennett; Treas., I. Sharp; Sec., J. P. Stephens; Asst. Sec., R. Marsly; Steward, J. Sharp; Measurers—E. W. Sheer, B. Wilson and I. Wilhelm.

H. C. Wintringham has given up the building yard at Bay Ridge and is now located in the Havemeyer Building, Cortlandt street, New York, where he will devote himself exclusively to designing in the future.

Crusader, schr., has been sold by Wendell Goodman to Seymour Husted, Jr., former owner of Tigra, schr. Mr. Husted is the candidate for commodore of the Larchmont Y. C.

Neera, schr., designed and built last year by Lawley & Son for Com. Warren Fales, Rhode Island Y. C., has been sold to H. K. McHarg, of New York, owner of Sagitta, sloop.

Lt. Wm. Henn, who recently returned from Florida with the body of the late Com. Colt, sailed for England on Feb. 10. He has been in this country since September.

Fedalma, steam yacht, Vice-Com. Brown, New York Y. C., has been sold to F. L. Osgood, owner of Cosette, steam yacht. Mr. Brown will purchase a schooner this season.

Neera, schr., built last year by Lawley & Co. for Com. Warren Fales, R. I. Y. C., has been sold to Henry K. McHarg, of New York, owner of Sagitta, sloop.

Mr. W. D. Anderson, Jr., of B. Y. C., has sold his sloop Water Lily to Mr. Geo. S. Birrell, of New Rochelle, N. Y.

The South Boston Y. C. celebrated its twenty-sixth anniversary by a ball on Feb. 5.

#### American Yacht Clubs.

We have received notice of the Shrewsbury Y. C. of Red Bank, N. J., treas. Edward Miner, New York, omitted from our list, and also the Neptune Boat Club of Baltimore; with some notices of changes of secretaries' addresses of other clubs.

### Canoeing.

THE question is constantly asked us how a man may join the A. C. A. Applications for membership must be made through the purser of the division in which the applicant resides, who will furnish a blank form. The application must be indorsed by a member of the Association. The initiation fee is \$1 and the annual dues the same. Those desirous of joining, but who are unacquainted with a member, can write to the purser; or in most large towns in localities where canoeing is practicable there are clubs from which strangers may obtain information as to canoeists in their vicinity who might be able to indorse them.

#### An Interrupted Cruise on the South Platte River.

It is not an unusual thing to pick up a copy of FOREST AND STREAM and read an article describing a canoe trip down some river where there was little carrying, wading, or those things one encounters occasionally; when the skipper took things easily, was dry and comfortable and enjoyed every minute of his cruise. But those where all is trouble and worry are seldom mentioned, though a description would often be of benefit to other canoeists contemplating a cruise over the same waters. For this reason I will describe one of my canoe cruises—a dismal, discouraging failure as far as the attainment of our object was concerned, though we had a pleasant time.

The South Platte River is like other rivers rising in the Rocky Mountains and flowing east or southward, in that it is wide, shallow and rapid. During early summer it is a turbulent stream, carrying a large volume of water from the banks of snow melting on the mountain tops. But at other times there is only a small stream spreading over the wide bed of the river. Irrigating ditches take out the largest part of the water in the summer and early fall, and then the ditches are usually closed until spring.

During our many pleasant afternoons and evenings spent in paddling on Sloan's Lake, the question often occurred to us and was discussed thoroughly, "Can we get through to the Missouri River by starting from Denver via the Platte?" We asked many who claimed to know and were told that we could, as the ditches would all be shut off by Oct. 1, leaving plenty of water in the river. We put our faith in our informants and got ready. So on the morning of Oct. 12, 1893, the skipper and crew of the canoe Dollie were busily engaged in the last preparations for departure at the gun store of Schoyen & Burgen in Denver, where a crowd of the boys stood around and made comments, funny and otherwise.

The last article was finally stowed away and the crew went out to find an express wagon to transfer us and our outfit to the river. We had taken the genial George Schoyen into our confidence, and up to this time he alone knew our plans, our other friends thinking we were simply going down the Platte for a little cruise after ducks, geese and rabbits. We had many misgivings as to our ultimate destination, and did not wish to be laughed at in case we came back again in a few days, so we simply said we were going down the river for a little hunt,

and did not know how long we would be gone or how far we would go.

The crew came back in a short time, followed by a large express wagon, and the Dollie was placed in it, along with our oiled bags and grub. Then followed many kind words of advice as to the best places from old Mr. Carlos Gove, Mr. Rhoads and George, and after shaking hands all around, we started down Fifteenth street to Market, and from there down Nineteenth street to the river. By the time we had launched the Dollie and stowed everything a crowd of a hundred or more had collected on the bridge, for we presented a novel sight to them, no doubt, at least it was an unusual sight.

As there were some very shallow places to begin with, the skipper started alone. There was a broken dam just above the Twenty-second street viaduct, and the skipper got through it with a rush, and after running a shallow rapid a block below he was joined by the crew. There were plenty of small dams, rapids and ugly places to require careful paddling, but the worst of all were the sewers, slaughter houses, etc., near the edge of the city. As we passed through Shanty-town, lying on both sides of the river near the big smelters, we were hailed by small urchins on all sides. On the west bank an old Irish-woman stood in the front yard of her wood, iron and tin palace talking across the division fence to her neighbor. When she spied us she ceased her gossip, took the clay pipe from her lips, cocked her head on one side and yelled:

"Hillo, there."  
"And are yez goin' to the Worrald's Fair?"  
"Sure and we're not," he shouted back, adding to the skipper, "Oh, for a snap shot at her with a Kodak!"

As several parties had gone down the Platte the past season in flat-boats on their way to the World's Fair, the old lady no doubt thought we were bound for the same destination.

Just above the beautiful Riverside Cemetery we had to carry across a dam at the head of a big irrigating ditch, which was shut off. This gave us fresh hopes, for if all the ditches were shut off we knew there would be plenty of water. Noon found us several miles on our way, and as the sun was very hot and we were tired after our morning's exertion, we lay under the shady trees on a grassy bank for a couple of hours. Up to this time our route was through groves of willows and cottonwoods, under high banks, but in the afternoon we reached more open country and had glimpses of the mountains occasionally.

As the water in the river was unfit to drink, we kept a bucket in the canoe filled with fresh water, which were replenished whenever we came to a little creek emptying into the Platte. The river described many curves, often winding around big bottoms and coming back to nearly the same place. Several small ditches came in on both sides at various places and on the west side more than one emptied, taken from Clear Creek, away up in the mountains. Clear Creek itself was passed, its water belying its name, as it was a dirty yellow in color, caused by the chemicals used in the abstraction of ores far above.

About 4 o'clock we came to a fine place to camp, and the tent was soon up and a fire burning brightly in front, while some water was brought from a small spring above. We had no game, but a supper of flapjacks, bacon, coffee, caudled tomatoes, etc., was soon disposed of, and we lolled around the fire and smoked our pipes while we talked over the events of the day. The night was cool and the sky cloudless. From a little sand hill near our tent we could see the mountains distinctly, and the electric lights and tall stacks of the smelters at Denver were plainly visible, though miles away.

During the night a strong wind blew from the north, but in the morning it was clear and cold and there was a heavy frost. A half mile below our camp a barbed-wire fence crossed the river, but by lying down we got through it and passed around a long curve toward the mountains, turning eastward after traversing several miles of swift water. Toward noon we passed through another long strip of trees and came out again in open country which was tickly settled and covered with well cultivated fields and farms.

After dinner we reached the long chute which leads into the Fulton ditch. In the shade of some willows we got out, and walking down the chute some 500 yds., what we saw dashed our hopes to the ground in one moment. There was the big ditch, thirty feet wide and ten feet deep, the head gate of which was open and nine-tenths of the water from the Platte flowed into the ditch. Looking down the river we saw a stream spread wide across the river bed, but too shallow to float a two-inch plank. This was what we had feared, but were told all the ditches were shut off, so we really could not see why the ditch was open so late in the season.

But the ditch was open and we couldn't continue down the Platte. The ditch was private property, and even if we had attempted to run it and had escaped being shot at or prosecuted for trespass, we would have probably wound up out on the prairie somewhere high and dry, or had no end of trouble with gates, flumes, etc. So we returned to the canoe, put up the tent, gathered some wood and put things in shape for the night; and then taking our rifles started across toward the big road on the hill, made some inquiries at ranches about the river below, and found out to our disgust that the only railway station near us had been closed and was now only a flag station.

We intended shipping the canoe and outfit to North Platte, Neb., and starting out fresh from there, but found that impossible. We were stumped. We finally found a man who was going to Denver on the morrow with a big farm wagon, so we engaged him to come to our camp next morning and take us in with him. We returned to camp and cooked supper and built a roaring fire, for the evening was cold after the heat of noon. The pipes were lit, and in their glow we all but forgot our troubles.

Next morning while we were eating breakfast our friend appeared, and we soon packed up and were on our way home again, reaching there in the afternoon. We were a little shy of meeting our friend, not liking to be quizzed about our sudden return. The canoe was taken to the Union depot office of a prominent express company for shipment east, and when the agent told us he would charge \$21 per 100 lbs. to Jefferson City, about 800 miles, we nearly dropped dead. We did the best thing we could under the circumstances and shipped the canoe by freight. From the fact that there was an additional charge to pay on receiving her, and the time required for her journey was over two weeks, the canoe arrived in Jefferson City without injury. Of cruises near here I may write at some future date.

Should any canoeist attempt a cruise down the Platte River he should start not later than Aug. 1 and carry not an ounce of unnecessary duff. After reaching the mouth of the North Platte River the trip would be easy to the Missouri, and the river one only has to keep clear of snags and good time can be made down stream, as the current is very swift.

JEFFERSON CITY, Mo.

#### Toronto C. C. and Its New House.

(From the Toronto Mail.)

Among the pleasing changes wrought upon the water front during the past year is the removal of the old ramshackle structures which obtruded their rugged ugliness upon the vision of the citizen, and created anything but a favorable first impression upon the stranger arriving by water. The new buildings which adorn the water front are more in keeping with the city's progress. Of the number none is more conspicuous than the new home of the Toronto C. C., a cut of which is shown in to-day's issue.

Occupying a most advantageous position immediately south of and in a line with the clock tower of the Union station, it will, from its size and handsome appearance, be a noted object.

Toronto, so widely known for its lead in aquatic sports, can now boast of having the largest and most completely equipped canoe house on the continent, a distinction of importance, when it is remembered that the American Canoe Association numbers 138 clubs upon its roll.

It may safely be asserted that no other sport has among its devotees such a number of persons belonging to the professional classes in arts, sciences and literature. The individual that is termed "a sport" finds no congenial companionship among canoeists. There is no noisy and unhealthy excitement, and no opportunity for the development of the belting instinct. The joys of the canoe and paddle are unobtrusive, but none who has tasted the joy of a summer's cruise, with its varied and delightful experiences, would ever abandon it for the more noisy sports.

It affects the heart and imagination in a manner not to be expressed in words, but only to be realized by actual participation in the pleasure of an outing. A trip with congenial companions in a light canoe through lake and river, over the portage and down the rapid, the voices of nature soothing the nerves, and the cool, healthful breeze cooling the brow, is it any wonder that in picture, in song and in story canoeing occupies a higher plane than any other outdoor sport?

The yearly gathering in camp of the clubs comprising the American Canoe Association is a notable event. Here is true fraternity. No national, political, or religious dividing line, but friendly rivalry—who possesses the most complete canoe kit, the fastest canoe? Who has made the longest cruise, can tell the best fish story, or exhibit the most artistic views, the product of his own camera? One such outing makes of the novice a willing enthusiast—he too is compelled to tell of its joys. Thus no gentlemanly sport has received such accessions of

membership in so short a time as canoeing. The Toronto Canoe Club is an illustration of this. In 1880 nine gentlemen met in the Rossin house and formed the Toronto Canoe Club, which now is so strong in members as to justify them in leasing one of the finest aquatic houses on the continent. The present membership exceeds 130. The club house has provision for 160 canoes, with locker rooms, dressing rooms, shower bath and gymnasium. Nor have the lady friends been forgotten in the general arrangements. The club's "at home" will in future be held in their own rooms, as 100 couples will not crowd the dancing room. The ladies' parlour adjoining, with dressing room and lavatory is ample for all occasions, and in good taste.

The ground floor is entirely devoted to the housing of the canoes and other craft belonging to the members, and is not only the largest, but the most convenient boat house in the city. The building has a frontage of 86 ft. on the bay, with a depth of 40 ft., enabling every canoe to be stowed so that no twisting or turning is necessary to convey it to the float for launching, nor will it be necessary to carry it very far, and in returning after a run the work of hauling up and housing will be accomplished with a minimum of trouble and risk to the craft. The large frontage also gives opportunity for several floats, preventing crowding on regatta days, when a large number of the members are getting afloat or returning at the same time. These are important points about a boat house and in these respects the Toronto C. C. could not have done better. The room is lofty and the walls finished in a light color, making a neat and clean appearance. As the membership fee and rack rent will altogether amount to less than an ordinary boat house rental the club ought to attract large numbers of the owners of small craft, especially when the club house and social advantages are considered.

A stairway leads directly into the reading room, a square, cosy apartment the full width of the building, and forming the winter quarters, always heated by a stove, and ready for the reception of members. To the east of this is the large assembly room, separated only by folding doors, which can be moved altogether, making a very large and convenient apartment for an "at home." For heating the assembly room there are two old-fashioned fireplaces, of a capacity suggesting the warmest and heartiest kind of hospitality. The western end of the first floor is taken up with a comfortable ladies' parlor, with mantel and grate, neatly furnished, and with dressing room attached. In all these rooms the floors are stained and are to be finished in varnish, the walls and wainscoting being of agreeable tints, and the general effect excellent without ostentation or extravagant display. A kitchen and well-supplied china locker are also to be found.

The next floor contains committee rooms, janitor's apartments, shower baths and lavatory, and a locker room, the latter having a large central space, with a cottage roof, so as to be fitted up as a small gymnasium. A stairway leads up to the flat roof of the main portion of the building, which has been fitted with railings so as to make an excellent observatory which, with the large balconies down below, will afford vantage ground for a thousand people to view races on the bay.

The house was opened on Jan. 12, a large number of guests being present. The officers of the club are: Com., H. R. Tiley; Vice-Com., George Wilkie; Rear-Com., R. P. Stewart; Sec., Frederick Woodman; Treas., Harry Ford; Ex. Com., A. E. Ball; Chairman of Regatta Com., James E. Brown; Chairman of House Committee, John C. Iredale.

#### A. C. A. Membership.

ATLANTIC DIVISION: W. J. Averil, Bay Ridge; A. W. Van Deusen Arlington, N. J.; Stephen M. Balzer, Bayard Hawthorne, New York Paul C. Gottschalk, Jersey City. Central Division: Frank D. Wood Buffalo, N. Y.; John L. H. King, A. W. M. Moffitt, Troy, N. Y. Eastern Division: Chas. H. Davenport, Jr.

#### On the Home Table.

PHILADELPHIA.—Your paper is a great paper for me and the whole family, as it is read by them daily; and when my brother calls on me the first question will be "Have you this week's paper?" The closest blue print will show what paper can always be found upon our table. C. W. H.

## The Atlantic Division and the Meet.

Vice Com. SCHUYLER, of the Atlantic Division, has sent out the following circular:

NEW YORK, January, 1894.—Dear Sir: The next annual meet of the American Canoe Association will be held at Croton Point, on the Hudson River, about thirty miles from New York City. This is the most desirable place that could possibly be had for the entire A. C. A., and yet be in the Atlantic Division and on salt water. It is on the direct route of the N. Y. C. & H. R. R., and most convenient for the Atlantic Division. A line of boats runs daily from New York to Sing Sing, and a boat will make several trips daily from there to camp, about three miles distance. It is within easy cruising distance from the canoeing center of our division, and arrangements will be made for those from a distance shipping their canoes and duffie to Sing Sing, so as to get them to camp with the least possible trouble.

The camp is on a finely wooded point, affording good shade for those who desire it, also plenty of open. There is a high bluff and the view fully equals Champlain or Lake George. The river is about three miles wide and as fine a sailing course as could be wished for. The beach is fine hard sand down to low water mark, and the finest racing canoe could be hauled up on it without harm, so the building of skids would not be necessary.

The rise and fall of the tide is about three and one-half feet, and as the beach is very steep the distance between high and low water is about thirty-five feet. For those who desire cruising, there are a number of delightful short trips up the Croton river; to Rockland Lake and to Peekskill. For those who own single handed cruisers there is a safe anchorage, in the cove formed by the point and the dock, and no doubt a number of this class of boats will be at camp, as there are a number of them on our large open waters and a special race will take place for them. In fact, there is no place within the Atlantic Division where we can get so many conveniences, and the A. C. A. is to be congratulated upon having selected and obtained permission to camp on Croton Point.

It is hoped that we can hold the largest A. C. A. meet that has ever been held, and as a camp has never been held so near a convenient to New York and its suburbs, we trust that we shall have a big delegation from our own division, and we ask you to join in helping us make it a success by joining the A. C. A. and attending the meet which takes place the last two weeks in July.

By joining now you will have your name and canoe enrolled in the 1894 year book, and it will not cost you any more than by waiting till next spring to join.

Enclosed find an application blank which please fill out and send to the purser, Mr. F. L. Munnell, 185 Broadway, N. Y., enclosing \$2, one dollar of which is for initiation fee, and one dollar for 1894 dues.

Trusting you will join, I remain yours truly,

C. V. SCHUYLER, Vice Com. Atlantic Div.

Vice Com. Schuyler has appointed the following Division regatta committee to assist the A. C. A. committee: M. V. Brokaw, L. B. Palmer, W. C. Lawrence.

## CANOE NEWS NOTES.

The annual meeting of the Mohican C. C. was held on Jan. 25 in Albany, the following officers being elected: Captain, W. Howard Brown; Mate, John S. Neville; Purser, W. S. Hackett. Executive Committee—C. V. Winnie and F. L. Mix. The chief event of the evening was the presentation of a silver loving cup to the retiring captain, Mr. Winnie, who has held the office for four years, having been elected purser of the Mohicans in 1888 and 1889; captain in 1890, 1891, 1892 and 1893, and chairman of the transportation committee, A. C. A., 1889, 1890 and 1891. As vice-commodore of the Central Division in 1891 he turned a loss of twenty-two members into a gain of forty-nine. Mr. George F. Hilton made the presentation speech.

At the annual meeting of the Rondout C. C. on Jan. 24 the following officers were elected: Com., Harry J. O'Sullivan; Vice-Com., Charles Reynolds, Jr.; Treas., G. W. Crispell, M.D.; Sec'y, J. D. Schoonmaker.

The Orange Canoe Club has elected the following officers: Com., George Manly; Vice-Com., W. Palty; Sec., A. M. Burroughs; Treas., C. W. Burroughs.

On Feb. 9 Mr. R. S. Stoddard, the well known photographer and canoeist, gave an entertainment at Bensonhurst for the benefit of the New York C. C., delivering his new lecture, "The White City," with stereoscopic views of the Fair.

The annual meeting of the Knickerbocker C. C. was held at the club house on Jan. 23, the following officers being elected: Com., James R. Steers, Jr.; Vice-Com., James K. Hand; Sec., William R. Farrell, Jr.; Treas., Sidney M. Wintlingham; Mess., Frank C. Moore.

The Yonkers C. C. has elected the following officers: Com., W. R. Haviland; Vice-Com., D. B. Goodsell; Sec., Thos. Hale, Jr.; Capt., H. L. Quick; Lieut., C. S. Middlebrook.

Messrs. E. G. Langley and E. D. Gray, two young canoeists of Atlanta, Ga., are now on a long trip in canvas canoes, having left Atlanta on Jan. 13. The purpose is to visit Florida and to cruise on a number of Southern rivers.

We have received from M. E. Blasler & Co., Utica, N. Y., a new catalogue of their yacht, boat and canoe hardware, including fittings of all kinds in brass and nicked goods. They manufacture the Blasler patent folding and releasing anchor.

At the annual meeting of the Peoria C. C. the following officers were elected: Com., Henry C. Morse; Vice-Com., F. C. Howe; Purser, Walter M. Clark; Executive Committee, Henry C. Morse, Walter M. Clark and Shurburn Pearson. The retiring purser reported a gain of three in membership during 1893, and that the club house was paid for. There are no bills outstanding and nearly \$100 in the iron box. The club is now on a good sound footing and hopes to show more progress than last year during '94.

The St. Lawrence River Skiff, Canoe and Steam Launch Co. has made arrangements for the exclusive privileges of a repair and supply tent at the A. C. A. meet, and will send one of its best canoe builders with a supply of tools, materials and fittings.

Members of the Central Division A. C. A. will please take notice that any changes in address or name of canoe, names for membership or of those wishing to be reinstated, should be sent to the purser, Chas. E. Cragg, Port Henry, N. Y., at once, or they cannot appear in 1894 year book.

About thirty-five canoeists were present on Feb. 17 at the dinner at the Arena, among them being Com. Dorland, Sec'y Douglass, Vice-Com. Schuyler and Messrs. Winnie, Whitlock, Steers, Peebles, Lawrence, Palmer, Stephens, Henry, Hand, Seavey and Quick. The evening passed very pleasantly, the party breaking up about 10 o'clock.

## Rifle Range and Gallery.

## Port Chester.

PORT CHESTER, Feb. 13.—The following scores were shot at this place on Saturday, Feb. 10, 200yds. off hand, German target:

Smith.....	18 22 22 18 20 15 22 24 22 30
McNeill.....	22 22 21 16 24 22 21 25 24—422

	20 21 14 23 24 18 21 17 17 15—190
	23 25 20 30 *withdrew. Rudd.

## Jersey Rifle Notes.

THE Hudson Rifle Club has adopted a new plan which has its origin with its popular captain. He has divided the club members into three teams, and the member making the highest score in each team during each month will receive a cash prize, and the member making the highest single score in the year will receive an additional cash prize. All these prizes are donated by the captain, and its adoption will increase the interest of shooting as the results are already making their appearance although it has been in operation but a month.

The Hudson Rifle Club intends to enter a team in the famous Zettler Shoot, and feel confident of winning a place on the victors' side.

The Hudson Rifle Club has discarded the plan of honorary membership, as it has a ten year to reduce the interest of the sport, and unless it has active members the club would not retain the good name it already has attained.

The Hudson County League has died an unexpected death, as there seems to be too few interested riflemen to compose sufficient teams to continue in the series.

## Greenville Rifle Club.

THIRTEEN members of the Greenville Club were present Friday night to participate in the weekly gallery shoot for club prizes. Mr. Dorrier made the highest score of the night, 245; J. B. Bag and Plaisted tied for second place with 240 each. Scores: J. B. Bag, 245; Dorrier, 245; C. Collins, 232; Graef, 215; Becker, 215; C. O. Lutz, 214; J. B. Bag, Plaisted, 240; Scheeline, 226; Dorrier, 245; Spahn, 239; Holzappel, 230.

## Greenville vs. Excelsior.

The first of a series of gallery matches between teams from the Greenville and Excelsior rifle clubs, of Jersey City, was shot off on the Excelsior Club's ranges on Wednesday night of last week. Both teams were handicapped by not having their best men present to participate in the match. With a few exceptions the shooting of the men in both of the teams was below the average. The Greenville team, however, succeeded in beating their competitors by 31 points. The ninth round showed the Greenville team only one point in the lead. Pinney, the 10th man of the Excelsior team, found the strain upon his nerves to be too great; he made only 203 against 233 for the Greenville man. Scores:

Excelsior team.		25	24	24	24	24	22	21	10—231
O C Boyce.....	25	24	24	23	23	23	22	20—238

## Cincinnati Rifle Association.

CINCINNATI, O., Feb. 11.—The Cincinnati Rifle Association held its regular practice shoot at its range to-day and made the scores appended. A stiff, unsteady wind blew all day, which made good scores a difficult feat. The day was excellent otherwise. The scores:

Louis.....	8	9	8	7	7	10	7	8	10	—84
Hake.....	7	5	8	4	6	6	5	3	7	—96
	9	3	4	7	6	5	3	3	10	—53
	5	5	4	5	4	3	7	4	8	—56
Weinheimer.....	10	7	6	4	4	6	7	5	6	—61
	10	4	9	6	9	10	6	5	10	—79
	5	8	10	6	5	9	5	9	9	—87
	7	8	9	7	7	9	8	5	10	—67
Payne.....	8	6	9	6	6	7	10	7	8	—77
	5	9	8	5	9	9	8	7	10	—67
	6	9	8	5	9	10	8	7	8	—73
Wellinger.....	7	9	8	7	10	7	9	10	6	—81
	9	6	9	5	6	8	10	7	9	—79
	8	9	6	7	8	7	8	9	8	—97
Edwards.....	8	3	2	3	5	6	4	2	6	—42

	8	6	8	8	7	6	6	10	6	—67
	4	7	6	10	10	6	6	4	5	—86

## New York Schuetzen Corps.

The weekly shoot of the New York Schuetzen Corps, in the Zettler gallery, on Friday night of last week, brought together twenty-eight members. The members were divided into two teams of fourteen men each, under the leadership of Capt. Offermann and G. H. Werenberg. A match was shot off, 10 shots per man, for the refreshments, which resulted in a victory for Capt. Werenberg's team.

Capt G H Werenberg.....	221	Capt H Offermann.....	225
B Walther.....	244	B Zettler.....	241
Phil Feigel.....	232	A J Christian.....	232

John Ranson.....	90—329	87—283	C Pyle.....	79—328	68—303				

## Williamsburgh Schuetzen Corps.

This annual gallery prize shoot of the Williamsburgh Schuetzen Corps was held at its headquarters, 123 Hamburg avenue, Brooklyn on Feb. 11 and 12. There was the usual attendance of the gallery experts, and the competition for best position on the prize list brought out some good scores. There were fifteen prizes ranging from \$30 down to \$1. Three shots per ticket, three best tickets to count for first three prizes, and two best for all others. Messrs. Holges, Ross and Rosenbaum had a hot race for the \$30, and in the end found themselves tied each with three scores of 74. Scores:

delivers tied with	74	74	74—222	G W Vorbe	73	70—144
F Ross	74	74	74—222	W Vorbe	73	70—144
H Hutch	74	74	74—222	B Zettler	73	70—143
Rosenbaum	74	74	74—222	B Zettler	73	70—143
M Dorrier	74	73	73—147	G Zettler	71	71—142

Hutch	75	72	72—147	G Krauss	69	68—135
B Walther	73	73	73—146	G W Plaisted	67	65—132
I Martin	73	73	73—146			

## New York City Schuetzen Corps.

TWELVE members of the New York City Schuetzen Corps devoted an evening to target shooting last week in the Zettler gallery. Two teams of six men each were made up under the lead of Chas G. Zettler and R. Busse. Two matches were shot off for the expenses of the evening's sport. Captain Zettler's team was victorious in both events. Scores:

G G Zettler.....	240	242	R Busse.....	242	243
H Radloff.....	230	233	Chas Reil.....	234	235
W F Gerdes.....	232	220	A Muz.....	234	235
H Molzen.....	227	221	C Roedle.....	224	221
W Facklam.....	223	224	A Ränge.....	224	228
H Kuhlmann.....	222	225	H Witte.....	228	242

## Conlin's Gallery Scores.

Recent performances at 12yds. were: Dr. J. K. Knowlton and T. Tippling, 3 full scores at 14in. bullseye. Knowlton, 20 shots in 30 different positions, 116 out of 140. Wm. Kinghorn, 10 shots, all in bullseye on 16 records, 14in. bullseye. Peter De Nice, 9 bullseyes out of 10 shots, 25yds. J. Blydenburg, full score at 25yds. Major Krockett, 50 shots, average of 8 out of 10 on 2in. bullseye at 25yds. with open sight rifle.

Major also has made the best score with rifle at 135ft., making several targets, 9 bullseyes out of 10 shots.

Mr. Card, 2 targets, 9 out of 10 shots on bullseye at 125ft. I have decided to set two nights a week, one for revolvers on Thursday evening, and for rifles on Saturday evening. All shooters are cordially invited to bring their friends, as a good time and good shooting may be expected.

Mr. Edward Wasserman has made the best average shooting with revolver so far in the gallery; has made full score at 25yds. at 23in. bullseye, and full score at 12yds. at 14in. bullseye.

H. C. Fales made full score at 25yds., 14in. bullseye, which is the best yet.

Mr. A. A. Cohen, who used to shoot so well, is just commencing to practice and some good scores may shortly be expected. Several of the officers have been shooting their new revolvers, but have not got things down line yet; will send you some of their scores next week also some targets.

## Jerseymen at the Targets.

THERE was quite a gathering of riflemen in Armbruster's Park on Saturday afternoon of last week. Only five, however, entered the 50 shot handicap sweep. Messrs. Hansen and Plaisted decided the last of the three 50 shot series between them. Hansen won on a total of 1069, beating Plaisted 34 points:

Plaisted, scratch.....	210

and the cord wood at an army post. If it is a crime to take the latter it should be a crime to plunder a forest reservation."

A law providing for the systematic protection of all these parks and forest reservations should be enacted without further delay. Such an act should formally place all these parks and forest reservations under the authority of the Secretary of the Interior, giving him full power to make such rules and regulations as he shall deem needful for their government and control.

It should formally declare the timber, the forests and the wild game and fish, now or hereafter to be found within these reservations, to be the property of the United States, and should make the cutting of timber and the killing of game or fish, except under the regulations prescribed by the Secretary of the Interior—crimes.

It should provide and set in operation that process of law (without which no man under our form of government can be adjudged guilty of a crime), by which trespassers, timber thieves, game butchers, and those who wilfully or carelessly fire the forest—all those who violate the regulations or commit misdemeanors or crimes—shall be tried; and should establish the necessary machinery of justice for such trial and for punishment.

It should authorize the Secretary of War to furnish to the Secretary of the Interior on his request such troops as may be necessary for the purpose of efficiently patrolling and permanently protecting each of the reservations. The excellent protective work done in recent years by the troops in the Yellowstone Park, has thoroughly established the efficiency of the soldiers as guardians of our National reservations.

Such an act as we have indicated should be broad and complete, and after it has been drawn it should be submitted to the criticism of those best acquainted with the Western country and with the problems of forest and game preservation, which are inseparably connected with the subject. There is perhaps no one act which would confer on the mountainous country of the West, and the dry plains which lie at the foot of those mountain ranges, so much material benefit as a wisely drawn law which would provide broadly and fully for the efficient protection of our national parks and forest reservations. Only those who are familiar with the arid West and with the changes which take place in that dry region when once water is put upon the thirsty soil, can appreciate how vastly the material prosperity of the inhabitants of a great section of our country would be increased by the passage of a suitable act of this nature.

## GOVERNOR HOGG'S OPPORTUNITY.

GOVERNOR HOGG, of Texas, has been given some notoriety recently because of alleged connivance in the unlawful patenting of a famous canvasback resort—Lake Surprise—to a Galveston man named Moody. The patentee claimed that he wanted the lake for a rice farm. The sportsmen of Texas declare that he wanted it for the ducks, which are shot for market, the proceeds going in part to Moody. The Governor has been criticised for winking at the transaction; it is said that he should see to it that the patent of Lake Surprise to a market-hunting "combine" be rescinded.

Just now Mr. Hogg finds himself in fresh trouble with Texan sportsmen for having killed a deer out of season. The deed was committed in Nacogdoches county. The press dispatches say that the Governor has been arrested, and has declared his intention of settling with alacrity, if he has violated the statute.

If the papers report him correctly, he has put forth two explanations of his predicament, neither of which becomes the chief executive of the State of Texas. One of these explanations is that he did not know that deer were protected in Nacogdoches county. This is a poor enough excuse. Mr. Hogg is not only a Governor, but he claims to be a sportsman as well, and in either one or the other capacity, if not in both, he should have known that while Cherokee, Shelby, Franklin, Rockwall, Hopkins, Brazos, Williamson, Coryell, Brown, Mills, Comanche, Runnels, Cooke, Wise, Madison, Clay, Jack and the unorganized counties attached to the same for judicial purposes, Freestone, Stephens, Eastland, Palo Pinto, Polk, Throckmorton, Callahan, Taylor, Jones, Kent, Garza, Lynn, Terry, Yoakum, Trinity, Archer, Wichita, Wheeler, Oldham, King, Dickens, Crosby, Wilbarger, Childress, Lubbock, Hockley, Cochran, Bailey, Lamb, Lamar, Hale, Floyd, Motley, Cottle, Hall, Briscoe,

Swisher, Castro, Parmer, Greer, Deaf Smith, Randall, Armstrong, Donley, Collingsworth, Gray, Carson, Potter, Hutchinson, Hartley, Moore, Roberts, Hemphill, Lipscomb, Ochiltree, Hansford, Sherman, Hardeman, Dallam, Cass, San Jacinto, Camp, Dimmit, Kinney, Cameron, Jackson, Kaufman, the unorganized county of Zavala, Angelina, Walker, Trinity, Panola, Jack, Young, Fannin, Delta, Hopkins, Gonzales, Morris, Waller, Tyler, Newton, Burnet, Karnes, Atascosa and Bell counties are exempt from the provisions of Art. 426 of the game law, which is the section relating to deer, the counties of Bowie, Nacogdoches, Hill and Rusk are exempted from Arts. 427, 428 and 429 only, and not from 426. It is all simple enough, when as a plain sportsman or as a Governor and sportsman combined you have memorized it; and every one in Texas has abundant time to commit the law to memory, for they change the list of counties only once in two years.

The other explanation which the Governor is reported to have given is that he was arrested out of spite, because of the Lake Surprise affair. This excuse is no better than the other, for it is to say that the Texas deer law is enforced only as a spite measure. If this be true, it indicates a condition of game lawlessness, of which Mr. Hogg as Governor and Mr. Hogg as sportsman should be ashamed, and to the correction of which as executive and sportsman he should address himself without delay.

Mr. Hogg is just now at odds with the sportsmen of his State. He may regain their regard and earn their lasting gratitude if he will set out to accomplish these two things—first, the simplification of the game laws so that all may know what they are; and second, their wholesome enforcement not as spite measures, but as wise provisions to be observed and respected by all alike for the general good. It is a great opportunity.

## SNAP SHOTS.

If the marketing of game could be stopped, the result would be not only to diminish the legitimate drain on the game supply in the open season and by lawful methods but as well to cut off a large share of the illicit pursuit of game. For as a matter of fact, experience demonstrates that a vast proportion of the unlawful shooting is that which is done to feed the markets. A resident of Long Island was complaining the other day of the absence of wildfowl from the Island waters this season; and now it develops that the reason for this is that the bays have been fire-hunted systematically by market-shooters, for the Brooklyn and New York trade.

An egg of the great auk was sold in London last week for \$1,500. If your great-grandfather had robbed a few nests of this fowl and stored the eggs in the attic, he would have performed a distinguished service for his posterity.

Mr. Austin Corbin has some wild boars in his New Hampshire preserve; but we understand that he is not particularly enthusiastic over them. There is no special sense in importing wild boars into this country. The brutes are all well enough perhaps for Algerian pig-stickers, but they would not make a desirable addition to the game supply of this great and glorious land of freedom. As for wild hogs, there is a very creditable native supply; and those who are ambitious in that direction may find the game in Tennessee mountains, Louisiana swamps and California tule lands, not to mention Texas with its peccaries. Fur and feathers, the more the better, but we may well spare the bristles.

Mr. Gilbert, the trout culturist, has succeeded in putting his bill through the Massachusetts Legislature again this winter, and it threatens to become a law unless Gov. Greenhalge shall follow the wise precedent of Gov. Russell and give it his veto. The measure is to permit the sale of cultivated trout in certain months of the close season for the capture or sale of wild trout. Mr. Gilbert bases his argument for the bill upon the fact that he can raise trout in his own private ponds and market them at a profit in the close season, that to forbid this is to work hardship to him, that the industry of trout breeding is one which should be encouraged, and that the marketing of artificially reared fish will not endanger the native supply of wild trout in the waters of the Commonwealth. The personal advantage of the measure to Mr. Gilbert must be conceded. But on the other hand all experience teaches the futility of attempting to preserve fish or game

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

## TROOPS FOR THE FORESTS.

ATTENTION has frequently been called to the fact that our National Parks and the recently established forest reservations are entirely without that protection which is essential to their preservation and to the accomplishment of the useful purposes for which they have been established. This is something which has been too long neglected, and which should now have the attention of Congress.

It is true that in the Yellowstone, the Yosemite, the Grant and the Sequoia National Parks, troops have been employed to patrol the reservations and to protect the forests, and in a measure the game, though recently doubt has been thrown on the legality of the use of troops for these purposes in the three last mentioned. But the forest reservations, embracing nearly 12,000,000 acres of land are now, as they have always been, entirely without guardians.

It is to be assumed that when Congress passed the act of March 3, 1891, under which these forest reservations were set apart, it meant to give the opportunity for just such action as was taken by the President when he issued the proclamations that established the reservations; but it must be evident to any intelligence that the mere formal announcement that these tracts of land are reserved is entirely without practical meaning. In order that such reservations and such parks shall be of actual benefit to the country, it is necessary that they shall be in fact what they are in name, and shall really be protected from incursions by trespassers and from fire; and this can be done only by the presence on these lands of government officials who shall see that the law is obeyed. These national parks and forest reservations are all of them situated in the Rocky Mountains or in the mountains of the farther West. They are more or less timbered with coniferous trees, and are thus especially exposed to the danger of fire, burning when once aflame, like so much gunpowder. Besides this they are subject to constant invasion by timber thieves, who cut the growing trees; by sheep men, whose flocks destroy the young seedlings; and by hunters, campers and picnickers, whose fires frequently kindle conflagrations that are far beyond the power of human hand to hold in check. Thus the forest reservations, while they give pleasure and profit to a few selfish persons, who often entirely disregard the rights which the public have in them, at present accomplish nothing for the general good.

In the recently published book of the Boone and Crockett Club the subject of the Federal ownership of the timber and game on these forest reservations is concisely treated in the following words: "The timber and the game ought to be made the absolute property of the Government, and it should be constituted a punishable offense to appropriate such property within the limits of the reservation. The game and the timber should be regarded as Government property, just as are the mules

if the markets are open to receive them during the prescribed close season. The practical working of this Gilbert trout law, if it shall become a law, will be to encourage the taking of wild trout in close time for the market. The bill then is one which grants special privileges to an individual at the expense of public interest. Massachusetts might better get from Mr. Gilbert an estimate of the profits he expects from the operation of the law and make him an appropriation out of the public treasury, and have done with it. The amount so expended would not equal the expenditures necessary to provide protection for wild trout in a close-catching and open-marketing season.

## The Sportsman Tourist.

### CAPE COD WAY.

BY CHARLES HALLOCK.

LAST summer, with Thoreau's charming book in my hand, I took a jaunt down Cape Cod to the land's end, where the strong "right arm of Massachusetts" holds the writhing waves in its fist while they hiss and chafe into foam upon the sands. It was July, and the sun was hot, yet an ever cooling and grateful breeze blew across the land from ocean to bay, so that the tramp, instead of being fatiguing, was actually invigorating, and the perspiration which started betimes upon the brow was dissipated as soon as it formed. For mile after mile, with book in hand, I followed the identical route which Thoreau had chosen forty-five years before along the beach and over the dunes, and across the sands, and past the old windmills and wrecks, and into the lighthouses and fishermen's huts, and past travesties of so-called "farms," where the soil is so scant that mature corn stands only 2ft. high and fruit-bearing apple trees grow no higher than one's head—trudging along with the book as chronicle rather than guide, whereby I was enabled to make honest comparison of the past with the present, and determine for myself how much man could subdue or appropriate of this weird spit which projects itself 65 miles into the expansive ocean. As to losing the way there was small chance in clear midsummer weather, for there was but one direction to follow, and that was straight forward, unless one wished to walk into the ocean on the right hand or the left, and for a *dernier ressort* the bewildered wayfarer might take to the railroad which traverses the attenuated axis of the Cape like a backbone. No surer guide than this for castaways and shipwrecked mariners when there is no fog and the track is bare of snow. The average width from shore to shore is not more than five miles, while at a certain point between Truro and Provincetown, some four miles from its extremity, one can almost straddle the narrow neck like a veritable Colossus of Rhodes.

There was no railroad in Thoreau's time. It was then stage-coach or nothing, with an ever shifting trail through the mobile sands which were here to-day and gone to-morrow, according to the caprices of the winds which moved them. Frequently, between sand hills utterly bare were grassy intervals or marshes, or cranberry bogs, and sometimes little water holes where pond lilies grew and blossomed. Then there were larger ponds of many acres filled with perch and pickerel, many of them scarcely separated from the ocean by a narrow fllet of sand. Occasionally there was a brook with speckled trout. At times the homely vehicle would toil for a long distance through a deep hollow with no outlook whatever, and anon it ran over a dune 75ft. high, from whose top there was an illimitable view. Few trees were to be seen; only patches of scrub oak here and there and small plantations of dwarf pitch pine which provident philanthropists had set out betimes to cover the nakedness of the land, and furnish a meagre substitute for the driftwood on the landwash, when that pitiful resource might chance to fail the inhabitants for fuel. And there was seldom a farmhouse; only an occasional fisherman's hut at long intervals, or a wrecker's cabin. Ever and anon there would occur the remains of a stranded whale or blackfish stripped of its blubber, while a continuous selvedge of seaweed marked the edge of the tide. Beyond the town of Wellfleet, these features stand to-day but little changed. But in the interval between the elbow and the wrist (the brawny fore-arm of the Cape), there are no less than seven pretty modern towns, strung like pearls upon the sands and set in shrubbery and shade where good cheer and good fare are held out as attractions for summer guests; while Provincetown itself, a refuge for Pilgrims since 1621, has cast off much of its ancient and fish-like smell, and fish flakes have given place to lawn tennis in the yards of the cottagers. Such a novel trip it is seldom one's good fortune to take. The comfort of the present period is that one can accomplish as much of it as he likes on foot, and when tired take to the railroad cars at convenient stations. Bicycles are obviously not in it. Neither are the Cape Cod Folks, old style, which Mr. Thoreau wrote of. They all lie buried in the wind-swept cemeteries among the sand dunes, with whortleberries clustering around the headstones. There are none left. Railroad communication has placed these once isolated people in sympathetic touch with the progressive world at large, and latest fashions and newest fads prevail throughout. Trains from Boston bring crowds of seaside visitors from remotest regions, and they scatter all over the Cape, from its shoulder to the land's end. New Yorkers who value comfort, economy and dispatch take the Portland, Me., steamers, which touch at Cottage City, on Martha's Vineyard, and cross to Woods Hole, where they take the train to Buzzard's Bay, while from Boston there is a lovely steamboat route to Provincetown—merely a four hours' morning run for one dollar, with a good dinner at Gifford's upon arrival at destination, and an interesting return journey by rail down the entire length of the Cape.

The rail route is distressfully hot and dusty in mid-summer, and a transit one way over it is enough. Yet it should by no means be omitted. Returning by steamer the voyager gets only the sail and the salt air, but land-wise he sees lots of traces of the early occupation, as well as endless innovations. There are gaunt old windmills with bare arms and summer girls with bare arms, antiquated farmhouses and modern villas, starveling

garden patches and choice bits of lawn, ox teams and pony carts, well sweeps and tennis courts, lilacs and jack roses, poll parrots and canaries, pug dogs and whale ribs, and altogether such a conglomeration of things past and primitive with things present and perennial as gives the rusty old cape a blooming and cheerful aspect, and enables the living and progressive generation to hobnob agreeably with those who have played their parts. Rip Van Winkle and the Little Tycoon are both on the stage together.

Working down toward the land's end, where the sandy neck is no wider than a causeway, one sees at last in the blue distance, away to the left, the extremity of the Cape, curved like the letter C and stretching along the watery expanse in ghostly undulations of white sand, with little green dales between the hillocks, and a fringe of white houses aligned along the curve of the beach. This is the site of ancient Chequocket, now Provincetown, where the Pilgrims and the Mayflower first made land after their precarious voyage across the Atlantic. The city extends for three miles along the water front, and with its numerous spires and clustering masts looks like a large and populous seaport. But it really has only a few thousands, and the houses are chiefly confined to the single marginal street, though some few buildings on elevations give it an imposing appearance. From a dominating sand dune 75ft. high, which stands almost in the center of the town, the whole surroundings can be seen at a glance. This hill was once the site of the town hall, and a corkscrew carriage road wound up to the summit; but the building burned down, and afterward, in prosperous whaling times, the high perch was used as a lookout and signal station to announce incoming vessels. Now it is inclosed with an iron fence and used as a park, provided with seats, and a slightly location it is. Later on it will be occupied by the tall granite shaft of the Pilgrim Memorial Association, to

A PILGRIM IN THE TOILS.

commemorate the landing of the Pilgrims on Nov. 21, 1620, as well as the first birth and the first death which occurred in the Pilgrim band.

In the immediate foreground stretches the attenuated shoestring of a town, the long projecting wharves and the shipping, which is a goodly sight when the returned whalers and the fishing fleet are in port. Of the latter there are 150 sail. There are half a dozen or more craft engaged in whaling off Hatteras, N. C., which brought home from 800 to 500 barrels of oil apiece last August. It is one of the crack sights of the town in summer to watch from an eminence the mackerel handliners come in from the cruising grounds outside. When the wind is fair they all arrive in a body, with the foam piled up under their forefeet, and the panorama is then impressive. It is equal to a regatta.

Back of the town are the restless and mysterious sand dunes inclosing it like an amphitheatre, and interspersed with stunted woods and pretty fresh-water ponds—a novel and expansive tract which it is hoped soon to reclaim entirely from the inexorable drift and convert into a park. Modern sentiment demands this, and the inevitable summer visitor stimulates the movement. Already there are enough summer guests to command the situation. They come by steamboat loads every day the season through, and the antiquated fishing town with its drying stages, shore traps and seines, has so far transformed herself to meet the requirements of the fashionable world as to furnish carriages, water works, a steam fire engine and gaslights. It supports a wide awake local newspaper, two livery stables and several comfortable hotel boarding-houses. There are very creditable church edifices and school buildings and a modern Town Hall, steam-heated, with clock and bell tower, seating a thousand people. Provincetown has furnished up.

From the elevated summit of Town Hill several life-saving stations and four light-houses can be seen on a clear day, with long spots of yellow sand reaching out into the tide like tentacles of a giant octopus in wait for his prey, while away off to the limit of vision the diminutive white sails of the outgoing mackerel fleet appear like alabaster beads strung along the horizon at regular intervals, looking for all the world as if the blue canopy of the sky were buttoned down to the selvedge of the aquamarine beneath. It is altogether charming! The formation of these sandspits is a curious study. They are being reproduced continually all along the Atlantic coast, from Cape Cod to Cape Lookout in North Carolina. Conspicuous examples are noticeable at Chatham, Wellfleet, Hyannis, Barnstable and on the shore lines of Nantucket and Martha's Vineyard. They are formed by the action of tides and counter currents, just like sandbars in rivers, commencing at points of land and extending in a line parallel with the shore until eventually there is only an inlet left for the ebb and flux of the diurnal tides. When these inlets are finally closed by storms and wave action, ponds are formed, sometimes of great extent, which ultimately become fresh-water bodies containing only fresh

water species of fish. These ponds are a common feature of Cape Cod. In North Carolina the largest of them are called "sounds." Currituck Sound is noteworthy. Fifty years ago it was accessible from the ocean with market boats. To-day it abounds with black bass, perch and pickerel, to an extent sufficient to furnish a livelihood for many boatmen who fish exclusively with seines.

There is something phenomenal about the vegetation which grows in a deep ravine on the north (l) side of Town Hill. It is so luxurious and rank as absolutely to choke the ravine, showing thereby what these silicious sands are capable of producing when held in place and kept from drifting. The commissioners of the projected Marine Park may take abundant encouragement therefrom. An inventory of the trees and plants found there discovered the following, of which several are sub-tropical, to wit: Laurel, willow, yarrow, two kinds of maple, oak, apple, woodbine, blueberry, blackberry, two kinds of smilax, locust, cherry, wild rose, sweet briar, beach plum, golden rod, beach grass, mock cranberry, sorrel, scrub pine, silver leaf poplar, balm of gilead, indigo weed, bayberry, poverty grass, beach pea, crowberry, squaw huckleberry, shad hush, bearberry, and several not recognized. It is said that fifty barrels of wild strawberries were picked at Provincetown last June. Experiments prove that exquisite lawns can be grown, and some of the balsms of gilead in the village are fully 60ft. in height.

By all accounts the end of the Cape is a great resort for foxes and rabbits, which love to burrow in the warm sand and forage upon the demesnes of the numerous sea fowl which congregate there, such as black ducks, teal, doe birds, plover, curlew, wild geese and brant. A local authority says that raccoons and quail are numerous. I can testify as to English sparrows. Just imagine. Where will these feathered tramps not penetrate? Parties from New Bedford make yearly visits to this place for the purpose of fox hunting. Between coursing, fishing, shooting, bathing, boating and sailing, the local attractions are great, to say nothing of the cool comfort one gets in summer when everywhere else is hot.

In Pilgrim times the Fathers must have had grand sport. Bradford, the historian of the colony, says: "Beside water fowles ther was great store of wild turkies, of which they took many, besides venison, etc."

In Mourt's journal of the first landing of the Pilgrims at Provincetown he recounts in his gaunt orthography how his party fared during their first exploration on the land, Cape Cod way; how they found two wigwags, an Indian burial ground, two canoes and great store of garnered "corne, some yellow, some red, and others mixt with blew." They also discovered an old palisaded fort, several planks, a great iron kettle and other evidences of a previous European occupation. On their first night ashore it rained hard and they made camp "with a Baricado to windward, and kept good watch all night with three Sentinells." On the morning of Nov. 27, the narrative recites, "We took our kettle and sunk it in the pond, and trimmed our Muskets, for few of them would go off because of the wet, and so coasted the wood againe to come home, in which we were shrewdly pulled, and lost our way; as we wandered we came to a tree, where a young Spritt was bowed down to a bow, and some Acornes strewed vnderneath; Stephen Hopkins said it had beene to catch some deere, so we were looking at it, William Bradford being in the Reare, when he came looked also vpon it, and as he went about, it gave a sodaine jerk vp, and he was immediately caught by the leg. It was a very prettie devise, made with a rope of their own making, and having a noose as artificially made as any ropes in England can make, and as like ours as can be, which we brought away with vs."

"In the end," the story runs, "wee got out of the Wood, and were fallen about a myle too high above the creake where we saw three Bucks, but wee had rather have had one of them. Wee also did spring three couple of Partidges; and as we came along by the creake wee saw great flocks of wild Geese and Duckes, but they were very fearefull of vs. So we marched some while in the Woods, some while in the Water vp to the Knees, till at length we came neare the Ship, and then we shot off our Peeces, and the long Boat came to fetch vs."

After snow fell and the country froze up there was more hardship than sport in their outings, and finally they were fain to eat the "corne, beanes and Indian wheat" which they found stored, in order to keep them selves from starving. It is on record that 46 of the 101 colonists died that winter.

Reminiscences of this sort make Cape Cod interesting to the visitor of to-day. No town in the good old Commonwealth of Massachusetts is so replete with historical facts, and all who are familiar with them will rejoice that a suitable monument is to be erected there at an early day to commemorate a period so pregnant with great events. The Land's End will become the Mecca of New England tourists.

### A STORY OF 1864.

It was the one golden hour of the day. The sun had set and on the extreme edge of the after-glow, like an Esquimaux kayak, sailed the red, crescent moon. Borne faintly to our ears on the fragrant night wind came the voice of the James River as it hurried onward to the sea with its song of the valley.

From a sportsman's standpoint the day had been a good one, as the great bunches of quail that Aunt Viney was skinning could attest; and now our visitors were seated around on the old veranda enjoying their pipes—all except the Judge, whose dignity demanded a cigar.

Now the Judge was from the North, and had occupied during the war a very high position in the Federal Army, so conversation naturally turned to war times and the changes that had taken place in Virginia since then. "Virginia," said the Judge earnestly, "is one of the finest spots on God's green footstool, and I would gladly end my days amid such surroundings. What do you say, Isiah?"

Isiah—seated on the lower steps of the veranda engaged in mending the Judge's gun case—looked up and answered: "Wall, seh, Judge, I was borned an' riz right yeah seh, an' I feels jus' like I was one ob dem ol' magnolias down yon'er, wid dey big feet planted in de groun', dey ain' no win' pow'ful 'nough to tar'em out, an' when de good Lord done see fit to call me home, I knows my ol' bones will res' easy an' com'f'able 'long side of we-all's folks down by de ribber."

"Thankee, seh, no seh, I don' smoke a seegar very of'en,

dat's a fac'. You see, I likes a pipe, cause it's like an' ol' fren' dat you done know fo' a long time, but a seegar allus 'peaks like a stranger an' it takes you some time to get 'quainted.

"No seh, de wah did'n' make no difference to we-all. Some ob de niggers was glad to git dere freedom, but dey was mosly young folks. De ol' ones was kinder sorry like, dey did'n' wan' to leab ol' Marse, fo' dey was mighty comf'able an' happy in dey little cabins, 'dout no rent to pay an' nothin' 't all to pester 'em. No seh, I did'n' do no fightin' nohow, but I went wid de ol' Marse when de wah broke out, 'cause you know I was his p'ticular sarvent an' ten' to him ever since we was bofe chillen.

"Heh—whenver I goes quail shootin' it makes me think ob de time when de ol' Marster an' me went huntin' one day over in de Valley of Furginia—you see—it was long about de en' of de wah, an' we was wid de Army of Noth'n Furginia. Mistah Lincum was a keepin' our rations down mighty clus, an' we all was powful sick of eatin' corn meal, but we did'n' hab nothin' else, so of cose we had to make de bes' of it. Well, one mo'nin jus' 'bout daybreak, I was a fixin' breakfas' fo' de ol' Marse, when I hears some quail a pipin' in a little patch of corn stubble ober to'ards de woods—Marster he done hear 'em too, an' he lif' his haid offen his saddle n' say: 'Lis'en still, Isiah. Hear dat whis'le. It soun's like quail.'

"It cert'ny do,' sez I, 'an' dem quail would taste mighty nice if dey was done broiled over dis yeah fish. Dey beat dis yeah no 'count corn pone and goober corfey, I tell you. My sakes, dem quail holler so loud dey make me 's hungry as a houn'.

"De Marster he done get up an' shake hisself, den he look down to'ard dat cornfiel' an' he sniff de air jus' like he had done got de win' of dem birds. By-m-by he say, 'Look yeah, Isiah, we jus' gotten hab some ob dem quails fo' breakfas'. Jus' you go up yon'er to dat fahmhous, an' see 'f you can borrow a shotgun.'

"Well, up I went to de fahmhous, 'n' knock on de doo' an' take my hat off to de lady what opens it, an' say, 'Please, ma'am, missus, de Marster he wan' know if you-all will be so kin' enough fo' to len' him a shotgun fo' a few minutes, cause dere's some quail down yon'er what he would like to git fo' breakfas'.' 'N' she say, 'Cert'ny 't ain' much 'count, but de Capt'n am welcome.' Den she bring me de wuss lookin' gun you ebber did see; de barr'ls was all red wid de rus'; an' one of de hammers act like it done had de rheumatiz. My! you nebber did see sich a gun! Cose I did'n' say nothin', but 'low it was a fine gun, thank her very kin', an' done toted de ol' thing back to de marster. He laugh when he see it, but we managed to git one of de barr'ls loaded so as it would be very likely to shoot, den we starts off fo' de cornfiel'.

"De quail was hollerin' louder 'n' ever an' I 'clar' 'twas so long sence I had done any huntin' dat I was a shakin' like a young colt wid de wust case ob buck fever you ebber see. When we reach de cornfiel' we done git down on our han's an' knees 'n' c'mence to crawl very slow like to'ards de bunch ob stalks where de quail was a feedin'.

"You knows we had to be mighty keerful, 'cause de woods was jus' swarmin' wid Yankees.

"Marster was creepin' jus' a little ahead ob me an' he wave his han' so like fo' me to keep back, so I jus' sot still an' he crawled on.

"He had'n' got no mo' 'n three yards away from whar I sot when zip came one ob dem minie balls, 'n' it mus' hab jus' passed about fo' inches ober his head 'n' bury itself in de dirt behin' him.

"I looked up to'ards de woods on our right an' jus' caught a glimpse of a little cloud of white smoke fadin' away in de top of a big oak. De Marster he see it, too, 'n' I hear him sw'ar to hisself.

"I whispered fo' him to come back, but he don' pay no 'tention to me, fo' he was ter'ble sot on gittin' dem quail, an' he creeped right on. Den zipp-ee! came another one ob dem balls, an' a little bit ob san' flew up an' hit de Marster in de face. Dat settles de matter, fo' he see dat some daim Yankee sharpshooter was up in dat live oak, an' dat he was jus' feelin' fo' his range. He 'd got de line true 'nough; one shot had been too high, de nex' too low, but de third shot was jus' about liable to come in between—an' dat's whar de Marster was. So back he came, his face almos' as black as mine, an' a-sw'arin' mos' pow'rful.

"All day long we could hear dem quail a-callin', an' every time de wind would bring deir voices to us, de Marster would cuss dat Yankee twell he couldn' think ob no mo' cuss words.

"One day in de airly fall, long after de wah, when Capt'n Haynes, a Yankee gen'lman, was down here at de Hill fo' de shootin' season, I hear de ol' Marse a-tellin' him de story, while I was a-mixin' dem some aig-nogg; an' de Marster he say, 'No, seh, Capt'n Haynes, I don' bear no manamosity to'rds de Yankees, dey done burned my houses, 'stroyed my fel's and killed my stock, but I wouldn' hab minded dat a bit if dat daim Yankee sharpshooter had only lemme git dem quail.'

THE GENERAL.

### THE SOUL OF SHOOTING.

It may be pretty late to recount one's experience in last season's shooting, but as such occasions never die with those who really enjoy them, by such they seem always appropriate and in order. While mine extended over most of the open season and was divided into many short excursions, the grand results as far as bags of game were concerned were quite small. I started out splendidly, getting five birds with my first six shots—one partridge, one woodcock and three quail. If I had stopped here no doubt my record would have been quite creditable in the 'aged class,' but I should have lost much real sport, and the revival of many old memories that are dearer to my heart than bags of game.

I hunted mostly alone except for these memories, and time in the soft autumn days would pass wonderfully fast and pleasant, with none visible about me but my faithful log. If there were nothing about hunting but simply the game one gets, I never should hunt very much now, whatever I might have once done. Sport without sentiment seems much like a harp without strings or a shadow with no sunshine to me nowadays. It may not always be good taste to shake out this sentimental flag every time one takes his rod, gun or pen, but shall we not be better men, and will not the enjoyment of our field sports be keener and more lasting the closer we entwine them with the affections of our hearts? It seems so to me.

My system of hunting has become, of late years, to

be very quiet and perhaps lazy. I take my dog in the wagon in the morning, driving sometimes three or four miles to a locality before hitching, and if I find one bird I worry with it till it either comes to bag or outwits me, and the latter is quite often the case, though I make it a rule never to leave a wounded bird as long as I and the dog can keep any trace of it. Sometimes I would do all my hunting for the day in one locality, and at others I might try two or three places. I and the dog would take our lunches quite regularly at about noon, and the dog not having this bad habit I did the smoking for the party the whole day. Some days we took home a partridge, a brace of woodcock or a few quail, and some days we went home without a feather; but do not for a moment believe that such days were entirely without sport and real benefit. The bushes may have been very thick where we found the game, or the birds may have flushed wild, or my shooting may have been bad, owing partly to the rheumatism in my right elbow, which was the case all season. But was I not all the time hoping and expecting to get something, and did I not enjoy one of those quiet autumnal days which needs no description to those who have lived them? I cannot hope for many more of those glorious seasons, but they will be among the last to fade.

### DANVIS FOLKS.—XXIII.

#### A Gathering Cloud.

THE continual roar of the November wind on the mountains was at times overborne by the nearer uproar of blasts that swooped upon the valley, screeching through the withered herbage, clashing the naked branches and driving the fallen leaves in sudden scurries against the low window of the lean-to.

But if the outer world was cheerless the shop was cosy, and Uncle Lisha and Sam were enjoying its comfort over their pipes and the affairs of their absent friends. At times the draughty little stove ceased its fluttering monotone, as if holding its breath to listen to the conversation. Then it resumed its roar as if the subject was too trivial for its attention.

"Yes," said Sam, "Peltier's pooty sober, but he 'pears tu be kinder settled daown, an' not narvous nor off in a dream as he was. Why he'd hev spells last year, 'at he'd stan' a gawpin' off int' the air, at nothin' anybody else could see, an' let a fox go skippin' by him wi'out seein' the critter ner takin' no notice till Drive came on his track an' looked wonderin' as if askin', 'why in time didn't you shoot?' Once he let a silver gray go by him jest that way. That raly tried my patience, fer it seemed as if it would ha' cured a feller of most anythin' tu ha' shot that fox. Then agin, he'd be all in a whew, an' blaze away wi'out takin' no sight at nothin'. But he's carm as a eight-day clock this fall, an' haint let a fox go by yet, ner missed ary one."

"I callate he'll be all right when fishin' time comes raound agin," said Uncle Lisha, splashing an obdurate tap in the tub and then bending it back and forth with impatient jerks. "Good airth an' seas. I b'lieve dat aire so'luther must ha' come off 'm an off ox, it's so dum'd contry."

"It jes' as likel' he come off caow, prob'ly," said Antoine, catching the last remark as he entered the shop and took his favorite seat. "Ah 'll have see caow was more wus for do he 'll man' to as hoxens, jes' sem' as whomans was," and he crowded the tobacco down in his pipe and drew his crossed legs closer under him.

"Whomans was funny kan o' peoples, an' so was mans, prob'ly. Ah 'll b'lieve more as half de tam' de fun ant pay for de troublesome for get marry. Folks had more good tam' for be hol' bachelery an' hol' gal. Ah do' know if Peltier ant lucky for ant get marry, prob'ly."

"Sho, Ann Twine, you've took twice as much geniwine comfort as ye would if you 'd ben a-shoolin' 'raound julluk a lunsome garnder all yer days, an' so hev I, along wi' my ol' goose, an' so 's Sam, tew, a-hevin'. One tech o' that leetle goslin' o' hisen, a-snugglin' up tu him, is wuth more 'n ten year o' his ol' wil' goosin. Haint it, Samwil'?"

Sam nodded a hearty affirmative. He could hear the slow rock of a cradle in the next room above the subdued voices of the old wife and the young, and the occasional responses of his father, who preferred the amiable converse of these two women to the babble of the men.

"The trouble is," Uncle Lisha went on, "folks gits merried tew young, 'fore they raly know what they want, an' bimeby wake up an' fin' they got what they don't want, an' then they jest set the sharp aidges tow-ards one 'nother the hull endurin' time."

"It ant gat no defrunce," Antoine protested, "w'en Ah 'll was marree, Ah 'll was heighteen, an' Ursule was feefteen, an' we 'll ant quarrly honly for made up ag'in. Mebby some tam Ah 'll had for slap it leetly mite, but we 'll be all raght pooty quick. Wal, siah, Onc' Lasha, der was hol man an' hol hwomans in Canada get marree togadder w'en dey was hol, an' in tree day dey was set heat dinny an' leetly maouse run on de house, an' hol hwomans say, 'See dat maouse.' Hol mans say, 'It was rats,' an' hol hwomans say, 'No, it was maouse.' 'Ah tol' you it was rats,' he 'll said. 'Maouse,' she 'll said, an' dey holler 'Rat,' 'Maouse,' an' get so mad he 'll go 'way an' stay tree year. Den he 'll come back, an' she 'll was veree glad for see it. 'It was too bad you 'll go 'way so, jes' for leetly maouse.' 'Ant Ah 'll tol' you it was rats' he 'll holler, an' he 'll go an' never come some more. What you tink fer hol folkses now, Onc' Lisha?"

"Yis, the's ol' fools as well as young fools, an' it's hard tellin' which is the biggest. But I've hearn toll o' tew ol' critters 'at got sot aidgeways an' come aout better 'n you tell on. They 'd lived together thirty year, but bimeby they fell aout, an' they 'd mump raound all day 'thaout speakin', an' when it come night they 'd turn the' backs towards one another an' snore an' putrend tu be asleep, each one wishin' 't tother 'd speak, but nary one wouldn't fust. An' so it run on till one night in the fall o' the year they heered a turrible rumpus 'mongst the sheep in the yard, an' he ups an' dresses him an' goes aout. Arter quite a spell, an' he didn't come back, she slips on her gaownd an' shoes an' aout she goes tu see what's the matter ailded him, an' lo an' behol, he was clinched in with an almighty gret bear, the bear a-chawin' at him an' him a-huggin' as hard as the bear tu keep him f'm gittin' his hind claws into his in'ards, which is unpleasant, as I know. 'Go it, ol' man, go it bear,' says she, 'it's the fust fight ever I see 'at I didn't keer which licked.'

"She stood lookin' on a leetle spell with her fists on her

hips, till she see the ol' man was a-gittin' tuckered, an' the bear a-hevin' the best on't, an' then she up with a sled stake an' gin the bear a wollop on the back 't knocked him stiffer'n a last, an' then they hed a hugging match over the carkis of the bear, an' lived together as folks ortu, to the end o' the' days. But what's this I hear eem tellin' 'baout that aire Bascom goin' to marry Square Needham's widdier? She's rich, I s'pose. Got taller 'nough aouten the ol' ox tu buy her a steer."

"Ah 'll guess he 'll marree it if he 'll could, prob'ly. What ail dat Bascoms? He 'll borry money of ev'rey bodee, an' dey say dey can' anybody gat hees pay, honly promise, promise, nex' week, nex' week."

"I'm glad he's in the same fix I be," said the old man. "He haint got none o' my money, ner I haint nuthin'."

"An' dey say folks was hear loaded team goin' way from de store in de naght, an' dey t'ink he 'll carry hees good."

"Sho! You don't say? Wal, I'm afeered he's a tough cud fer someb'y to chaw, I r'aly be, an' a turrible nice-spoken, candid-appearin' feller he is tuw."

Sam arose, went to the door, and looked out into the gusty night and retired to the kitchen. He bent for a long time over his boy sleeping in the cradle where Huldah, sitting sewing at the table corner, could jog it with her foot. Then he cast a troubled glance upon his wife and Aunt Jerusha at her knitting, and at his father nodding over the braided husks coiled in many convolutions about his legs and on the floor. Then he sat down in moody silence to whittle the morning's kindlings.

"You 'll ant s'pose prob'ly Sam was lend it money, ant it?" Antoine whispered.

"Good airth an' seas, no," said Uncle Lisha, in a voice as guarded as its emphasis would allow. "Samwil haint no money tu lend, but he's allers took onaccountable tu that aire Bascom, an' he can't abear tu hear a word agin him. There, that tarnal tap is on at last, an' it's hopesin' it won't make the man 'at wears it go the way he don't want. It's contry 'nough, tu."

He loosened his foot and the boot from the strap that held it to his lap, and rising with a sigh of relief, began to untie his apron, a hint that hastened Antoine's departure.

ROWLAND E. ROBINSON.

### FIGHTING FOR A DEER TRACK.

I was stopping at a hotel in Indiana a number of years ago, and made a passing acquaintance of a gentleman in this way: I was looking at some railroad map of Wisconsin, in the vicinity of Wausau, Marathon county, when he casually asked me if I was acquainted up there. Telling him no, but that I had recently been up there looking over some land on which I had paid taxes for twenty-five years or more, but had never before seen, he said that when a boy he had lived in that section, and had so often been out with his father who was employed sometimes by surveyors and sometimes by owners of land in looking up their property, that he was familiar with that entire section. In speaking of looking over my land I happened to say that at two pools or small ponds of water I had noticed the tracks of many deer, where they had evidently gone down to drink. With a peculiar smile he said: "Speaking of deer tracks recalls one of my experiences up there. I was about seventeen years old, a fair shot, and had killed many deer unaided. There had been a fall of three or four inches of snow one afternoon, the first of the season, and as the clouds cleared away about sunset, I determined to start early the next morning for a deer. Getting into the woods about sunrise I jumped a deer almost before I had really settled down to business. It was a fine doe and I had carelessly turned her out of doors, as it were, from her night's apartment beside a large fallen pine. I made a quick shot as she bounded directly away from me, with no effect, so far as I could see, except to push her quickly to one side; and when I got up where she was when my gun cracked, I found a little tuft of hair that had evidently been cut from her side, but no blood stained the snow.

"Having a muzzleloading rifle I took plenty of time to reload, knowing that she would not get quieted down and stop for some little time. I followed the trail carefully all the forenoon, and only saw her once, but did not get a shot. I saw in the mean time the tracks of several other deer crossing the one I was following, in one instance two together, and quite as fresh as the one I was on, but I thought to myself, this is mine, and I will follow it out. But imagine my feelings, when soon after noon I came on to the imprints in the snow of a good-sized pair of boots keeping my deer track very close company. Of course I stopped and thought the matter over a little. One argument was, 'You can go back and pick up one of the many tracks you have crossed in coming here.' But against this came the thought that 'Some one may have killed those deer or run them out of reach before you get back there, and besides, this is your track.' That settled it, and I hastened on without using any precaution to get a shot at the deer, but with all speed to get a sight of the man who wore the boots. I had gone a mile or more when, as I went over a knoll I came suddenly upon him, and with no preliminaries I said, 'You are on my deer track.' He said he reckoned not, that he had been following it for two hours and he thought it was his. I told him I had been on the trail since sunrise and I thought it was mine. That ended the verbal argument, except that both said they would have the track or fight; and as if by mutual consent we set our guns up against trees and came together, catch as catch can. While I was only seventeen years old, I was pretty well grown for my age, quite active, with good wind and plenty of sand. However, I was thoroughly satisfied that I was right. My antagonist was about thirty years old, well set and about my size. We tussled about for some time, and once I came down on one knee, but my foe was either getting winded, or he was too slow in benefitting by his advantage, for I gained my feet quickly and found myself with the under-hand, when with a heel-trip I laid him flat on his back with my weight across his breast. He struggled once or twice to throw me off, without any prospect of success, and then said that if I would let him up he would give up the track. I took his word for it. We both got up, shook the snow off and picked up our rifles. I followed after the deer, he turned back and we have never met since. I got a shot at the deer after a while, breaking one of its hind legs; followed it till near sunset and found I was about thirteen miles from home; went to the nearest farmhouse, staid all night, took the track the next morning and got my deer within an hour."

A.

## NO LOVE LIKE THE OLD LOVE.

"GET DOWN, get down! Lay low!" cried a half dozen excited voices in as many different keys as two of us—mere boys then—were walking across a celebrated flyway on Cape Cod. Somewhat bewildered at the sudden commotion which our appearance on the beach had produced, we were in doubt just what to do, when a gunner in a blind near by called out, "Come in here! It's a bunch of brant. Don't you see 'em?" Our inexperienced eyes did not at first distinguish the long, wavering line of fowl that occasionally rose a few yards above the dark water of the bay and then fell till the wings of the birds hardly cleared the whitecaps. In a wonderfully short time the great flock had crossed the bay, risen 20 or 30 yds. in the air, gone over the beach and disappeared in the distance, bound for their favorite feeding grounds on Chatham Flats.

As the brant flew over, the gunners, hidden at intervals the whole length of the beach, they were greeted with a fusillade that was out of all proportion to the small number of birds which fell before it. The few brant that tumbled on the narrow beach were hastily picked up with many wordy arguments as to their proper ownership, and then we had a chance to look at the gunner who had given us a refuge in his blind.

He was clearly one of the veterans, but still tall and straight, and well able to battle with the fierce storms which beset the Cape in winter. A combination of sportsman and fisherman, he was roughly dressed in heavy hip rubber boots, a canvas shooting suit which had seen much hard usage, and a sou'wester that had passed through more than one season on the fishing banks. His weather-beaten face lit up with a kindly smile as he exclaimed, "I'd like to have got in the second barrel, but you see I couldn't overhaul her quick enough. She's a good one. I tell you. Aint a gun on this beach nor anywhere else can out-shoot her."

As he lavished these encomiums and many more upon his gun, he carefully reloaded, and then rested the paragon against the sea-weed in a way so tender and affectionate that one could easily see he was in love with this companion of many years, and indeed no aged invalid ever needed greater care and attention than did this old-fashioned, double-barrel muzzloader. The barrels and mid rib were evidently anxious to part company, and were only restrained from doing so by a piece of cod line tightly bound around them, and fastened neatly as only a sailor could have done it. At the muzzles the barrels were as thin as paper, and the nipples were so worn that there was always doubt whether the caps would stay on or tumble off. A bad break in the stock was partially mended with three screws and a nail, and a band of cod line gave additional strength to the rough carpentry. The left hammer would not stay at half cock, and sometimes failed to catch at full cock, but the right hammer would catch at either point or not just as fickle fate decided; it also had an unpleasant habit of falling off whenever the gun was fired, and so it was made fast to the guard with a piece of bluefish line. Then, too, there was some trouble with the triggers, and unless they were in just such a position when the gun was about to be cocked, the hammers absolutely refused to catch at all.

We examined the gun with curiosity, and I think there must have been a look of apprehension on our faces, for our new acquaintance exclaimed with an air of apology, "Yes, I know she does need fixing a mite, but there aint no one round here I'd trust her with, and I don't like to send her to Boston. You'll never know what they'll do to a gun, when you aint there to look out for her. Yes, that's so—it is kind of bad when you want to shoot both barrels. You don't get time to overhaul 'er, and sometimes they both go to once, but then you ought to see the birds come out of the air."

Just then another flock of brant came in sight, and my friends and I fairly tumbled over each other in our anxiety to put a safe distance between us and "the finest gun on the beach." However, it did not go to pieces at that time, and though we watched it with a morbid curiosity during our two weeks' shooting, it was still "as good as the best" when we started for home.

Ten years passed by all too quickly, and then one beautiful November morning found me again on that beach watching for sheldrakes. As I sat in my comfortable blind I heard footsteps, and looking around found my friend of many years ago. Time had dealt kindly with him; he was still strong and straight, but his hair was a trifle more gray, perhaps, and the wrinkles in his face a little deeper. Time, too, had dealt gently with the gun; it looked about the same, and upon inquiry I found it had all the old peculiarities of action. "But I tell you what," said its owner, "you can tell about your hammerless and all that, I wouldn't give her for the best one in Boston. Why, last—" But just then a little bunch of sheldrakes came out. We both put up on them, and before I could shoot there was a double explosion on my left and a cry of surprise. The long expected event had happened. The gun had gone to pieces, and I had been in at the death. Finding neither of us hurt, I felt inclined to laugh; but a glance at the rueful face of the old sportsman restrained me. With tears in his eyes he looked at the wreck of his precious gun. The ruin was complete. The fore end was gone and the barrels had parted company with each other and with the mid-rib. The stock was broken short off, and the right hammer had disappeared.

In vain I tried to cheer the unfortunate gunner. His grief was too deep for words of mine to solace. All I could do was to gather together the various parts of the gun that had been his pride for many years. I found everything but the right hammer, and though we searched for an hour or more it was still missing when my old friend started sadly homeward. "I don't think I'll ever shoot again," he said; "there aint another gun that could kill 'em as she could." Slowly he picked his way along the beach and disappeared over the bluffs across the bay. To him the tragedy was complete.

Three years more went by and last April I met my old friend again. He was in his favorite blind on the familiar beach, and as I approached to shake hands he made as pretty a right and left on two sheldrakes as one could wish to see. He was armed with a brand new double breechloader, and as I looked at the gun he exclaimed, "The boys gave her to me. She's a good one, but she aint up to the old one. Yes, I've got her to home. Oil her and look her over every little while. If I could find that starboard hammer I'd put her together

again, but I never could. I've been looking for it to-day." There was a tinge of sadness in his voice as he spoke of the old gun. The lapse of time and the boys' gift had not healed his sorrow. He was still true to his first love.

BRADLEY.

## Canadian Speech.

SOMER, P. Q., Feb. 16.—*Editor Forest and Stream:* Pardon me for again trespassing on your space. In writing to you some little time ago re what "Kelpie" is pleased to call "a misuse of the aspirant," my object was not to express any personal annoyance, but merely to point out an error, which I am pleased to see "Kelpie" has corrected in your last issue.

Why the Kingfisher Club should class as Canadians every one they meet in Canada I fail to see. If I meet in Vermont a full-blooded African, would it be sensible to refer to him as "my Yankee friend"? Canadians are fully able to take the responsibility of their own shortcomings, but don't try and put on our shoulders the personal peculiarities of every foreign-born resident you come across in our country. We are quite used to English ignorance of Canadian affairs (as recently as 1872 an English lady asked me "if we were much troubled by the Indians" in Montreal, while English newspapers even now refer in a casual way to the fire in Winnipeg which the Toronto brigade assisted in quenching, etc.).

There is, however, little excuse for such ignorance on the part of our American cousins, who have of late years so many business and friendly relations with us. When Hanlan first appeared in the aquatic world your newspapers referred to him as the "Canadian sculler." When he beat Elliott, Trickett, Lacey, et al, they claimed him at once as the "great American scullman."

I have mentioned this, as many people have expressed to me their conviction that Hanlan did more toward making Canada known than all other agencies combined, up to his time. Would there were a thousand Hanlans! Only three or four years ago a New York paper (the *Sun* I believe), had an article on certain troubles in New Foundland, and gravely attributed them to the mistaken policy pursued by the then Canadian premier. I have several times seen in "our own paper" the expression "Canada and the British provinces," or "Canada and the provinces" and this from people who have been among us. What would you think if I wrote "The United States and the States?"

In conclusion let me say, that if any former letter has succeeded in removing from the minds of your American readers even one misapprehension concerning my native land, I will be very well pleased. If "Kelpie" and "Kingfisher" would care to come a little further east for their next camp, I should be happy to indicate to them a place within 50 miles of here, where they will get all the trout and other fish they want (besides feathered game), in the proper season (no connection with Mr. Hough's game pocket). And now, when next Messrs. Kelpie and Kingfisher visit Canada if they find trouble in distinguishing between Canadians and Englishmen, let me recommend the following "shibboleth"—if the suspect can't say it properly he is no Canuck: "Harry, hop up, and run to Mr. Harris and ask him if he has a bit of ash or oak, to make a hammer handle." Yours in the faith, PINTAIL.

After reading in print my remarks anent "Canadian Speech," I am inclined to the opinion that somebody ought to punch the heads of the "indefatigable" and "indisposed" and the distracted proof-readers for "putting up a job" on me in order that "Pintail" might have grounds for another philological lecture. I did not, as I firmly believe, write "aspirant" when I meant to say "aspirate." No, sir. KELPIE.

## Natural History.

## SNAKES AND "WHOPPERS."

*Editor Forest and Stream:*

Perhaps I sinned in killing the snake; but "Coahoma" is a little hasty in putting me in the evil company of game butchers and other marauders of the woods. It is one thing to kill every wild thing that one sees, making a sport of slaughter, and quite another to rid picnic grounds of snakes and vermin, so that ladies may enjoy a wholesome outing undisturbed. Their fears may be as groundless as you please, but no son of man can convince them of it, and when it comes to a choice between the serpent's comfort and the woman's—now "Coahoma!"

Picnic snakes aside, I say a fervent amen to every word in your correspondent's earnest plea. He is not the only sportsman who has uncocked his rifle and spared the innocent. Let us understand each other. Sam Lovel went to the heart of the matter when he said: "I git lots o' things a-huntin' 't I can't show ye or tell ye 'bout, an' a feller that don't, don't get the best o' huntin', 'cordin' to my idee." My experience with the dying blacksnake has taught me more respect for his species. There is more to a snake than the naturalists tell us of, and the next time that I see one in a tree I will study him and let him go (though if one should run up my trousers leg, "Coahoma," I will not answer for him—there is such a thing as a snake out of place). Yes; there are queer things in the woods, and this leads me, Mr. Editor, to say a few words about "whoppers."

The gullibility of the average man when snake stories are in order is proverbial. And yet, along with an open-mouthed credulity about yarns that were told to us in our boyhood, there goes an equally unreasoning scepticism of things that we never heard of until now. The same man who will swear by bell, book and candle that there is (or used to be) a snake with a sting in its tail, may laugh at the idea of a "glass-snake" or a "compass-plant." Whence it comes that the rambler who really has seen something strange and worth noting feels a little diffident about making it known. He may be mocked at. The naturalists show a becoming mistrust of popular lore, but some times they overreach themselves. It is not many years since the Smithsonian experts pooh-poohed at the old hunters who told them that prongbucks shed their horns, and you can readily recall many other instances in which the knight of the lens and scalpel has backed down before the sage in wildcraft. Old "Nessmuk" (God bless his memory!) once said in your columns: "I do not secretly call a man a liar because he has seen and known something that I have not."

It is one of the things I like best about FOREST AND STREAM, that it gives a fair hearing both to the wonder-bearer and his critic. A lie cannot live long in your pages, and this gives us all the more confidence in telling you what we have seen. Let us have the simple, downright truth about the shy dwellers in the woods; it is marvelous enough. If the general public once finds this out, it may relieve the snake editor of the *Sun* from his unwholesome occupation. Once convince a sportsman that even a snake has habits that are worth investigating, and he may think twice before stamping the life out of it.

"Coahoma," we are not so much at odds after all. You are the older, and have seen more snakes than I have (no, there is not the breath of an insinuation about it); but I have seen one snake that has induced me "to do some thinking." Perhaps further acquaintance with his ilk may lead me even to espouse the cause of snakes at picnics.

HORACE KEPHART.

St. Louis, Mo., Feb. 24.

SEVEN live Rocky Mountain elk for sale. Exhibited at World's Fair, Genie. Price very low. Soper & Arter, 46 Lake street, Chicago.—*Adv.*

## CAPT. GALLUP ON SNAKES.

*Editor Forest and Stream:*

I saw an article in your ever welcome paper, FOREST AND STREAM, where a gentleman saw and captured a black snake sticking to the body of a large tree some distance above the ground. The gentleman also asked for some information how it was possible for a snake to climb a tree. This I am satisfied that I can give him an answer to, as I was born and raised in a snake country and spent much of my time when I was a boy in learning the character and habits and nature of snakes.\*

As far back as 1832 I accidentally learned that all fast traveling snakes and tree climbers have claws; and during my long journey through life I have never met with but one person that had learned the secret of snakes having claws. There is but one time in the history of a snake's life that this secret can be successfully discovered, and that is when the snake sheds his hide. When a snake comes out of his hide he is about as helpless as a crab when it comes out of his slough. That is when I discovered that a snake had two rows of claws. These claws are as fine and as sharp as the point of a Cambric needle, and can be found in little pockets or sacs, beginning about 4in. from the head and running back only the length of the stomach, as I could find none near the head or tail.

It is strange but true that just as soon as a snake gains his strength, if not disturbed he destroys his slough before he leaves it. What this is done for is best known to the snake, as that is one part that I have never learned.

Many people contend that there are two families of black snakes to be found in this country, but this I am satisfied is not the case, as I know more about the black snake family than any other family of snakes. Black snakes are great cowards. There is but one month in the year that they show fight, which is in May, when they are mating. Like many other living creatures of God's creation, the male and female are quite different in size and looks. The male snake is very slim, has a white breast, small head and sparkling eyes. Some people call them "horse runners," which is a very appropriate name, for I am fully satisfied that no snake, and few horses in this country, can outrun them on a clear track. The female snake is larger and has a different shaped body and head, with a dingy blue breast.

This family of snakes mate in May and lay their eggs in June, which hatch in July. They lay these eggs in a sandy soil and cover them over carefully, and never leave the neighborhood of their nest while the eggs are hatching; and near the time for the eggs to hatch they can be found near their nest waiting for the little fellows to come out, when she will open her mouth and they will all crawl down her throat. She will then go to her den, and every good day she will come out; and all the little fellows will come out of her mouth and lie in the sun; and at a moment's warning she will open her mouth and they will rush down her throat; and this performance is kept up until the young snakes are large enough to look out for themselves. I once surprised one of those old mother snakes lying in the sun with her brood of little snakes, and before I could find a stick to kill her, she got in her den. I then went for some help and tools and dug her out, killed her, cut her open, and found in her stomach twenty-seven little snakes about the size of a knitting needle.

The black family are noted roughs; they rob all the hens' nests that they can find, and if not too large swallow all the young chickens and birds that they find. I have seen several fights between hens and snakes over a flock of small chickens. I once found a large black snake near the barn that had found a setting hen and swallowed all her eggs whole, and he was a sight to look at. Only to think of a snake swallowing a dozen large hen's eggs at one time, and it made such a bulk in him that he made a poor fist of getting out of my way. And what do you suppose he did while I was looking for a stick to kill him? He wound himself around a pole and broke all the eggs inside of him, for when I killed him every egg was broken.

Mr. Editor, when I was a boy the black snake family and I were in the same line of business, although I want you to know that it was not Gallup & Co. This business was to destroy all the birds' nests we could find and eat all the young ones, and many times we both met at the same nest and then there was fun, you bet. But at one of those meetings there was not much fun on my side, as Mr. Snake had the best of it, and as it was a good joke on myself I will tell it. At one time when I was out hunting young birds I found a crow's nest in the top of a large scrubby oak tree that was full of green briars, and as the crows were making a great squawking around the nest I concluded that I had found a prize in the way of a nestful of young crows. I knew it would be a big job to reach the nest, but after surveying the track a spell I concluded to undertake the ascent, which took me fully one hour to reach the nest; and when I got high enough to peep in the nest all that I could remember was that my nose was within about three inches of a large black snake's nose that was there ahead of me and had dined on crows; and I have never been able to find out who reached the ground first, or who was frightened the worse, me or the snake. And strange to say, that after falling the whole length of that tree, the most damage that I received, except being badly scratched by the briars, was to my wardrobe, I could see my clothes hanging on the briars from the top down within a few feet of the ground.

I am fully satisfied that snakes, reapers and mowers have been the cause of the great scarcity of all kinds of birds that build their nests on the ground, and more particularly partridges that build their nests in wheat and clover fields.

E. B. GALLUP.

\* Capt. Gallup wrote us the other day: "Many years ago I thought that I would like to learn the reporter business and applied at reporter headquarters to be examined, and failed to pass the examination. I couldn't answer all the fool questions they asked me. I suppose they thought they had to go through the civil service law. They first asked me what college did I graduate at, and whether I had received an academic and grammatical education. That kind of gave me the lockjaw, and I answered by saying that I graduated at a common county school house that was built of red oak logs, with a cat and clay chimney, and had to feed fifteen head of cattle and horses night and morning; and walk three and a half miles to school every morning and back home at night, when the mud was frequently over my boot tops; and this school house had to be cleaned out every Saturday and used as a church to preach in twice every Sunday; and one of our ministers was a farmer and the other a shoemaker, and all they got a year for preaching was \$80 apiece and a suit of clothes apiece."

CARIBOU HABITS.

ST. JOHN, N. B.—In summer the caribou feeds chiefly on common plants; it is especially fond of a broad-leaved grass, growing in wet places and around the barrens which are so numerous in various places in the interior of New Brunswick. In September you will find them on these barrens feeding on the reindeer moss (*Cladonia rangiferina*), of which they are very fond. They will dig for it when the snow is nearly or quite four feet deep. They have been seen at this work when only their backs were visible above the surface of the snow. When there is a crust on the snow their operations at once cease, as they are no longer able to work. Then they betake themselves to the black moss which hangs from the trees which skirt the barrens. This they will, however, never eat so long as they can get the genuine reindeer moss. Toward spring they ascend to the high lands and hardwood ridges, where they remain until the snow has left. The dark and white caribou are often seen together in droves.

Not one out of every ten female caribou has horns; when they do have them, they are much smaller than those of the bull. The horns of the female have, however, in general many more branches than those of the bull, and are much more regularly and finely formed. The cows carry their horns much longer than the bulls; they have been seen here with horns in the month of April. The old bulls shed theirs from the 10th to the last of November; they hardly ever carry them after the month of November. The young bulls shed theirs from the 1st of December until the middle of February; the younger the animal the longer he retains his horns. EDWARD JACK.

Lynxes.

YOUR correspondent "J. A. G." says, in issue of Feb. 3, that he has seen tracks and heard howls which "Pine Tree" thinks were probably the manifestations of a lynx.

As these things happened in the Wisconsin forests, of which I used to know something, I believe that "Pine Tree" is right. The size of the tracks (3 in.) is not unusual. I used to track one old fellow which had an enormous foot, and I hardly expect to be believed when I say that I measured it at several different times and its diameter was 4½ in.

I never saw any other track of lynx nearly as large as this, and I was most anxious to see the creature; but although these animals are often very bold and apparently fearless of man, I could never manage to get a sight of one. Yet I spent years in the forests where they were common and often heard their cries.

Once, about noon of a winter's day, I reached a logging camp on the Oconto, where I found the men just come in for dinner. They were hurrying about to get a gun ready for shooting something. On inquiry, it appeared that when they had nearly reached the camp a lynx was seen by the roadside, and allowed the whole crew, fourteen in number, to pass him within a few yards. They did not get a shot at the animal.

At the water-hole in the ice, near the same camp, a man who was dipping water one morning threw his axe at a lynx which came quite near.

I suppose that they were the more fearless because of the many men they saw; very few were armed with anything more deadly than an axe. Yet it seems odd that they were very rarely killed.

In this county, although I believe that they have been seen, they are certainly very rare. I have never tracked one or known one to be killed hereabouts. KELPIE.

Camp-Fire Flickerings.

"That reminds me."

The Last Moose of Millsfield Pond.

PARTIES who have traveled over the stage road from Berlin Falls to Errol Dam, in New Hampshire, have doubtless met or heard of John Chandler, of Dummer. Chandler has the reputation of being a jolly, wideawake, first-rate fellow; and his house is said to be the best place to stop at in that region.

Some four years ago, in October, two young men went to Chandler's. Like most young hunters, they were very enthusiastic and full expected to find game of all kinds. They asked a great many questions about hunting. Chandler said the woods were full of deer, bear and moose; and he advised them to go to Millsfield Pond. They were told to follow the stage road until they came to an old logging road, which would take them to the pond; and were cautioned to be careful when they got near the pond, as there would be a moose in the water very near the spot where the old road came to the pond. Chandler drew a sketch of the route and also of the pond with a moose standing in the water. Starting early, they found the old logging road; and when the pond was reached, there stood the moose and they shot him at once. The return to the house was made in pretty quick time; and when the boys saw Chandler they shouted, "We've got him! We've got him!"

"Got what?" asked Chandler.

"Why, the moose you sent us after."

"You can't fool me," replied Chandler; "there has not been a moose around here for the last twenty years."

"We don't care if there has not been," said the boys, "we found one in the pond, and he is there now; and we want you to go and bring him out."

An ox team was taken to the pond and the moose was hauled out and taken to Berlin Falls.

In telling the story afterward, Chandler would laugh and say, "What a giveaway it was for me. Had I supposed there was a moose about here I wouldn't have told any one; I would have gone after him myself."

Two weeks or so after this moose was killed, John Danforth and I were on our way to Parmachenee, and we spent a night at Berlin Falls. When we were talking about the moose with the landlord of the hotel, he said, "I suppose it was the largest moose ever killed."

"I heard it was a young bull and weighed 400 lbs.," I said.

"Yes," replied he, "that is what it weighed; but they have been selling it at the butcher's here for 35 cents a pound, and have sold already about 1,200 lbs., and I guess there is a little left."

C. M. STARK.

WINCHESTER, MASS.

It was this way.

Skavlem and I were shooting at our place on Koshkonong, and as we have nearly three miles of frontage there in common with one other gentlemen we had plenty of room.

Skavlem thinks that twenty-five decoys are as good as a hundred, while I think the reverse. So I had out nearly a hundred and he only twenty-five, and the canvasbacks were coming my way more than his, but he wouldn't give up his theory.

One day at dinner he was kicking about something. The blind was not right, or the sun was in his eyes, or something, I hardly remember what; but anyway I told him to go into my blind after dinner and I would shoot off the point, where he had another jam of decoys, and I would show him how I could call the canvasbacks in. He rather sniffed at it, I thought, but after dinner he poked out in my blind, while I walked down to the point with John, who was staying with us. Pretty soon John asked me where I got the tall grass I used in my blind instead of willows, and I went down along the shore to show him and help him cut some, which was right in behind my blind. While we were cutting it there came a big lot of canvas headed in from the lake, but well outside of the decoys. I began calling, and after they were about twenty rods past Skavlem the whole gang, fifty at least, came up into the wind, turned and struck straight for him. As they circled over his decoys, John and I held our breath, for we knew he had his 8-bore in the boat and we expected to see a street cut through them. But not a sound came from Skavlem and John said, "He must be asleep." I began calling again and once more the great flock swung back, bunched together over the decoys and again we held our breath. But not a sound from Skavlem. Then John and I walked slowly back to the point meditating. John says, "Anyway, I reckon he knows you can call 'em all right." Pretty soon we heard Skavlem shoot and after that he kept it up pretty lively, so we knew he was awake.

That night after supper I said, "Well, I called 'em in to you, didn't I, why didn't you shoot." "The safety stuck." That was all he said, but I knew he felt hurt.

JANESVILLE, WIS., Feb. 21.

A. M. VALENTINE.

Game Bag and Gun.

"GIVING THE ALARM."

WITH your correspondent who wrote recently under the above head, I have long observed the readiness with which the shy little denizens of the forest warn each other of approaching danger. All birds seem to have a language sufficiently common to be able to understand alarm notes. The scolding of a wren or catbird at a stray dog or cat will assemble in a few minutes an indignant flock of the bird family, of all names and sizes. It is a question, of course, to what extent the larger animals make note of bird cries. I have never hunted moose, but have understood that they take alarm at the screaming of the Canada jay.

And speaking of jays, the whole family of them are not only close observers and persistent meddlers, but most inveterate crows. The California jay will follow and yell at the deer hunter till his patience is worn to the last frazzle. In fact I have known instances where it was quite exhausted and the worm turned. He has a near relative down in this neck of woods in Mexico. I do not know exactly who he is (*Aphelocoma sieberti arizonae*?), but he has the same bad habit. I never had positive proof that deer take notice of these forest tattlers, but probably they do.

I never was aware till painful experience brought it home to me, that the Virginia deer is so much more cunning than the California blacktail. Your editorial matches my experience exactly when it says, "The Virginia deer is the wariest and most cunning of any of his tribe, and there is no task of greater difficulty than to take up the track of a whitetail deer and kill it by fair stalking." The suggestion that this wariness is the result of contact with hunters for generations past, is hardly borne out by the fact that here, where there is the minimum of hunting, the same characteristic is exhibited. It might be inferred from a sentence in the same editorial that all the whitetail deer of Mexico are small. Those to be found where I have hunted, in the dry hills and mountains of central Mexico, average rather large, though not usually very fat.

There is perhaps no better training for the still-hunter as a boy than shooting squirrels with a rifle. And I have about come to the conclusion that they ought not to be shot any other way. With your correspondent I have often noticed the baleful effects of a long wavering shadow. When the sun is low the hunter must watch as carefully where his shadow is to fall as he selects a place for his feet. I have observed too the effects upon game of the white face and hands of the hunter. Skillful hunters in the jungles of Africa are said to blacken their faces. I think, however, that the reason little animals prefer to come up behind one when he is sitting or standing still, is not so much the color of his skin, as their desire to avoid his eyes. All game is peculiarly sensitive to the eye, and wild animals seem to know perfectly when they are observed. Of course they sometimes discover this by the movements of the hunter, but they doubtless mark the glance of the eye much further than we suppose.

A Mexican gentleman interested me very much telling how he was initiated into still-hunting for deer. He and his friends used to go out with their fine guns and wide white hats, white coats, high-heeled shoes, etc., and tramp for hours without so much as seeing a deer, though they knew the hills were full of them. But one of the farm hands only asked that they lend him an old carbine and two or three cartridges and he would bring back meat. This nettled the gentleman a good deal, and puzzled him even more. But one day he came upon Julian in the woods. He had discarded hat and shirt. His trousers were rolled high up on his thighs. The brown skin mingled easily with the dull colors of the hillside. The sandals even had been left off, and defying rocks and thorns he was slipping through the brush like a ghost. Don Luis took in the situation. He got him a green hat and a green jacket—the woods are green the year round there—and with a soft sole of rope matting on his shoes he became a still-hunter himself, and a good one.

Suitable footwear is the still-hunter's chief problem in

this land. The hills which the deer inhabit are both rocky and thorny. Nothing but stout leather and thick soles can resist the fierce cactus thorns which almost cover the ground. But no man can walk over loose rock and gravel with thick soles and heavy heels on his shoes without a racket that will give the whitetail ample warning. The natives, accustomed to the hills from childhood, seem to avoid the thorns instinctively and walk about barefoot or with light sandals on in apparent impunity. I observe that I am learning myself what not to step on. I may later be able to wear moccasins or sandals. I had the heels taken off a pair of old shoes, and soft, spongy soles put on, with the flesh side down. They were pretty quiet on the gravel, but bruised my heels, as the inner sole was thin. And as I came down a steep hill one night in a shower I sat down far too often and too violently for one whose spinal cartilage is beginning to harden.

This is a lot of gabble, Mr. Editor, and about quite a variety of nothing. But I have just been reading up FOREST AND STREAM for four months back—time which I have spent away from home. I notice that when my hour for recreative reading comes, even the illustrated monthlies lie uncured on the table, while the "family paper" has its innings. I would tell about my recent hunting experiences, but they are as those giddy young men found the Midway, "Nothing to it." In fact, the experiences themselves have been about nil. But now I am going to make an earnest effort to wait till I have something to say. AZTEC.

SAN LUIS POTOSI, Mex.

STOP THE SALE OF GAME.

A PLATFORM PLANK.—The sale of game should be forbidden at all times.—FOREST AND STREAM, Feb. 10.

Editor Forest and Stream:

The position you have taken in regard to the marketing of game, namely, that at some future time the selling of the spoils of the chase will be, and of right should be, prohibited within the limits of the United States, has given me much food for reflection.

I think your attitude in these matters the correct one, and I am glad that you have given expression to these views, for this sentiment is destined to gain ground in degree commensurate with the gradual extinction of the game supply in such localities as are still free to the public.

I am very well aware that there are a great many persons who will be ready to curse roundly any one who gives expressions to such views as these; but let them curse, and they will.

For more than half a century I have hunted and fished as opportunity occurred, and in many different States. It has not ordinarily been my practice to go afield when I felt it incumbent upon me to stay at home and attend to business, but for all that I have hunted a good deal, and as far as I can recollect, I never fired a shot on preserved grounds or cast a line over preserved waters. I have lived in more than one place where men could exist on the game that they could kill. I have seen it in vast numbers, and where is it now?

The old, old story is my answer; the senseless and wicked wastefulness, the utter disregard of the plainest lessons taught by the reckless slaughter of game and fishes, seem to have been everywhere the same. In the town and country where I write, where a few years ago a good hunter could almost certainly kill a deer when needed, it is not now worth while to carry a gun. The very grouse—such of them as are left, seem to have changed their habits, and instead of haunting the roadsides and open spaces in the forests during the autumn season, betake themselves to the depths of the woods where they are seldom seen unless by a chance land surveyor.

Every deer killed in this region costs the hunter, in time and other expenses, a good many dollars more than its market value, yet there are those who seek to eke out the payment of these expenses by the sale of the venison they may chance to secure. I cannot think this right. Certainly this course has not conduced to the greatest good of the greater number of hunters.

Wherever there is still game enough for all—if there be such a locality, it might seem that a poor man may as rightfully market a superfluity of birds or animals killed on public lands, as that a shareholder in a game preserve should kill more than his needs require, for any purpose whatever. But what business has any man, be he prince or peasant, with more than a dozen birds in a day, or with more than one, or at most two, deer in a season?

I am in favor of game preserves, and do not care who knows it. I would own one if I could, and so would every other man who loves the gun.

I am in favor of everything which shall tend to provide against the threatened extinction of our game and fish, that those who succeed us may not perforce hear only in imagination the whistle of a buck, or the whirr of the startled grouse; and the game preserves appear to me to offer the only hope to this direction. But I would insist, had I the power, that the number of game creatures or of fish which may be taken on these preserves should be limited to the same that any one outside their limits should be allowed to kill; and this number should be very small indeed, until the overflow from these inclosures should at least begin to have its effect on restocking the public lands. KELPIE.

TOWANDA, Pa.—We have several market-hunters here, who kill from 100 to 300 birds in a season. PITT.

Ohio Game Legislation.

TOLEDO, O., Feb. 22.—Editor Forest and Stream: The Strong bill forbidding the sale or possession of any game or game birds during the close season (House bill No. 176) which passed the House some three weeks ago, was defeated in the Senate yesterday. This is not a matter of regret, owing to the crude and imperfect shape in which the bill went over from the House. If enacted as it passed that body, it would have prevented any common carrier, club or individual, from bringing any live game birds into the State, or from even feeding them through the winter, for stocking purposes. Some of us attempted to secure an amendment to the bill after it had gone through the House, but without success. The section forbidding the sale of dead game at any time in the year, and its possession during the close season is all right, but people do not buy live game to kill and eat, and the provisions of the Strong bill, if it was to be impartially enforced, were too sweeping. JAY BEEBE.

### "HUNTING WITHOUT A DOG."

SILVERDALE, Wash.—Under the head of "Hunting Without a Dog" in issue of Feb. 3 a correspondent signing "B." strikes the keynote according to my ideas. I will not use a dog for any kind of game when hunting alone. I prefer the Indian method, still-hunting, in the broadest sense of the word; and that embraces a great deal. It means, first, an unlimited stock of patience, next absolute noiselessness and wearing of clothing from toe to crown, which will allow one to press through brush or dry grass without a sound, provided he knows how to lift and put down his feet. The still-hunter must be a lover of nature, a sort of homespun naturalist, if he would be successful; for he will have to gain a minute knowledge of the habits and characteristics of his game, and in so doing will suffer some disappointments and lose some good shots. He must, as "B." says, be a snap shot, though he will have many chances to use all the deliberation he may wish to. He will learn to observe the slightest "sign," to harken to the smallest sound, to familiarize himself almost unknowingly with all the bird and animal calls, the plant and insect life, and a thousand other things familiar to the silent disciples of the gun who seek solitude and the company of nature alone rather than the more boisterous company of a canine companion.

Still-hunting is the best method that I know of of teaching a man to pay attention to little things in detail and to note seemingly unimportant things.

I know many Indian hunters, all still-hunters, all successful, and I find some surprises among them once in a while. For instance, a Siawash "told my fortune" from my pipe not long since in this way: The pipe lay on the table and picking it up Joe looked at it a few moments and said, "You smoke much." "Why?" "The pipe is new, yet it is much burned inside. You are right-handed, for the top of the bowl is match-burned on the right side and not on the left. You have strong teeth and strong jaws, for the new mouth-piece has a mark to fit your teeth on top and underneath. You use strong tobacco, for there is much oil in the bottom of the bowl. You smoke at home and away from home, for the bowl is polished smooth where you carry it in your pocket." Joe is only a Siawash Indian and a still-hunter, but he "read the sign" on the pipe comprehensively and correctly; and it struck me very forcibly that still-hunting teaches a man to observe and to use the senses that have been given him to the best advantage.

I think "B." is right in his preference for the method as against that of using dogs, and I extend my trigger hand to him in fellowship, for I too enjoy a day off and a ramble among those familiar spots, nooks hidden in the thicket's heart, dells beside the stream or pine-girt glades of the mountain ranges and tule-fringed ponds of a dozen States—spots as familiar as my own house. Their inhabitants too are equally well known and have furnished me with an interesting volume of natural history, always readable, always new, and in which *finis* is not yet written. My sketch book has many a curious portrait in water color, pencil or India ink of these same dwellers of this, another world than ours, and its every page recalls some interesting bit of nature with its own setting, obtained only by meeting the original on equal footing and sketching them while they were unwittingly the most natural of models.

"B." has opened the right book and read the first two or three chapters; may he keep at it, for it grows decidedly more interesting as one reads on. EL COMANCHO.

### THE ADIRONDACK DEER.

INDIANAPOLIS, Ind., Feb. 19.—*Editor Forest and Stream:* Just once a week I clean my guns. I don't mean to say that I go hunting that often or that the guns need an oil bath. I get FOREST AND STREAM every Saturday and read the stories of the chase and wax enthusiastic. Then I clean my guns for want of better use to put them to at the time. A fellow must do something, you know, to work off the effects of the perusal of the stories of "Podgers," "Kelpie," Lew Wilmot, Mr. Hough and others.

I want to echo Mr. Cheney's wish that there be a growing sentiment in the Adirondacks against running deer with dogs. To my mind it is far more unsportsmanlike than "jack" or night-hunting. With dogs, the deer has no chance of escape. With C. R. Egbert and Emmett Lathrop—two of God's noblemen who live in Auburn, N. Y.—I and my brother went up into the Grasse River country, on a fine preserve in St. Lawrence county, last year and the year before. On the latest trip we took the new Adirondack railroad at Herkimer. As we approached the mountains every station gave us an addition of hunters, and almost every one had from one to three dogs—hounds. At Fulton Chain Station the majority disembarked, and my recollection is that there were eight hunters and twelve dogs. Others scattered themselves along at other stations. We proceeded to Childwold and then by wagon to our hunting ground. Our party were in the woods nearly three weeks and we got five deer. We could have obtained more but we didn't need them. On my return trip I waited anxiously for the train's arrival at Fulton Chain. There four hunters and seven dogs got aboard, and three dead deer were thrown into the baggage car. Each hunter had his pack full of skins. They fell to discussing the events of their hunt and soon were pulling the skins forth to illustrate how they "did the business for that big deer." Every skin had a bullet hole in the neck. Of the dead deer in the baggage car, two were shot in the neck and the other in the head. I asked one of the hunters how many deer they shot on still-hunts. "Still-hunts!" he said, casting a pitying glance at me, "Who the—would go still-hunting when he is dead sure of getting a deer with his dogs? You see, the dogs chase 'em into the water and we can get 'em and shoot 'em in the neck dead easy."

"And how many did you get by night-hunting?" I asked.

He pitied me again and replied, "Not a blanked one. Dogging is the easiest and surest. These deer up here are on to the light racket, and it's only once in a great while that one will stand. Most of them run like the devil when they see a light."

These hunters, so they told me, had ten skins in their packs, and the three whole deer in the baggage car. They were not the same ones I saw get off the train at the Chain on the trip into the woods, but another party. I

have often wondered what "luck" that other party with the twelve dogs had.

In St. Lawrence county dogging is not allowed. As a result the Grasse River country is well supplied with deer. It might almost be said that the woods and marshes are full of them. Of the five deer killed by our little party last fall two were shot at night. With my own eyes I have seen deer run from a jack light, or rather I have seen their eyes for a moment and then heard them plunging away through the woods. I well remember my first experience with a jack lantern. I had been very anxious to see a deer's eyes at night, blazing back the reflection of the light. I went to Burnt Bridge Pond with Uncle Hi Hutchins, one of the oldest and best guides and hunters in the Grasse River region. He paddled me about the dark pond for an hour before I got a sight or a shot. We could hear deer in the water at various points, but they ran away the moment the light flashed across the water. At last we heard a deer tramping through the alders. The noise was about five rods on our left. Uncle Hi veered the bow of the boat in that direction and signalled for me to open the light. I did so, and there, directly in front, and only for an instant, I saw two balls of fire—the deer's eyes. At once, and before I could lift my gun, they disappeared. I held the light steady and Uncle Hi pushed the boat ahead with a strong sweep on his paddle. The light penetrated the alders, and I was enabled to make out the form of the deer plunging madly for high ground and the somber woods. I lifted my gun and fired. The deer dropped dead, the bullet having penetrated the paunch. "That deer has been shot at before by a jack-hunter," said Uncle Hi. We examined it after lifting it into the boat and found on its back the distinct mark of a bullet. I am convinced that when that deer saw my light it felt impelled to do as Bill Nye did when he found the location of the cyclone—go away from there. While in the woods I heard numerous stories of deer running away from lights. In fact, there is one deer at Burnt Bridge Pond that seems to be proof against hunters. Uncle Hi says he is "an almighty big buck," and has dubbed him "Big Sandy." For eight or nine years Uncle Hi and others have tried to get a shot at "Big Sandy," but have failed. He treats a jack-light with withering contempt.

I saw in a Utica paper some time ago some figures relative to hounding, jack and still hunting. The number killed by the hounds, if memory serves me right, was more than double that secured by means of jacks. If the deer in the Adirondacks do not increase—if they are wiped out entirely—hounding will be the prime cause. This is the opinion, not of a great hunter, but of an ordinary sportsman who has given the subject some study.

Speaking about remarkable shots, they tell of one up in the Grasse River country that deserves a place in FOREST AND STREAM. Mr. Henry Wise, of Auburn, N. Y., was hunting on Burnt Bridge Pond one day, when he saw a deer on the shore. He was beyond rifle range, but a little matter like that never discouraged Wise. He raised his rifle and pulled. The bullet struck the water, glanced and penetrated the deer's heart, killing it instantly. I did not witness this shot, but it came to me from reliable persons who were present. FRED LESLIE.

### CHICAGO AND THE WEST.

[From a Staff Correspondent.]

#### In Iowa.

CHICAGO, Ill., Feb. 22.—Hon. J. G. Smith of Algona, Ia., did not receive the appointment of State Fish Commissioner, which went to Geo. E. Delevan, editor of the *Estherville Vindicator*, a political friend of Gov. Jackson. Mr. Delevan may be an older soldier, not a better. And politics we have always with us.

Mr. Smith, by the way, writes me under date of Feb. 22: "Yesterday, Feb. 21, the Iowa Legislature passed the 'Hunters' Trespass Law.' It is a law which I think will cause more trouble than any other Iowa law. I doubt very much whether the law is a constitutional one. It seems to me that it would be a good plan for the sportsmen of Iowa to raise a fund and make a test case as soon as possible. Many of our best lawyers think that it will not stand the test."

The Iowa farmer has apparently been downtrodden again by those awful hunters. When the details of the statute are better known we shall probably find that it resembles many other laws framed by the rural Solons, a good deal more perforated than penetrating.

#### In Dakota.

G. L. Cross, a cold storage man at Sioux Falls, S. D., was fined \$25 and costs last Wednesday for having in his possession illegal prairie chickens. The sportsmen of South Dakota are beginning to value their game.

#### In Illinois.

The Tuscola wolf chase ended the second day in the killing of a wolf which must have been a timber gray, since it is described as being "large as a mastiff."

In the past few months dog poisoners in Ottawa, Ill., have killed nearly 100 valuable dogs of all breeds, in value probably of \$5,000. On Feb. 17 nine dogs died, among others those belonging to Attorney-General Moloney, ex-Mayor Young, Deputy Treasurer Dowell, Alderman Beem and others. Deputy Dowell's dog was worth \$175.

Mr. G. W. Rexroth of Virginia, Ill., writes that quail have wintered very well indeed about his town, and a good supply seems assured for the coming season.

#### In Arkansas.

Sportsmen of the State say that a good and reliable dog trainer, who could be depended upon, could find an admirable location and good patronage at Devall's Bluff, east of Little Rock.

Mr. Jos. Irwin, of Little Rock, asks for information on how to carry live minnows for bait without loss by death in transportation. Can any one tell him a better way than the old one of frequent changing of the water?

#### In Texas.

Mr. G. A. Wheatley, president of the Austin (Tex.) Rod and Gun Club, writes as follows of that far away but always interesting country which is every year coming closer to the sportsmen of the North:

"The Austin Rod and Gun Club, organized May 2, 1893,

has a membership of sixty. The house of the club is located upon the club property, about nine miles above Austin, on the Colorado River, and six miles above the great dam built across the river by the city of Austin. The fishing lake of the club is eight or more acres surface, maximum depth 40ft. It is stocked with black bass. During the coming spring the club will build a commodious club house, and next fall will have good fishing, and also good hunting on the large (or Colorado) lake, which is 30 miles long and one-half mile to one mile wide.

"The winter here being very mild, we have good fishing all winter, and good duck shooting on the lake. The surrounding hills are filled with deer and wild turkey."

In regard to the alleged illegal killing of deer by Gov. Hogg of Texas, the dispatches had the following:

"AUSTIN, Texas, Feb. 22.—Sheriff White of this county armed with a warrant from Nacogdoches county, arrested James Hogg, Governor of Texas, for alleged violation of the State game law while in Nacogdoches a few weeks ago. The whole matter is a vent of personal spite, but the Governor gave the required bond and says he will promptly pay the fine. An investigation, however, shows that this county, like many others, is exempt from the operation of the game laws."

Where is Dr. Thomas of Chicago? Dr. Thomas, this is Gov. Hogg—Dr. Thomas, Governor.

#### In Ohio.

The Ohio Senate on Feb. 21 knocked out the bill prohibiting the sale of game. It hasn't knocked the plank out of the sportsmen's constitution, nor the determination out of their hearts.

#### In Chicago.

Cumberland Club is at this writing holding high jubilee at the Lodge in Indiana, and this is billed to be the principal shooting festival of Washington's Birthday.

Garfield Club shoots live birds to-day at the grounds, Robinson avenue and West Madison street.

Calumet Heights Club had 85 members present at its last club gathering, and has the brightest of hope for the future. Improvements have been made on the club premises. The annual election is March 7.

The Chicago Fly-Casting Club had to postpone its banquet to-day, not enough members signifying ability to be present.

#### Unknown Disease.

Mr. Joseph Irwin, of Little Rock, Ark., wrote recently asking advice about his pet pointer dog, Jack, the little fellow over which we lately had so much sport together. The dog was suffering from some sort of mysterious disease which his owner thought might be rabies. There was constriction of throat and hoarseness of the voice, with noticeable irritableness and disposition to snap at other dogs. No convulsions or difficulty in drinking water appeared, though food was swallowed with difficulty. Mr. Irwin had put the dog into confinement, and was very anxious to know what was the trouble, as no one in his locality could define it. What little could be done here was too late, for the next day Mr. Irwin wrote that it was all over.

"Poor little Jack," said he, "to-day was so much worse and suffered so much I could not stand it longer, and I had him shot. Thus one of the staunchest friends I ever had was lost to me. I shall always regret his loss."

This is too bad. The little fellow was one of the hardest, merriest little fellows I ever saw, and a treasure of a dog all around. There is only one consolation in his end, and that is that the undiagnosed malady was not hastily set down as "hydrophobia." In a human being it might have been called diphtheria. E. HOUGH,

909 SECURITY BUILDING, Chicago.

### The Vagaries of a River Bed.

VERMILLION, Clay Co., S. D., Feb. 11.—I came here since 1861. At that time it was pretty wild; there were not more than a dozen settlers. Game was plenty. There were elk, deer and antelope and a few buffalo, but not many close to Vermillion. Of ducks and geese and swans and brant there was no end.

At that time the Vermillion River emptied into the Missouri right at the town of Vermillion, and it was alive with fish. But it has all changed here now. In the spring of '81 we had a big flood and the Missouri cut across a large bend about three miles south of Vermillion. That left the old Missouri bed for the Vermillion River to spread out over, and it is more like a swamp now than a river. It has almost spoiled the Vermillion River for fishing. It is about seven or eight miles to the mouth of the Vermillion now, but having all grown up to wild rice it is quite a place for ducks. About six miles north of Vermillion on the Vermillion River there is another great duck country. In a wet season the bottom is from a half to three-quarters of a mile wide, and it is a continuous swamp seven or eight miles long. For the last three or four years it has been dry and ducks have been scarce, but I think that when we have a wet season they will be plenty again.

I am afraid that the pinnated grouse have been pretty nearly all killed off or caught off. I have not seen one for a month and I know they were plenty this fall. I am afraid they are going to follow the wild turkeys, which used to be plenty here, but I don't think that there is one left. I see that the Mitchell Gun Club is taking steps to put a stop to this game slaughter. I hope they will succeed.

I think we will have a good many ducks and geese here this spring. The ground is frozen hard and the sloughs will hold the water well. I suppose it is not right to shoot ducks in the spring, but that is the only chance that we have at them because they do not stop here much in the fall. J. D. S.

### The Testing Institution.

MR. ARMIN TENNER tells us that the American Gun Testing Institution is in working order. It is situated at Dexter Park, Brooklyn, N. Y., that being the post-office address. Mr. M. F. Lindsley has withdrawn from the advisory board.

### Lead-Poisoned Wildfowl.

*Editor Forest and Stream:*

Speaking about birds dying with shot in the gizzard Mr. Knott, who keeps the shooting box at Liverpool, Indiana, always scolded the boys for throwing shot about loose, for he said it would kill the chickens. H. C.

# Sea and River Fishing.

## ANGLING NOTES.

### Whitefish Lemonade.

LAST week while writing in these notes about the size of smelt fry, I was reminded of what happened to some whitefish fry in charge of the late A. H. Powers, Fish Commissioner of New Hampshire. Mr. Powers was transporting a lot of whitefish fry in cans on the cars, and was left at a railroad junction with his charge to wait for a train on another road to take him to his destination. The cans of fish had attracted all the loiterers about the station and some of them did not understand what the cans contained.

Mr. Powers, anxious about the condition of the little fish, dipped from one of the cans a tumblerful of water and whitefish fry to examine them. Trout fry of similar age would have massed at the bottom of the can, but the whitefish were "swimming up" all through the water. The fry were semi-transparent mites not unlike in appearance particles of the inner tissue of a lemon that had been through a lemon squeezer. Holding glass and contents up to the light he watched the fry for a moment and then put the glass on the cover of a closed can as he peered down into the open one to see how the fry were doing. He raised his head just in time to see one of the loungers with head thrown back, glass in hand, and the last of its contents disappearing down his throat. A puzzled look appeared on the man's face which quickly gave place to one of fear, as he exclaimed: "Bigosh! I thought that was lemonade. What was it?"

Mr. Powers, with a serious look on his face, informed the man that he had swallowed about twenty-five live whitefish, and if the conditions existing in his interior department should prove satisfactory, the fish were capable of growing from thread-like fry into fish of 10lbs. each, thereby adding 250lbs. to his weight, much to his knowledge of natural history and, as an object lesson to curb his curiosity, would be worth more than could be computed.

### The Sea Serpent Redivivus.

I am not a prophet or the son of a prophet, but when, a week or two ago, I mentioned that President Jordan had said that there was no such thing as a sea serpent, and added that I presumed in spite of this fact the sea serpent would bob up, as usual, next summer in the newspapers, I had not the slightest idea that at the moment of writing the news was on its way to this country from South Africa that the sea serpent had already been seen in 1894. The *Natal Advertiser* tells the story of his serpenthship, and it seems to be a brand new species, and the largest that has appeared thus far, inasmuch as it was computed by the officers and passengers of a steamship to be not less than 150ft. long. The steamer was turned from its course and ran close to the "serpent," when it was found that it had several pairs of fins about 20ft. apart on its body as large round as a whale, and of the shape and color of a conger eel. It was no relation of the serpent in the proverb—"How sharper than a toothless serpent to have a child say 'thanks'." This fellow had "a jaw about 7ft. long, armed with large teeth, the gums being of a whitish color."

That is the kind of a serpent I am looking for, and I would like to get seven of them to put into seven trout brooks that I know. I do not care so much about the color of the gums, but its esophagus must match its greed and it must be able to swallow a man without rolling its eyes, and if its body is 700ft. long, all the better; but it must not taper too much toward the tail, as I shall expect it to take in a "trout hog" or "fingerling fisherman" for each 6ft. of its length. In fact, I think that the specifications should demand that every 6ft. of length should take in two "fingerling trout fishermen," as they are about the smallest patterns made. No serpent under 150ft. in length will answer, for smaller ones would become gorged on the "smart Alecks" who go out before the law opens the fishing season, and the digestive organs of the serpent would not be in order to meet the rush of other sorts of men who violate the law in different ways when the season is open.

I would like to reserve the right to reject all offers of serpents that may fill the above description if there should in the meantime be discovered a serpent with jaws 7ft. long at the posterior end of the body to duplicate those at the anterior end, because a double-ender would do more business and sooner prepare the way for honest anglers to get some decent fishing in our stocked trout streams.

### Public Fish and Private Waters.

Some time ago a gentleman in Lansingburgh, N. Y., asked me if the New York Fish Commission furnished trout fry for private waters, and I told him that it had no right to do so, and presumed that it did not. I had forgotten that I made this reply until a day or two ago when he reminded me of it and sent me a clipping from the New York *Tribune* with the headline "Fish for Private Waters," and said: "Here is evidence that the State does furnish trout for private waters, and if further confirmation is needed you will find it in *FOREST AND STREAM*, Feb. 17, in a letter from C. W. Puffer, Supt., stating that he has ordered 5,000 brown trout for a preserve in New Jersey (out of this State, you will notice) from the State hatchery in Caledonia. Do you wish to revise your reply to me?"

I am not infallible, but in this instance I have nothing to revise, for there is no evidence whatever that the State has furnished trout for private waters, or that it proposes to do so. To be sure, the *Tribune* clipping reads, under the head I have quoted: "Many applications have been received (by the Fish Commission) from all parts of the State on the part of people who wish to stock private waters with fresh-water fish," but that is not evidence that the applications were granted, even if they were made. If my friend will send to the secretary of the New York Fish Commission for blank fish applications he will find that they read as follows: "The undersigned applies for — fry of — to be planted in the *Public Water* hereafter described, etc." Then follows a sort of civil service examination as to what the applicant knows about fish, and water, and temperature, and fish-food, and the law, etc. There is another blank used for black bass which reads: "The undersigned applies for — black bass to be planted in the *Public Water*, etc., and then follows the civil service examination as in the case of fish

fry, and the average applicant will do well if he passes fifty per cent. of the questions which are necessary for the intelligent distribution of fish. In each case "Public Water" is emphasized in capital letters, which is evidence that it is the *Tribune* which is wrong and not the writer.

As to Mr. Puffer's letter in *FOREST AND STREAM*, he does not say that he has ordered the trout from the State hatchery at Caledonia. He says he has ordered them from Caledonia. One of the State hatcheries is situated at Caledonia, and I know that it is quite customary to associate this hatchery with the name of the post-office, to the exclusion of a similar institution wholly free from State control at the same place. If my critical friend will look in the same issue of *FOREST AND STREAM* to which he refers me he will, in the advertising columns, find the advertisement of James Annin, Jr., of Caledonia, who offers trout for sale, and when sold he can send them to Europe, Asia, Africa or New Jersey, for the product of his hatchery and trout ponds is individual property to do with as he likes, and while I personally know nothing about the matter, I presume it is this Caledonia establishment that is to furnish the trout mentioned in Mr. Puffer's letter.

Doubtful things are mighty uncertain, and if my friend will continue to apply at the *FOREST AND STREAM* shop when in doubt about matters and things which this journal is devoted to and avoid the false gods of the daily newspapers, he will get information that he can bank upon.

A. N. CHENEY.

## PORTAGE LAKE.

PORTAGE LAKE, in Province of Quebec, is a beautiful sheet of clear water with some six or eight square miles surface, situated near the Maine boundary and consequently at considerable elevation above sea level. It is perhaps the most beautiful of a large number of lakes clustered among these boundary mountains and forming the headwaters of Portage Brook, a branch of Du Loup River on the Canada side and the north and south branches of the West Branch of Penobscot River in Maine. From Portage to Penobscot Lake the head of the South Branch is only half a mile, and this trail crosses the boundary. All these waters are well stocked with trout—not very large fish, but up to 2lbs. or thereabouts; and one lot of ninety taken from Portage in 1891 weighed 90lbs. At that time 150lbs. of trout could have been taken in a day with a single fly-rod, according to the guide's estimate. The fish are not often rising so freely as they were at that time; but enough can be caught to satisfy any reasonable man at almost any time during the trout season.

The only feasible way to reach these waters is via Jackman, Me., thence by train twenty-five miles on the Kennebec road across the boundary, and then in and over a tote road nine miles to Portage Lake.

I first visited this region with Jackman guides, and after the first trip secured guides from the Canada side. The latter is decidedly the better and cheaper way. The Jackman men are not sufficiently acquainted with the country to be efficient there, and they make a trip cost 50 per cent. or so more than the local guides find satisfactory.

There is a very nice place for sportsmen to stop near where the State road to Portage Lake starts from the Kennebec road, a house kept by Mrs. Rainy who makes her guests very comfortable. There are several good men living along the Kennebec road, who can be hired as guides. The only one who owns a camping outfit is Robert Elliott, whose address is Kennebec Road, Armstrong P. O., County Beauce, P. Q. He built a camp at Portage last year, owns a nice canoe, some other boats, tents, cooking kit, etc. He is very familiar with this region, having made his living in these woods for more than twenty years. He is a very reliable temperate man, a cheerful willing worker and most excellent woodsman. If notified in advance, Mr. Elliott will send a team to Jackman to meet any train and bring sportsmen over the boundary. Portage Lake can be reached in a day from Jackman, but a more comfortable way is to break the journey by stopping over night at Mrs. Rainy's.

Good trout fishing is becoming more and more scarce and difficult to reach. I believe Portage Lake offers as good sport in this line as any place equally easy of access, especially for those who consider expense. I shall be pleased to give any further information that may be desired by gentlemen who may like to make this trip.

In this region deer are plenty, caribou less so, moose rare. Under Mr. Elliott's guiding two very fine caribou heads were secured last fall on the boundary mountains, and one smaller one on the headwaters of St. John River.

FRED TALCOTT.

PROVIDENCE, R. I.

## BOSTON BUDGET.

### Inglewood Looks for Big Fish.

THE Inglewood Club, the preserves and camps of which are in New Brunswick, but the membership largely in Boston and other cities, is proving, under good management, to be a successful institution. So far pretty strict rules have to be lived up to and its present management proposes to keep in that track. During the fishing season ladies are not permitted in the camps. This may seem to be a pretty strict rule, but it is a measure agreed to by the majority of the membership and has worked well so far. During the summer months, when the camps are not full of sportsmen, members are allowed to take their wives and sisters with them. But guests of any sort are under the direction of a live house committee at all times and no one is allowed the privileges of the preserve without the consent of this committee. Mr. Leroy S. Brown, of Boston, is chairman of this committee and he is determined to keep the camps clear of objectionable people. Mr. Brown received a letter the other day stating that 150,000 trout eggs were about ready for shipment to the hatcheries of the Inglewood preserve from the celebrated trout breeding establishment of ex Commissioner Wilmot, of Canada. Mr. Wilmot, it will be remembered, was for a number of years Commissioner of Canadian Fisheries. He is greatly interested in fish propagation, and goes into the business with a great deal of study and forethought. The trout eggs he is about sending to the Inglewood hatcheries have all been bred from large parent fish. He writes Mr. Brown that the parent fish from which these eggs have been bred weigh from 1 to 4lbs. It is Mr. Brown's opinion, and those interested in stocking the Inglewood waters agree with him, that trout

bred from large parent fish are much more likely to make large fish themselves, other conditions being equal.

### Gilbert Trout Bill Again.

The old Gilbert trout bill is again before the Massachusetts Legislature. The form is essentially the same as ever; simply to permit Mr. Walter L. Gilbert, of Plymouth, to sell the trout he raises in his ponds, in open season. Of course it will again be opposed by the Massachusetts Fish and Game Protective Association, and all other good friends of fish protection in the State. Gentlemen familiar with legislative proceedings, and who know the temper of the present House, do not believe that it will receive much consideration in that body. The Fish and Game Protective Association is asking a law at this session to prevent the seining of smelt in the bays and inlets along the coast, as well as up the smelt streams, and the chances are that such a law will be passed. It is said that the Hoxie measure, to prevent all seining in Buzzards and other bays, does not stand as good a chance for favorable action.

Mr. Chamberlayne, who is much interested in protection of our shore fish, as well as the trout streams in the State, made an excellent point the other day, in speaking of the indifference of either wardens or commissioners as to the enforcement of the fish protective laws. "If our fish protective laws are not worth enforcing," was his idea, "then we have no further use for the officers appointed to enforce these laws." I may not have quoted Mr. Chamberlayne exactly, but the idea conveyed was a good one. A warden or commissioner who is not earnestly working for the full enforcement of our game and fish protective laws, should be asked to resign immediately.

### Maine Trout Through the Ice.

Stories of trout caught through the ice are again in order in the Maine papers. A Monson, Me., dispatch to one paper says that over 300lbs. of trout were brought into that town in two days last week, and that even a temperature of 28 to 30° below zero was not sufficient to keep the fishermen from the ice. Another paragraph in the same paper says that a party of seven fishermen brought in a string of over 200lbs. of trout, the result of two days' fishing. The water is now remarkably low in all of the Maine lakes and ponds, and this makes the work of the ice fishermen all the more deadly. The low water narrows down the feeding ground of the fish. They are thus more starved than usual, from their long fasting under the ice, and it is but the work of passing in hooks baited with live bait, to take every trout in the vicinity of the hole where the lines are put. SPECIAL.

### A New Rod and Gun Club.

THE sportsmen of Glens Falls, N. Y., were invited to meet in the directors' parlors of the Young Men's Christian Association on the evening of Feb. 15 to discuss the formation of a Rod and Gun Club. The originator of the idea, Mr. N. R. Gourley, called the meeting to order and Mr. A. N. Cheney was chosen chairman and Mr. C. H. Baxter secretary. The chairman explained the objects of the proposed organization and how its influences might be exerted for the welfare of the fish and game, and as an educational body in the community, how it might become a power for good in training sportsmen in the expert use of rod and gun, and in the proper observances of the game laws. The secretary outlined a plan for organizing a club, and a general discussion followed, which resulted in the meeting by an unanimous vote organizing itself into a Rod and Gun Club. The secretary was instructed to cast a single ballot for A. N. Cheney, correspondent of *FOREST AND STREAM*, as president. Mr. C. H. Baxter, one of the editors of the *Glens Falls Morning Star*, was elected secretary, and Mr. S. A. Hays, of the Glens Falls Insurance Company, treasurer. A committee consisting of N. R. Gourley, Rev. J. R. Crosser, D. L. Robertson and Dr. T. J. Henning, was appointed by the president to draft a constitution and by-laws, suggest a name for the club and report to the club the names of three or five gentlemen to act as a governing board in connection with the officers elected, the club to vote on the names at the next meeting. The club bids fair to be a success, as it undoubtedly will begin its career with about 100 earnest, active members. The enthusiasm shown at the initial meeting gave evidence that the time was ripe for a club of this character, as there is not in the village, containing over 12,000 inhabitants, any organization of the sort. HORICON.

### Gilbert Trout Bill.

TROUT fishermen will be pained to learn that the Gilbert Trout Bill has actually passed the Massachusetts Senate, and has passed the House to a third reading. It is almost certain to become a law this time, there being very little chance that Gov. Greenhalge will veto it, as did his worthy predecessor, Gov. Russell. The bill was opposed before the committee by the Fish and Game Protective Association, but finding that the members of the committee were generally in Mr. Gilbert's favor, the case was given up as hopeless. The measure does not give the full close season to Mr. Gilbert for the sale of his home-raised trout, however, but only the months of February and March. Then the bill on reaching the House (it was first reported in the Senate), was amended by exempting the four western counties of the State—Hamden, Hampshire, Franklin and Berkshire. Another amendment has also been tacked on forbidding the sale of any trout under 8in. in length. The bill now goes back to the Senate for concurrence in these amendments. It was first on the order for Monday, and the amendments were to be vigorously opposed by the friends of Mr. Gilbert. SPECIAL.

### Game and Fish at Albany.

[From our Special Correspondent.]

THE Assembly committee on fisheries and game will hold but one meeting a week through the session. It will be on Thursday afternoon at committee room No. 3.

### A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the *FOREST AND STREAM* one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the *FOREST AND STREAM* during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

## The Kennel.

## NEW YORK SHOW.

THE eighteenth annual dog show held by the Westminster Kennel Club last week was a success. This is the plain, unvarnished truth. A success, because in the majority of breeds the quality was an improvement on former years, and further, the attendance was such as to astonish even the blasé show goer. Favored probably by the most charming weather they have ever experienced, at any rate in late years, the club's coffers took on a plethoric appearance even as early as Tuesday, and we should say that the immense crowd on Washington's birthday simply filled them to overflowing, as it did the hearts of the management. Never in an experience dating back to 1871 have we seen such a crush in the gardens, old or new, at a dog show as that of Thursday afternoon. The aisles were crammed and the sides of the amphitheatre were black with humanity clear to the roof. The club this year seemed to be rather weighed down with the burden of a responsibility which a loss in last year's show did not seem to lighten. Providence was kind, however, this time, and sunshine beamed all round, and even Mr. Terry's generally serious countenance took on a continual smile.

It is always the proper thing for the veterans to remark that they scarcely think the show this year goes with the same snap as last year, but somehow we think there was some justice in this remark frequently heard during the week. The club showed little or no courtesy to visiting exhibitors, the usual dinner on the first night being dispensed with. Of course, there is really no reason why the club should charge itself with this additional expense; still if such or similar affairs, where exhibitors may congregate together for mere recreation, can be arranged, they serve to create a good feeling all round and start the show on a friendly basis.

Our notice of the show last week would serve to enlighten our readers to some extent as to the arrangements. Experience, however, showed the unfortunate exhibitors of pet dogs that in moving from the floor to the sides of the amphitheatre their troubles had increased. They suffered the penalties of popularity, and the jam at times in the narrow aisles between the chairs was fearful. At the same time the dealers of the pet dog fancy report heavy sales, in fact better than ever before.

The show was well managed in many respects; the rings were kept very clean and spruce, and the notice that dogs should only be exercised at certain hours was a decided success. Less dogs encumbered the aisles and few dogs which the public paid to see were found off their benches. There was none of that boisterous romping in the ring, so objectionable and dangerous a feature of former years. It is superfluous to say that the aisles and stalls were kept clean, for John Read's eagle eye looked them up and down incessantly. Mr. Mortimer's executive ability was clearly shown in the able and frictionless manner in which the show progressed. He was ably aided by Mr. H. B. Cromwell, who looks after, more particularly, the financial and most agreeable end of the entertainment. Mr. Terry, not yet quite recovered from his late illness, strolled slowly around, ever ready with a kind word and pleasant greeting to the visitors; Messrs. R. C. Cornell and Elliot Smith were pleased to see taking an active part once more, and their presence in the rings lent an old-time aspect to the gathering. Messrs. Duer and DeLuze also devoted themselves to the general success. Society people turned out in force and, as at the horse show, the same faces were to be seen morning, noon and night.

The judging, we thought, progressed more rapidly than in former years, there were few vexatious delays, and the arrangement of the rings probably made the serving of them an easier task. There is always considerable grumbling over the awards at New York, and this year was no exception. In fact, in several of the breeds this was intensified, though it is pleasing to relate that the novice judges came in for less of this sort of thing than some of the veterans. Dr. Sauveur and Mr. Woodward, of the new judges, having the most important classes, came in for much just praise for the manner in which they handled their classes, and Dr. Foote, though handicapped by judging "markings," by electric light, also did well, though his task was a very easy one. Mr. Underhill made but one little break in the mastiff bitch class, and seemed at home with the rest of his not particularly difficult lot.

In an entry of such magnitude one must expect a few errors in the catalogue, but this year there seemed to be more wrongly entered dogs than usual, though this may not altogether be the fault of the catalogue compiler. Typographically the catalogue was very praiseworthy and nicely arranged, pretty much on the style of last year. Nearly all the dog world and his wife, literally, were there, and to name all those we greeted would almost fill a column.

Dr. Glover was the veterinarian and did well, though several "sore" dogs escaped him down the back stair.

Our thanks are due those judges who so kindly consented to deny themselves some of the pleasures of the show in order to give us reports of their classes, which follow:

## St. Bernards.

## Judge's Report

In numbers this important breed keeps far in advance of all others regardless of the many new, or revivals of old fashions. In quality and beauty the puppy classes show noteworthy advance and more promise than heretofore. Fruits of the importations of the leading breeders are visible at last, and American-bred specimens begin to elbow foreign winners. A woful lack of condition was apparent in many of the dogs. "A rotten lot" was the harsh ejaculation of a foreign and disinterested critic, surveying one of the classes. "An army of cripples" murmured an exhibitor handling a well built active mover. Perfectly groomed dogs of moderate merit jostled clumsy giants of good quality and sweet expression slouching under coats suggesting dilapidated family doormats. Traces of eczema or worse were only too visible, and blighted the hopes of more than one dog that should have been cooling his blood on Lenton fare at home. Are the smooth coats so much stronger in constitution that they can keep in full bloom when their long-haired brothers and sisters are faded, or coarse and gone off?

The challenge class for rough dogs was a round surprise to the many who thought—probably hoped—Sir Bedivere safely out of it at his faraway home in Arkansas. Here he was, however, wonderfully fresh and strong too, after a journey of 1,700 miles, and again he won first, not for his past but his present merit and condition. In less profuse coat than sometime past, he carried quite enough, and has more benign expression than of old. Careful examination and tests proved him in hard muscular order, a credit to his kennels and keeper. Otos, the handsome son of Ben Lomond, richly deserved second. Inheritor of the beautiful color and perfect markings of his sire, he is better built in hindquarters, very symmetrical, powerful and strong. Eyes deeply set and more wrinkle would improve his good head. Kingston Regent, reserve, looked well in head and bright in coat, but was very thin and nervous.

Lady Livingston, first and alone in the corresponding class for bitches, was in beautiful condition as usual.

The open class included forty, a motly throng Altonceer,

a son of Alton, orange with white markings and black facings, in exquisite order has gained immensely during the last year, is now fully furnished, a massive, powerful, compact fellow, carrying his 188lbs. in bone and muscle, unencumbered by fat. The casual observer dubs him a good "little" dog. Measurements prove something better. His somewhat uneven blaze and lack of wrinkle detract from expression. His head is large, skull broad and well shaped, his forehead is well modeled, and he has well-carried ears of the right size. On his legs he is strong, active and free. Roland, Jr., second, similarly strong in build, submitted gracefully to a reversal of last year's decision. He moved well as usual, but was hardly at his best. His coat, like that of all his kennel companions, was a lesson worth heeding by many careless exhibitors. A white and orange dog needs and shows the value of good grooming more than solid colored ones. Grand Master, son of Hesper, winner of third, as last year, has gained in expression, and appears vigorous and strong, but looked somewhat lank after his journey. His rich orange color and clear white markings lack black shadings to give a finishing touch to his beauty. In frame, strength of limb and action, as also in head quality, he will always be among the best. Eboracum, fourth, the imported son of Scottish Prince, while a strikingly handsome dog, orange tawny in color, with correct markings and shadings, seems yet undeveloped, and for his age needs breadth of chest and loin, and stronger expression. In the ring among the others he seemed more like a splendid great pup of 18 months than a dog in his third year, and should improve for two years to come. His head is well proportioned, muzzle unusually broad for its depth, eyes well set and genial, but ears so persistently held back or drooping that they looked larger than they really are. He is not undershot a full inch, as detractors say, but would be improved by a perfectly level mouth. Mauprat, reserve, one of the very largest dogs present, a marvel of symmetry, beauty and agility, needs no adverse criticism back of his ears. His brilliant orange color, perfect white markings and superb development make one regret the lack of correspondingly high quality in his head, which still, on a less magnificent body, would be far from commonplace. Columbus, Lord Walbeck, Laurin and Kingstonian Count, the vhc's, were equal in award, yet quite different individually. Columbus, youngest of the lot, an eighteen months pup, son of Lord Dante, is a large, well-grown youngster, shown in most exquisite condition, and promises to make a dog quite above the average. Rich red orange in color, with correct markings, he wears a fine flat coat, brilliant as satin. He is of medium stature, light in flesh, a little short in couplings considering his youth. His head is well developed and expression fine. Lord Walbeck, five months older, is also in the intermediate stage and more massively built. His head, always good, is slowly improving, though his ears are still generous. For his length he needs some inches in height and his coat shows lack of grooming. Laurin, a handsome, well-grown son of Alton, loses but little to the massive Kingstonian Count in head, and is his superior in action. All four are valuable dogs. Lord Wilton, Montrose, Hamlet, Gen. Phil Sheridan, Harold Saxton and Christopher Columbus, the hc. lot, are handsome ones, with one exception orange or orange and white, properly marked, behind the others in quality or condition, and in some cases both. Chieftain, Rob Roy, Young Morgan and Prince Salut captured c. which, according to one philosophical exhibitor, should be interpreted "Clumb" of comfort. Noticeable among them was the imported English prize winner Mount Morgan, a beautiful dog, but as shown, a malodorous wreck reflecting little credit on his owner or handler. It was a shame that so fine a dog should be exhibited in public in such a shape.

The open class for bitches, twenty-five in number, included eleven imported ones. Miss Anna, the well-known daughter of Watch, was easily first, and will make her next appearance in the challenge class. Though not the largest, she possesses tremendous substance, and in expression, quality and coat handsomely beats her more lately imported daughter, Royal Duchess, second. The latter, a grand animal of great merit in head, proportions and frame, fine in type, excelling her mother in size and ears, has an almost unparadoxically bad coat. Imported Rustic Beauty, third, a fine, upstanding, large bitch like Royal Duchess, a daughter of Scottish Prince, closely contested the second place. In head she loses to the winner, and her coat is not what it should be. Countess Madge, fourth, quite a beauty, of excellent size and good type, is so unfortunately marked—her whole head in front of ears being white—that her merit is not discernible to the inexperienced eye. Lady Bountiful, reserve, another tall, handsome one, white and orange, with beautiful head markings, loses but little to those above her, has filled out and improved greatly, and in coat and condition equals the best. Lady Adelaide II., Lady Bess II., Mt. Sion Leila and Mascot Bernie, all vhc., are far above the average. Lady Adelaide II. is perhaps the best all-round and the oldest. Dorothy IV., Ellen Terry, Peg Wollington, Lady Edna and Miss Jerome made the hc. division; the last named is quite the best, a massive, beautiful-headed bitch of unusual quality, but put back by condition. Eima, Mora, Miss Cora and Bella, the c's, were all pretty little ones, and with one exception too fat.

A handsome even lot of twenty, the youngest just over six months old, made up the class of rough-coated dog puppies. Columbus, first, of great size, good head and pleasing expression, perfect in color and markings, was too fat and, perhaps, consequently not straight in pasterns. Hellgate Prinz, second, a big seven-months one, very rich in color and markings, shows great promise throughout. Watch Erdman, third, eleven months old, son of Marvel, another big one, white and orange in color, inherits his father's striking head, but is somewhat pig-jawed. Duke of Berkshire, Count Otto and Cadmus, Jr., each vhc., are all handsome, well-grown dogs of quality, the first named oldest and most forward. Count Otto is least massive and is now too full in eye. Cadmus, Jr., is very massive and rather fat. Caesar, Marvel II. and Kalfi, hc., almost as old as those above them, are all fine promising fellows, the first named litter brother to the first prize winner, and like him rather fat for growth. Norman, Eneus, Masterpiece, Scottish Chief and Hellgate Sullivan, c. each, were well worth their mention. The last of these is litter brother to the second prize winner. Scottish Chief, a son of Scottish Leader, looks like the making up into a great one with time and the right sort of growth.

The corresponding class for bitches included eleven and Princess Eulalia, daughter of King Regent, beautiful and symmetrical, was easily first. Stella, second, just a year old, rich orange, correctly marked, is of good size and massive frame, pleasing expression, less mature than the winner. Alva, third, a daughter of Marvel, of medium size, beautiful color, promising in head, was so timid and sad it was difficult to examine her. Lady Vixen, reserve, a fine daughter of Rowland, Jr., well-grown and good in head, married her expression by very badly carried ears. Madame B., vhc., daughter of Sir Hereward, a fine large forward eight-months puppy, did not do herself justice in the ring and was also handicapped by a neglected coat. Ada Somers and Florencia, c., pretty well marked and exquisite in coat, were well behind the others.

The challenge class for smooth coated dogs was drawn blank.

In the challenge class for smooth bitches Empress of Contoocook, her figure somewhat marred by maternal care, but in exquisite condition, won first; second going to Melrose Belle, her niece. The latter, one of the famous litter of winners, is a very beautiful massively-built, grand headed one, excelling in bone, frame and richness of color, but not equal to the Empress in expression.

In the open class for smooth-coated dogs, the superb Alton, Jr. won first; good as he was last year he is even better now, straight in limb, more massive and symmetrical in body, pleasanter in expression. Patrol, second, the handsomest in the class in color, in more brilliant bloom than ever before, well deserved his place. Plinlimmon V., third, son of Refuge II., has grown and improved considerably since last year; being only two years old now he has a promising future before him. Major Plon Plon, fourth, an 18mos. old son of Otos, well grown and furnished for his age, has a fine expression, but loses to those above him in muzzle and skull. Leicester, Jr., reserve, was one of the many fine dogs not shown at their best. He boasts of a well modeled head of the family type, a strong frame, excellent legs and good coloring. Blucher, hc., is a good sized dog of excellent proportion, but long in head and stern in expression. Eric, hc., a good dog in his day looks small beside these giants. In color, coat and proportion he is even with the best. Petro vhc. (a rough coat I learned afterward, but so entirely close in coat I transferred him from the roughs to this class), was a tall well grown son of Otos, good all round for his age, but not out of puppyhood in proportion. One china eye gives a curious effect.

In bitches the beautiful Lady Alton easily won first. Nearly perfect in markings, frame, proportions and head. Like most of her brothers and sisters, she is almost a model. Judith's Ruth, second, her half-sister, resembles her strongly in character, size and markings, and at present has the same fault, too much coat. Guess Noble, third, a tall, well made orange and white daughter of Victor Joseph, shows excellent general quality. She is getting cheeky. Pandora, fourth, and Julia, reserve, litter sisters, daughters of Kingston Regent, are both good-bodied, richly colored young bitches, strong-limbed, but not tall, much resembling their grand sire, champion Hector, in head, expression and style. The former is superior in skull. Melrose Judith, vhc., full sister of the second prize winner, large and light in body, a little heavy in ear, showed herself very badly. Charmion, vhc., another daughter of the excellent Cleopatra, and very like Pandora and Julia, is behind them in size and quality. Queenie Mars, c., smallest of the class, is under-sized, but typical and good. It is interesting to note that all included in the open classes of smooth-coats, with three exceptions, are the offspring of rough sires. Taral, first in the puppy class, smooth-coated dogs, is a promising, tall, quite undeveloped seven-months' specimen, beating Ben Alton, second, only in straightness of limb and coat. Juggernaut, third, a son of Patrol, well grown and handsome, excels Belvedere, hc., in all points at present. Miss Thelma, first in puppy bitches, another of the many daughters of Cleopatra, is almost exactly like her litter sister, winner of first among rough-coated bitch puppies, save in coat; stylish, typical, well proportioned and very mature for her age. Minka, second, is a little inferior at all points. Miss Polyphemus, third, another pretty one, is less forward in growth. Scottish Gloria, reserve, is at present but a frame on which to hang promise.

In the Novice class (rough and smooth dogs), first was awarded to Plinlimmon V. the smooth; second to Laurian, a rough; third to the rough Demetrius, a grand young dog still in puppyhood, of remarkable quality and size, but gross and in need of cooling diet; vhc. was awarded to Francisca, a large grand-headed son of Alton Jr. lacking markings and crooked in legs; to Sir Eldred Bedivere and Gen. Victor Joseph, two fine but somewhat backward sons of Sir Bedivere, and to Sir Rufus, a beautiful typical son of Lothario. The hc. included Perival, a very typical massive dog in need of grooming, Bryant needing similar attention, Gen. Joe Hooker, Gen. Phil Sheridan and Hamlet. The chief faults of Sam, c., are lack of size, straight hocks and heavy ears. Pro Patria, c., tall and lank fair in head and good in muzzle, needs another year to complete his development. Romeo II., c., tall and well formed is too narrow in head and lacks quality.

The Novice bitch class brought out twenty roughs and smooths. First prize went to Judith's Ruth already criticised, followed by Pandora and Melrose Judith to whom equal seconds were awarded. Melrose Judith shown by her owner this time appearing to so much better advantage than before as to seem a different animal. Third prize went to the massive rough coat Uarda. The vhc's were Lady Bess II., a young daughter of Sir Bedivere, Lausanne, of charming quality, and Judy her niece. The latter is unusually large and excellent throughout, but did not do justice to herself in the ring. Flora Valentine, not unlike Judy but inferior in quality, Gift a pretty typical one but small. Mascot Bernie and Queen Margaret not perfect in limb, were given hc., c. falling to three good little ones, Adam's Corisette, Miss Cora and Queenie Mark. It would have been much easier work to judge the novice classes if they had been divided into roughs and smooths, regardless of sex.

## Newfoundlands.

## Judge's Report.

In spite of the liberal inducements offered there were only six entries and but half this number present. Leo, first winner of second at Newark in November last, looks a different creature and a fair specimen after a course of careful grooming. His proportions are good, legs sturdy and well set, size small, head moderate in quality. Nero I., second, is only an unfurnished 12 months pup and may give a better account of himself later.

Brunette, alone in the bitch class, was lucky to have a blue ribbon to wear, being quite without startling merit in any way; a small, compact, flat-coated specimen, intelligent in expression and a good mover.

## Pugs.

## Judge's Report.

Taken collectively, the quality of the twenty-nine entries was so far beyond that of years past as to warrant special mention.

In the challenge class for dogs the highest honor was won by Attraction, the exquisite little son of Bob Ivy. Less than 18 months old, he is already a well-finished, symmetrical dog, deserving his name. In skull, wrinkle, eyes and muzzle there is admirable quality. His ears—most important—are of fair size, well hung and proudly carried; body might be a bit broader in loin, legs harder and color clearer. Bob Ivy, second, is as good as ever, a capital dog, but not his son's equal in eyes, carriage of ears or size, and no better in skull or wrinkle. In color, good silver fawn, he beats the youngster. Curtis, reserve, the handsome silver fawn son of Lord Clover, followed close, but was hardly equal in ears or eyes, rather heavy in flesh and very smutty in face.

Midget, a tiny one, kennel mate of Attraction, captured first in the challenge bitch class, but with little to spare. Compact in build, jaunty in style, strong and free in action, she makes the most of herself and pulls every morsel of skin in front of her ears into wrinkles at the critical moment. A good skull, nice little ears and tight twist are hers, but her dusky fawn color might be better. Vega, second, a daughter of Lord Clover, is another choice little one, more pleasing in color and a smart mover, but not equal to Midget in head. Nellie Bly, reserve, fairly out-classed, could only console herself by contemplating her beautiful pale golden fawn coat.

A round dozen filled the open dog class and only two were unnoticed. Al Von, first, a son of Penrice, is one of the few boasting eyes fully large enough. He is all style, from muzzle to tailtip, has a good sized skull, very short, square muzzle, face a mass of wrinkles, pleasing expression and ears perfectly carried. His color is a bright golden fawn, without.

much trace or very dark nails. Lack of substance and strength in his hindlegs are his misfortunes just now. Pinsky Duke, the lately-imported son of Confidence and a grand specimen himself, will push others harder when acclimated and fresh. Of medium size, strongly built, square and strong on his legs, pure, clear, silver fawn in color, with jet black head markings; he has also a beautiful head, nicely wrinkled face, and broad, short muzzle, but this coat at its best. His face is too black for a desirable thumb mark. Pomona Fritz, third, a silver fawn of sterling quality, rather larger than those above him, would not show up well in the ring, and surprised me the day after he was judged by his improved bearing and consequent display of good points. Corbett, reserve, a seven months' pup, golden fawn, with heavily wrinkled brow, fine large eyes, well-set ears and a deal of expression, was lucky in winning his place with his lank body and heavy limbs. Head quality and style took him up. Little Jewel, vhc., an importation of some years ago, the veteran of his class, has improved wonderfully since his first appearance, and would hardly be recognized. Rather oversized among such a lot of little ones, but stocky and muscular; he can give the best of them points in action and spirit. His head properties are quite above mediocrity, but his body color is not clear. Ivy, vhc., son of Penrice, a silver fawn, smart youngster in his second year, is not fully developed in head or in confidence. He is handsomely marked and good all through. Sullivan, litter brother of Corbett, but larger and too promising in bone; Prince Bobtail, a fair dog, here outclassed, and Prince Ivy, a beautiful eight-months-old son of Attraction, all scored alike, winning he; the first for his excellent front, the second for his general make-up, the last for coat and markings, carriage and symmetry. Mitchell, c., beaten by Corbett and Sullivan, already exceeds them in size.

The open bitch class introduced the recently imported Haughty Midge, a beautiful silver fawn but smutty in face and lacking trace. At a different stage of coat these markings may vary. While no toy in size she is a typical one in build, character and movement. Dauntless—the possible feminine of pugnacious—ready, and unconcerned among a crowd of strangers and in a strange land, she is a show dog hard to beat. Her eyes might be larger and ears smaller to advantage, but her bright expression, fine head, tremendous wrinkle and inimitable style take her straight to the front. She reminds me of the old English fancier's remark, "If a pug's armonious, I don't care if he weighs forty pounds." Midge is "armonious," and does not weigh twenty. Silver Queen, second prize, a daughter of Kash, is quite another art, less clear in color, smaller and more dainty, fine in head, ear and expression, with beautiful eyes. She is small in frame, and, like some of the others, should learn to manœuvre herself. Too long nails seriously mar the movement of pugs. Little Ruth, daughter of Penrice, a sweet little thing in her second year, did bravely for a novice and may give the best a hard fight by and bye. She is a beautiful silver fawn with no smutiness, symmetrical throughout, immature in expression, but with a charming little head, nice, small ears, and wrinkle enough when she pleases. Pansy G., reserve, daughter of Bob Ivy, just two years old, similarly marked, was too heavy in flesh and indolent to display herself well. She crowded Little Ruth for place and in the opinion of so competent a judge as her breeder and owner should have beaten her. Diamond Bessie, vhc., an excellent specimen, small, strong and muscular, a trifle heavy in ear, not in show form, should have had a longer rest from family cares before appearing in public.

Pomona Dolly, vhc., also a good little one is like the other dingy in color, and though symmetrical and pleasing is faulty in skull. The h.c.'s, Lady Bonsor, LaBelle Petite, Nannie II. and Timmie Thasmo, were as unlike as their names, and the first of them, daughter of Bonsor, that won first at Newark last fall, a bitch of splendid quality, should have stayed at home this time. Ragged, thin, nearly bare, she looked a begger rather than a "lady" and I hesitated whether to acknowledge her presence in any way. The show ring is not honored and it is a cruel wrong to a good dog to exhibit one in such condition. La Belle Petite, less belle and less petite than her kennel companion, looked a valuable matron, fair in general quality. Nannie II., one of the best in color and condition, lacked shortness in face, and was faulty in carriage of ears. Timmie Thasmo, another good coated, well built sprightly one, was a lesson in style to some of the better ones. This was a notable class. The matter of breeding pugs of the right size and of general fair quality seems settled, but fanciers must remember that a toy pug is no more desirable than a toy mastiff. Small eyes, large ears, dingy color, lack of trace of thumb mark and of black nails, and mincing action are faults not yet wholly bred out.

ANNA H. WHITNEY.

### Great Danes.

Judge's Report.

Challenge class.—Major McKinley, dark brindle, the only entry of either sex, had of course for once in this class a walk-over. His principal shortcomings are the intensified, untypical head of his sire, even smaller eyes in proportion than Melac's, is somewhat cheeky, has a well formed neck of good length and any amount of loose skin; has a very good front and middle piece, feet good, quarters rather weak, especially in second thigh, the result of his immense size; fair stern.

Open class dogs—an entry of fifteen dogs, with two added, wrongly entered in the miscellaneous class as so-called "Ulmers," came in the ring, and among the seventeen were very few of quality and even fewer of sound movement, and it is discouraging to see our largest "sound" breed go the same way as the other large breeds, unsound and sliding in their hindlegs, no doubt the result of kennel raising and the "Anglo-American" craze for big, tall specimens. I am afraid the same state seems to exist, to some extent, at least, also in Germany. Quality was sorely absent, except in those few of winning rank, and those were again in bad condition, with few exceptions. Earl of Wurtemberg, the winner of first honors, is a very much improved dog in hindquarters since last year, although in very light flesh, and had a badly used-up tail. He could give every one of his competitors a beating with ease. He is a grand light brindle with a most typical, well-cut head, good neck, shoulders and feet, rather shelly in body, showing more so on account of being very low in flesh; hindquarters well made, but somewhat stilty, tail a bit coarse and evidently battered while en route. He is of capital proportions and excellent size, his owner giving him size to be 33 $\frac{1}{2}$  in. at shoulder; although to my idea 33 in. is a nice height, even for him.

Lawrence Leopard, a very nice tiger, black and white, splendid size, excellent character, reminds me very much of that splendid granddam of his, Heimerle's champion Irene; he is rather light in body, not very good in quarters, very pleasing expression, front feet too open, good stern; a dog which only lacks maturity (he is only fifteen months now) to give the best ones a tussle. Hepburn Hero, belonging, as well as the first and second winners, to the Lawrence Kennels, is a dark brindle of very fine outlines; in poor condition, or better, in evident danger of becoming a very sick dog, and was lucky to get so high up, but as nothing near the above three in type and quality showed up he was plainly entitled to his place. He is still out at elbow, but not so loaded in shoulders as last year, has good body, splendid hindquarters and is one of the jaunty movers so much desired and so seldom found in this breed. Hero's principal shortcomings outside of his faulty front (elbows and pasterns out) is his too flat a head, he is also a bit cheeky; he is a dark bridle. Helois was a so-called "Ulmer dogge" entered in the miscellaneous class and on request I

judged him later separately, permitting him to win any equal to which he was entitled, which I thought at first glance to be high up, though further examination and comparison with the winners pressed him to equal third with Hepburn Hero. He is a beautiful golden brindle of fair size and good movement, and had he not showed lameness in one hindleg when trotting, without any apparent cause, would have been put equal to Lawrence Leopard, being, except this, perhaps accidental fault, almost the best moving dog in the class; his head is a bit too short, cheeky and short and thick in neck, and will, if not looked carefully after, be very common when older, through this defect. Shoulders fair, too far set apart on top, good body, good quarters, bone and feet, excellent stern and withal a good fair specimen.

Faust, vhc. reserve, is a more than average good golden brindle, rather bad, flat hindfeet, tail too much curled, and not over good in movement; round in skull, thick in cheeks, short from eyes to nose, besides having a lump on the nose, which mars his appearance; eyebrows too prominent, and ears set too low, good neck, pasterns and feet should be stronger. Pascha, vhc., dark brindle, is on the small side, an undeveloped dog, round in skull and light in muzzle, well-cut neck, a bit throaty, straight in shoulders, good front legs, good chest and ribs, good movement and fair stern. Hepburn Apollo, vhc., light slate color, a dog of very good outline rather small but a capital mover; he has grown very wide between the shoulders, almost double as wide in shoulders as in quarters, which threw him out of the race for place. He is plain in head, should be cleaner in cheek, good legs and feet, very good shaped, but too gaily carried. Bismarck, vhc., the winner at Rhode Island and Danbury last fall, is not a bad sort of a black dog, and his worst faults are his weak pasterns and open feet; he is on the coarse side all through head, body and tail, and also his bone shows its lightness more than it would otherwise. His head has character outside of its coarseness, neck fair, with plenty of loose skin; shoulders medium, ribs and chest good, too straight behind; not a bad sort. Yarrum, h.c., a black dog of some character, too but too much bulk altogether. Head, although not bad in character, is too large, fair in profile, well arched, almost too long in neck, which is thick and has too much loose skin; in fact I think it could be pulled all over him; good bone, poor feet, when moving throws elbows out, very poor hindlegs, with that shuffling, sliding gait so characteristic of most of our St. Bernards and mastiffs. All in all he is too bulky. Leo, h.c., is not a bad redish fawn dog, of fair size, head too small, and lacks character, muzzle not square enough and ears too low set; when animated shows a bit more type, as his badly-trimmed ears come up much higher, is very throaty, has shoulders shaped similar to a cow, fair bone, a little low in legs, pasterns too high and turned out, body fair, left hindleg weaker than right, feet fair.

Bitches: Portia Melac, the only great Dane to my idea in the show, as she has all I require of a good specimen except perhaps, size and she being of the gentler sex, I am not inclined to find too much fault with that. She is a dark brindle daughter of champion Melac and a litter sister to Major McKinley, but compared with him as a thoroughbred with a half bred farm horse. Her head is very typical, marred a little bit by a drooping right ear, and perhaps too dark lines between the eyes, a grand neck well set in splendid shoulders, excellent legs and feet, a beautiful and graceful outline, very good quarters, in fact there is hardly a fault to find except that there is not a little more of her, her coat was dull, and it is a pity all of the Kennel Lawrence's dogs were not in better shape. Phryne dark slate and white "tiger," is a good one but too fat, execrable head with dark red flesh colored black spotted nose, weak before the eyes, which are set too close, an apparently utterly cowed animal, and if anything else had been in the class would have not been in it at all. Manon, reserve, her kennel mate is a lighter colored slate and white; these were the only ones present.

In puppies a fair share of blues showed up. Bismarck, first, has a fair head, rather light eye, although thoroughly permissible in a blue, good bone, nice neck, will grow wide in shoulders, good conformation and quarters fair, legs a bit more bent than I like, and shows tendency to weakness; rather coarse in tail. Thor, second, also a blue, light in shade as the winner, shows very much of his sire's character in his too light muzzle and stilty movement behind, but is of better proportion than his sire, Shepard's Duke, and will make a better dog than Duke, has fair bone, plenty of skin as yet on his throat, eyes light. Mr. Lawrence won the kennel prize.

### Basset Hounds.

Judge's Report.

Four showed up in this quaint breed, and the winner proved to be Royal Hector, belonging to the Hempstead Farm. He is a nice, strong type of hound of orthodox marking, and his fault is a pronounced eye and too much cut out under the same; good texture of and sufficient leather, where he principally beats. Solomon, the second winner, who has a well-shaped head, but is not houndy enough, and as mentioned above has bad leather; in fact, they would do for a pair of soles; is not clean enough in head, and neither he nor the two following him could come near the Hempstead Farm representative in condition. Ninette, third, is a nice bitch all over, of the same stamp as the second winner, only a trifle smaller, as can be said, too, of the reserve, Rowton Wag, who is still smaller, though none of the four were too small.

### Dachshunds.

Judge's Report.

In challenge dogs Zulu II. took first. I beg to be excused criticising this little rascal to any extent, he objecting so much to any intrusion on the bench that I had to pay for my temerity with a torn cuff, escaping with sound skin, but what I can recollect of the little beggar he beat Don Quixotte in the ring by his better general contour and better movement; they are both good dogs, although I prefer Zulu.

Challenge bitches had champion Janet and a new face to me, Jessie Victoria, and she beat the older bitch by the way she showed herself. I suppose displeasing the cognoscenti, but as I am one of those *enfant terrible*s who have no respect for tradition and reputation any further than my eyes go, I suited myself, as Jessie Victoria showed so much more gracefulness than the matron Janet, who looked like five weeks in whelp, and Janet's head, beautiful as it is, would suit me better on a dog than a bitch, and this counter balanced Jessie's round skull and slightly weak muzzle. Any way, as the two appeared in the ring, their owners and others, if they had compared them without bias, would have had to indorse me. Perhaps Mr. Manice's absence, made Janet show herself so listless as she did, and I will say right here I like a medium sized dachshund best for the work he is required and bred for, and all views on this side to the contrary, I demand a dachshund of a size best adapted to go under ground; and whether used or not for this purpose here, cuts no figure at all; he must conform to the original purpose or we come to Mr. Freeman Floyd's capital squib about the Timbuctoo terrier, teaching the original breeders how their dogs ought to be.

Open dogs had seven in the ring and the winner was Jay, but good dog as he is, his condition was such that Tack, the second winner, had he been in better shape, would have beaten him, and will do so some time, as Jay's mouth is about gone, a most prominent point in a dachshund, who has to use his teeth for his work. Jay has and can beat Tack, everything equal, but when condition is on Tack's side, Jay's usual bad coat and poor mouth will or ought to help Tack to defeat him, as reputation should cut no figure in

competition, although Jay is far superior in outline and back to Tack. Hermit, third, is not in the same class as the former two, being of rather coarse type, and almost the same can be said of the vhc. as of him, as they were much alike. Hermit is a beautifully bred dog by Jay & Janet, but shows neither quality nor refinement, and may be a good over-ground dog, but heaven preserve me from ever seeing his stamp generally reproduced, which is evidently his owner's desire, if he shows such coarse dogs of his own breeding and sells the finer cut ones like Pretzel, who is very faulty in hindlegs, but of beautiful quality. Roy K., h.c., is a dog very much on Hermit's and Ichthyosaurus's type, coarse and lumbery, only more so, especially so in stern, and is a washed out color.

The bitch class had some very nice quality and numbered nine, all in the ring. Polly Finders, the winner, is a capital-shaped little bitch of my size, marred, as I was then told, by a box falling on her, when her eye was almost knocked out; but as I took this to be only a temporary injury, gave it no weight at all. She is of beautiful contour, long and well-arched back, beautiful-shaped and carried stern, good legs and bone, a bit weak in muzzle and light in eye; but I think she can beat Jargonelle, who is better in front of eyes, but who is coarser and dragged her bag almost on the ground; she (Jargonelle) has excellent bone and is a beautiful bitch all the way through, but a bit more refinement would not hurt her. Hesse Darmstadt, second, is a nice liver and tan, good head, ears set too high and almost hairless, not enough bone and bend in legs, good body, but not enough tucked up, which made her appear too straight in back; grand hind-quarters, but stern too gaily carried—a nice specimen all through when in good condition. Lovely K., reserve, is a bitch of the size I want and with capital head, and although too short in back and consequently not enough arched; would have been higher had she not been pig-jawed—a very severe and bad handicap for a dachshund. It is true, she is not badly deformed, but her jaws do not meet level, and the fault is there; and I could not overlook it, though I wish I could have done so on account of her other good points. Dina K., vhc., has a nice enough head but is too short in body and too high in leg, not crook enough, besides being too high and light in pasterns, stern coarse. Peggy, h.c., a medium black and tan, not refined enough in type, too straight in legs and too high, material for mating with a strong boned dog with lots of crook. The well known Bessie K. got nothing being too straight in back and close setting knees, out at elbows, though to be honest, on second consideration, I treated her harshly, but she showed so little quality in the ring, that twice as long a string of winnings as she had could not put her much higher, although a vhc. would have been correct for her in the class she was in.

Only three puppies showed up, one the coarse winner of third in open class and here first and the reserve dog who got second, was in the open class. Hermit's sound coarseness won over Pretzel's quality, as he is handicapped by a bad front and crippled hind feet; but he shows lots of quality; vhc. was a light tan and black bitch of no special merit.

G. MUSS-ARNOLT.

### Spaniels.

Judge's Report.

The spaniels were remarkable for no particular point this year, beyond the general very good condition of the majority and a few new faces. With the exception of that very handsome breed, the Clumbers, the classes were well filled throughout, a grand total of 109 being catalogued, with but five absentees.

In the cocker classes, my desire to "lift up" this very useful little dog, and thus get away from that fascinating type of small dog—short-legged and heavy-boned out of proportion, pretty, but toyish—legged me, no doubt, in some instances, to peg back here and there one that might possibly have scored a point or two better than its opponent were it not for its lack of proper size. It seems to me that the time is ripe to come out flat-footed in this matter of size in cockers, as we are all aware of the intended usefulness of the breed—of their keen nose, merry action and hunting possibilities, but from which the tendency to drift is noticeable in the production, year after year, of smaller and smaller specimens.

The question arises as to whether the prerogative lies with the judge to discriminate in this matter when the standard permits the weight limits of 18 to 28 lbs. This point I roached to two or three breeders during the show, and found their views to be that if a specimen were either just over the minimum weight or just under the maximum—in other words, at the extreme limits either way—and a point or so better in type than another specimen in the same class of about 23 or 24 lbs. (my ideal weight), that the former should win. This is apparently good argument, but in opposition to my personal views, and I should never consent to be guided by this should it ever become a ruling, as it is certainly only an exceptional case where the dog approaching the smaller limit (viz., 18 lbs.), especially in the compact, heavy-boned specimens, is, or can be made, a useful dog in the field. Of course, where there are two individuals competing—one very typical of low limit weight and one of what I consider proper weight, but of poor type—the former should prove the winner without hesitation on the part of the judge; but as for placing an 18 lb. dog over one that weighs 23, and is within a hair's breadth of being the former's equal as regards points, I say no, it should not be done, nor do I believe such to be the proper interpretation of the standard. There must be a medium; there must be limits; and these limits are to hold us within bounds, else we would soon see "pocket" editions carefully blanketed, carried around in bird cages, and the day of this, the best of man's companions, on the wane. With these few remarks I will turn to the classes, taking them in rotation, telling of the dogs as they appeared to me.

IRISH WATER SPANIELS.—This breed was fairly well represented, but all in poor open coat. With this exception, the lack of the requisite amount of topknot, and in one or two instances a slight tendency to crookedness in the front legs, they were a workmanlike looking lot.

CLUMBERS.—In Dash, the Owahena Kennels have a very fair dog that improves on acquaintance, with rather nice body, legs and feet. He disposed of his kennel companion readily, the latter being light in substance, short bodied and generally poor. Why this breed does not become more of a favorite I am at a loss to understand. They are certainly attractive and pretty, and when trained, prime dogs with the gun.

FIELD SPANIELS.—Judey, the champion of champions, was in fine fettle. There was nothing in the class with him that could even be called a "runner-up." His condition was grand, but I maintain, and have always done so since his first appearance on the bench, that the addition of a full inch to the length of his body would be a welcome improvement, making him more symmetrical; his appearance now tending to give the appearance of heavy-headedness. Newton Abbott Farmer I placed second, as he showed more field spaniel character than his nearest competitor, Brantford Mohawk. Both are horribly bad in fore legs. The latter has much the advantage in head, but is light of eye, lacks size, and is short bodied and cockery in appearance. Newton Abbott Torso is a poor specimen, and not worthy of mention. How he ever graduated to the challenge class is a mystery. Black Prince was credited in the marked catalogue with vhc. As the old fellow was not for competition, and not even there during the judging, the compositor is probably chargeable with the insult to "his highness."

In challenge bitches Bridford Ruby got away from Roseale Bess without difficulty; the former, however, was in

her usual poor condition—coat rough and short; light in flesh.

All old faces in the open class. Warwick proved the winner, with Echo a good second. The former has lost much of his coarse appearance of last year. Echo is also vastly improved and was shown well. He has nice length of barrel, good dark eye, good bone and substance, but lacks in stop; is a trifle full under the eye, and toes turn out slightly. Sorry Jake is too light for this company. Beau was fat enough to kill; eye too full; short-bodied; domed skull.

The bitchers numbered two: Midnight III, smothered her rival. The former lacks stop, has a Roman nose, is a trifle out at elbows, but a good bitch that will be heard from again. I withheld second prize in this class and awarded third to Greencroft Nellie—light build, small of muzzle, and on the cocker order. The class for livers brought out a new face in Colehill Rufus, vhc. This dog attracted my attention at once, every inch of him being a spaniel, and his every action being characteristic of the breed; but upon close examination his numerous defects became too apparent for him to claim honors higher than those bestowed. Well furnished, grand coat, bone and substance; on the Sussex order, but wretchedly crooked front legs; thin through pads; shows haw of eye and cheeky. There was little choice between first, second and third in this class. Gypsy Belle has the making of a good bitch in her, and will improve and show to greater advantage when better furnished; Old Queen should be retired.

In any other color, two very poor specimens confronted me, and the best I could do was to award second and third, withholding first. Romeo's horrible coat handicapped him, but he is also not the type we are seeking.

In puppies, Princess Bolus, by far the better one, is rather nice; good length, fair mover, but trifle fine of muzzle and light of eye. Will improve.

**COCKERS.**—Six entries greeted me in the challenge dog class—all good ones. Brantford Redjacket received the blue ribbon, but he is aging perceptibly, and should be retired. His chief weak points are a wideness of skull and ears a bit too short. He was shown too fat. Othello, second, is an attractive little dog; eye was rather full; stern carried too gaily; muzzle not quite as square as it should be, but a dog of nice size, good action, free mover, good legs, feet and loin. Ears proper length, and set on low. Jay Kay out at elbow, ear short, coat rough, muzzle too fine, poor condition. Jersey Obo—too much length, gone in mouth, action bad, wretched condition. Red Roland—nice body and coat, but broad in skull, undershot, bad front legs. Middy—on the small order; toes turn out; toyish. Challenge bitches.—Miss Waggles and I say claimed first honors, with matters rather in favor of the former. Her open, loose coat, and front legs being not as good as they might be, are her main faults. I say was not shown as I have seen her; coat rough, ears high. Black Duchess is a beautiful little bitch, but gray in muzzle and gone in mouth. On the small order. Open black dogs.—Donovan, to whom I gave first was sold and taken away before my notes were made, but my recollection of him is that he was a trifle light of eye and perhaps a shade heavy of head, but a good, active, workmanlike little fellow and the best in the class. Woodland Prince is a trifle plain in head and full of eye, but good bodied, nice coat, legs, feet and a good mover.

Picpania, third, has gone off badly since Toronto, where he received first, shown in bad shape, coat rough, ears too high on head. Jumble II, was removed from the ring before I could give him a card, also from his stall, so that I was unable to secure my notes. Commodore was a nice, compact little dog, of free movement, but rather small and lacks furnishing. Douglas—high ears, full eye, out at elbows, toyish.

Open black bitches. Rideau Reine, first, is a good little bitch with nice feet, legs and body, a shade more squareness of muzzle would improve her. Action and movement free. Lady Fidget—too wide in front, eye a bit full; a little out at elbow; body and coat good. Flossie Butler—toyish, off in front. Modjeska—an attractive little bitch that will improve. A free mover, but lacks stop, and a trifle out at elbows.

In the class for dogs of any other color, Ned W. came to the front easily, with Red Justice second. The former's color is poor, but his action pleasant; legs, feet and body good; ears set a bit high; skull perhaps a shade too wide. Red Justice—ears high, muzzle long, undershot. Chestnut is a very taking little fellow, active and quick; eye a bit light; expression not of the best; undershot. Shown in beautiful condition. Red Obo—head short and thick; out in front; good body; nice action.

Bitches, any other color. Tanita, first, was much to my liking. At Toronto last September she also received the blue ribbon, but shows no improvement since then, in fact was not shown here in her previous good shape. Could be improved a trifle in muzzle; ears high; tucked up. A wonderfully free mover, good cocker action, and subsequently selected for the special prize for best moving spaniel in the show. Mollie, second, is a nice bitch showing considerable spaniel character; muzzle too fine; ears might be a trifle lower. Red Rose, rather on the large order, was third. The reserve card went to Bessie Warner, muzzle too fine; make up rather light; eye full, an attractive and pretty spaniel, however. Ruin vhc.—too much drawn out; expression poor; high stationed. Diana Miskill—ears not set low enough; yellow eye. Maud S—thrown out—overweight.

In puppies Cherry Boy II., very unlike his father, I had to place first. This was not a very taking lot. The winner is a nice bodied, active little dog, but lacks in head; ears a trifle high, skull too broad. The winners in the Novice class have all been previously described.

The specials were numerous, and as a rule went with the awards in the regular class. The one for the cocker with the best head, was a rather difficult matter to decide. I finally placed it with Mr. Willey's Black Duchess. Although considerably gone in mouth, and rather on the small order, yet hers is a head built on the right lines, pretty, and of proper type.

### Boston Terriers.

#### Judge's Report.

These terriers made a good showing, it being taken into consideration that this is the first year classes have been made for them in New York. Prince Walnut, winner of first in the dog class, is a good specimen of a Boston terrier. On the bench he seemed lacking in expression, but when shown in the ring he was very smart-looking. His skull, muzzle and head are excellent and his color and markings of the best. Barring a certain coarseness in his make up, Prince Walnut is a good one. Ned, winner of second, is on the small side. His skull is good, but his muzzle is rather weak, which fault he inherits from his sire. This little dog had a splendid body, legs, tail and feet, and had been in a class for dogs of his weight, would probably have done better. Dixie, third, is on the toy order. There seems a tendency on the part of some breeders to run to toy terriers, this, particularly in a breed like Boston terriers, should be avoided, and unless a halt is called will greatly injure the breed. Fifteen pounds should, in my opinion, be the minimum weight allowed. Dixie, as well as Ned, inherits the weak muzzle of his sire; this, together with a poor tail, constitute chief faults. Otherwise he is a good little dog, with lots of style. Sir William got vhc. This dog just misses being a really good one, but his head has an unfortunate drawn-out look, due somewhat to its peculiar markings. His body, legs and tail are very good, indeed. There were nine entries in the bitch class. First went to Nankin, a capital specimen. There is but little fault to find with her. She possesses a head very nearly perfect, with a short and square

muzzle, without a wrinkle in it; skull broad and flat, and well proportioned neck, shoulders and body. Her tail is also excellent and she moves beautifully with any quantity of style. Nankin also won the special prize offered by the Boston Terrier Club for best of the breed in the show, regardless of sex, easily beating Prince Walnut, first in the dog class. Dolly, who won second in open bitch, is a mere toy terrier, and has no business outside of a glass case. Still, what there is of her is good, and she easily disposed of Peggy, who won third. Peggy is weddy and weak-muzzled, but showed herself well. Vhc. went to Cinney and an hc. went to another Peggy. Queen and Buzz could win in any class of Boston terriers judged under the present standard.

CHARLES F. LELAND.

### Bulldogs.

#### Judge's Report.

I must confess I was a trifle nervous when I entered upon my duties of adjudicating the merits of the 59 entries in the bulldog classes, but Mr. Mortimer's presence in the ring as steward was very re-assuring, and it was served without any delay.

In order to be consistent in my judging, I first picked my dogs on general appearance, and after that paid most attention to facial properties; the great characteristic of the breed being a short face, with a broad, upturned muzzle. I hope any exhibitors who were disappointed will attribute any mistakes to my inexperience in the ring, and, perhaps, a not too long acquaintance with the breed. The judging is simply my opinion, and can be taken at its estimated worth.

The challenge class for dogs saw Leonidas, King Lud and Pathfinder fighting their old battle over again, and the little brindle carried off the palm. He was suffering from an abscess on the jaw and was shown too fat entirely, so there was very little to choose between him and Leonidas.

In skull, forehead and wrinkle both dogs are good, Leonidas being a little longer between eye and ear and Lud deeper in skull. Leonidas' face is badly twisted, and this even extends to the eyes, which are not set in evenly. Both dogs have good bone, and stand wide on good legs, Lud being a little the better in these respects, and he is much lower to the ground and shorter in body. In stern both are bad. Lud answers more to standard in being compact, thickest and low, and is very smart in the ring, always on the *qui vive*, and his activity was in marked contrast to the sluggish movements of the other two.

Pathfinder, reserve, though beaten, was not disgraced, as later on he won the club's medal for best stud dog. He looked well and clean. He has a wonderful underjaw, well turned up; but is thin through the face, and should have higher temples. He stands wide on excellent legs, but is very long in body.

In challenge class for bitches, Saleni took first, but she would not show at all until her handler took her off the chain. She is very seedy looking, moves badly, and I think her vision is defective. Unless she takes a turn the other way her shows days will soon be over. She is a very good all around bitch. The Graven Image, second, is a nice little bitch; her skull, though small, is good in type, and her face short, well-wrinkled and finished. Her body cobby, but not cut up enough; muscular development good. She was very active, and I may have erred in not handing her the blue ribbon. Dolly Tester, reserve, is a good stamp, but out-classed here.

The open class for dogs over 45lbs. brought out eleven candidates for first honors, and His Lordship was well ahead. He was not shown in first-class condition and would not move well, but when he settles down in the ring he looks grand. He is of very even quality all through, and his good points bear a symmetrical relation to each other, none of them being unduly exaggerated. He could be better in forehead and skull, and might carry his ears a bit smarter, and his hind legs are crooked, making him wide behind; he has great bone, is low, well ribbed out and has a good stern. In general character, I spotted Romance as next best, but, upon comparing him with Found It, who got second, I discovered exquisite quality in the latter. He is a good-headed one, with a short, well-finished face; body good in outline, but flat ribbed and not let down between his forelegs. He stands too straight and needs more substance all through; has neatly carried and well-placed ears, a clicking back and good stern. Romance, who is low to the ground, wide and big in skull, with lots of substance before the eye, would have won third had it not been for his very hollow and weak back; but he could not bear the pressure of a few pounds there, and had to be content with reserve and make way for Reve Royal, not so good a stamp, still a dog with character about him, as he has a large skull, broad muzzle and short body; does not stand well, is too much in the air, and carries his stern like a ship's mast. Sheriff has a huge skull, a beautifully finished forehead, very broad and deep, with good underjaw, all of which are worth studying. His ears are large and one buttons over; his forelegs are well boned, but, like his body, are shapeless, and he brings his feet together. He is young and will improve greatly. Cameron, also vhc., has a large skull and fair forehead, but is in the air with a terrier-like body. Handsome Dan, also vhc., is well-known as the Yale boys' mascot. He is an attractive looking brindle and white, and needs no comment, as his face is a familiar one. Argonaut, a good bodied one, was also vhc.; in fact, after Found It, were six dogs hard to separate. He has good wrinkle and stop, and a grand underjaw, but his skull is too round and one ear buttons over badly. Good roach back, neat stern and stands fairly well. Rustic Sovereign, a very big dog with large skull, and is plain. Governor has a deep stop, but legs and body of a terrier. Dr. Rush has a large skull, is froggy and not typical.

The heavy bitch class, over 40lbs, brought out six, of which White Venn had most claims for highest honors. A grand skulled bitch, with good forehead, plenty of wrinkle, good bone, but long in body. Rosie, second, was shown too thin and she is a trifle timid in the ring. Has good, all around character, skull domed a bit, and her chops are too pronounced and on bloodhound type. Miss Venn has good skull, forehead and wrinkle, but is in the air. Lady Nan, reserve, and Ukita, vhc., were close together. Nan has a long muzzle, but is good in wrinkle and dewlap, and has that good old property, i.e., the furrow traceable up the skull. She is bang on her legs and long. Nikita, a cobby little bitch, with good legs under her, is down-faced, but a good stamp, nevertheless. Victress he, is plain.

In the open class, light-weight dogs were two hard ones to separate—Nugget and Wal Hampton—the former won. He has about the shortest face in the show, and a straight edge laid down underjaw to temples just touches his nose. His stop should be better defined and his temples more prominent; good wrinkle and loose skin, ears very small, beautifully set and carried, but skull much too short; high on leg, but no higher than Wal, though he appears so on account of his short body, which is too short and gives him a pug character. He is also too straight in hind legs. Wal Hampton is a good, all around dog; face long and no lay back, in which the winner excels. He was shown too thin, which made him appear long in back, which is nicely roached. Wrinkles, third, has a beautifully broken up face, and, as his name implies, is well wrinkled; has great substance before the eye and good underjaw; one ear is badly buttoned over, which detracts from his good character. He is high, not out in front, and body very moderate; should improve. Taffy, reserve, is a very neat little toy, with plenty of good points about him. Heathen, a very good stamp, and would have been higher but for his color—black and tan. Mars is froggy and plain.

Open bitches under 40lbs. A "plum pudding" brindle (supplied from Mr. Mortimer's vocabulary) was liberally treated when given first but, she only had one competitor, as Haphazard was injured and withdrawn. I could not resist the smile worn by Mr. Mason-Jones, on the other end of Grace's chain, and, as I had become accustomed to handing him blue ribbons, he having shown His Lordship and White Venn, I forked this one out to him. Queen Mab was given hc., lame behind, tail like a foxhound, and long body with a hollow back.

Dog puppies, a big class. The winner, Rustic King II., is a well-grown puppy, well wrinkled and sturdy. If he improves and does not get too large, should finish into a nice dog. Counsellor, second, seven weeks younger than the winner, is a very nice little fellow, short and low, big bone and very promising. Robin Adair, reserve, is plain, but well wrinkled. The remainder were very moderate. The winner in the corresponding class in bitches was supplied by the Woodlawn Park Kennels. She was only fair. Robin Rosalind, is a very sweet little bitch; the other two are very plain.

In Novice dogs and bitches, Nugget first, Sheriff second, Wrinkles third, Taffy reserve, all commented on before. His Lordship won the Grand Trophy for best dog or bitch in show, King Lud, in his present condition, not pressing him very hard. His Lordship's owner should look after him, as I am afraid he is the kind which goes to pieces easily. Saleni won the Porter cup for best bitch; Rustic King II. the Puppy bowl, Nugget the Sawyer cup, and Handsome Dan the American Field cup. Graven Image won the English Bulldog Club medal for second best bitch, and King Lud one for second best dog. The Brace prize went to His Lordship and White Venn, while Mr. Austin pulled down the medal for best team, and his Pathfinder won medal for best stud dog, with King Lud and Found It shown as his get. Pathfinder's son, King Lud, also competed for this with three sons, Nugget, Argonaut and Taffy, all showing the grandly developed underjaw.

E. A. WOODWARD.

### Collies.

#### Judge's Report.

Challenge class—dogs—First, Wellesbourne Charlie looking very well, scored over Roslyn Wilkes in bone, size, substance, coat, carriage of ears and length of head. Roslyn Wilkes, second, a nice, showy dog, was outclassed by Wellesbourne Charlie. Ormskirk Shep, had to be content with reserve, a nice little dog, full of quality. He is too small and bitchy to win in hot company.

Bitches—First, Highland Floss, skull might be flatter, a little full in eye, otherwise good in expression, body, coat, carriage of ears and symmetry and an all-round good bitch. Jacky Dean, second, better in head, eye, bone, legs and feet, undercoat and a better mover, but wanting in top coat, loin back, and shown too fat. Flurry III, reserve, a well known winner, has carried everything before her in former years; if shown in good condition can easily win first in good company.

In Open class, dogs—First, Sefton Hero; a very attractive dog, grand size, bone, symmetry, length of head, carriage of ears, bone, legs and feet. Coat might be better, a bit high in brow, but a good mover and unquestionably a good one. Christopher, second, smaller than his competitor, was looking very well, in coat, skull and expression he beats the winner; he might carry his ears better. Woodmanstern Trefoil, third, a nice black, white and tan. A good one. Not so good in bone as Christopher; full of character and carries a coat of proper texture. Conrad II., fourth, a good specimen, with good legs and feet, nice size of ears, but could not get them up in the ring. He lacks expression. Finsbury Dude, vhc., is thick in head, good body and condition. Finsbury Hero, hc., full of quality; would have been placed higher, but did not show well; seemed a little dull. Blizzard, vhc., a nice type of collie, a little full before the eye, little thick in skull, good fair coat, might move better. Jim Crow, vhc., good head and texture of coat; in better condition should do well in good company. Charlie Chris vhc., a son of Christopher, a real collie with lots of character and expression, a little small. Fergus McIvor, hc.; good type of head, ears and collie expression. Christopher, J. C., a little full in eye, fair coat.

Bitches, Charlton Phyllis, first, a good type of collie, excellent expression, a little light in bone, ears might be better, but plenty of quality and shown in good form. Olive, second, is a nice bitch, lots of quality, nice body, in good coat and shown well. Iduna III, third, a nice type of collie, plenty of coat of good texture and shown in exceptionally good form. Ormskirk Susie, fourth, ahead of reserve, better in ears, grand expression, possibly faulty in feet, a nice, active and good type of collie; one that should do some winning. Lady Fidget, vhc., the best of the vhc.'s, good legs and feet, sweet expression, her greatest fault being one ear pricked, and she is at present out of coat. Nora, vhc., nice quality, fair carriage of ears, they are a bit large, good legs, feet and tail; a good mover. Ormskirk Julia, hc., a very nice bitch of good type and well deserved her letters. Sweetheart, hc., a good, strong bitch, large size, good body and length of head, domed in skull, heavy in ear, but a good, useful bitch as a breeder. Mary of Argyle, hc., is at her best now. Chesterford Hattie, reserve, an excellent type of collie, with good head, expression, good body and legs.

In dog puppies, Hempstead Trefoil, first, a fine son of Woodmanstern Trefoil, full of character and should hold his own in the best of company. Cragston Pinto, second, possesses a head of good length, expression and carriage of ears. Warwick, third, a nice type, full of quality. Glenfyne, reserve, son of the good dog, The Squire, is possessed of a good head, plenty of bone, and carries a dense, hard coat. Highland Bobbie, vhc., another heavy-coated one. The rest were a fair lot.

Puppy class, bitches—Hempstead Dorothy, first, one of the best bitches in the show; a nice sable and white, with plenty of bone, a lovely head, beautiful expression, small, perfectly carried ears, nice body, legs and feet; has a fine coat of proper texture; this bitch is sure to be heard from again, and should win in hot company. Olive and Iduna II, described in the open class. Cragston Queen, reserve, a good type of bitch. Novice dogs, Hempstead Trefoil, first; Rhodrick Dhone, second, a fair type, with lots of good bone, loses in head and coat. Conrad II., third, described before. Bitches, the winners have all been mentioned. Cragston Snowdrop, vhc., a nice white bitch, one of the best of the color yet seen in this country. Chesterford Hattie, vhc., described in open class. The rest need no particular mention.

**SMOOTH COLLIES.**—Blue Belle, first, better size and bone, having a good length of head. Hempstead Belle, second, has plenty of quality. Blue Light, third, was outclassed.

L. C. SAUVEUR.

### Pointers.

#### Special Report.

The pointer classes had a very large entry and the quality was higher than shown in late years. In fact pointers to-day in America are as a whole above the average of those in England, though to our regret no startling good one has made his appearance among the new dogs.

Lad of Kent in challenge dogs easily defeated Tempest, Robert le Diable, Pontiac and King of Kent not being for competition. Lad of Kent, had he a better head, would come very near being as good as we have ever had for barring slightly heavy shoulders, a rather thick and short neck and feet that are a bit smaller than I like to see, he comes up to the best. In challenge bitches Woolton Game won, had Mr. Daley had Josie Bracket (her only competitor) in better con-

dition, the decision might have been reversed as Game showed none too well.

In open dogs Prince Regent, a new one, Mr. Heath picked for the winner, Ridgeview Tenny came next, between these two dogs there is little to choose; Prince has more bone, is better in shoulders, legs and feet than Tenny, and has a head more to my liking, while Tenny beats Prince in loin and hind parts handsily, and has a better expression. Lord Braeken third, muzzle too short, trifle light in eye, is loaded in shoulders, too long and low in body, neck too thick, should be better sprung in ribs and drops away too quick behind—legs and feet excellent, a dog showing quality and good character. For fourth, I preferred Jack vhc., to Ridgeview Panic. His muzzle is not clean cut enough, a bit cheezy, shoulders might be cleaner, apart from that he is a very nice made one. Hylas of Naso, reserve, might have been ahead of Panic, they are well known. King of Lyons—fair head, cheezy, skull too round, stands high on his legs, poor feet, too long and high in body, has a nice neck and shoulders above the average. The Hempstead Farm dogs in this class were absent at the field trials and were not in show condition. Wautagh Chief, h.c., is a fair pointer, cheezy, not depth enough of muzzle, shoulders are loaded, stands wide, good legs and feet.

In open bitches, heavy weights, the well known Lady Tammany won. She, however, has nothing to spare over Kent's Bella, a nice little bitch that I think should be in the smaller division. She is a bit cheezy, rather rounder than I like to see in her barrel, stem rather long, shows better type than her kennel companion, Lady Tammany. Lass of Tammany, third, is a rather nice, big bitch. She stands a bit higher on her legs, but then she is pretty large in body. She should be better in pasterns, clearer in shoulders; skull is too broad. Kathlene Kent got fourth; a bitch plain in head, ears not well carried, not depth enough of chest, slightly back in her pasterns, too slack in loin, nice bone; a useful looking bitch. Devon Fan was off her bench when I called to see her. Ridgeview Stella is a fairish bitch, but Mr. Heath didn't like her considering her condition. He can hardly be criticized for not giving her "first" or "second," but really now her fond owner thinks she might have got at least a c.

In challenge dogs for those under 55lbs. Duke of Hessen rather handily defeated his only competitor Arthur. John Brett deserves much credit for the excellent condition in which he showed Arthur.

Challenge light-weight bitches found Lady Gay Spanker the winner, pressed on account of condition by her sister Miss Rumor. Wild Lilly, third, is as well known to FOREST AND STREAM readers as the two winners.

Open light-weight dogs brought out a nice new one in Ridgeview Comet; he has a nice head, frontal bone a bit too high, eyes a trifle light, might be cleaner in neck and shoulders, could be better muscled behind. Here is where the second dog, Chancellor, a litter brother of Comet's, beats him, both have excellent legs and feet, and nice bodies, but Chancellor is beaten in head and neck, and has not the character or amount of quality that Comet has. It was said by one or two breeders that Chancellor would beat Comet when both are a year older if Comet does not go wrong. Chancellor under me would never see the day he could beat Comet; however, he is a very nice little dog.

Ridgeview Donald, third, well known. Brackett's Lad, fourth, head plain and cheezy, excellent legs, feet too small; is a fair sort; he is heavy in shoulders, wide in front, not deep enough in chest; he has a nice stem, carries it a bit too high. Reserve went to Ridgeview Faust. Mr. Hooley has a nice little dog in him. He has his faults and his good qualities as well. Prince of Pontiac, Tom Croxteth, Roderick and Springside Hal all got vhc., and they deserved their cards. Prince of Pontiac is too young to show in the open class yet. When he has more age he will do some winning. Roderick and Springside Hal are well known. Tom Croxteth is short in muzzle, inclined to be snipy, ears only fairly carried and too boundy; eye not rightly set, wide in chest, not good in shoulders, legs and feet fair, sprung too much in the barrel, rather nicely made behind, stem well made, but carried too high. Graphic VI, well known, should have been quite well up; he got nothing.

In open bitches under 50 lbs. Mr. Heath must have overlooked Kent's Pearl, certainly one of the best in the class. First went to Lady Grace, a nice bitch; however, I prefer Springside Nell for the place; this bitch is improving and looked better than she did at Newark. Third went to Jingle Bell, well known. Fourth went to Fan Fan II., also well known. The reserve went to Ridgeview Lass, shown principally as the dam of Comet and Chancellor. She is a very timid bitch and did not show well, has a fair head, beautiful neck, loaded shoulders, the best of legs and feet, nice body and excellent hindparts. Hempstead Kit, vhc., should not have been shown; she was heavy in whelp to Prince Regent. Graceful II., also vhc., is well known. Kent's Pearl got vhc. This bitch is a bit short in skull, trifle cheezy, stands wide in front, could be better in shoulders, has nice body, legs and feet; one of the best, if not the very best in the class. Mr. Mortimer did not purchase her any too soon, as many were after her. Chloe, h.c., is a useful looking bitch, should have more bone, is long in body and might be improved in head. Hempstead Blossom should have had three letters or more.

In dog puppies some nice ones were shown and rightly placed. It was the best class of puppies I have ever seen. The corresponding class of bitches was hardly as hot a class as the dogs. The winner, Springside Lady, is a nice bitch, beating Faustina with nothing to spare.

INADDA.

#### Smooth Fox-Terriers.

Judge's Report.

There was a good turnout of this breed, and the quality throughout was of a high standard, all the old favorites being present, some of them looking well and others beginning to show age, proving that every dog must have his day. Several promising youngsters made their debut and gained distinguished honors, notably Warren Safeguard, the winner in open and novice classes. This is one of the best American bred dogs ever seen, and, without a doubt, has a brilliant future before him, both as a bench winner and future sire, his breeding being the bluest of the blue, his sire being the English champion Venio, dam Eggsford Sapphire, by Starden's King. In the competitions for the specials between the smooth and wire hairs the latter scored decisively in the teams, brace, and also for the best fox-terrier in the show, the winner of the latter being the wire-haired dog Cribbage. Although not shown at his best, still he cleverly defeated Blemton Victor II., the winner of the Grand Challenge Cup in 1892 and 1893.

In challenge dogs, Raffle being absent, left the battle to be fought out between Blemton Victor II., Starden's King and Ripon Stormer, these being placed in the order named, Victor, as usual, being shown on the light side and not improving in feet. Still, I think this can be remedied with plenty of exercise. This dog is good in skull and jaw, eye and ear, nice neck let into a good, sloping shoulder, good ribs and plenty of depth in brisket, a little cut up in flank; still shows a good loin, quarters and thigh, fairly good in hocks, with a nice set on of tail; possesses a good coat of nice texture, full of gas and go, and ought to win for some time to come. Starden's King, second prize, I thought shown a little heavy in condition, as he is a dog directly op-

posite to the winner in formation, being a little on the coarse side; therefore should be shown lighter and in hard condition; to-day he looked coarse in neck from the amount of coat he carries. This point improved, he is a hard nut to crack in any company, being nice in skull, with a good eye, long, punishing jaw, fair ears, right in placement and lay of shoulders, best of legs and feet with round bone, ribs well sprung, level in back, with quarters, loin and thighs as they should be, fairly good in coat as regards texture and quality, a showy terrier and a rare-bred one. Ripon Stormer is a vastly improved dog since Saratoga, and great credit is due to Mr. Robinson for the condition he exhibited the dog in. This is another good terrier, lasting well, being good in jaw, bone, feet, neck, body, loin, quarters and jacket, full of fire and always ready for a scrap.

In challenge bitches, first, Miss Dollar, a little light in jaw power, good in skull, fair ears, neck, shoulders, legs and feet good, nice depth of chest, level in back, good loin quarters and hocks, a wonderful shower and always making the most of herself. Second prize to Dona; this bitch is beginning to show age but is still a grand old terrier.

In open dogs, first prize went to Warren's Safeguard, who owns a strong punishing jaw, good eye, flat skull, nice V-shaped ears, lean neck set into good shoulders, excellent in body, loin and quarters also with well sprung ribs, perfection in legs and feet, with a good jacket and right texture, a little straight in hocks, still taking him all around, he is a grand one, and I congratulate his owners on possessing such a youngster. Second prize Hillside Domo, a dog too light and leggy, although, in head and expression, he shows more English than fox-terrier, still he possesses fair ears, coat, shoulders, legs and feet, a showy terrier put down in good condition; it was only this that placed him over the third prize dog, Blemton Rasper; this dog was looking far from his best. We know he is a little foreign in expression but to-day he looked tucked up in loin and not improving in feet; in neck, shoulders, ribs; outline and bone, he scores and only wants to be in good trim to turn the tables on his more fortunate rival. Blemton Stickler, fourth; this dog did not show at his best, being full of fight and it was impossible to see him to advantage, looked long cast and inclined to be fine in coat, fair in jaw and skull, still I fear he is not improving.

Open bitches. First prize Blemton Vindex wins in length of face, not improving in eye, fair ears, a little upright in shoulders, lots of jacket, good in outline and character, fair front, but only moderate in feet. Second prize to Blemton Votary, a very nice pup, good in jaw, eye, flat skull, nice ears, her parti-colored nose at present handicaps her, should this improve she is, without a doubt, one of our best bitches, being level in back with nice ribs, brisket, loin, quarters, hocks set on of tail, good front, best of legs, feet and bone, heaps of coat of nice texture, a grand youngster and a credit to her sire Kasper. Warren Duty, third, is beaten in length of face and coat, a well balanced terrier with good neck, shoulders, ribs, quarters and action, also right in legs and feet. Warren Cautious, fourth, a handsome terrier, nice in head, jaw and eye, bone, legs and feet.

In dog puppies, first prize went to Beverwyck Royalist, a fair puppy, short in back, nice round bone, good front, legs and feet, heaps of coat, at present not harsh enough, good jaw, flat skull, nice eye, wants keenness in expression; a showy terrier that makes the most of himself. Second to Warren Tori, beaten in head properties, also coat; in front, bone, legs, feet and body he is a more than average youngster. Third prize went to Blemton Viking, all a terrier, but over-sized, good coat, fair texture, nice head and ears, good legs and feet, little long cast in body.

In bitches, first prize was given to Blemton Votary, already spoken of. Second, Blemton Erminie, a beautiful terrier, but a wretched shower; it was with the greatest difficulty she could be got to stand up in the ring. Grand coat, a terrier head, right in skull, eye and jaw, fair ears, good neck, nice bone, legs and feet; all round a good one if she can only be persuaded to make the most of herself. Beverwyck Twilight, third; fair coat in quantity and texture, nice bone, leg and feet, only fair in head, at times ears not well carried; nice-bodied bitch, but a moderate shower.

Novice dogs, first prize, Warren Safeguard; second, Beverwyck Royalist, and third, Warren Tori, all criticised above. In bitches, first, Blemton Votary; second, Beverwyck Twilight; third, Warren Damsel; moderate in coat, fair head and ears, legs and feet, body and quarters.

T. S. BELLIN.

#### Black and Tan Terriers.

Judge's Report.

Black and tan terriers were not a strong class. The good ones seem to be getting scattered through the breaking up of what have been the strongest kennels in this breed. Broomfield Sultan was shown not for competition, leaving the challenge dog class to Prince Regent, a smart terrier whose worst fault is his weak head, and that was not improved in appearance by a glandular swelling under his right ear. In the challenge bitches Louie and Gipsy Girl competed, the latter winning on her general merit and lack of serious faults. She is not, however, a strong type of terrier. Louie shows more character, but her dark and indistinct markings, wide chest, and tendency to cheekiness greatly impair her show form. Meersbrook Maiden shown in something like her old form did not compete. In open dogs Glenwood won easily, principally owing to lack of merit in his competitors. He is a strong type, heavy boned, well marked, slightly breeched, good in body and legs, stands well, head contains good eyes, and shows character, but is too wide and deep back of eyes. Tail coarse and high carried. Second went to Rochelle Rush, a showy fellow with good terrier expression and an excellent eye, but his muzzle is weak, markings dark, good in legs and body and carries a nice short tail. Rochelle Colah, coarse, and not clear in marking, was third. In bitches nothing of consequence appeared. Rosette is coarse and cheezy, and while her tan is a good color her markings are smutty. She, however, was good enough to win first over Mizpah and Olata, who followed in the order named. The former is poor in markings, weak in muzzle, light in eyes, and while good in bone is not straight in front, and carries a long tail; the latter is hardly up to show form. Prince Regent and Gipsy Girl easily won the special for the best brace.

#### White English Terriers.

Judge's Report.

White English terriers were not noticeable for quality, in fact those shown have little to commend them. Something better should be brought over if anything like proper type is to be reached. Nobility, an 8mos. old puppy, is somewhat promising and should in time get the award over his sire, Spring, who won in the open dog class in this instance; but Spring is weak in muzzle, large in eye, light in bone, wide in front, yet withal has a nice body and a neat movement. In bitches, Louisa is very much like her kennel mate Spring, and easily won over Lone Star, who is not at all a show specimen. Teddy and Daisy, toy bull terriers, were wrongly entered and not passed upon.

#### Toy Terriers.

Judge's Report.

Toy terriers showed up strong in quantity but of the usual poor quality. The winner, Lady Clyde, won easily, having a well shaped terrier head, good markings, stands well, but carries a gay tail; she is rather long in body, and might to advantage weigh a couple of pounds less. Daisy was placed second, but for her light and excessive tan, and extreme limit of toy weight, would have been placed first, having

more type and character than the winner, standing on good straight legs, and carrying a short straight tail. Prince won third. He is a fair headed small one, neat in body but lacking markings; reserve went to Sally Stick, an all black one with head that is on the apple order, but better than the average. The rest are not worth criticism.

#### Italian Greyhounds.

Judge's Report.

Italian greyhounds were numerous and good, none of the large and over fed sort putting in an appearance. Spring and Sprite competed in the challenge class, the former winning on account of more nearly approaching the large type of greyhound. Both have good heads, the bitch having somewhat the best forequarters, but the dog excelling in outline. They might be smaller to advantage. In open dogs Kentucky Prince won somewhat easily; he is of proper size and a fair all round specimen. Souris won second, while a symmetrical dog, is badly handicapped with a large round head, hairy tail, and a white chest. Colene's too sharp head and tucked up loins placed her third. The open bitches brought to the front the most perfect little greyhound that I have seen, but for an Italian she is far too large, I consider, however, she won easily. Her head is most perfect, neck long and well set, chest deep, ribbed well back, and back nicely arched, but for her size and white chest Beauty would have won the special over Spring for the best of the breed. Lady Lee and Vinnie were second and third, the former having the advantage in smallness and condition; the latter being fat. Both are nice specimens, and correct in size. Psyche is a shapely little hound and would do better with properly carried ears, less white on chest and stronger eyes. Spring and Sprite made far the best pair and won the brace prize.

H. T. FOOTE.

[By a Staff Reporter.]

#### English Setters.

Major J. M. Taylor, Judge.

The class for challenge dogs had two competitors, Breeze Gladstone and Glendon, the former getting the decision, though far from being in good condition. Glendon is better in head, though the outline of it is marred by throatiness and a noticeable heaviness of flew, but in skull, muzzle and shapeliness his head is far better. Breeze has the leaner and better neck. Glendon I consider the better dog. He is just a bit heavy in shoulders, but in every other respect he is Breeze Gladstone's superior, he having a better muscular development, is better ribbed, has a better and more graceful and spirited carriage. Probably Breeze's defective eyesight has the effect of making him quiet and listless. Ben Lewis strenuously insisted that there was nothing the matter with Breeze's eyes, as they had always been as they then were, he said. It was plain that there was a disease of the eyes. On referring the matter to Dr. Glover he pronounced the disease cataract, one eye being affected more than the other, and both seriously. In the challenge bitch class, in which were two competitors, Donna Juanita won over Spectre.

The open dog class had twenty-five entries, three absent. The judging did not meet with the endorsement of many exhibitors, though such is not necessarily a test of good judging at all times. The class was most irregular in type and quality. First went to Antonio, a strong-built dog, but not nicely proportioned for bench quality. Second went to The Earl, short in muzzle, round skull, stop too deep, rather thick in build and quite sound in body, legs and feet, on which he stands squarely, yet he was lacking in symmetry and setter character as compared with many of the others. Third went to Netherwood Nymrod, a small, snugly-built dog, symmetrical and sound. He has good body, legs and feet and was superior to the second winner in many respects. Ben Hur of Riverview was not looking at his best. He is plain in head, throaty, and stands high on legs. Gameter, the reserve, is light in muzzle and somewhat coarse in general makeup. Drake Jewell and Scider, vhc., were given about the right letters.

In open bitches there were twenty-five entries for absent. Esmeralda, first, is quite a good bitch. Her head would be improved were there more stop. Second went to Countess Rush, a good bitch, but lacking in general symmetry, being surpassed in setter character, symmetry and muscular development by Nahmke Chita, c., a prettily turned small bitch, good in head, body, neck, legs and feet, carries herself well and shows fine setter quality. Gossip, third, has a plain head and was very heavy. I thought she was surpassed by Jersey Daisy, h.c., shown too fat and Nahmke Chita. Fourth went to Laurendress, narrow muzzle, good legs and feet, lacking in symmetry. Dominion, the reserve, is a large broody-looking bitch of a good deal of quality. Monk of Furness Lill, vhc., is a trimly built bitch, a bit narrow in head, which is not badly shaped, and she had more quality than several placed above her.

Dog puppies had ten entries, of which English Jack was first. He is quite a good puppy, though a bit large in knees and a shade light in barrel. Several of the puppies were taken out after the judging, so there was no chance to look them over on the last days of the show.

The bitch class had nine entries. Woodland Grace, first, and Woodland Echo, third, were an ordinary pair. Second went to Belle Bondha II, she being too ill to show herself when I called to report on her. Constance, the reserve, is weedy. Puppies were not a remarkably good lot. There were sixteen in the novice class for dogs and eight in bitches. Rodney, first, and Netherwood Nymrod, second, two brothers, were easy winners. Third went to Young Howard, good in body, legs and feet, a bit plain in head, active and good in setter character. Queen of the Elms, first in novice bitches, is narrow in skull and not first-rate in forelegs. Brownie, second, is light in bone, wide in ribs and narrow in muzzle. Rowdy Donna, third, is a light, undersized bitch, though truly built. The letters were not distributed with the skill and correct estimates which have marked the judges' efforts many times heretofore.

#### Irish Setters.

John Davidson, Judge.

A large and remarkable class of dogs faced the judge in the challenge class, the veteran Tim carrying off the honors notwithstanding his ten years of age. Kildare was second, with Pride of Patsy reserve. The others in the class were Inchiquin, which was in good condition; Blarney, Jr., Montauk, Jr., Duke Elcho, Kildare Glenmore and Seminole, a class of rare strength and numbers. In the contest for the special, Tim was beaten by Queen Vic, the winner in the challenge bitch class, which was also a strong class of four, Laura B. taking second, Edna H. the reserve, and Elfrida was the remaining entry. While Queen is a very superior bitch, she is lacking in the bone and muscular development of the dog, and is somewhat lacking in these respects considered as a bitch, although very symmetrical. In my opinion, Tim was the better. Dr. Fowler's kennel took the special for the best kennel.

There were thirteen dogs in the open class, and quite a fair lot they were. Flnglas, first, is substantial in build and symmetrical in outline, is well ribbed, has good legs and feet, muscular quarters, strong back, and good general symmetry. He shows throatiness and his head could be improved. Pemberton won second. He is coarse in head, is long cast and has a general tendency to coarseness. Elmhurst Billy, third, is heavy in head, though it is not badly shaped, is flat in ribs and is good in coat and color. For fourth place Young Signal was marked in the judge's book, but it was said to be a mistake, Young Tim being meant instead. Young Signal was

absent. Kildare Beverly, vhc., is heavy in shoulders, head large and not clean cut, good back and color, and fair general symmetry.

Thirteen bitches appeared in their class. Nona, first, is light in bone and thin in flesh. Her head is shapely and she has good setter quality. Ruby Glenmore II., second, is better in substance than the winner and is a smoother turned bitch. Third went to Shandon Belle, light in muzzle and bone, head plain and weak in appearance. Bessie Finmore, fourth, is better in head and neck than Belle, and also in legs and feet. Delphine, vhc., is narrow in head; well-ribbed body.

There were seven in the puppy class for dogs, all ordinary in quality. Killane, first, is large and coarse. Second, Thasmo Ca'dic, is throaty, head narrow, and ordinary otherwise. There were three bitch puppies, all ordinary specimens. The novice class brought out ten, of which Finglas was first, Elmhurst Bill was second and Killane third, all winners in other classes. Novice bitches had eleven, of which the first winners in the open class were first and second, Nona and Ruby Glenmore II., and Onota Peg third. The latter is short in head and is not clean cut; body good and symmetry ordinary. In the field trial class Finglas was first and Fingaln second, the latter thin in flesh.

#### Gordon Setters.

John Davidson, Judge.

The challenge classes were well filled, five in the dog class, seven in bitches. Ranger B. won over Leo B., with Count Noble the reserve and Heather York, vhc., and Rexmont hc. though it seems somewhat absurd to give letters of commendation to dogs which are in challenge classes. Dutchess of Waverly was first over Janet, Lady Gordon reserve and Heather Bee vhc. The others in the class were Bellmont, Flomont and Lady Waverly.

There were eight dogs in the open class. Lad, first, has large feet, yet they are well shaped; neck throaty, narrow muzzle, deficient in short ribs, good coat. Duke of Wellington, second, is coarse and heavy in head, bad knees and a bit loaded in shoulders. Archibald, third, is rough in coat. He is strongly built. Richmond Prince is pale in tan, poor head, ears badly carried and is large in knees. Fred Thasmo, vhc., is smudgy in tan, heavy in shoulders, yet is a fairly good dog.

There were eight bitches in the open class. Fan, first, is round in skull, is poorly hung, shows throatiness, feet turn out in front, and she is lacking in symmetry, but a good coat and color give her rather a good appearance. Second went to Highland Yolo, and third to Venus, the latter not clean cut in head, light muzzle, short neck, good body and fairly good legs and feet.

There was one puppy class for dogs and bitches, Dick Noble, an ordinary specimen, won first. He has a weak, small head, smudgy tan and poor legs. The rest were ordinary. There were three in the novice class. Dundee, a fairly good, small bitch, took first. Lady Beaumont II. took second, the latter plain in head, pale tan and ordinary quality, and third to Sport, also ordinary. In the field trial class Ranger B. was first, Flomount second and Count Noble third.

#### Foxhounds.

Maj. J. M. Taylor, Judge.

There were no entries in the classes for English hounds. There were ten entries in class for American foxhounds, dogs. Drum IV., first, is fairly good in head, though cheeky and lacking in expression. He has fair symmetry of form. Ned, second, is short in neck, thin in flesh and lacks muscular development, and he shows some coarseness. Third went to Ranger II., a large, coarse fellow, with apparently a trace of English type in his form. There were five bitches, of which Sunmaid was easily first. She stands on good legs and feet, and shows plenty of foxhound character. Lilly Dale, second, is light in bone and somewhat leggy. Third went to Tempest, light in build, yet showing good hound character. The Governor's Kennels won the kennel special. There were six in the puppy class.

#### Chesapeake Bay Dogs.

Mr. J. M. Taylor, Judge.

There was but one class, and it had but six competitors. Rose was easily first. She is strong and good in coat and color, but is thin in flesh. She was not in condition from nursing a litter. Second went to Deacon, good in bone and coat, legs and feet strong and well made, fairly good head and throaty neck. Bough, third, shows age, the rest were ordinary. It is strange that this most useful breed of working dogs is so neglected. They deserve better. B. WATERS.

[By a Staff Reporter.]

#### Russian Wolfhounds.

John Davidson, Judge.

This breed is fast forging to the front, and the display this year is the best yet seen. The two principal kennels are depending upon their home raised ones, and that they, as well as others, are doing good work cannot be gainsaid. Before another year rolls round it is to be hoped that the vexed question of a correct and settled type will be agreed upon. At present, doubtless owing to the limited knowledge of the breed possessed by those who have judged them, the latter are compelled to follow certain lines which appeal to them as the more correct formation of a hound that is built to a great extent on the lines of the greyhound family. While this may do away a good deal with certain peculiarities of coat and body formation, extreme flatness of rib, roached back and "head into shoulder" appearance, the result seems to be stronger loins, because broader and deeper, greater spread of quarters and well of rib, and longer neck. These seem to be the characteristics of the Marlboro Kennel dogs of the later breeding. Princess Irma and Zerry, the former especially, show more of the type so prevalent in the Searcroft Kennel dogs, and which is claimed by Mr. Hanks to be the correct and original type. Leaving out this question of distinctive appearance, it cannot be denied that the principal winning dogs at the show look more like being capable of sustained and heavy work because following the greyhound lines more closely. Argoss and Leekhoi again faced each other in the challenge class, and both looked fit and well; the former won again. The bitch class brought out a quartette of beauties and to Vinga fell the honors. At the same time, to be consistent, Zerry should have won; she is deeper and stronger in loin, and as good in other respects, but Vinga is more of the type of Leekhoi. Princess Irma and Svodka are much of the same type, and looked well. Both lose in size and substance to the others.

The open dog class was a hot one, and competition between the first three was close. Odrooski, a new face, is an excellent son of Argoss, beautiful front and strong loin, long, clean head, but lacking the coat characteristics of some of the others round the neck, but he has beautiful tail and feather; he is almost black in color, with a little white. Korsar, second, a charming light brindle and white, is built on beautiful lines, nice straight front, good body, spread of quarters and head; partaking some of the Leekhoi type. Leekhoi II., third, while a trifle plain in head and not so good in hind parts as his brother Col. Deitz, vhc., excels him in front quality and condition, and this probably accounted for his position, handsome dog though the latter undoubtedly is; Magrajda improving, is a bit plain and lacks coat characteristics, but is nevertheless a well built dog, though to us he appears too long cast and flat bodied; Krupp C. loses in size and substance. The bitch class brought out Riga

and Ermina, two almost black ones; there is little to choose between them; they have filled out a little since Newark, when their positions were reversed; they are sisters of Odrooski and partake of his type. Gypsy Queen, third, a seven-months-old bitch of beautiful quality, good, straight forelegs, toes should be better arched, nicely shaped body which only needs time to furnish, and excellent quarters and coat. Zlobellis is very narrow in front, but straight and body light throughout, good legs, clean head showing lots of quality; Hempstead Olga is faulty in hind legs and size, good front and head, coat and condition not up to the mark. Zmeika looking in excellent condition, good front, body and loin, is a strongly made bitch that, but for her faulty hocks, could best anything in the class. Lady Deitz, the winner in puppies and vhc. in open, is a bit short faced and falls away behind too rapidly, great bone, lacking in quality to some extent, nice coat. Suddorka has a sweet, long head and is brimful of quality, but was looking light and loses to the winner in straightness of front and cleanness of shoulder, beautiful feather on tail and quarters, will probably grow into an extremely handsome animal, her color being black, orange and white. The others are well grown animals, showing lots of coat and bone, but not good in fronts, light in loin, and might have been put down in better and cleaner condition. These belong to the noted financier, Mr. G. J. Gould. The Marlboro Kennels won most of the specials.

#### Deerhounds.

John Davidson, Judge.

Competition, as usual, was chiefly confined to the Hillside Kennels, and as usual these were shown in good hard condition. Robber Chieftain had to give way to his half-brother, Hillside Warrior, in challenge dogs. We like him better in head and loin and ribs. Chieftain showed little or nothing of his late accident, and we are glad to see it has not compelled his retirement. In the next class Theodora loses in size, head and loin to her kennel mate, Romola, who subsequently beat all the others for the special. In open dogs, first went to Lochiel, described before, but here shown too heavy and woolly in coat. McGregor and Raven were placed next, as named. McGregor is better in skull slightly, but taking body, loin, bone, legs and length we think Raven excelled all others in the class. Argyle, vhc., is well known. Bruce of Altwood loses in head and substance, and Rhoderick should have had another letter. In bitches, Hillside Ruth won over Hillside Heather and Hillside Sylvia. According to my idea, the latter wins with something to spare; better head, muzzle especially, stronger body and loin, and more size and substance. There is little between Ruth and Heather; both are well-built bitches and often seen before. Minna, vhc., was out of coat and dips a bit in back, but otherwise a well-built bitch that deserved her position. The others do not approach in form. Mr. Thayer won the kennel prize.

#### Greyhounds.

John Davidson, Judge.

The entry was a large one but with the exception of two sons of Wild Rose there were few, if any new ones, possessing much merit. Several of these were not shown in the best of condition. In challenge dogs five appeared but Balkis, vhc., was not for competition. Gem of the season won well in hand from Imperator, beating him in head, loin and quarters especially; Master Rich looking better came next and Pious Pembroke should have had letters; Balkis is keeping up well. In bitches Spinaway scored again, she might be better in shoulders, more oblique, but she is hard to beat behind that; Wild Rose pressed her close; Bestwood Daisy, reserve, looked as neat as ever. In open dogs Jos. Lewis showed two well put up youngsters, Chester and Spring of the Valley, by Gem of the season out of Wild Rose, good front, ribs and loins. Oldstone, third, is a bit heavy in shoulders, and not let down enough in stifle and a little more rib would improve him, otherwise a well made one. Randy, reserve, I liked better, is a very nicely turned one, was put down in excellent shape; his head is a bit plain and his feet could be better; Dakota had a little warmer competition this time but will bear watching in future when he has filled out, being only ten months old yet; Bee's Wing should have better feet and be stronger in jaw; Norway Star was the equal of either and ran Oldstone close. Baritone, hc., was shown a bit soft.

In bitches the peerless Southern Beauty excels Miss Dollar III. in head, loin and quarters and won handily enough, good as the latter bitch is. Queen in Black, third, shows lots of quality and is a nicely made one, barring a little heaviness in shoulders, a little more rib would improve her—a smart looking bitch. American Daisy, vhc., should be longer in head, faulty stern, good loin and forelegs, undersized. Cassie, reserve, is light in loin and quarters, faulty in ears and head, should have more bone and be better ribbed up. I liked Speedaway, vhc., much better, a strongly made all white bitch, with good legs and feet and excellent loin; her coat is too profuse and woolly.

Chester and Spring of the Valley won well in puppies. Princess Fullerton we did not see; most of these had gone home before we came to them. A. W. Purbeck easily won the kennel prize.

#### Poodles.

Dr. Cryer, Judge.

The display in this breed excelled that of former years, but we regret to see the decline of the corded poodle. No new ones are coming out, and the smarter Caniche seems to have usurped the popular favor. They are less trouble, but at the same time some attention should be paid to the curl, many of those shown seemed to have felt the brush too much and were neither one thing or the other.

Lion was the only corded challenge dog and he has been often before. Challenge Curlier had Milo and Chloe and both looked as well and smart as ever, the dog best in loin and rib, Chloe looking a little light there. In open corded dogs and bitches, Tell, the winner, at the Pet Dog show, needs some attention prizing to cords, he has a plain, fat, loin and quarters droops too much. Nanki Poo, second, lacks that sprightly appearance the breed should have and was too fat. Duke, third, is too long in loin, cords fair. Bismarck vhc., was in poor shape, his cords were short and rusty. Ralph was wrongly entered.

In open curly black dogs, first went to Rajah, a much improved dog; he beats Sidi, also from the Meadowmere Kennels, in length of muzzle, loin and curl, where he is much improved, he is a bit coarse and Sidi is a smarter looking dog. Murat, third, should grow to cords, neither one thing or the other, but a nicely made dog. Bob, vhc., is too leggy and coat not curled enough, plain in muzzle and though good behind has not that chic expression and sharp, clean cut head he should have. Sambo, hc., is too woolly coated, and Sancho, hc., is pinched in muzzle and stern and quarters are faulty, fall away too sharply, coat needs curling and should be crispier.

In bitches the well-known and smart-looking Dinah scored the necessary win to compete in future challenge classes. She beats Cybele in curl, loin and muzzle, both are smart. Juno, third, is a bit plain in muzzle and light in loin, nice coat. I liked Bess better, though minus her caudal appendage; she beats the other in muzzle, rib and loin, is a little faulty in stop. Barring her slightly dished face, I thought Victoria the best of the two-lettered one.

In any other color dogs Poobah again beat Diamant; he is a little clearer in color, but he is not so good before the eye as the latter, both are brown and handsome smart dogs, with good curly coats. Pierrot has a brushed-out coat and is not a clear brown. Gamin de Paris is a white, with brushed-out coat. Ray, vhc., I did not see.

In bitches first and second fell to Mr. Hunnewell with Vinette and Bellone; the latter is mixed in color, but is very smart and well-shaped. Yum Yum, third, loses in coat to the winners, and I thought H. H. Dinah a smarter, better-headed one. Jumbo and Jabot, and Juna and Jeanne were the winning puppies, and have been spoken of before; they are improving all the time. Novice winners were Sidi and Ralph, an untrimmed one with a good head. Bellone vhc.; were the latter's color better she would press the winner close. Meadowmere Kennels won the kennel prize. From Mr. Trevor's and Mr. Hunnewell's entries the club derived \$175 alone.

#### Beagles.

John Davidson, Judge.

There was a splendid lot of these dogs and they were well judged. The Hornell-Harmony Kennels won most of the prizes and deservedly, having now a capital sorty lot, both over and under the 13-inch level. Many of the winners in the different classes are well known and but few new ones of merit were brought out. Royal Krueger holding himself well had little trouble in downing Fitzhugh Lee and Doctor, especially in head and body. Lee holds up well, but his head is not short enough and he is loaded in shoulder and neck. Doctor is a good serviceable dog, but has not the quality of the others. In bitches, outside of condition, Elf easily beats Parthenia in head and body and type, but the former being thin and heavy in whelp should have thrown her out; it was either first or nothing.

In open dogs Sherry and Roger W. were placed as named, the former shown quite fat enough; both are well known; Joe, third, is longer in the head, but well shaped, not so good in front, and should have more rib; Cry Baby has a nice head if it is a little long, good body if a little more rib, nice running gear; Sir Thomas, reserve, is too much on before the eye and is long cast, a bit wide in front and stern faultily set on, good legs.

In bitches, first went to the Boston winner, Oracle, who beats Daisy Corbet in body, being shorter, but loses in expression and head; is better in carriage of stern and quite as good in front; all things considered the decision was correct, though Oracle might have been in better condition; but she has had pups, two very promising ones being shown *sub rosa*. Lufra, third, looked very well; she is a bit lengthy; Coquette, reserve, is away in coat, long in face, body not by any means up to the winner's form; Jenny Lind was shown too fat—a long faced, lengthy-bodied bitch; Flute, hc., is a big bitch on the coarse side; Ullie of Glenrose is long-faced, and body the same; this kennel should shorten up its stock, both in heads and body; they have the bone and substance, but need more type and quality.

In small dogs the Saratoga winners were reversed, but Razzle should beat Little Wonder, as stated in that report. Young Royal, third, is heavy in shoulders and his fore legs are not straight, is snipy and carries his tail over; good body and type; Clarion of Glenrose is a little wider in front, bit long in muzzle, but skull better shaped, with nicely carried carriage, fairly good body, a nicish sort all over; Laddie, vhc., was outclassed here, poor expression, gets his brush up too gaily and is faulty in front.

The bitch class showed lots of type and quality, the sweet-faced Evangeline winning only in front from Spot R.; both had good legs and body. Cleopatra of Glenrose, reserve, is a good, cobby sort, nice skull, eye and ear; shown a little fat. Cloister, the winning pup, loses in muzzle and is coarse in coat, good bone, and will improve with time. Razzle shows a little more quality but has not the substance of the other. Novice winners have been mentioned, and in the field class Royal Krueger beat Spot R. in forelegs. Hornell-Harmony rightly won the kennel prize and Royal Krueger the special for best, and on a general look over the others we should say Evangeline stood about next in all round merit.

#### Wire-Haired Fox-Terriers.

R. F. Mayhew, Judge.

Never in the history of the W. K. C. shows has there been such a meritorious display in this breed, and praise is due to Mr. H. W. Smith for his efforts to bring the breed to the front; and that his work was well appreciated may be judged from the fact that the wires carried all before them, beating the smooths out of their boots. He has a capital sorty kennel, Cribbage and Surrey Janet carrying all before them. The advance the breed has made is no less decisive than meritorious.

In challenge dogs Oakleigh Bruiser, a bit plain in head himself, beats Suffolk Toby in head, ears and cleanness of shoulders and general outline. Sister Patter, a terrier all over, excels Suffolk Tassal in length and cleanness of head, carriage of ears and shoulders.

In open dogs we were introduced to Saint Cribbage, whose long, clean punishing head, excellent front and general terrier character, easily sufficed to place him well ahead of Compton Vindex, whose light rib, round skull and shorter muzzle were against him; he has a good coat and front. White Topper is a taking sort, a bit coarse, but head well-shaped and long, good legs and body, but very soft coat; otherwise he was well up for second. Brittle, reserve, keeps himself well, and in his day could have made it interesting for any of them; he is a terrier all over, but his mouth is gone. Brittle Beaut, vhc., is faulty in muzzle, a bit leggy, but straight with proper coat. Dark Eye, hc., is the best of that lot, good, long, clean head, legs and body fair, big in ear and coat too soft. Cairnsmuir Topper, hc., is rather a promising sort, nice head, front and coat. Ebor Larchmont, while showing a good coat and forelegs, with plenty of bone, has grown coarse in shoulders and head.

In bitches, Sister Janet (late Surrey Janet) scored easily; a little flat in stop, and that is all the fault one can find; she has lots of terrier character, good legs, body and coat. Jess Frost loses much in length of head and straightness of front; excellent coat and character. Roath Keenie, third, has a coarse, snipy, short head, and is not true in front. Sister Grit, vhc., is better on the leg and head, though small is pretty well shaped; her coat is not wiry enough. Babette, reserve, has a better head than the average, good front, ears faulty, but coat good. Vindex won in puppies, followed by Mister Great Snap, who has a nice stamp of head, better than the winner's, and is a pretty smart terrier all over. Brittle Bright is promising, round in skull yet, good coat. The bitch winner had gone when we came to the class. Saint Cribbage and Sister Janet furnished ridiculously easy novice winners.

#### Old English Sheep Dogs.

R. F. Mayhew, Judge.

The three shown were better than yet seen here, but Herdman III. clearly surpassed the others in head, expression and coat. Lord Mayor better in head, coat and front than Jason.

#### Mastiffs.

F. T. Underhill, Judge.

We were disappointed in this display as far as numbers went. The quality, however, was representative of the best we have east of the Alleghenies. As most of the winners are familiar names it is not necessary to give any extended criticism. In challenge dogs Merlin of course had to succumb to Beaufort's Black Prince, who was looking quite himself and with more flesh than at Saratoga, which does not improve his short body, Merlin was out of shape. There were no challenge bitches.

In open dogs, as the judge remarked, there were only three in it. First to Ingleside Minton, who is improving all the time, and while not so massive as Beaufort's Black Prince in

head and body, is better on his legs and longer in body; he excelled Emperor William in head properties, loin and body; William has white forefeet. Beaufort's Prince, third, is a bit straight behind, excellent body, bone and forelegs, and a well shaped, massive head, lower to the ground than the others. The rest were poor.

In bitches we thought Lady Diana, first, a comfortable second, as she in no particular beats the exquisite head of Brampton Beauty, unless it be in a certain expression of benignity; she loses in volume of skull, ear carriage, not so true in front as Beauty nor so good in hocks; she is also beaten in size. Beauty is faulty in set-on of stern and looked a bit tucked up; her coat could also be finer. Gerda II, loses to the others in skull and forehead, is down on pasterns; a nice stamp nevertheless; her merit lies chiefly as a matron.

In puppies a promising youngster by Black Prince—Frederick the Great, won easily, good short face, and only needs time and good treatment to become a winner; this strain matures very slowly. Campana is not up to his form by any means. Maximilian had an easy win in the novice class. The kennel prize was a walkover for Dr. Lougest.

#### Bloodhounds.

John Davidson, Judge.

Only four shown, but the best we have were on hand. Victor beat Belhus in challenge dogs by greater depth of head, length and wrinkle and earage, both are good on legs and in body. No challenge bitches. In open dogs Berry's Bradshaw had a walkover, were he not dis-faced his head would be good, as it is plain; head long with plenty of depth, good skull and neck, ears not well carried and was shown low in flesh and coat was harsh and stary, excellent legs and bone. The only competitor in the bitch class was Vigilant, a beautiful faced daughter of Jack the Ripper and Beison, that is very promising, has a well shaped head that only needs time, and the same may be said of her body that looks lathy at present; she is only Smos, old yet.

#### Bull-Terriers.

C. A. Stevens, Judge.

An excellent entry both in quality and numbers. The judging, however, cannot be termed entirely satisfactory. After awarding the prizes in the challenge dog and bitch classes the first day the indisposition of the judge compelled a postponement till next morning, when the remainder of classes were gone through.

Streatham Monarch, in good condition, though a little above himself, had a bloodless victory in challenge heavy dogs. Those two good dogs, Attraction and Starlight, faced each other in the next class. The former has a cleaner head, but was shown fat; both are too well known to need going over. In open dogs Duke of Rochester has filled out and has a good head and eye; dips a little in back and carries his tail too gaily; his feet are open, too, still he is a good stamp. Cordona I liked quite as well, though not so clean in neck and cheek; he is a well made terrier all over. Admiral Mello, third, would be better if not so wide and heavy in front; his muzzle is a trifle short, too; eye should be smaller and not so full, otherwise he is well built. White Friar was spoken of at Newark; his head is a little coarse and cheeky, but he is a nicely balanced dog. There were several in this class that deserved mention, such as Vigilant, Bellerby King and Topsparkle.

In bitches, first went to the Saratoga winner Edgewood Tipsey, whose condition was not so clean as before, she loses very much to both Maggie Cline, Topsey and Lady Carabrook; Maggie Cline has a good set of legs and nice head. Edgewood Topsey, third, has an excellent front, nice clean head and eye, and well deserved her place. Lady Carabrook, reserve, beats the winner in muzzle especially and stands on good legs, and has a well turned body. Castle's Pride and Edgewood Modesty certainly deserved cards. Leota, a well made one with a coarse tail, has a capital head marred by a patch on ear. There were no heavy-weights.

In light-weight dogs over 20 and under 30lbs., first went to Tarquin, whose capital head is marred by coarse neck, light body and faulty stern. Principio, second, keeps well though getting cheeky. Sailor, third, was shown a bit too fat, has too much stop and is fairly good in front. Ted Pritchard, if he does get his tail up should have been well in the money; he scores heavily on general smart appearance. The new dog Brookery Bay is short and thick in head and not clean enough in neck, good in feet and bone, excellent eye and a terrier all over, he should have had some letters.

In bitches, that sweet headed one, Lady Rochester, scored nicely, though losing in front and shoulder to Jeanne D'Arc, a nicely made one, but not so good a head as the winner. In the under 20lbs. class, first went to Pearl Rochester, the Toronto winner; she scores easily over Nero, whose faulty head is against him in good company; Soda Mint, third, is too full in the eye and tosyish, but a pretty terrier and above the average for size. In puppies, the order was Tarquin and Edgewood Modesty, and Novice, Tarquin, Admiral Mello and Lady Carabrook was the order. Mr. Stevens was very chary of his cards, for the merits of some of the dogs certainly deserved the three letters. W. J. Higginson took the kennel prize and Streatham Monarch the specials for best in show, including the Tubby Hook cup and the Herald cup.

#### Dandie Dinmont Terriers.

Dr. Cryer, Judge.

With the exception of one entry, the Heather Kennels had it all their own way. In fact, all the prizes they went for came to them. In challenge class Amphion and King of the Heather succumbed to Anisty Daisy. How this is we cannot surmise. Amphion is the better dog; better head, bone and better behind. King of the Heather's head should have placed him ahead of the bitch, well made one though she is.

In open class Laddie scores very much over Dandy in head, body and coat. Heather Kennels took the kennel prize.

#### Irish Terriers.

Dr. Cryer, Judge.

The best we have showed up here, so it may be imagined that quality was not wanting by any means. Many of the winners have been out before, the home-bred ones are not making much advance. The challenge dogs were a warm lot, Jack Briggs scoring on general character and front, but his coat was ragged; Jackanapes, second, is another good one that pressed the winner close. Boxer IV, loses a bit in head to the others, while Crib, good as his head, must always be handicapped by crooked forelegs. In bitches, two good ones came forward, with Dummy returned the winner. She is a little stronger in muzzle than Candor, though not so long and clean in skull; both well off for legs and body, Candor loses in coat, too, being very short of this essential commodity.

The winner in open dogs was the honest Merle Grady, who if shown in harder coat and more flesh would be better; he is a good all round terrier if a little stronger in muzzle. Romulus, third, has a fairly good head, but his coat is shot with objectionable black. Brickbat, Jr., is getting a bit canny and is on the large side; he has good parts, though. Hanover Boy, but for thick head is a good terrier all over and deserved his place. Fenian Boy, reserve, has good legs and bone but coat should be harder and brow not so prominent; a little more rib would improve him. Killarney, vhc., is thick in shoulder and a bit coarse in head. His Honor, hc., was hardly treated; his good, clean head offset his light hind parts and he is well off in other conditions. Bill Briggs I did not see.

In bitches, first went to Hill Top Surprise, a good sort and described at Newark. Crate, also well known, excels in head though she loses in bone; she might have had the blue ribbon without cavil. Judy, third, was too heavy in whelp to have been shown. Erlo II, reserve, fair head and coat, faulty front. Kalkleen, c., deserved more encouragement. Conn Keadeabagh, winner in puppies, is a promising sort, good-topped one. The novice awards have been mentioned, but His Honor certainly deserved recognition if good enough to get it in the open. W. J. Comstock took the kennel prize and Jack Briggs the special for best in show though we fancy Dummy ran him close.

#### Bedlington Terriers.

As usual, there was nothing new in this breed. Most of them have been written up before. Qui Vive and Christmas Carol were placed as named. The latter was out of coat, while the other was well shown. They both lack size and substance. In open dogs, Chemist beats Professor in coat; the latter too soft and not the proper texture. Chemist is not good in coat himself, and beats the other in head; loin would do with more flesh. In bitches first went to Mount Vernon. Tibbie, good body and legs, should have better topknot and ear tips, and coat is soft. There is a certain crisp, soft feel to these terriers' coats that seems absent in most of those shown. Brunetta is gooseberry-eyed and is small and weedy. The Kennel prize went to W. H. Russell.

#### Scotch Terriers.

Dr. Cryer, Judge.

There was a slight advance in numbers and quality over last year, and the whole exhibit of the Wankie Kennels excited much interest among those not familiar with this smart terrier. Three again beat Kilroy the challenge dog, though I think the latter has a better head but he loses in front. No challenge bitches.

I scarcely agree with the placing of the first three, Rhudaman won over Kilree again probably on account of the latter's bad showing, but he is beaten in head, coat and body by the second winners; Wankie Tam's capital head, short body and good coat and ears, would about place him at the top in our estimation, had he a better front. Here is where Kilree excels Rhudaman, throws out at elbow, and ears are too big, either of the others can beat him in head.

In bitches, Wankie Diana won; she has a strong head, good front and coat, ears should be neater. Culbrean scores in head, long and strong, excellent coat and front, body could be a bit shorter; she should have won. Wankie Daisy, third, has a proper coat, bit fine in muzzle, ears should be smaller, and she might be improved with a shorter body. Clutha, reserve, should be harder in coat, and she knuckles over a bit. Wankie Freda well deserved her letters. Clarita is too high in skull, good legs but a little high, and she is large-sized all round. Some promising pups were shown. Messrs. Brooks & Ames won the kennel prize naturally, and their team is becoming a very sorry one.

#### Skye Terriers.

Dr. Cryer, Judge.

An excellent lot of these animated door mats. Mr. Shinn has branched out largely in this breed and is responsible for any advance there is in the breed's popularity. Sir Stafford and Barnaby Rudge came together in challenge dogs, and victory lay with the former, who beats in cleanness of head and expression, both are soft in coat and Barnaby is on the large side. In challenge bitches Endcliffe Maggie took the blue from Bessie, who loses in head and length, but is better in eye and color. In open dogs first went to Elphinstone, second at Chicago, his good long, head and ear carriage, profuse coat, but soft, sufficed to beat Prince Charlie, who is light of bone, full in skull and coat not hard enough; he has a smarter carriage than the third, who is also mixed in color and coarse in head, fair coat. In bitches first went to a good one in Queen of Skyes, whose nice length, carriage, level top, heavy coat, strong head and bone placed her well ahead of Princess May, who loses in those respects. Islay, third, pressed her close, she loses in ear and eye, good bone, length and coat, and is slightly stronger and better in head than Princess. Wheel of Fortune, reserve, is a smart terrier, eyes should be darker, but she has one of the truest coats on the bench and should have been second, as her carriage and action are perfection. C. A. Shinn took the kennel prize with a very level lot.

#### Yorkshire Terriers.

Dr. Cryer, Judge.

Nothing out of the common here. Young Ted furnished the challenge dog winner and was well shown. In open dogs, Prince is mixed in body color and tan should be brighter, he is a bit on the legs, too. Prince (Finlayson's) loses in coloring and coat. Ben, third, is of a light mixed color, but has plenty of coat. Billy, vhc., is smutty in tan and body collar is too dark for his age. F. Seun took the kennel prize.

#### Toy Spaniels.

Dr. Cryer, Judge.

Considering the show, we were rather disappointed that the number shown was not larger; many of the winners are well-known. Romeo furnished the challenge King Charles winner and looked as well as usual. His kennel mate King of the Charlies came first in the open class for dogs for that breed; there are few to beat him. Duke, second, is a bit leggy, good head and tan, ear long and well set on, coat flat, but not much of it. Royal Roy is well known; he excels in skull, but is large-sized, deep square muzzle and was short of coat. King Henry is a bit long-faced, but has plenty of coat and good coloring. In bitches Bonita, the Pet Dog winner, took the blue, followed by Lady de Lena, who is a bit on the leg, and skull should have new volume.

In Blenheim dogs Exeter Earl scored, had he a little shorter muzzle his back would be good; nice coat. Dred, second, is too long faced and has not depth enough, faulty behind, nice coat and size. Chiselhurst Hero, the new one, comes with a reputation, but he was not well shown, just off the ship he was hog fat, dirty, and his coat is as curly as a retriever; he has a fine head that would be improved by a deeper stop, but still he is altogether too large all over. In bitches first went to Tiny, who is too sharply domed in skull, short faced, fine coat, but better in front than behind. Liel, second, needs a deeper stop to break up the face which is pretty short. Jeannetta, third, should be a bit shorter in muzzle, excellent coat and skull, a nice size. Queen, vhc., is a long down-faced one. Comparatively, Muriella did not get anything, though she has a string of firsts to do her credit; her skull is well developed, short faced, coat curls a bit and her tongue protrudes, but she stood well up with the others. Not one of these spaniels shown had the spot on forehead so desirable in this breed.

Prince Charles and Rubys came together, and the winner proved to be Yetsen Chief, a ruby with excellent skull and face, but entirely too leggy, light in body and lacking in coat; Campanini is also leggy, long in body, coat flat, what there is of it, and head better than the average; these dogs require lowering in the leg. Ruby Prince, third, good head, fair coat and ear; King, vhc., I could not find. In bitches, first went to Marguerite, winner in 1892; excellent head, short and high, too heavy in chest and feet come together, flat coat; second to Yetsen Belle, another good-headed one, but like all in the kennel, too high on the leg and light and shelly in body; Bell, third, is a bit long and straight-nosed, plain in face, good legs.

Japanese spaniels had a reduced entry, but the quality made up for it. Breeders seem to be getting them smaller, and their short faces should be useful for a cross, out on some of the dog breeds. Tokio and Kobie were placed as named in the dog class. Two very pretty small specimens, extremely short in face, Tokio beats the other in size and height. In bitches some odd little faces were on view. That superb little atom of caninity Tootsie, ensconced in a glass box, took pride of place, followed by Yokie, a smaller one still, with scarcely any nose at all, a bit mixed in color on forehead, nice coat and ear. Tamah, third, is a little larger and not so short-faced, but an exquisite little thing. These three can pass muster anywhere. The latter two reposed in beautiful Japanese cabinets of pagoda shape, with rush roofs.

#### Miscellaneous Class.

John Davidson, Judge.

A mixed lot, truly, in the large size. We believe a class was made for the Esquimaux dogs, which made a great display. Chimo was quite a dude among his more untutored brethren from the icy regions; he was in good coat. Moore, a white Esquimaux, took second, and another brindle, Patrick, claimed third. These dogs do not seem to fancy the ring business at all. Clydesdale Pride, a bit large and light in color, and the Maltese terrier Duke, owned by the well-known "Nellie Bly," took first, as well as the stumpy Welsh terrier Dewr. Sheffield Lad, the "Pom," and Flossie, a Maltese, and Doc "whacked" on the seconds, while thirds fell to a Clydesdale, Belle of Clyde, and Jewel, a Mexican hairless. H. W. Lacy.

#### LIST OF AWARDS.

MASTIFFS.—CHALLENGE.—Dogs: 1st, J. L. Winchell's Beaufort's Black Prince; 2d, Mrs. Chas. E. Wallack's Merlin.—OPEN.—Dogs: 1st, Geo. W. Glazier's Ingleside Misting; 2d and 3d, Dr. C. A. Lougest's Emperor William and Beaufort Prince. Bitches: 1st and 3d, Dr. C. A. Lougest's Lady Diana and Gerda II.; 2d, W. Norman Higgs's Brampton Beauty. Puppies: 1st and 2d, Dr. C. A. Lougest's Frederick the Great and Campana.—NOVICE.—1st, Dr. C. A. Lougest's Emperor Maximilian; 2d, Mrs. Alexander Brenner's Donald.

ST. BERNARDS.—ROVER-COATED.—CHALLENGE.—Dogs: 1st, Argyle Kennels' Sir Bedivere; 2d, Fred. Schmitt's Otos. Reserve, New York St. Bernard Kennels' Kingston Regent. Bitches: 1st, E. H. Moore's Lady Livingston.—OPEN.—1st, E. H. Moore's Altoneer; 2d, Fred. Schmitt's Roland, Jr.; 3d, Alta Kennels' Grand Master; 4th, Swiss Mountain Kennels' Eboracum. Reserve, Tracy Gould's Mauprat. Bitches: 1st, 2d and 4th, Col. J. Ruppert, Jr.'s, Miss Anna, Royal Dunes; 3d, Mountsidge; 3d, Argyle Kennels' Arctic Beauty. Reserve, Fred. Schmitt's Lady Bountiful.—PUPPIES.—Dogs: 2d, Wm. Muller's Heligate Prince. Reserve, Fred. C. Wackenhuth, Jr.'s, Ericus. Bitches: 1st, Daniel Mann's Princess Eulalia; 2d, Fred. Schmitt's Stellina; 3d, Miss Selma Holtzer's Alva. Reserve, Newton H. Day's Lady Vixen.—SMOOTH-COATED.—CHALLENGE.—Bitches: 1st, Col. J. Ruppert, Jr.'s Empress of Contookook; 2d, E. H. Moore's Melrose Belle.—OPEN.—Dogs: 1st, E. H. Moore's Altoneer, Jr.; 2d, John Morrison's Patriot; 3d, H. B. Turner's Philinimon V.; 4th, Louis Daur's Morn. Pion Plou. Reserve, A. B. Fisher's Leicester, Jr. Bitches: 1st, E. H. Moore's Lady Altoneer; 2d, G. P. Wiggin's Judith's Ruth; 3d, Mrs. Fred. Schmitt's Guess Noble; 4th, Samuel Mann's Pandora. Reserve, Phil. Frederick's Julia.—PUPPIES.—Dogs: 1st, Robert Sehring's Taral; 2d, J. H. Lyke's Ben Altoneer; 3d, Jas. B. Nies's Juggernaut. Bitches: 1st, Daniel Mann's Miss Thelma; 2d, H. H. Meyer's Minka; 3d, Rev. Wm. Golden's Miss Polyphemus.—ROVER AND SMOOTH.—Dogs: 1st, H. B. Turner's Philinimon V.; 2d, A. W. Comstock's Laurin; 3d, Daniel Mann's Demetrius. Reserve, A. L. Martin's Nero D. Bitches: 1st, G. P. Wiggin's Judith's Ruth; equal 2d, Samuel Mann's Pandora and E. H. Moore's Melrose Judith; 3d, Argyle Kennels' Uarda. Reserve, Col. J. Ruppert, Jr.'s, Miss Amanda.

BLOODHOUNDS.—CHALLENGE.—Dogs: 1st, J. L. Winchell's Victor; 2d, Dr. C. A. Lougest's Belhus. Bitches: 1st, Dr. C. A. Lougest's Vigilant.

GREAT DANES.—CHALLENGE.—Dogs: 1st, South Bend Kennels' Major McKinley.—OPEN.—Dogs: 1st, 2d, 3d, Kennel Lawrence's Earl of Wurttemberg, Lawrence Leopold, and Ephern Hero. Reserve, J. N. Phelps Stokes's Faust. Very high com., Prof. L. P. Braive Bismark D., Wm. Young's Pasha, C. S. McChesney's Hepburn Apollo. High com., Mrs. Hilda Bord's Leo, Fritz Von Bernuth Jr.'s Yarrum, Wm. Texter's Caesar.—Bitches: 1st, Kennel Lawrence's Fortia Melac; 2d, T. B. Burnham's Phryne. Reserve, T. B. Burnham's Maunon.—Puppies: 1st, C. Fisher's Bismark; 2d, C. L. Lawson's Thor.

NEWFOUNDLANDS.—Dogs: 1st, W. L. Hoagland Jr.'s Leo; 2d, John J. O'Rourke's Nero I. Bitches: 1st, Mrs. R. Braive's Brunette.

RUSSIAN WOLFHOOUNDS.—CHALLENGE.—Dogs: 1st, H. W. Huntington's Argoss; 2d, C. S. Hanks' Leekhol. Bitches: 1st, C. S. Hanks' Olga; 2d, H. W. Huntington's Zorry. Very high com., C. S. Hanks' Svodka. High com., H. W. Huntington's Princess Irma.—OPEN.—Dogs: 1st, H. W. Huntington's Odroski; 2d, H. W. Sharpless' Corsair; 3d, N. M. Wanner's Leekhol II. Very high com., C. S. Hanks' Col. Dietz. High com., H. W. Huntington's Magrajad. Com., A. Schmidt's Thripp.—Bitches: 1st and 2d, H. W. Huntington's Riga and Irmina; 3d, C. S. Hanks' Gipsy Queen. Very high com., A. E. Pitts' Zlobel, C. S. Hanks' Lady Dietz. High com., Hempstead Farm's Hempstead Olga. Com., Hempstead Farm's Zuelka.—Puppies: 1st, C. S. Hanks' Lady Dietz; 2d, H. W. Huntington's Suddorka; 3d, J. J. Gould's Vera. Very high com., G. J. Gould's Czar. High com., G. J. Gould's Czarina. Com., G. J. Gould's Vladimir.

DEERHOUNDS.—CHALLENGE.—Dogs: 1st, and 2d, J. E. Thayer's Hillside Warrior and Robber Chieftain.—Bitches: 1st and 2d, J. E. Thayer's Hillside Romola and Theodora.—OPEN.—Dogs: 1st, A. L. Page's Lochiel; 2d and 3d, J. E. Thayer's Hillside McGregor and Hillside Raven. Very high com., J. E. Thayer's Argyle. High com., Mrs. E. de G. James's Brute of Atwood. Com., Mrs. J. J. Phelps's Roderick.—Bitches: 1st, 2d and 3d, J. E. Thayer's Hillside Ruth, Hillside Heather and Hillside Sylvia. Very high com., A. L. Page's Minna. High com., Mrs. E. de G. James's Loyal. Com., Mrs. E. de G. James's Maid of Atwood.

GREYHOUNDS.—CHALLENGE.—Dogs: 1st, A. W. Purbeck's Gem of the Season; 2d, D. B. Lemley's Imperator. Reserve, W. G. Fito's Master Rich. Bitches: 1st, Woodhaven Kennels' Spinaway; 2d, Joe Lewis's Wild Rose. Reserve, A. W. Purbeck's Bestwood Daisy.—OPEN.—Dogs: 1st, Joe Lewis's Chester; 2d, White Oak Hill Kennels' Oldstone. Reserve, E. W. Richardson's Randy. Very high com., Joe Lewis's Spring of the Valley, Maybrook Kennels' Dakota and Dr. S. W. Clark's Bee's Wing. High com., W. S. Gilson's Norway Star, H. M. Nelson's Partonite and D. B. Lemley's Alert. Bitches: 1st, A. W. Purbeck's Southern Beauty; 2d, Maybrook Kennels' Miss Dollar III.; 3d, W. Blackham's Queen in Black. Reserve, M. T. Kennedy's Cassie. Very high com., Blenheim's American Daisy and White Oak Hill Kennels' Speedway. Puppies: 1st and 2d, Joe Lewis's Chester and Spring of the Valley. Very high com., White Oak Hill Kennels' Chevie Chase and Woodhaven Kennels' Princess Fullerton. High com., and com., White Oak Hill Kennels' Bit of Fancy and Poland Fullerton and Swallow.

AMERICAN FOXHOUNDS.—Dogs: 1st, Willow Brook Kennels' Drum IV.; 2d, F. M. Whipple's Ned; 2d, Seminole Kennels' Ranger II. Very high com., White Oak Hill Kennels' Zack, and The Governor's Kennels' Rover and Moose. High com., The Governor's Kennels' Blizard. Bitches: 1st, White Oak Kennels' Sunmaid; 2d, 3d and reserve, The Governor's Kennels' Lily Dale, Tempest and Nance. Puppies: 1st, 2d, reserve and high com., The Governor's Kennels' Tempest, Moose, Nance and Blizard.

ENGLISH RETRIEVERS.—1st and 2d, Hempstead Farm's Hempstead Jet and Physician; 3d, J. W. E. Clark's Commodore.

CHESAPEAKE BAY DOGS.—1st, 2d, reserve and very high com., B. A. Smith's Rose, Rough, Tuckamuck Favorite and Otter Girl; 2d, F. C. Fowler's Deacon.

POINTERS.—CHALLENGE.—Dogs (55lbs. and over): 1st, Geo. Jarvis's Lad of Kent; 2d, W. Ledyard's Tempest. Bitches (50lbs. and over): 1st, Hempstead Farm's Woolton Game; 2d, T. G. Davey's Josie Brack.—OPEN.—Dogs (55lbs. and over): 1st, Geo. Jarvis's Lad of Kent. Reserve, 2d, Netherwood Kennels' Ridgeway Tenny; 3d, Muss Arnold's Lord Bracken. Very high com., J. B. Backer's Zack, F. H. Fleer's Gameter. High com., J. M. Lawrence's Wantagh Chief. Bitches (50lbs. and over): 1st and 2d, Springside Kennels' Lady Tammany and Kent's Belle; 3d, R. H. Robertson's Lass of Tammany; 4th, R. Leslie's Kathleen Kent. Reserve, Dr. J. E. Hair's Devon Fan.—PUPPIES.—Dogs (55lbs. and over): 1st, Geo. Jarvis's Lad of Kent. Reserve, 2d, Netherwood Kennels' Ridgeway Tenny; 3d, T. G. Davey's Ridgeway Comet; 2d, Rinada Pointer Kennels' Chancellor; 3d, Springside Kennels' Ridgeway Donald; 4th, E. Halpin's Brackett's Lad. Reserve, Victoria Kennels' Ridgeway Faust. Very high com., G. W. Lovell's Prince of Pontiac, P. Moeller's Tom Croxteth, R. C. Cornell's Roderick, Springside Kennels' Springside Hat. High com., Hempstead Farm's Head Luck. Com., T. G. Davey's Lady Gay Sparker and Miss Rumor.—OPEN.—Dogs (under 55lbs.): 1st, T. G. Davey's Ridgeway Comet; 2d, Rinada Pointer Kennels' Chancellor; 3d, Springside Kennels' Ridgeway Donald; 4th, E. Halpin's Brackett's Lad. Reserve, Victoria Kennels' Ridgeway Faust. Very high com., G. W. Lovell's Prince of Pontiac, P. Moeller's Tom Croxteth, R. C. Cornell's Roderick, Springside Kennels' Springside Hat. High com., Hempstead Farm's Head Luck. Com., T. G. Davey's Lady Gay Sparker and Miss Rumor.—PUPPIES.—Dogs (under 55lbs.): 1st, T. G. # CLUB MEETINGS.

## St. Bernard Club.

The annual meeting of this club was held Tuesday, Feb. 20, at 8 P. M., present: Mrs. Sidwell, Mrs. Lee, Mrs. Smyth, Miss Whitney, Miss Chandler, Miss Goodenow, Messrs. C. A. Pratt, G. P. Wiggins, B. P. Johnson, J. A. C. Johnson, Daniel Mann, E. H. Moore, J. Lutz, Edward Booth and W. H. Joekel, Jr.

On motion the reading of the minutes of previous meeting was dispensed with and were approved as published.

Mr. Johnson presented his report as treasurer which had previously been audited and approved, showing a balance of \$373.37 in the treasury from which the premiums offered during this present year are to be paid.

It was decided to hold a St. Bernard show in connection with that held by the Hempstead Farm Co., May 1 to 4, the understanding being that the Farm Co. were to pay all cash premiums which were to be as numerous and as liberal as those offered by the Westminster Kennel Club, and the entrance fee was not to exceed that charged by them. Messrs. Joekel and J. A. C. Johnson were appointed to represent the St. Bernard Club and to secure as liberal terms as possible. Mr. Joekel read the correspondence with Mr. Terry relating to this show and stated that the Madison Square Co. had offered the St. Bernard Club a special of \$25 either in plate or cash, the St. Bernard Club to determine the disposition of same. Mr. Joekel also stated that the notice of the annual meeting had announced the proposition of holding the show and that about seventeen members had responded to the invitation to express their wishes. All were in favor of holding the show, and no opposition had been offered by any one, and about \$125 had been promised for premiums. Of the seventeen replies received twelve had voted for judges of which nine were for Miss Whitney, and one each for Messrs. Mortimer, Mason and Joekel.

The following officers were elected for the ensuing year: President, W. H. Joekel, Jr.; Vice Presidents, Miss Whitney, J. Ruppert, Jr. and R. J. Sawyer; Treasurer, Jas. A. C. Johnson. No Secretary was elected, the selection of one being left to the Board of Governors. Board of Governors, Messrs. K. E. Hoff, C. A. Pratt, E. Booth, W. C. Reick, E. H. Moore, A. C. Shallenberger, W. H. Walbridge, B. P. Johnson, G. P. Wiggins.

Mr. Joekel said that a number of members had expressed dissatisfaction in the appointment of judges at the various shows and that the wishes of the club were not consulted. Col. Ruppert made the motion which was seconded, that the Board of Governors should select a list of judges, and the same was to be mailed to the members of the club, who were to strike off the names of those objectionable. The result was to be made known and to influence if possible the committees of the various clubs in the selection of judges in the future. Meeting adjourned.

EDWARD BOOTH, Sec'y pro tem.

## English Setter Club.

The meeting of this club was postponed to the second day of the Philadelphia Kennel Club's show, March 28, on account of the absence of the secretary, which was caused by a sad bereavement.

## The Eastern Field Trials Club.

The minutes of the last meeting were read and approved. The treasurer's report showed a small balance to the club's credit. The resignations of Messrs. Hulman, Merriam, Hunter, Carroll and Breese were accepted. The following stakes were arranged: Derby, purse \$600, divided into first, second and third, \$300, \$200 and \$100 respectively. All-Age Stake the same. The Breeders' cup was abolished. Entry fees the same as last year. The Subscription Stake (four-hour race) was changed to a two-hour race, \$50 entrance. Purse \$500. First \$250, second \$150, third \$100. Mr. F. G. Taylor was present as a representative of the P. K. C., with a view to arranging a members' stake to be run jointly by the two clubs and to arrange for both clubs holding their trials on the same grounds if possible. The conditions of Members' Stake will be made by the president. Mr. Lorillard was appointed a committee to confer with the P. K. C. on the matter at the Philadelphia show. A selling stake to be run jointly was also considered. The details were not settled definitely, but in a general way the stake is to be for setters and pointers which have never won at a field trial, no valuation of a dog to exceed \$300. Ten dollars entrance, and starting fee 5% of selling price. Dogs to be judged with a view to actual field shooting. Certificate of merit to every dog worthy of it. Winners to be sold at auction. Any surplus in excess of selling price to go to the club. The club has secured more grounds at Newton, N. C., and is fully equipped in that respect for a good trial. It is working earnestly to hold a successful and interesting competition. The Selling Stake, from its novelty and the restrictions which bar out winners and field trial dogs of the winning species (the limit of price, \$300, accomplishing that end) is expected to accomplish much in developing a large interest and support.

## Pointer Club of America.

The club's meeting was held in Madison Square Garden on Tuesday evening, Mr. Geo. W. LaRue presiding. There was a good attendance of members present. Mr. Heath's resolution that proxies shall be received was carried by a vote of 12 to 3. Messrs. J. B. Wickery, Pittsburgh, Wm. P. Scott, St. Louis, and T. P. Lewis, New York, were elected to membership. Mr. Webster made a brief speech on the deficiencies of the constitution of the club, his remarks being preliminary to the introduction of a new constitution for the club's consideration and action. He explained that it contained only what was regular in club constitutions. The new constitution was adopted. Names of candidates for election must hereafter be in the hands of the secretary at least 30 days before the meeting of the Board. At the next meeting the names shall be proposed for election. The election of officers resulted as follows: President, Hon. J. S. Wise; Vice-President, T. G. Davey; Secretary, F. S. Webster; Treasurer, C. F. Lewis; Board of Governors, Messrs. J. R. Daniels, Geo. W. LaRue, B. F. Seitzer, Jas. Mortimer, E. O. Damon and Geo. S. McAlpin. Mr. Chas. Heath was elected A. K. C. delegate.

## The National Greyhound Club.

The annual meeting of this club was called to take place on Feb. 21, at Madison Square Garden, but was postponed to Wednesday, March 7, no quorum being present. The adjourned meeting will take place at 12.30 P. M., Room 57, 26 Court st., Brooklyn.

## Bulldog Club of America.

The fourth annual meeting of this club was held Tuesday, Feb. 20.

The following members were present: Messrs. Roby, Kendall, Mason-Jones, Austin, Dole, Lawshe, Matthews, Mariner, Robinson (representative of Col. Hilton) and Woodward. The meeting was called to order by the president, Mr. J. H. Matthews, and the secretary, Mr. E. A. Woodward, being present, kept a record of the proceedings. The minutes of the last meeting were read and approved.

The former treasurer, Mr. E. A. Woodward, made a report up to January 1, 1894, upon which date Mr. Austin entered upon the duties of the office. Mr. E. K. Austin then made his report from that date up to the present time. Both of these reports were accepted.

Upon motion duly seconded, it was voted that the thanks of the club be extended to Mr. Woodward for preparing for

the present treasurer a set of books detailing the transactions of the different treasurers since the club was organized.

The secretary submitted his annual report for the past year, which was accepted. It contained the recommendations that several gentlemen, admirers of the breed, be made honorary members of the club.

Mr. Roby made a motion which was seconded by Mr. Kendall, that the following gentlemen be made honorary members of this club: Messrs. J. W. Berrie, J. S. Pybus-Sellom, G. R. Krehl, F. W. Crowther, H. W. Lacy, C. F. W. Jackson, Chas. H. Mason, and D. Y. Cassels. Carried.

Mr. Kendall made a motion which was seconded by Mr. Lawshe, that a vote of thanks be extended to Mr. H. W. Lacy for the publication in the FOREST AND STREAM of the several interesting articles on the bulldog, and which have stimulated much interest in the breed. Carried.

Mr. Dole made a motion which was seconded by Mr. Mariner, and carried, that the members of the club be furnished with a complete membership list and requested to designate ten members as their choice for club judges.

Mr. Roby presented an outline for Produce Stakes which he moved be instituted by the club, and that the Executive Committee consider the different conditions under which to offer them, and that the members be immediately advised of its decision. This was seconded by Mr. Dole and carried.

Mr. Mariner stated he wished to invite suggestions from the members present as to what manner they thought it advisable for him to offer a donation to the club in order to enable it to offer a prize, or prizes, for competition at certain shows among bulldog owners not members of the club.

Upon motion of Mr. Woodward, seconded by Mr. Kendall, it was voted that Mr. Mariner impose such conditions as he thought advisable, and that his donation would be thankfully received. Carried.

Mr. Kendall made a motion which was seconded by Mr. Mason-Jones, that at future annual shows at New York an attendant in uniform be stationed near the bulldog exhibits to hand out information cards to the public, and to look after members' entries, and the interests of the club generally. Carried.

It was moved and seconded that the Executive Committee be authorized to issue a souvenir of the club, giving its history, rules and regulations, membership list, and other items of interest, and that the same be embellished with cuts of typical specimens of the breed, provided, however, that the cost of publishing two hundred copies would not exceed \$100. Each member to be given one copy free, and the Executive Committee to fix the price at which additional copies shall be sold to members and the public. Carried.

Upon motion, duly seconded, it was voted to proceed with the election of an Executive Committee for the ensuing year, thereupon a ballot was taken and the following were declared elected: Messrs. J. H. Matthews, H. D. Kendall, E. K. Austin, Wm. Mariner, Renshaw Mason-Jones, Frank F. Dole, and E. A. Woodward. Meeting adjourned.

The Executive Committee then convened and from its members elected officers as follows for the ensuing year: President, John H. Matthews; Vice-President, H. D. Kendall; Treasurer, E. K. Austin, and Secretary, E. A. Woodward. Meeting adjourned. E. A. WOODWARD, Secretary.

## Irish Setter Club.

The Irish Setter Club held its annual meeting Feb. 21. There were present Messrs. Jas. B. Blossom, Dr. L. C. Sauvageur, B. L. Clements, Geo. Langran, E. F. Badmington, W. L. Washington, Geo. H. Thomson, F. L. Cheney and G. G. Davis. Seventeen additional members were represented by proxies.

The minutes of the last annual meeting were read and approved.

The secretary-treasurer submitted a report of the finances of the club. The report was accepted, the accounts approved and a vote of thanks tendered.

Mr. G. W. Lang of Pittsburgh, Pa., was elected a member. It was resolved to amend the constitution so as to enable the executive committee to elect new members by ballot—three negative votes to exclude.

Mr. W. S. Bell of Pittsburgh was elected a member. The Rev. Robt. O'Callaghan of Rochester, England, and the Rev. W. H. Knowlton of Paso Robles, California, were elected honorary members.

The annual election for officers was then held with the following result: President, W. L. Washington, Pittsburgh, Pa.; Vice President, Dr. L. C. Sauvageur, Chestnut Hill, Pa.; Sec.-Treas., W. S. Bell, Pittsburgh, Pa. Executive Committee, F. H. Perry, Des Moines, Iowa; J. B. Blossom, New York, N. Y.; Geo. W. Lang, Pittsburgh, Pa.; Geo. H. Thomson, Philadelphia, Pa.; F. L. Cheney, Pittsfield, Mass.; G. G. Davis, Philadelphia, Pa.

## Great Dane Club.

An enthusiastic meeting of the Great Dane Club of America was held on the last evening of the show. Officers elected for the ensuing year are: President, Jas. A. Lawrence of Columbus, O.; Secretary, A. H. Heppner, N. Y.; Treasurer, Chas. Fischer, Brooklyn; Executive Committee, Bardee Elliott, Henry Bord and C. R. Lawson. E. B. Elliott as a committee of one, was authorized to elect new members. New members admitted, T. B. Burnham and Henry Bord. The club is financially strong. It was decided to put up the silver cup of the late President C. D. Bernheimer at the following shows: Chicago, Boston and Columbus, O.—it being too late for Detroit.

Mr. J. A. Lawrence was elected president of the club unanimously in view of the facts, firstly because he is to-day certainly the leading breeder and importer, secondly because he resides in the West. The club wishes to emphasize that it is not a local affair for mutual benefit and glory, but a national club of progressive, broad intentions. It has by its action put the western Great Dane fanciers in the position to hold meetings, elect members, etc.

The secretary was instructed to inquire into the expense of publishing a standard work on the Great Dane, with first class illustrations. He addressed the meeting, submitting his ideas on this subject and calling special attention to the fact that there is nothing published in this country, except newspaper controversies, often eccentric and selfish in motive to which the beginner or the American fancier and judge could refer for information and guidance in breeding, buying and importing. Any one interested in the progress of this breed who has any suggestion to offer is requested to address, A. H. HEPNER, Delegate and Secretary, Great Dane Club, 426 Produce Ex., N. Y.

## Collie Club.

The annual meeting of this club took place on Thursday afternoon. The officers elected were: President, Jenkins Van Schaick; Vice Presidents, Thos. H. Terry and J. Pierpont Morgan; Secretary and Treasurer, J. D. Shotwell.

## American Fox-Terrier Club.

The regular meeting of the American Fox-Terrier Club was duly held at 4.30 P. M. on Wednesday, Feb. 21, and after the regular routine business the following Board of Governors were elected for the ensuing year:

August Belmont, W. Rutherford, Hollis Hunnewell, Clarence Rathbone, John E. Thayer, H. W. Smith.

At a meeting of the Governors held immediately after the above, the following new members were unanimously elected:

George Hendrie, George M. Hendrie, W. H. Muir, G. M. Carnochan, R. F. Mayhew, Dr. H. T. Foote, Dr. D. B. Darby, and John E. Thayer was elected President; August Belmont, Vice-President; and H. W. Smith, Sec'y and Treasurer.

At the regular meeting it was voted that in addition to the grand challenge cup (value \$300), that the Secretary be empowered to make collections for four challenge cups to be given for the Apollo, Homebred, Tomboy and Stud Dog Stakes, and after suitable money was raised, these cups with the grand challenge cup in a suitable case should at the wisdom of the Board of Governors be sent around to the various shows where proper guarantee could be obtained, in order that the different fox-terrier breeders throughout the country would have an opportunity of seeing what stakes, etc., could be won by their produce.

The following gentlemen subscribed the amount opposite their name: John E. Thayer \$50, Hollis Hunnewell \$50, H. W. Smith \$50, Clarence Rathbone \$25, Wayman S. Cushman \$25.

The following stakes of the American Fox-Terrier Club were decided at the New York show: Stud Dog Stakes of 1894 to which the following nominations were made: C. Rathbone—Beverwyck Royalist and Beverwyck King Pin, the former out of Beverwyck Moonshine, and the latter out of Beverwyck Moonbeam, both sired by Standard's King.

Blenton Kennels—Blenton Esparanza, Blenton Ermine, both out of New Forest Ethel by Blenton Victor II. Also Blenton Viking and Blenton Votary, both out of Blenton Vanity, sired by Blenton Rasper. L. & W. Rutherford—Warren Regent and Warren Damsel, the former out of Reprieve and the latter out of Warren Dorothy; both by Warren Tiptop. Also Warren Foxy and Warren Tippet, the former out of Dusky II, and the latter out of Villanelle; by Warren Tiptop. The first prize in this stake—one-half of the entire subscription (\$70) was won by Clarence Rathbone's brace, Beverwyck Royalist and Beverwyck King Pin. Mr. Thayer therefore received second prize which was one-half of the subscription (\$70) and the President's cup as the first prize brace was sired by his Standard's King. The third prize which was the stakes, amounting to \$20, was won by the Blenton Kennels' Viking and Votary.

For the first division of the Eighth Grand Produce Stakes the following nominations were made: John E. Thayer's Hillside Grit, by Standard's King ex Pluck. Clarence Rathbone's Beverwyck Royalist, by Standard's King ex Moonshine. Blenton Kennels', Blenton Spanker, by Standard's King ex Spinstar, and L. & W. Rutherford's, Warren Regent, by Warren Tiptop ex Reprieve, and Warren Foxy, by Warren Tiptop ex Dusky II. The first prize which was one-half of the entire stakes was won by Clarence Rathbone's Beverwyck Royalist.

It will be seen from the above that Mr. Rathbone won \$124 in both these stakes on the two puppies. H. W. SMITH.

## American Spaniel Club.

The annual meeting of the American Spaniel Club was held Feb. 21, at 4.30 P. M. Present: Dr. J. S. Bradbury, H. Brooks, C. G. Browning, E. W. Fiske, A. B. Forsythe, Henry Jarrett, R. P. Keasbey, Dr. F. W. Kitchel, A. Laidlaw, C. M. Nelles, E. M. Oldham, W. T. Payne, Geo. P. Preston Jr., A. E. Rendle, H. S. Reynolds, F. Smyth, John Stacom, Mar. oil A. Viti, and A. C. Wilmerding. President Wilmerding in the chair. The President's annual address described the work the Executive Committee had accomplished during the year. That there had been more meetings and more members elected during the past year than in any one previous; that it was not thought advisable to continue the committee on medals, as prizes of this nature were at the present time at a discount, so the committee was discharged; that the field spaniel \$100 cup had been officially awarded by this committee, as it had been under the requisite number of times by one exhibitor, viz Mr. A. E. Foster with Judex; and that it was proposed to hold a specialty show in Madison Square Garden the latter part of April, which had received full endorsement from the club members, conditions and particulars of which had been printed and distributed. With a few matters of minor importance this report closed.

The Treasurer's statement showing a net balance on hand of \$266.47 was a very gratifying one and on motion it was received and adopted.

Executive Committee elected for the ensuing year was as follows: A. Clinton Wilmerding, Edw. M. Oldham, Rowland P. Keasbey, R. H. Eggleston, Dr. S. J. Bradbury. Adjourned.

A subsequent meeting of the Executive Committee for the election of officers resulted as follows: President, A. Clinton Wilmerding; Treasurer, Edw. M. Oldham; Secretary, Rowland P. Keasbey; Delegate to A. K. C., Edw. M. Oldham.

## A. K. C. MEETING.

It is impossible to find space for a full report of the A. K. C. meeting this week. The most important business transacted was the agreement between the C. K. C. and A. K. C. Mr. Vredenburg spoke as follows:

I have some general business which I think ought to come up before this meeting of the Kennel Club. At our meeting in December last there was a committee appointed by the American Kennel Club to confer with a committee representing the Canadian Kennel Club with a view of securing a compact with the Canadian Kennel Club, subject to the ratification of the two clubs, as would be mutually agreeable and advantageous to both clubs. The committee met on Tuesday evening last, and the committee of the American Kennel Club, through myself as chairman, desire to say we were more than pleased with the gentlemen who represented the Canadian Kennel Club, whom we found as anxious to meet us as we were to meet them, and to procure an agreement that we considered would be a just one. Of course you can readily understand that we had at the outset differences of opinion, but these differences were very quickly settled, and we agreed to the following compact, which is duly signed by the members of the committee:

"Articles of agreement entered into by the joint committee representing the American Kennel Club and the Canadian Kennel Club, subject, however, to ratification by both clubs.

"1. It is agreed that all registrations and listings received either by the American Kennel Club or the Canadian Kennel Club shall be recognized by both clubs; provided, that all dogs owned in the United States shall be registered or listed with the secretary of the American Kennel Club, and all dogs owned in the Dominion of Canada shall be registered or listed with the secretary of the Canadian Kennel Club.

"2. All cases of suspension or disqualification by either club shall be recognized by the other club.

"3. The bench show rules governing exhibitors and the rules governing clubs holding shows shall be the same in both countries. The Canadian Kennel Club agrees to appoint a standing committee on rules to correspond with the committee elected each year by the American Kennel Club, and all amendments offered by either club must first be submitted to this joint committee, which shall report on the same before said amendments can be finally submitted for adoption.

"4. All awards made at bench shows both in Canada and in the United States, under Kennel Club rules, shall be recognized in both countries and made a record with the respective clubs.

"5. The Canadian Kennel Club agrees to appoint three delegates to represent it in the American Kennel Club, and the American Kennel Club agrees to receive such delegates. The credentials of said delegates are to be signed by the secretary of the Canadian Kennel Club, and are to be accepted by the American Kennel Club in the same manner as are the delegates representing the associate members of said club. No annual dues are to be required from the Canadian Kennel Club.

"6. Each club parties to this agreement reserves the right of absolute jurisdiction in all cases of discipline brought before it without appeal. It is further understood that all violations of rules upon which charges may be preferred shall be acted upon by the club in whose territory the misconduct occurs. Appeal can only be made to the club exercising original jurisdiction.

Mr. VREDENBURGH—That article means this: If any misconduct occurs in Canada they cannot rush down to the American Kennel Club, as they have heretofore, and prefer charges and make this club investigate the matter. They must go to their own club, and by this agreement they can only appeal to their own club. This article makes each club a sovereign club in its own country.

"7. The Canadian Kennel Club agrees to publish the registrations received by it within the covers of the American Kennel Club stud book, paying to the American Kennel Club therefor the sum of 50 cents for each registration so forwarded. The American Kennel Club agrees to accept and to publish in its annual stud book, under a department to be known as "Canadian Registration." All such registrations must be duly compiled and forwarded with the fee of 50 cents each to the

secretary of the American Kennel Club, on or before Jan. 15 of each year. All sales of stud books made by the Canadian Kennel Club shall be furnished to said Canadian Kennel Club at a discount of 10 per cent."

Mr. VREDENBURGH.—This article means that the Canadian Club will abolish its stud book. We know that there is not enough room in this country for more than one stud book, but owing to their organization we had to make a concession to them. They have two hundred members, and each member is entitled to five free registrations during the year. That would be one thousand dollars. All the free registrations that they kept, together with the registrations for which they receive a fee of one dollar, they pay to us a round sum of fifty cents each, and we felt that we could afford to do that, as in these articles they agree to do all the clerical work except compiling the registrations ready for the printer and send them to us, the only work we are called upon to do being the indexing of them for our system and paying for the printing. We found it impossible to think of any scheme by which we could incorporate the registrations received from the Canadian Kennel Club into our own book, retaining our own number, and for that reason we agreed that in one portion of the book we would open a department for Canadian registrations and continue on their numbers.

"8. The awards made at Toronto and Ottawa in the year 1893 are to be recognized by the American Kennel Club.

"9. The Secretary of the Canadian Kennel Club must forward to the Secretary of the American Kennel Club within seven days after the closing of each Canadian show, two marked copies of the catalogues of such show, giving the awards made at such show, and duly certified to by its Secretary."

Mr. VREDENBURGH.—That is just and proper. That is an article I believe the Canadian Kennel Club could force us to do. The compact entered into between the two clubs in 1889 was consummated at an annual meeting of the club. The cancellation of that compact was made by the executive committee meetings of the club, and I think you will all agree with me that it was not a legal cancellation; that there was no committee of the club, unless there was special power vested in it which could undo what had been done by the parent body of the club itself.

"10. This agreement, if ratified by the American Kennel Club and the Canadian Kennel Club, is to be only attested by the secretary of each club and copies filed with both clubs."

"11. This agreement may be cancelled upon six months notice in writing given by either club to the other."

"Representing the Canadian Kennel Club, T. C. Davey, J. S. Niven. Representing the American Kennel Club, A. P. Vredenburg, J. M. Taylor."

The agreement was ratified as read.

The old list of officers was elected.

### The Pet Dog Club.

The annual meeting of the American Pet Dog Club was held at Madison Square Garden, New York, on Wednesday, Feb. 21, 1894, at 3 o'clock, P. M.

Members present were: Mrs. McKee, Mrs. Cunningham, Mrs. Ferrero, Mrs. Hall, Miss Baumeister, Mr. Rackham, Mr. Foyer, Mr. Barnum, Mr. Morris.

The president and vice-presidents being absent, Mr. Barnum was elected chairman.

Changes in the Constitution and By-Laws were made as follows:

Article III. Sec. 3.—Change the clause, "The name of any member failing to pay dues for two years may be stricken from the roll," to read, "The name of any member failing to pay dues for one year shall be stricken from the roll."

Article IV. Sec. 1.—Strike out the last clause and change the second clause to read, "No officer, except the secretary, shall be eligible for election to more than two consecutive terms."

Sec. 3.—After the word "Committee," insert the clause, "and also the delegate to the American Kennel Club, from the members elected on the Executive Committee."

Article V. Sec. 2.—Change to read, "The regular meetings of the club, other than in the month of February, shall be held on the second Wednesday of April, June, September and December of each year, at such places and hours as may be determined on by the Executive Committee."

By-Laws. Article I. Sec. 3.—Add, "The Secretary shall, at the annual meeting, submit a general report of the condition of the club."

Sec. 4.—Strike out the word "savings" before "bank," and insert the words "or banks" after it.

Mr. A. A. Cobb, Wilmington, Del., was elected a member. Officers were elected as follows: President, Mrs. Horace Stokes; Vice-Presidents, Mrs. Dudley Kavanagh, New York; Mr. A. F. German, Louisville, Ky.; Mrs. George A. Freeman, Sands Point, Long Island, N. Y.; Secretary, Miss Marion E. Bannister, Springfield, N. J.; Treasurer, Mr. Charles D. Bernheimer, New York City; Delegate to American Kennel Club, Mr. T. Farrar Rackham; Executive Committee, Mr. T. Farrar Rackham, Mr. Edwin H. Morris, Mr. S. C. Barnum, Mrs. William R. McKee, and the president; secretary and treasurer; Trustees, Mrs. Edward Ferrero, Mrs. A. Cunningham, Mrs. M. E. Randolph, Mrs. Emily Stout, Mr. Charles Wheatleigh.

MARION E. BANNISTER, Secretary.

### A Kennel Club for Louisville, Ky.

The following circular was sent to a number of residents of Louisville, Ky., Feb. 23: "You are earnestly requested to meet with quite a number of our prominent citizens, who are lovers of that noble animal, the 'Dog,' and who believe that Louisville, like her sister cities, could, and should, give a successful 'Dog Show,' which would prove of interest and a benefit to the city at large. With this end in view, be good enough to meet us at the 'Armory' on Seventh street, between Chestnut and Walnut, on Monday, Feb. 26, at 8 P. M., there and then to talk this matter over. Mr. Rogers D. Williams, of Lexington, Ky., will be with us and give us the benefit of his knowledge and experience. Respectfully, Dr. D. W. Yandell, Gen. J. B. Castleman, Lieut. Col. M. B. Belknap." Louisville has held good shows in the past, and we trust the present movement will result in a strong kennel club being formed and a show arranged for in the Fall.

## DOG CHAT.

### Boston Dog Show.

The premium list of the New England Kennel Club can now be obtained by addressing the Bench Show Committee, 125 Tremont street, Boston. All the important breeds are most liberally provided with special prizes both of specialty clubs and regular specials. The prizes run from \$15 in challenge classes, and \$15, \$10 and \$5 in the open classes of the more important breeds to \$10, \$5 and \$3 in others and \$10 in challenge. Puppies have \$5 and \$3, first and second respectively. Some open classes have \$10 and \$5 and others \$5 and \$3. The usual arrangements have been made with express companies to return dogs free. Entry fee is \$3. Entries close March 17. Following is the list of judges: James Mortimer, mastiffs, St. Bernards, great Danes, bloodhounds, pointers, poodles, pugs and toy spaniels; John Davidson, Newfoundland, Chesapeake Bays, English and Irish setters, foxhounds, dachshunds, Bassetts and miscellaneous; J. Otis Fellows, deerhounds, greyhounds, Russian wolfhounds, Gordon setters and spaniels except toy; Thos. H. Terry, collies; John E. Thayer, bulldogs; John P. Barnard, Boston terriers; W. S. Clark, beagles. John Read, superintendent. H. Clay Glover, veterinarian. The management is endeavoring to secure the services of a well-known English judge for terriers (except Boston) and schipperkes, and will announce same through the press.

### Russian Wolfhounds.

Will the gentleman who was so much interested at the W. K. C. show in the above breed, who lived many years in Russia, attended their shows, and later on visited the Columbian

Exposition and there saw bronzes of the breed in question, kindly send his address to H. W. Huntington, 148 South Eighth street, Brooklyn.

Andrew Ludlow the cocker man, from Canada, never had such a good time, for he sold about 19 dogs. Zip goes to B. A. Sands, of New York; a red bitch to Ed. Young, of Jersey City; Vic to C. E. Idell, of Germantown, Pa.; Jasper to Dr. Kitchell, of Perth Amboy, N. J.; Mollie to N. E. Martin, of New York; a red bitch to Mr. Keasbey, Secretary of Spaniel Club; Commodore to H. Graves Jr., Orange, N. J. The others were pups from his kennels. Among the St. Bernards sales were not so brisk. Mr. Thiman bought Maud from Jas. Quigley. Daniel Mann sold Miss Thelma, the winning smooth puppy to a New York purchaser. Mrs. Nickerson bought Royal Duchess, second prize in open rough bitches, from Ed. Booth and Sir Marmaduke from Paul Goldsmith. Mr. Booth also sold the noted rough Lothario to Mr. S. S. Keller, Richfield Springs, N. Y. Lothario will be put at stud.

Mr. S. J. Rogers exchanged his wire hair Ebor Larchmont for Searcroft Kennels' smooth fox terrier bitch Tortilla with privilege of Searcroft Bourbon's service.

Among the poodles we found that Mr. Trevor had been busy having sold to Mrs. Tuckerman some of his puppies and Mr. James Brown Potter was also a purchaser. Mrs. William Todd Helmar bought Jeanne, second prize winner, and Mrs. R. L. Crawford, of New York, bought Jumbo also a winner.

In Boston terriers C. C. Kammerer was cleaned out of all available selling stock, Mr. Sherman Martin and H. La Grand Cannon buying some of them.

The noted beagles Whalebone and champion Storm are dead. The former was killed last summer by an Italian.

The New England Kennel Club have been trying to get an English judge to take the terrier classes at their coming show. They called upon Messrs. Redmond, Maxwell, Vicary and Pim, but neither can come, a cable to that effect being received during the show. Mr. S. Smith will not judge at Boston, as he is not coming over. Mr. Ed Brooks, as president of the N. E. K. C., will not show his dogs for competition at their coming show. A commendable practice.

### Gerda II. Comes to New York.

Dr. Lougest, we understand, parted with Gerda II., the bitch that has been such a faithful producer, to a New York shipping broker.

Mr. Preston, owner of the Owahgena Kennels, is importing a field spaniel dog, brother to his Newark winner. The dog should have been entered at New York, but could not arrive in time.

The Irish terrier Shargar while being uncrated on Monday morning under the direction of Dr. Niven, slipped his collar and escaped to the street. He has not been seen since. He answers to the name of Monkey. Information can be sent to this office if found. Mr. Mortimer also lost on Sunday morning at the kennels at Hempstead, L. I., a collie that was sent over last week from England. It is a sable and white, and answers to the name of Rover.

Texture won the great Waterloo cup, run last week at the plains of Altcar, near Liverpool, England.

### Transportation Petition.

A petition was posted up on the wall of the Superintendent's office in Madison Square Garden which was generally signed by the exhibitors present. It is intended to bring to the notice of the Trunk Lines Association the risks that exhibitors and owners of dogs incur when they consign their dogs to the tender mercies of the express companies. Many exhibitors object to sending valuable dogs by rail unless in charge of their own men and if the present agreement between the association and the express companies is carried out dog shows and in fact the whole dog breeding interests of the country will suffer. The petition has merit and it is to be hoped that the railroad companies will consider their own interests as well as these of a numerous class who use their roads in traveling to the different shows, by taking some proper action in the matter. The A. K. C. having appointed a committee to take the matter up, and backed by this signed petition, their efforts should secure some amelioration of the present state of affairs, even if we cannot hope for the favorable manner in which the English and Continental roads treat their canine travelers.

Dr. Foote sold five terriers and gave away three. Mr. Carnochan, who is going in largely for wires, bought Mrs. R. F. Mayhew's Britannic, which was shown N. F. C.

F. Von Bernuth, Jr., sold his two great Danes Yarrum and Yenoh for \$250 each.

Dr. L. C. Sauveur offers a silver cup for best challenge collie, and another for best novice at the Chicago show. E. B. Elliott offers \$10 for best black and tan in the show.

Luke White sold Grace II. to Messrs. Sturgess and Phelps, and Dr. Nash bought his Strider. He had a good offer for Lady Grace, but refused to sell as she is turning out so good in the field.

Report of spaniel dinner in type. Crowded over, Next week.

Mr. Washington, besides winning with his new Irish setter Finglas, booked seventeen services to this good field dog. Seminole Kennels sold Tim's Best, their Irish setter, to C. W. Guystur, of New York.

A. Fischer sold his great Dane Bismarck to George A. Weiss, of Chicago, at a good price. Mr. Kammerer, who had the Boston Terrier Kennel, did well, too; he sold a pup to Mr. W. A. Pell, and another to Mr. H. LeGrand Cannon. Miss Hermie he sold to Mr. Durand Cheever for \$100, and Miss Daisy to Mr. Herbert Harriman for \$100, all of New York. He also refused \$500 from Thomas Martin for the winning bitch Nankiu. It is expected that a Boston terrier club will be started in New York.

John Whelan imported and sold the bull-terrier Admiral Mello to Mr. W. Faversham and Vigilant to Mr. F. Church. He also sold Billy Plimmer to James Patterson, who in turn disposed of it to Mr. F. Church. He also sold Queen Mab to Mr. Higginson and Daisy Belle to a gentleman in New York. Another bitch he has imported is Lady Woodrose, that whelped ten puppies (six dogs) the day after landing. She was sold to Mr. A. Taylor, of New York.

Mr. C. A. Shion did not sell his Skyes, but took orders for nine Clydesdale terriers to be imported.

The South Bend Kennels sold the noted great Dane Major McKinley to Mayor Gilroy, of New York, for, as stated, \$1,500.

Mr. Paine, an old-time field spaniel man, got the fever again, and purchased the winning cocker Donovan from Dr.

J. E. Hair, taking him home during the show to Stanton Pa., where he now resides.

Geo. W. Lovell, the pointer man, sold Pontiac Spot to Percy R. King, of New York, and a native setter to Mr. Geo. Warren, also of this city.

Hempstead Farm Kennels sold Herdman II., the bobtail, to Mr. J. Pierpont Morgan and had \$500 offered for the sensational young bitch Hempstead Dorothy.

Mr. Huntington sold the Russian wolfhound Nagradjad to Mr. Havemeyer.

Mr. Patterson has sold the black and tan terriers Louie and Buffalo King to Mr. Robert McLean, of Janesville, Wis., who will show them at Chicago.

Seminole Kennels are the happy possessors of a diminutive pug, Banker, Jr., by name. He is now eight months old and weighs but 3½ lbs. He is a son of old champion Cash out of Flossie C., by Silvershoe out of Zadie, a daughter of Old Treasure. Dr. Sauveur tells us he is cobby and excels in pug qualities. His debut will be made shortly, and is sure to create interest.

We never remember so many sales at a New York show, and it is pertinent to remark that the crowds and the money seemed to drift toward the terrier and smaller dog sections throughout the week, the big dogs not commanding the attention they usually receive. Passing along the dachshund benches, we found that Mr. Manice had sold Hermit to Mr. Francke, of New York; Ichthyosaurus to Mr. H. L. Brevoort, New York, and Jessie Victoria to C. Mottschbacher, M.D., of New York; a Janet pup to Mr. Cogswell, of Brooklyn. Chas. Klocke, of Pittsburgh, did not go back penniless, for he sold his noted dachshunds, Bessie K. and Roy K., to Mr. H. O. Havemeyer, of New York, at a good figure.

Among the beagle men we found F. W. Chapman looking happy, having disposed of six puppies at good prices to New York parties. Mr. C. S. Wixom also disposed of nine beagle puppies and one greyhound.

Mrs. Senn had better sales than ever this year, having sold to Columbus B. Rogers, of New York, the second prize Jap Kobie for \$300. Tokio, first prize winner, was purchased by Mr. A. B. Hilton for \$500. The dog was purchased quite recently on a steamer at a comparatively low figure. Mr. Stern bought two pug puppies at \$50 each and a black and tan terrier went to another New York man for \$50.

Spratts Co. fed and benched in a most acceptable manner, but we would draw their attention to the wires in front of the partitions that catch the clothing, and in one instance tore a dog's lip.

The Woodlawn Park Kennel sold the noted fox-terrier, Ripon Stormer, to F. G. Browning, Mere Kennels, of Tarrytown, N. Y., at a stiff figure. He will be placed at stud.

T. G. Davey made some sales too. His setter winner, Esmeralda, goes to H. B. Hollins, of New York, also Monk of Furness Lill, for \$800. George B. Hopkins bought his English setter dog, Brighton Ranger.

Joe Lewis sold his winning greyhound pup, Chester, to Mr. Wolff, of Philadelphia, and Spring of the Valley to Mr. Sidel, of the N. J. K. League.

Frank Dole was busy, too. He bought the fox-terrier Leocota from Mr. Higginson and sold it Mr. H. O. Havemeyer, of New York. Modesty was also purchased by Mr. Havemeyer. Woodcote Scamp went to Mr. W. S. Patten, Long Branch, N. J. The cocker Adam to Mr. Benningham; of New York.

The Boston Terrier Club offers \$10 each for the best dog and bitch at the Mascoutah Kennel Club's show, March 13 to 16.

The Gordon Setter Field Trial Club will hold their trials next year near Taunton or Fall River, Mass., on Nov. 20. Several good dogs are expected, and arrangements will be much better this year. Mr. Oughton has promised entries, and some are expected from England. The club will offer prizes of \$15 and \$10 at the Boston show for field dogs. Miss S. A. Nickerson offers \$20, to be placed as they think fit.

## Canoing.

### Anything to Growl.

Editor Forest and Stream:

Having chafed for some days since reading Mr. John Trusty Holden's views on reforming the A. C. A., I am at last, like the "how thoroughly infuriated man of God" in the fable, moved to a high sense of reprieve. I admit that it would be courteous toward Mr. H. for me to contribute these few stickfuls over my own name. But then a man of Mr. Holden's perspicacity and thorough knowledge of A. C. A. meets and matters must know lex. If he does not I would most respectfully suggest that he once "come out of his hole" (on the Passaic River) and visit just one meet. There is nothing like actual experience to open one's eyes after all, and it is my opinion that our friend is on far from trusty holding ground.

Now, my dear Mr. Holden, did it ever occur to you that it is not reform that the A. C. A. needs, but advancement? If instead of rushing into print with ideas of A. C. A. reform you were to reform yourself and rather than cry down and belittle the almost incalculable good work that the A. C. A. has done, were to work hard for its advancement, things might change. It is not, I repeat, reform that is needed, but that power to act that comes from the force of numbers. So get to work, friend.

You hold that the clubs and not the A. C. A. are responsible for the advance made in canoes and their fittings. I deny that statement; even if Mr. Burns does not. That the development of such ideas was fostered by the clubs, no one can doubt; but that the clubs instigated such matters is an entirely wrong impression. Men go to the A. C. A. meets with the best rigs and boats they have been able to produce unaided. What happens? Their eyes are opened. They go home and tell their clubmates all about it, the result is that the meet has benefited all the men in the club. One of my clubmates had a canoe that was considered "some pumpkins" in local waters. Acting on my advice he joined the A. C. A. and attended the Jessup's Neck meet. When we returned he told me what he knew about canoes, rigs, and camps, before he went to camp. It was "about one small page of very large type."

Your next statement, that "the Zerega sail competition was the most practical action in the way of improvement of rigs, etc., we ever had," is easily picked to pieces in few words. Mr. Duntell won the event with a very small suit of sails. Mr. Douglass was close to him with regard to points, carrying a much larger rig. Now if this competition was of such practical use, showing such great improvement, etc., show us other rigs like Duntell's, in every-day use.

Now we come to the "good old cruisers," right here is where I live. I'm one of them, and I'm proud of it. You want to know why more is not done for the cruising member. Now any A. C. A. man, who has cruised the waters of this great country does not need to ask such questions. The cruiser does not desire to race; he wants to cruise, and visit the camp for cruising and social purposes. He then becomes acquainted with as fine a body of men as ever indulged in an athletic sport. When he cruises he meets them again, and a hearty welcome and numerous courtesies are tendered. Even if he does not know them but meets them while cruising in their waters, the fact that both are fellow-members of the A. C. A. smoothes the way and the welcome is just as sincere and hearty. Is not this standing, this good fellowship worth one paltry dollar per year? Emphatically, yes. I hold among my A. C. A. meet acquaintances some of my pleasantest friends. Is not a friend worth a dollar? If there be those to whom the foregoing are not sufficient returns for their dollar they are not

fit to become or remain members of the A. C. A. in its present social position. You compare the League of American Wheelmen with the A. C. A. The L. A. W. started its social decline with the "what do I get for my dollar" idea that you are trying to put into the minds of the A. C. A. men at present.

There are many estimable men in the L. A. W. and not a few canoe men among them, but the rank and file are not such as you introduce into the bosom of our family. There are very few A. C. A. men that you would not. Is not the cruiser benefited by this? I am a cruiser, I go to the meets, to get some cruising to and from and about there; to see my friends; to see the races and to get all the points regarding fittings, sails, etc., that is possible, and I accomplish all that I go for. There are usually about seven-eighths of the men in attendance that do the same as I, for the same reasons. Of course a man can go to a meet, make no friends, see nothing, and do nothing. Such are no use to themselves or anyone else, and ought to go home and give up canoeing. Yachting with a skipper and a chef would be much better exercise for them.

Let us work for a large membership of the right kind of men, and then we can do something for our members. Above all don't growl till we meet at the meet.

BOSTON, Feb. 18.

The A. C. A. Meet of 1894.

CROTON POINT, HUDSON RIVER, JULY 13-27.

THE indications thus far point to a very good attendance and a pleasant camp at the next annual meet of the American Canoe Association. The site has, on close inspection, proved decidedly better than was anticipated, and its accessibility is likely to induce a general rather than a merely local attendance.

The '94 camp is located near the extreme western end of Croton Point. Approaching the camp from Sing Sing by water one passes the large bay south of the Point, into which the Croton River empties. The water in this bay is comparatively shallow and well protected from the northwest and northeasterly wind, forming a splendid sailing ground in case the water should be rough north of the Point. Following the west shore line, which is a bluff ranging from 20 to 50 ft. high and quite rocky, one comes to a charming stretch of sand beach, hard and clean, free from large stone and debris and with very few pebbles; in fact the beach is one of those charming little stretches of sand found on the northerly side of most of the points along the Hudson.

CROTON POINT, SITE OF A. C. A. MEET, 1894.

This beach extends in almost a half circle for several hundred yards. The camp site lies back of and south of this cove. The Ladies' Camp will be located on the extreme northwestern point. The ground is high, sloping gently back from the beach, and the outlook in all directions is very fine. In this respect the entire camp is as attractive, and the scenery as fine as any of the Association camps in the past. Back of the cove, where the main camp will be, there is a somewhat limited extent of level ground. Then a hillside giving opportunities here and there for the pitching of a small cluster of tents, until at the top is found a nearly level field, giving abundant space for the location of tents with charming scenery and outlook to the northwest. The dock is already built, having been constructed very substantially for the use of a brick yard on the point, which will save the Association considerable expense. There is also a well of fine water within comparatively short distance, and when the underbrush that is now scattered over the proposed camp site is clear, it will present an attractive appearance. It is proposed to make Sing Sing the basis of transportation on the Hudson River Railroad, and to have a boat from there to camp. The village of Croton is situated to the north of the Point and about two miles away. A plan is under consideration to make arrangements with a Croton storekeeper to deliver orders in camp each day, and thus do away with the necessity for a camp store. The St. Lawrence River Skiff, Canoe and Steam Launch Co. have been granted the privilege of having a repair and supply tent in camp, and promise to have a competent boatbuilder there all through the meet.

At the November meeting Com. Dorland was empowered to appoint a committee to report at the July meet on the question of a continuation of the present plan of a different site each year, or of various proposed plans for a permanent or semi-permanent site. The names of this committee have been announced as follows: Eastern Division: G. H. Parmelee, Howard Gray. Atlantic Division: R. H. Peebles, L. W. Seavey. Central Division: R. S. Oliver, W. R. Huntington. Northern Division: E. B. Edwards, J. N. MacKendrick; chairman, W. P. Stephens.

What Can We Do for Racing?

Editor Forest and Stream:

The Hon. Secretary-Treasurer of the A. C. A., Mr. Douglass, was in the Hub recently. We were talking over the aspect of the racing at the recent meets. The fleet of starters has been growing beautifully less each year. And why? In my humble opinion the main reason is that an injustice is done the younger sailors and paddlers in making them sail or paddle against the expert and older men. This opinion leads me to express the further opinion that the time for class racing is now at hand. Would it not be much more encouraging to the new men to compete against others more nearly their equals? Why it is enough to "rattle" a beginner to watch Butler, Goddard, Oxholm, Palmer, Douglass, Gray, Archibald, Barrington, and a few other expert canoe sailors, let alone competing with them. Let us see how we can arrange it. First make a senior class, an intermediate class and a junior class. A lower-class man can always go up, but a high-class man cannot come down. However, if a junior wins a race in the intermediate class he becomes a senior. Prize winners in the different classes move up one. The senior class will never be too full, as from that men naturally retire from active racing. The first job of classifying will be the hardest one, and a council of the racing men should make the first classification. After that the scheme would work itself. If I am not greatly mistaken this step will soon be a necessity if interesting racing is to continue a feature of the meets. A discussion of this scheme would probably crystallize the idea of the many into one perfect gem, that it would dazzle the regatta committee into transforming the racing rules into line with the idea.

CANOE NEWS NOTES.

We are in receipt of inquiries as to practicable canoe routes between the headwaters of the St. Francis River and the Connecticut, from some canoeists who propose making the trip next summer, starting from Albany via Lake Champlain and the Richelieu, and then up the St. Francis and across to the Connecticut. Any information concerning the lower St. Lawrence and the Chaudiere will also be acceptable.

From the latest reports it is now likely that while there will be no international racing this year, in 1895 the New York Y. C. will be called on for the fourth time to face a challenge from a yacht of 70 ft. waterline. Lord Dunraven has admitted that in company with Lord Wolverson, his fellow owner in Valkyrie, he will challenge for the America's Cup in 1895, with a Watson cutter of 70 ft. l.w.l. Lord Wolverson is now in India and no definite plans have been made, as ample time remains before a challenge can be sent.

Yachting.

AS REGARDS the immediate prospects, it is unfortunate for all parties that Valkyrie will not race here on account of the absence of Vigilant from the class; and in fact the absence of any important class racing on the part of the larger yachts. It is quite natural that the syndicate owners of both Vigilant and Colonia should be averse to spending more money on either yacht, and in the case of the former there is everything to lose and nothing to win by further racing with the Valkyrie and the American 57-footers. At the same time there is an opportunity for the finest racing that has been seen for years, with such a fleet as Vigilant, Valkyrie, Colonia, Jubilee, Volunteer and Navahoe in one class at New York and Marblehead. Valkyrie, Colonia and Navahoe are capable of great improvement over their more or less imperfect form of last year, and with the rebuilt Volunteer would make the finest racing class of large single stickers that has yet been seen afloat, and the results of a series of races would be most valuable, besides giving a needed stimulus to what promises to be an exceptionally dull season. As the owners of these yachts are among the wealthiest and most spirited of American yachtsmen, the difficulties in the way of bringing together the whole fleet of 57-footers can hardly be considered insuperable.

In reading of the yachting exhibition now open in London we confess to a feeling of envy of our more fortunate fellows who are within reach of it, and also wonder why something of the kind cannot be done, or is not done, here in New York. It can hardly be because English yachtsmen are more enterprising, or that they are quicker to appreciate the interest and importance of such a collection; but whatever the reason may be, it never has been done here, nor is there any

promise that it soon will be. An exhibition was held in Boston in 1889 and was quite successful, but it was by no means what such an exhibition should be.

Royal Aquarium Yachting Exhibition.

From the Field.

WHATEVER may be the merits of this exhibition, one thing is certain that it is a fairly good representation of British yachting from its earliest days—the days of Charles II.—to the present time. The representation is pictorial, literary, architectural and mechanical. There is a portrait by Vandervele (loaned by Mr. C. Newton-Robinson) of the yachts of Charles II. off Greenwich, and portraits or designs of yachts of different ages down to the last photograph of Britannia and Navahoe, by West & Son. Yacht racing is represented in all sorts of ways, from the days of the old Arrow to the time, 1875, when Prince Bathynan established the Yacht Racing Association out of chaos, and made a distinct epoch in yacht racing. There are drawings of such varied forms as those of Mr. T. Chamberlayne's Arrow of 1822; Prince Bathynan's Flying Cloud of 1852, his famous cutter Kriemhilda of 1852, Sir Richard Sutton's cutter Genesta of 1854, and a beautiful model of the Prince of Wales' cutter Britannia of 1893. It will thus be seen that yacht racing is historically well represented. Before leaving the models we must call attention to two beautiful specimens of the modeler's art loaned by Mr. G. L. Watson. These represent the Marjorie cutter and Lenore schooner (now a yawl). We have seen these models before, but they will bear looking at over and over again. The vessels are beautiful in form, which pleases the eye, but what most interests the yacht-loving spectator is their equipment. They are completely rigged from deck to truck, and have all deck fittings accurately represented. From either of these models one could make a complete outfit of spars, rigging and deck fittings of a yacht, and they are certain to attract a large amount of attention in the exhibition. Another model should also be mentioned, that of the steam yacht Lady Torrida, owned by Sir Wm. Pearce. This model is also fully equipped with the outfit of an auxiliary steam yacht. Another model of an auxiliary steam yacht is that of the Valhalla, Mr. Laycock; it is not so highly finished as the models of Marjorie, Lenore and Lady Torrida, but then it was made by the Valhalla's carpenter, E. Balantine. "Chips" is always regarded as a mark of inextinguishable gentility, and he of the Valhalla has quite kept up the fame of his craft. This model of Valhalla, all the fittings and rigging of which he turned out with his own hands. The model yachts of the Round Pond and Serpentine, etc., are not so well represented as they were last year; but there are several good specimens, from the rectangular, vertical—longitudinal section to the short fin bulb keel.

We had almost forgot to mention that the Atlantic races are represented, the first and most memorable of these between the Henrietta (Mr. James Gordon Bennett), Fleetwing (Mr. Osgood) and Vesta (Mr. Lorillard). The yachts started on Dec. 11, and Henrietta arrived at Cowes on Christmas Day at 5 P. M. Mr. John White, the well-known shipbuilder, immediately sent an invitation to Mr. James Gordon Bennett and his friends to come to his house and partake of Christmas fare, which was accepted, as much to be expected, with great joy and interest, as an experience of the old-fashioned English Christmas entertainments. Of the three competitors, it is to be noted that Vesta was the only one fitted with a centerboard, and her draft of water with the board hoisted was only 7 ft. Mr. Lawrence Jerome, a guest on board the Henrietta, at a dinner at Cowes in honor of the event, thus described how the match came to be sailed: "Our yacht race was made up at a dinner. Two gentlemen arranged it, and one, as if to outdo the other, said, 'Let us make it from Sandy Hook to the Isle of Wight.' That suits me," was the reply. 'Let us make the stakes \$30,000 (£8,000) each.' 'That suits me,' was the reply. 'Let us sail in the stormy month of December.' 'That suits me,' was the reply. Then a modest young gentleman, Mr. James Gordon Bennett, asked if they would allow his yacht Henrietta into the match, and this they willingly did because she was considered the slowest boat of the three."

The yachts started Dec. 11, and had a very fast run across the Atlantic before westerly gales, the time to the Needles being:

	Days.	H.	M.
Henrietta, Mr. James Gordon Bennett	13	22	46
Fleetwing, Mr. G. A. Osgood	14	7	1
Vesta, Mr. Pierre Lorillard	14	7	41

The Vesta was ahead up to the time of reaching the Scilly Isles, when she was taken out of her course and Henrietta passed her. Fleetwing was hove to for four hours searching in vain for six men who were washed out of the cockpit. She also met with accidents to her spars. She was the favorite at starting.

There are also pictures representing the Cambria-Dauntless Atlantic race of 1870 and the Coronet-Dauntless race of 1887.

In connection with yacht racing we may here mention that one of

the exhibits is a selection of regatta cards, with colored racing flags, collected during the racing career of Prince Bathynan's Flying Cloud and Kriemhilda, both of which figure in most of the matches to which the cards refer. The collection goes back to the year 1856, and in themselves form a sort of history of yacht racing.

Cruising yachts are perhaps even more adequately represented, whether it be in the form of the yawl, schooner or steamer. A set of lithographs by Sir Oswald Brierly shows the sort of adventures yachtsmen went in for in the days of the Crimean War, and among the yachts looking on at the bombardment of Bomarsund—in the very thick of it—the Pet, the Baltic Pet as she was termed. It is worth noticing that this yacht was only of 8 tons, and was taken to the Baltic by Capt. J. W. Hughes (late owner of the 2.5-rater Humming Bird), his brother and one seaman. This set of lithographs must be rare, as we only remember one other set, and that is in the club house of the Royal Dart Yacht Club at Kingswear. There are a very large number of yachting pictures, but as at the time of writing (Friday) the catalogue of the exhibition was not ready, we must defer a detailed notice until later on. We may say, however, that the Royal Thames Yacht Club has sent a most interesting collection of paintings and yacht designs, including the working drawings of the yachts of the old Coronation Sailing Club, out of which the Royal Thames Yacht Club sprang.

Among the exhibits in the loan collection are several models designed by Mr. G. H. Wilmer, of the New Brighton Sailing Club. They include such well-known names in boat sailing as Tyro and Zinnia. The latter had a wonderfully successful career on the Mersey since 1888, and has always been sailed by her owner, Mr. G. H. Wilmer. Messrs. Watkins & Co., of Blackwall, have a good show of models, including that of the 30 ft. length class boat Bonnia, which came to the fore a dozen years ago on the Solent. Another interesting exhibit is that of the successful O. U. S. C. 35-rater Yacht Club yawl named "Edis." Mr. E. E. Eyrre, of the London Yacht Club, has a model of his successful Windermere yacht Saturn, and Mr. Hodgson, besides a model of the first 20-rater built, Vreda, has also contributed a model of the well-known Dublin Bay sailing boat Pitti Sing. Mr. G. Mollett has a collection of six models, including his concave-bottomed boat Gossip. This peculiar and more or less successful boat was built in 1890 for Mr. A. C. Roberts, and her achievements were much discussed in 1891 in the Société Nautique de Genève. The collection also includes several models of yachts which sail in matches on Lake Geneva. Such English designers as Mr. C. P. Clayton and Mr. A. E. Payne are represented in this collection, and Mr. A. Carey Smith, the American designer, Capt. Longridge exhibits his form of "drop bulb" center-keel, designed to combine the advantages of the fixed bulb-keel with those of the lifting centerplate, without encroaching on the inside space or greatly lessening the stability when the keel and bulb are raised. This is a very ingenious arrangement, and much improved in form since we first saw it. It still has, however, the defect (from the racing boat point of view) of not housing.

Among the "relics" at the exhibition is a wooden grapple or anchor loaned by Col. Fitzroy Clayton. The grapple is formed of part of a young fir tree, the stumps of the branches forming the arms or spikes of the grapple. It was found in 1860, when a barrow containing a young ship named of "Edis" Majesty's Coronation Sailing Society," but, a dispute having occurred over a prize, a large number of members seceded and formed the Thames Y. C. In 1831 the Coronation Sailing Club was dissolved, the leading members going over to the Royal Thames Y. C., as it was in that year termed. According to this the Royal Thames Y. C. has an ancestry almost as remote as that of the Royal Cork Y. C., which dates back to 1720. Not the least interesting "relic" in the exhibition is a model of the "Old Arrow," a seven-seventy-two years old yawl, built from 2,000 to 150 tons, and sailed by Lord Londsdale, who was on a cruise in the steam yacht Northumbria. Mr. H. J. Powell sends drawings of Lord Belfast's famous brig Waterwitch. She was sold into the navy on account of her great reputation for speed, and was one of the experimental squadron of half a century ago. The lines of a famous brig captured from the Dutch in 1795 is exhibited by Mr. W. J. Melville; and he also contributes the lines of a fast revenue cutter of 1839, named Lapsing.

We have already referred to the extremely interesting collection of yacht designs of the old "Cumberland Fleet," loaned by the Royal Thames Y. C. This "Fleet" was established in 1775, and was greatly occupied in match sailing. A print is shown of a race sailed in 1782 for the Duke of Cumberland's Cup. Strange to say, this cup was discovered in a pawnbroker's shop in San Francisco in 1859. In 1833 the club took the management of "Edis" Majesty's Coronation Sailing Society," but, a dispute having occurred over a prize, a large number of members seceded and formed the Thames Y. C. In 1831 the Coronation Sailing Club was dissolved, the leading members going over to the Royal Thames Y. C., as it was in that year termed. According to this the Royal Thames Y. C. has an ancestry almost as remote as that of the Royal Cork Y. C., which dates back to 1720. Not the least interesting "relic" in the exhibition is a model of the "Old Arrow," a seven-seventy-two years old yawl, built from 2,000 to 150 tons, and sailed by Lord Londsdale, who was on a cruise in the steam yacht Northumbria. Mr. H. J. Powell sends drawings of Lord Belfast's famous brig Waterwitch. She was sold into the navy on account of her great reputation for speed, and was one of the experimental squadron of half a century ago. The lines of a famous brig captured from the Dutch in 1795 is exhibited by Mr. W. J. Melville; and he also contributes the lines of a fast revenue cutter of 1839, named Lapsing.

In what is termed "Abbey Section," there are several interesting exhibits from yacht builders and yacht fitters. Messrs. Ramage and Ferguson, of Leith, have a fine show of beautifully-made models of steam yachts, the largest of which is a model of the Royal Sovereign, a model of one of the large four-masted sailing ships they have built. The Victoria Steamboat Company exhibit a grand model of their paddle steamer Royal Sovereign, which became such a favorite with Londoners last season; she is 312 ft. long, and her speed is said to be 19 1/2 knots an hour. The London, Woolwich, and Clacton Steamboat Company exhibit models of their Belle steamers, and amongst them Royal Sovereign, which was built for the Royal Sovereign, a model of one of the large four-masted sailing ships they have built. The Victoria Steamboat Company exhibit a grand model of their paddle steamer Royal Sovereign, which became such a favorite with Londoners last season; she is 312 ft. long, and her speed is said to be 19 1/2 knots an hour. The London, Woolwich, and Clacton Steamboat Company exhibit models of their Belle steamers, and amongst them Royal Sovereign, which was built for the Royal Sovereign, a model of one of the large four-masted sailing ships they have built. The Victoria Steamboat Company exhibit a grand model of their paddle steamer Royal Sovereign, which became such a favorite with Londoners last season; she is 312 ft. long, and her speed is said to be 19 1/2 knots an hour. LA VENDENESE, ALUMINUM RACING YACHT, DESIGNED AND CONSTRUCTED BY MESSRS. GODINET AND GUILLOUX, 1893.  
Scale 1/32 in. to the foot (nearly). P, Forecastle; B, Pantry; J J, Watertight Bulkheads; S, Saloon; O, Steerage; V, Sail-Room.

LA VENDENESE—SAIL PLAN.

La Vendenesse.

THE FIRST ALUMINUM SAILING YACHT.

WHATEVER foundation there may be for the idea that the French are less of a maritime people than the more northern nations, it must be admitted that they have held a relatively high place in naval design and construction, from the days when the English were glad to copy the lines of the captured French frigates down to the first adoption of the iron armor for war vessels, and so to the present time. Though lacking the constant stimulus which necessity has imposed on their insular neighbors both in war and commerce, with the accompanying effect on yachting; they have still maintained a foremost place as students and investigators of the science of naval design, and as practical constructors. Compared with its condition in England and America, yachting has labored under very serious disadvantages in France; but at the same time it has grown into an established and recognized national sport, with a code of rules and a large and growing fleet. Though dependent largely on England and America for its yachts, not a few have been built at home, and serious and systematic efforts have been made for some time to promote a national type, or type of home-built yachts.

The latest yacht built under the new rule of the Société des Yachts Français\*, adopted in 1892, possesses a special interest not only from her design, but from the fact that she is the first sailing yacht built of aluminum, the commercially new metal of which so much has been said and so little is popularly known. In the FOREST AND STREAM of Sept. 29, 1892, we illustrated a steam yacht of this metal, built in Zürich, Switzerland, for use on the Seine, but the chance of the successful use of the metal in a sailing craft has thus far been merely conjecture. Thanks, however, to the enterprise and skill of several French yachtsmen, the true value of aluminum in yacht construction is now being practically and to all appearances thoroughly tested. We are indebted to our French contemporary, *Le Yacht*, which paper has done much toward a better knowledge of aluminum, for the accompanying designs, which it describes substantially as follows:

\* The rule is  $\left(\frac{L-P}{4}\right) \times P \times \sqrt{SA}$ . P is the girth of the yacht.

See FOREST AND STREAM, Dec. 8, 1892.  
The design for La Vendenesse had been ordered by Count J. de Chabannes la Palice from Mr. Godinet, the author of the new French measurement rule, the yacht being planned originally for wooden

construction, and the dimensions of hull and sail plan having been calculated so as to assure as far as possible a faster craft than Aline, purchased in Scotland by the brother of Count de Chabannes (Aline was formerly the 10-rater Enore, designed and built by Mr. Will Fife, Jr., in 1890). After the yacht was planned, Count de Chabannes, struck with the promised advantages of aluminum in a racing yacht, determined to make the experiment of substituting aluminum for wood and steel. In order to put the experiment in practice he called upon Mr. Victor Guilloux, a naval engineer, the author of several articles on aluminum in *Le Yacht*, and although the cost promised to be high, the entire construction of the proposed yacht was finally intrusted to Mr. Guilloux.

As the result of an understanding between the designer and the constructor, the original design was altered, the length on the waterline being increased and the lines fined down, in order to realize the greatest possible advantage of the light hull which the use of aluminum permitted. The final dimensions of the design are as follows:

Length over all.....	57ft. 1in.
L.W.L.....	39ft. 4in.
Beam extreme.....	9ft. 4 1/2 in.
Draft.....	8ft. 4 3/4 in.
Displacement.....	15 tons.
Ballast.....	11 tons.
Sail area.....	1,938sq. ft.

The building was done at St. Denis, at the works of the Société des Chantiers et Ateliers de la Loire, the construction devised by Mr. Guilloux including first a rigid framework of steel, intended to carry the weight of the lead and the strains of the rig, and to distribute them as evenly as possible. This framework was covered with aluminum in plates and angles, serving to bind the different parts together, and to form the outer skin. Two unbroken bulkheads of aluminum are built into the hull, serving to bind the sides together and to give additional safety in the case of grounding or collision.

The fitting and rivetting of all the parts was done with extreme care; both the heating of the plates and the driving of the rivets being operations requiring the most delicate handling, the metal itself being difficult to work, and the proper mode of working it being yet uncertain. The workmen employed were accustomed to working iron, steel and copper, but not aluminum, and many trials were necessary to determine the best methods of handling a metal possessing such absolutely different physical properties. One point of special difficulty was the tightness of the hull, a much closer spacing of the rivets

being required than in iron or steel, so close in fact as to affect the final strength of the joint. By careful work, however, on the part of Mr. Guilloux, assisted by Mr. Boulogne, the superintendent and Mr. Lecomte, the engineer of the works, the hull, as proved by the test described further on, was made both tight and strong.

The weight of aluminum used in the hull is 1.08 long tons, and of steel 1.67 tons, or 2.75 tons to a total displacement of 15 tons, a ratio of 19 1/2%. Although aluminum is unaffected by air or fresh water, it is perceptibly affected, though less than steel, by contact with salt water, and by the salts contained in the sea. It was absolutely necessary to protect it in some way, and after researches in which he was aided by Messrs. Letellier and Veyrassat, chemists, Mr. Guilloux discovered a paint and a special mode of application which appears to meet fully the conditions of the case. Three coats are used, the first to secure adherence to the metal, the second to protect the metal from corrosion, and the third to prevent all growth of barnacles and other foreign substances. This preparation is said to be similar in principle to the lacquer used of late years in Japan for the hulls of war vessels.\* The interior of the skin was at first simply varnished, to

\* FOREST AND STREAM, March 23, 1891.  
show the natural color of the white metal, but the difference between the temperature of the air and water resulted in an excessive condensation of moisture on the side, even greater than in an iron yacht, and to prevent this three coats of paint were applied.

The interior arrangements include a forecabin in the forward compartment, a main saloon and steerage in the middle compartment, and abaft the after bulkhead a large sail room, capable of use as a stateroom. In the forecabin are three hammock berths, a galley and pantry, with locker seats, the headroom being 5ft. 7in. under the beams.

The saloon is 9ft. 6in. long, with a light wooden bulkhead dividing it from the steerage, the headroom under the beams being 5ft. 8in. It is conveniently and tastefully fitted up with lockers, table, shelves, etc. To port of the companion is a toilet room with w.c. and to starboard a wardrobe. Two permanent berths are fitted in the sail room, also serving as shelves when not needed for sleeping. The interior fittings, which altogether weigh under 800lbs., are of white pine, and so fitted as to give the greatest possible effect in strengthening the hull when in place and held by their screw fastenings, and yet to be quickly and readily removed.

The deck is of aluminum plates, just under 1/32 in. thick, and covered with a single sheet of linoleum to the plank-sheer. To meet the

LA VENDENESE—DIAGRAM OF HEELING TESTS.

heavy weight of lead and the large sail plan, the rigging and fittings are of especial strength, all of the fittings being designed for the yacht by Mr. Guilloux. The yawl, which was also built from his designs, is 8ft. 3in. long and 4ft. 8in. beam, of light draft with a flat bottom and two side keels. It has been tested to carry seven persons, though small enough to stow conveniently on deck.

La Vendenesse was launched on Dec. 5 and the following day she was put to a severe test demanded by her owner before he would use her on the sea. The yacht was moored, as shown in the plan, in the canal and heeled down by a purchase from her masthead to a crab at some distance, the moorings being arranged so as to allow her to heel freely. She was moved gradually from 0 to 40 degrees inclination, being left in the latter position for two hours, during which time the hull, free from all fittings below, was carefully examined for signs of straining or leakage, none being found. She sailed for Havre a week later, from which port she will hail in the future.

Feels Lost Without It.

I AM over sixty, still just as full of legitimate sport as at sixteen, and feel lost if I don't get the FOREST AND STREAM regularly.  
HARTFORD. B. H. H.

Boards, Fins and Lateral Strain.

Editor Forest and Stream:

Your elaborate and practical drawings and instructions for the building of Scarecrows represent a great deal of hard work as well as intelligent study, and are the most valuable contribution to yachting literature any periodical has contained for a long time. The model was built from by amateurs in St. John last year from the lines as originally given by you, and the little craft looked like a swan among geese in the company of the local craft. But her owners, with more pluck than judgment, sailed her against boats of twice her beam and 50 per cent. more length, and she was, of course, beaten every time.

I don't like your division of the boat into watertight compartments. Pumping, in the way you propose, would be a great nuisance if she leaked much. Why not allow the water to run freely under deck to the deepest part of the boat and have a fixed pump, covered when not in use with a brass cap flush with the deck, for the removal of water? Your portable pump, with numerous openings in which to use it, will prove to be a great nuisance.

Your precautions against the lateral strain of the fin are ample, though many practical builders will no doubt feel inclined to increase them. Observant centerboard sailors know that when a yacht is heeled by the force of the wind the board is lifting from the upper corner of it hugging the lee side of the box, and a fin will act in the same way. A heavy board, therefore, or a fin will actually cause less lateral strain when the yacht is heeled than a light one, as the weight will lessen the upward pressure of the leeward water. The strain will, at least, be no more with a weighted fin than with a wooden board.

CHATHAM, N. B., Feb. 9. L. S. STEWART.  
(The sub-division into several tight compartments was suggested because of the little or no extra expense, and in case of an extra leakage would be a decided advantage. With the construction usually employed in modern small craft, there should be no steady leakage to speak of, and little need of pumping. The principal strains to which the fin and hull would be subjected would be of course in grounding or docking.)

The Boston Knockabout Boats.

INSTEAD of building two boats of the knockabout class, the Hull Y. C.'s committee has decided to build only one at the club's expense. This is due to the fact that they will cost more than the committee anticipated. At a meeting, held on Feb. 1, the committee decided to contract to Waterhouse & Chasebrough to build one boat from their lines, and a club member (probably J. J. Souther) announced through the committee that he would also build one from the same lines. Other orders are likely to follow, so that four or five new boats are pretty sure to be built. McIntyre will build the boats. Designs were submitted to the committee by the above firm, Stewart & Binney, Boston Yacht Agency, Cape Cod Yacht Agency, the George Lawley & Son Company, L. C. Hanscomb and the Herreshoff Company.

The Hull boats are to be of the following dimensions: 25ft. 6in. over all, 21ft. waterline, 7ft. 4in. beam and 4ft. draft. They will have 3,700lbs. of iron on the keel. They are to be much like the two knockabouts, Nina and Pinta, built by these designers last year for the Eastern Y. C., and the Itatsu, owned by F. O. North, which easily won the championship of the class at Marblehead last year. They will have open coxswains, with watertight bulkheads between the cockpit and the cuddy, in which respect they resemble the open catboats which this new class of boat is likely to supersede.—Boston Transcript.

American Yacht Clubs.

We have received new addresses of secretaries from the Albany, West End, Haverhill, Schoodic and American Model Y. C.; also notice of the Poughkeepsie Y. C., organized September, 1893, the two Baltimore clubs, Corinthian and Neptune, and of the non-existence of the Bijou Y. C.

YACHT NEWS NOTES.

On Feb. 20 Jubilee was hauled out at the Atlantic Works, East Boston, for cleaning and painting.

The Essex Y. C. has elected the following officers: Com., Wm. H. Bruen; Vice-Com., Wm. R. Ogden; Rear-Com., E. L. Garrod; Fleet Capt., Jas. Keating; Meas., Jas. Sonnenberg; Sec'y, Wm. C. Rothe; Treas., F. Hartung; Trustees: Chas. LeComte, chairman, R. E. Thornton, Wm. J. Walker.

Intrepid, steam yacht, Mr. Lloyd Phoenix, sailed from New York on Feb. 16 for Bermuda and the West Indies. Mr. Phoenix was accompanied by Messrs. E. F. Oremieux and Schuyler Crosby.

The house of the Eastern Y. C. on Marblehead Neck is now being enlarged by a two-story addition 64x21ft., containing a new dining room, billiard hall, and below a laundry and room for an electric light plant.

Barracouta, steam yacht, J. R. Fell, sailed from Philadelphia for the West Indies on Feb. 17 with owner and friends on board.

The question of the admission of ladies to membership in the New York Y. C. is likely to be settled by the adoption of the following amendment to the constitution, proposed by the special committee recently appointed: "To add to Article VI: Any woman owning a yacht is eligible for election to the club as a flag member, and shall, upon election, pay annual dues, but no initiation fee. Such membership shall continue only during the period of yacht ownership and carries only the following privileges: The right to fly club burgee, to have a private signal registered with the secretary, to enter yachts in club races and to use the club stations and floats.

The annual meeting of the Larchmont Y. C. was held on Feb. 21 at Delmonico's, Vice-Com. Harold A. Sanderson presiding. The following officers were elected: Com., Seymour L. Husted, Jr., schooner Crusader; Vice-Com., George W. Cutter, Katrina; Rear-Com., Henry W. Buckner, Jr.; Sec'y, Charles C. Little, Treas., William Murry. Trustees (to serve three years)—Augustin Monroe and Chester C. Munroe. Resolutions in eulogy of the late Com. Colt were passed, and some routine business transacted. Mr. F. W. Flint has renewed his gift of cups for a race of cabin cats not over 30ft. l.w.l.

Mr. A. G. Cuthbert, son of the late Capt. Alex. Cuthbert, builder of Atlanta and Countess of Dufferin, has established himself in Toronto as a designer and builder, and has now under way three new yachts, two for the 25ft. and one for the 35ft. class. One of the 25-footers will be a keel craft, 36ft. over all, 24ft. l.w.l., and 850ft. of sail, with a bulb keel of 4,000lbs. She will have 4ft. 4in. headroom, with a flush deck. The other will be a centerboard boat, 36ft. over all, 22ft. l.w.l. and 850ft. of sail, or the same length and sail for the two, the beam, draft and models being different. The centerplate will weigh 650lbs. Both will be handsomely finished below. The third yacht will be 43ft. 3in. over all, a keel boat, for Messrs. A. Fynewald and W. J. Carlisle, of Hamilton. The designs are of modern type, with long ends and full waterlines, quite the reverse of the models of the elder Cuthbert.

The remains of Mr. C. W. Rudolph Kerr were on Saturday, Feb. 10, taken to Woking Cemetery, there to be cremated. Mr. Kerr was Lord Dunraven's brother-in-law, and passed away after a lingering illness. He was a thorough sportsman, and for a time was regarded as the best pigeon shot of his day. Latterly he spent much of his spare time in yachting, and represented the owner of the Valkyrie on board the Virginia in the recent races for the America's Cup. He was the eldest son of Lord Charles Kerr and grandson of the sixth Marquis of Lothian. He was particularly well known at Cowes and at Bembridge, where he used to sail a good deal in small boats. Among those who either traveled out to Woking or sent wreaths were Admiral Lord Frederick Kerr, the Countess of Fingall, Countess Cowper, the Earl of Northesk, Lord and Lady Alwyne Compton, Sir Thomas and Lady Freahe, Miss Freahe, the Hon. Douglas Carnegie and Lady Jervoise.—European Edition of the Herald.

Mr. Henry A. Mott, whose death we announced last week, was the father of Prof. Henry A. Mott, the editor of "The Yachts and Yachtsmen of America." The friends of the latter who may have confused the two will be glad to know that Prof. Mott is still alive and busy with the proofs of the coming book.

On Feb. 24 Mr. Norman L. Munro, owner of the Norwood, So So and Vamoose, died suddenly in New York of gastric appendicitis, from which he had suffered for some time. Mr. Munro, through his own exertions, accumulated a very large fortune in the publishing business, and for the past ten years he has spent his money freely in building yachts for high speed, among them being Norma, Say When, Now Then, Henrietta, Norwood and So So.

At a meeting of the Corinthian Y. C. of San Francisco, on Feb. 13, the following officers were elected: Com., F. F. Tracy; Vice-Com., A. L. Lyons; Treas., W. F. Dixey; Sec'y, F. E. Baker, 114 Beale street; Port Capt., J. H. Keefe; Directors: F. M. Thornton, M. A. Newell; Meas., Frank Stone; Regatta Com.: C. A. Graham, W. H. Crowell, J. L. Howell.

In our notice last week of Messrs. Seaton and Routhwaite's "Pocketbook of Marine Engineering," we omitted to state that it is published by the D. Van Nostrand Co., New York.

"Forest and Stream" Sells Goods in Japan.

We have lately received an order from Kobe, Japan, for one of our closets and can trace the order as coming through your paper.

Rifle Range and Gallery.

Zettler Club Team Tournament.

THE annual Washington's Birthday gallery tournament of the Zettler Rifle Club was held in its headquarters on Thursday of last week. Eight shooting societies responded to the invitations sent out in January. Unlimited practice was allowed each contestant, and when he was ready for his official score his target was run down the range and he was allowed 10 shots. Each team was allowed to make two or three re-entries. Each team to consist of 5 men.

The shooting committee of the Zettler Club acted as the judges and official scorers, and had full supervision over the tournament. The committee were: Geo. Krause, M. B. Engel, Henry Holges, Henry D. Muller and R. Busse.

In order to stimulate renewed interest in the gallery tournament this year the Zettler brothers, in addition to the five prizes offered by the club, donated an extra prize for the team that should make the lowest total score. This special prize was of equal value of either the fourth or the fifth individual prize for the best 10-shot score.

Of the ten teams competing in the tournament the first team of the New York Corps was the first to win a score that was considered good. They won the first place in the contest; the total of the five men was 1,303 and was made on the first entry of the team. The Williamsburgh team came next with a total of 1,300, made also on its first entry.

The Empire Club team on its second entry succeeded in tying the Williamsburgh team with a total of 1,300. The Williamsburgh team then made its second entry and by careful work and careful shooting of the part of Fred Ross, the team coach, and the expert shooting of Ross himself, the team made the magnificent total of 1,210, or an average of 242 for each member of the team. This put the Williamsburgh team in the lead seven points ahead of the New York Corps team No. 1.

In the mean time the Empire Club team had made its third and last entry. The last entry of the Williamsburgh team had forced the Empire team into a second entry, and the arguments were kept going. The Empire Club team and its friends were striving with might and main to make its third entry the lever to lift it into first position. The New York team was in a peculiar position; it was entitled to two more entries, yet it could not make them from the fact that one of its members had left the gallery after finishing the first entry and had not returned. Under the ruling of the committee the team could not put in a substitute in the place of the absent member. The Empire team had forced them into second place. The Empire team was then shooting on its third entry and its members were sending their shots into the bullseye in a manner that portended further disaster to the New York team.

The result was that partisan feelings began to ooze here and there among the friends of the teams interested in the contest. Happily, however, for the interest of the tournament, the arguments were kept going. The Empire Club team and its friends were striving with might and main to make its third entry the lever to lift it into first position. The New York team was in a peculiar position; it was entitled to two more entries, yet it could not make them from the fact that one of its members had left the gallery after finishing the first entry and had not returned. Under the ruling of the committee the team could not put in a substitute in the place of the absent member. The Empire team had forced them into second place. The Empire team was then shooting on its third entry and its members were sending their shots into the bullseye in a manner that portended further disaster to the New York team.

Of the other teams in the race for honors the Greenville team No. 1 on its second entry made a total of 1,187, putting it into fourth place on the list.

The one entry of the second Greenville team tied the lowest score of the Italian Society team. Under the rules governing ties in which the most center shots (25's) are counted, the Italian team won the trophy and the honors for the lowest scores.

Some would-be sympathizer with Capt. Robidoux, of the Greenville team No. 2, thought that the rule for ties should apply in the reverse order, in which case his team would be a winner by a number of points.

The individual cup, which was offered for the best 10-shot score, was previous to the opening of the match a subject of much interest to the many shooters engaged in the contest. But Fred Ross destroyed the hopes of many of the ambitious ones by making the figure of 248 on the first entry of his team. On the second entry of his team he made 247.

With the last shot of Rosenbaum, the fifth man in the Empire team, the agony was over. President Walther, with the secretary's list of the winning teams and their scores in his hand, called the teams together in the meeting room of the headquarters, and after a few remarks appropriate to the occasion he called up Capt. G. A. Schmidt, of the Williamsburgh Corps, and presented him with the trophy, representing the first prize. Following Capt. Schmidt came J. Grimm for the Empire team, Capt. H. Olfman for the New York Corps team No. 1, Wm. C. Collins for Greenville team No. 1 and Capt. Louis Reali of the Italian team; and last Fred C. Ross, of the Williamsburgh team, to receive the individual cup for the best 10-shot score, 248. With the trophies in the hands of the respective winners, the captain of the Williamsburgh Corps prevailed on all present to join the winners in drinking the health of the Williamsburgh Corps and the success for the tournament for 1895. New York, Feb. 25.—Please notice scores made by following members of Heidenreich Rifle Club: Horn 238, Goodman 231, Heidenreich 200, May 214, Roberts 228, Hicks 230, Keilner 203, Kaufman 232, Koch 217, Heidenreich R. C.

Golden Gate Riflemen.

SAN FRANCISCO, Feb. 11.—Editor Forest and Stream: The big Mid-winter Fair Intercession shoot was inaugurated last Sunday in a blaze of glory. A procession of several blocks in length, composed of the most prominent local shooting societies, several visiting societies from the interior, militia companies, prominent citizens in carriages, etc., marched through the principal streets of the city.

The 11 o'clock boat was taken for Shell Mound Park by hundreds of shooters and their families. Inaugural ceremonies were held in the large dancing hall, and after lunch shooting began. The day was warm and sunny, with no wind. About \$2,000 worth of shooting tickets were sold during the afternoon, mostly for the Golden Gate medal shoot.

High scores of the day: W. Glindeman, 72 on honorary target; 92 on man and 93 on 4-shot ring by A. Strecker.

To-day the shooting conditions were only fair, a drizzle falling all the afternoon. G. Helm made the first score, 93 on the 4-shot ring target. A. Strecker made the Golden Gate 23 (3in. bullseye), an excellent score. Several champion shots are holding back and will try their luck next month.

The Germania Club held its regular medal shoot to-day. Good shooting was done, the medal in all four classes being won with a score of over 400 rings in the 30 shots, with no re-entry. Dr. Rodgers started the ball with a score of 423, and though a pretty fair shot such a drizzly day; but when Mr. Young followed with 442 the medico had nothing to say.

The Columbia Pistol and Rifle Club elected 14 new members at its last meeting. The wife of a member made application for full membership. This was a poser and gave rise to considerable discussion. The matter is not yet settled. The lady, to prove that she could shoot, appeared on the range to-day and showed considerable skill with the rifle.

Club scores made to-day:  
Medals for members only, no re-entry, pistol, 50yds., champion class: S. I. Kellogg 89, A. Heath 86, C. M. Dais 85, E. Hovey 83, F. O. Young 83, H. Heath 78.

First Class: A. H. Page 86, F. Poulter 82, Dr. Rodgers 81, H. L. Pendleton 81, P. Bohr 79, T. Baumgartner 77, F. Gehret 76, C. Heath 71, A. H. Brode 76, G. Ungerman 72.  
Second Class: A. Gehret 81, D. W. McLaughlin 78, J. Zimmerman 76, W. Cobblehead 76, L. C. Babin 63, Marsh 62, G. Banks 49, H. E. Crane 32.  
Rifle, 200yds., champion class: D. W. McLaughlin 84, C. Heath 82, F. O. Young 82, Dr. L. O. Rodgers 78, C. Thierbach 77, E. Hovey 77, H. Heath 76, A. Heath 73.

First Class: A. Mocker 86, F. Baumgartner 77, F. Gehret 74, H. Heilberg 72, P. Bohr 72, G. Ungerman 70, F. Poulter 67, W. Cobblehead 63.  
Second Class: L. C. Babin 67, H. E. Crane 67, H. T. Marsh 54, G. Banks 53.

For medals and cash prizes, open to the public, re-entry. Blanding pistol medal match: C. M. Dais 94, E. Hovey 93, S. I. Kellogg 89, H. L. Pendleton 89, A. H. Page 89, F. O. Young 89, Dr. L. O. Rodgers 84, H. Heath 82, F. Gehret 80, F. Poulter 79, A. Heath 78.  
Roo target rifle medal: S. I. Kellogg 86, E. Hovey 84, Dr. Rodgers 83, C. Bohr 82, F. Baumgartner 82, F. Gehret 81, F. Fay 75, J. Peters 71, L. Ebers 70.

Glindeman military rifle medal: A. Heath 70, F. Poulter 63, W. H. Kirkman 61, W. D. Downey 54.

A feature of the foregoing scores is the fine work done by young Pape with the pistol, when it is remembered that previous to to-day he never shot half a hundred shots with this weapon. ROEHL.

Jerseymen at the Targets.

Five members of the Greenville Club met in Armbruster's Park, on Saturday, to participate in the weekly handicap shoot. The thermometer registered 5° above zero, with a cold northwest wind sweeping across the range. With the shooting house closed up tight, a large stove and a hot fire, it was rather difficult to keep one's fingers in a flexible condition. Three of the five cranks gave it up in disgust and devoted themselves to the fire. Collins and Plaisted shot out their scores. The scores are appended:

Plaisted, scratch	24 21 11 14 23 21 17 23 24 23-210
	22 20 24 19 22 22 23 20 21-213

Voulquin-Winans Revolver Match.

A REVOLVER match between the French champion, M. Gustave Voulquin and Mr. Walter Winans has been the latest thing in revolver events in Europe. Conditions: Sixty shots, at 23 meters, at a target representing a man life size, each series of 6 shots to be fired within 30s., the pistol not to be raised before the word fire, 3m. rest allowed between each series of 6 shots, all 60 shots to be fired within 40m.; revolvers .44cal. S. & W., cleaning allowed between each series of 6 shots, and a fresh revolver allowed in case of a breakdown, no allowance for jams or misfires, any shot fired after the 30s. to be counted a miss.

The match took place on Feb. 10, M. Voulquin shooting at Gastine Renee's well-known gallery in Paris, France, before M. Moreau, M. de Villeneuve, Count Tyskiewicz, Count de Lyonne and Vicount Clary. Mr. Walter Winans shot at Brighton, England, and won by 16 hits, with one shot to spare, making 57 out of 59.

Greenville Rifle Club.

A LARGE number of the members of the Greenville Rifle Club were on hand on Friday night of last week to attend the weekly shoot of the club. The success of the first team in winning one of the trophies in the Zettler tournament of the night previous caused much satisfaction to the lay members, and the winning team were the recipients of many congratulations on the part of their fellow members. Twenty members participated in the competition for the class prizes. The best score of the night was made by Plaisted, 242. Dorrier was second with 241, and Collins third with 238. The scores are appended, 10 shots, 200yds. C. Boag 239, J. Boag 233, J. Collins 235, Lutz 238, 85ft., 25-ring target. Plaisted 242, Dorrier 242, Collins 235, Lutz 238, Spahn 226, Graf 217, E. Wuestner, Jr. 216, F. Wuestner 215, Zegener 215, Charlock 210, Huelsen 206, Mang 205, Becker 200, Lauer 196, Holzapfel 194.

Schlicht Rifle Club.

TWENTY-ONE members of the Schlicht Rifle Club were present on Feb. 19, to participate in the weekly shoot for the class medals. The champion medal was won by Geo. Dorrier, first class medal by E. O. Brellenthine, second class by Aug. Meyer and the third class by Geo. Richter. The members were all improving their shooting and show commendable zeal in their efforts to become proficient. The scores are appended: Geo. Schlicht 244, Geo. Dorrier 237, Aug. Meyer 231, Chas. Mayer 230, E. O. Brellenthine 228, L. Dorrier 228, Wm. Schlicht 227, Geo. Lautenberger 227, John Pohly 225, Jacob Diehl 222, Geo. Richter 222, Chas. Liebel 223, J. Dedrick 222, Jacob Schlicht 215, Fred Lambrich 213, Aug. Meyer 213, Capt. Krobotsch 211, Peter Maile 205, A. Deubline 203, G. Tributant 203, J. G. Goehrig 207.

Zettler Rifle Club.

ELEVEN members of the Zettler Club turned out on Tuesday night to compete for the champion medal and the cash prizes. Champion match: R. Busse 248, Henry Holges 246, Fred C. Ross 246, M. B. Engel 243, Henry D. Muller 240, John H. Bohr 240, B. Zettler 239, Geo. Zettler 240, Dr. Charles Grosch 233, B. Walther 239, Gus Nowak 235.

Best 10-score, 5 entries: Fred C. Ross 249, R. Busse 248, Henry Holges 246, Charles G. Zettler 244, B. Zettler 244, B. Walther 245, M. B. Engel 243, H. D. Muller 243, Gus Nowak 242, D. B. Grosch 244, John H. Brown 243.

New York Rifle Club.

The

## Greenville vs. Excelsior.

The second of the series of gallery matches between teams from the Greenville Rifle Club and the Excelsior Club of Jersey City came off on the ranges of the Greenville Club on Wednesday night of last week. In the previous match, which was shot on Feb. 14, the Greenville team won by 31 points on a total of 2,296. Distance 28 ft.

## Empire Rifle Club.

The weekly gallery shoot of the Empire Club brought together five members in competition for the club prizes. Ben Zohan was first with 241, J. Grimm second with 237. Scores: B. Zohan 241, J. Grimm 237, W. Rosenbaum 236, C. Zettler, Jr. 235, W. Meisenholder 233.

## RIFLE NOTES.

At the annual meeting of the Paterson Rifle Association, on Feb. 1, the following board of officers was elected for 1894: Wm. S. Newton, President; John Weston, Vice-President; Frank Stokes, Recording Secretary; W. S. Brooks, Financial Secretary; W. Dutcher, Treasurer; J. Ransom, Captain; J. C. Welcher, Vice-Captain; Trustees—W. S. Brooks, J. Weston, A. Newby.

A match will take place at the Bunker Hill Range, Paterson, on March 4, between two of Paterson's crack rifle shots, Messrs. August Deitrich and James Irons, 50 shots per man, for \$20 a side, distance 100 yds., 20-ring target.

Not being satisfied with the results of the last two matches with the Greenville Club, the Excelsior Club has challenged the Greenville Club to shoot another series of matches, best two out of three. The Excelsior Club is now waiting for the Greenville Club to set the date for the first match of the new series.

Messrs. Hansen and Boyce, of the Excelsior Rifle Club, will meet Collins and Plaisted, of the Greenville Club, at the Greenville Park this afternoon in a match, 50 shots per man. Geo. C. Varick shipped a 25 lb. turkey out to Armbruster yesterday, with the request to have it ready for the winners, as soon as the match is finished.

At a meeting of the directors of the National Rifle Association, held on Saturday afternoon, resolutions of sorrow were adopted over the death of Capt. J. S. Shepherd.

After a long season of inactivity, the Our Own Club of Newark, has resumed its rifle practice. The club is in contemplation a series of team matches with the Hudson Club of Jersey City.

The Syracuse Rifle Club keeps up its out-door practice. The club contains some good shots. In last week's practice, A. A. Stillman made three scores off-hand at the standard target, 200 yds, as follows: 80-59-54. A. Ward from muzzle rest made 90-105-93, on standard rest target.

## Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

## FIXTURES.

- March 21.—Union Gun Club, 25 live bird shoot, \$20 entry, at Springfield, N. J.
- March 26.—Acme Gun Club, open shoot at Dexter Park, targets and birds.
- April 4-6.—Interstate Manufacturers' and Dealers' Association's grand American handicap at Dexter Park, Long Island.
- April 4-7.—Texas State Sportsmen's Association eighteenth annual meeting, at Austin, Texas. Wallace Miller, Sec'y.
- April 4-8.—California State Sportsmen's Association tournament, at San Francisco.

- June 5-7.—Kansas State Sportsmen's Association's fifth annual tournament, Topeka, Kansas. J. C. Clark, Sec'y.
- June 11-16.—New York State Sportsmen's Association for the Protection of Fish and Game, thirty-sixth annual tournament, at Utica, N. Y., under auspices of Oneida County Sportsmen's Association.
- June 12-14.—Atlantic City Rod and Gun Club, three days' tournament. Address R. C. Grieson, Sec'y, Atlantic City, N. J.
- June 14-16.—Sportsmen's Association of the Northwest, annual tournament, at Tacoma, Wash.
- June 19-21.—Chamberlin Cartridge and Target Company's first annual tournament, at Cleveland, Ohio. \$1,000 added money.
- Aug. 21-24.—Pennsylvania State Sportsmen's Association annual tournament, under auspices of Altoona Rod and Gun Club, at Wopsoncock Park, Altoona.
- Oct. 4-5.—West Newburg (N. Y.) Gun and Rifle Association's fall tournament.

## Cumberland Gun Carnival.

LOWELL, Ind., Feb. 22.—The fourteenth annual celebration and the first annual winter carnival of the Cumberland Gun Club, the Cumberland jubilee, began to-day. Considering the unfavorable state of the weather, it being cold and very windy, some remarkable scores were made.

To-day's scores:

Cumberland introductory, five live birds: Bingham 5, Loveday 1, Eich 5, Gale 3, Quimby 3, Purinton 5, Bissell 5, Sheppard Jr. 2, Robbins 5, Sheppard Sr. 5. Ties divided.

Sportsman's Review contest, twenty-five bluecocks: Bingham 24, Eich 18, Robbins 18, Bissell 12, Quimby 7, Purinton 5, Sheppard 12, Gammon 12.

Gammon handicap, twelve entries, twenty live birds: G. C. Gale, of Cumberland Gun Club, won by a score of 11 out of 20 and handicap of 10 birds.

Free for all, ten live birds: Bingham 10, Robbins 6, Purinton 7, Stafford 5, Loveday 5, Gammon 6, Quimby 6, Eich 7.

## DRIVERS AND TWISTERS.

The Myrtle Park Gun Club, which has nicely situated and finely equipped grounds on Elmwood avenue, Irvington, N. J., had a pleasant shoot on Feb. 22. There were eight events on the programme, and the scores were good, as was the entry list. In event No. 1, at 10 singles, T. Smith broke 9, F. Compton 8, E. A. Young 9, J. McCollum 8, J. Momm 5, Geissler 6. No. 2, same: T. Compton 8, McCollum 6, N. Compton 6, Momm 3, Geissler 7. No. 4, same: F. Smith 7, G. Howard 7, McCollum 7, Dr. English 6, Young 5, N. Compton 6. No. 5, same: Momm 2, McCollum 3, Compton 9, Howard 7, Young 7, Allen 6, Bradbury 5, Wilson 7. No. 6, 25 singles: F. Compton 21, McCollum 16, Howard 15, Smith 17, Young 14, English 10. No. 7, 10 singles: McCollum 8, Young 7, F. Compton 10, Smith 8, Ball 6, Wilson 6, N. Compton 6, English 4, Howard 7, Bradbury 3. Then came the wind-up shoot, also at 10 singles, in which all hands entered: Young 5, English 6, F. Compton 8, Smith 6, Wilson 5, McCollum 3, Momm 2, Howard 3, Allen 6, N. Compton 7, Geissler 4, Ball 6.

The Rochester Rod and Gun Club began another series of handicap contests for valuable prizes on Wednesday. The dates for the shoots are: March 3, 14, 17, 28 and 31, April 4, 7, 18 and 21, May 2, 5, 16 and 19, June 6, 9, 20 and July 14, 25 and 28, Aug. 8, 11, 22 and 25, and Sept. 5, 8, 19 and 22. The prizes that will go to the winners of this series are: First, watch chain, valued at \$15; second, seal ring, valued at \$10; third, 40 per cent. of the cash deposit; fourth, 35 per cent. of the cash deposit; fifth, 25 per cent. of the cash deposit. The members of the club have been reclassified for this contest. Twenty-five is the maximum number of members that any shooter will be allowed. Shooters will reclassify themselves as the shoot progresses. For instance, should a man in Class C who is allowed 33 targets smash his 25th target on his 30th shot, he will be advanced to the "thirty" division in his class. Contestants will be allowed to make up any back scores upon any open date.

T. W. Morley, the well-known Paterson expert, has a very severe attack of the match-shooting fever just now, and is taking all the chances that offer, whether in his favor or not. He is now billed for the following contests, all of which as a matter of course are "sure things": On Tuesday, March 6, at 15 live birds, for \$20 a side, against Chas. F. Lenora of Passaic; Wednesday, March 14, at 50 live birds, for \$50 a side, against T. C. Wright, of Paterson; Wednesday, March 21, at 50 live birds, for \$50 a side, against Gus E. Grief, of Carlstadt; Wednesday, April 4, 50 live birds, for \$50 a side, against John H. Outwater, of Rutherford (return match); same day, at 15 live birds, for \$25 a side, against John Ryan, of Hackensack. The matches against Lenora and Ryan will be contested there, the other two at the club. The matches will be shot at Willard's, Paterson. Shooting each day will begin at 1 P. M., and there will always be plenty of birds on hand for sweepstake shooting.

The Yauticaw Gun Club and the Nutley Rod and Gun Club, both of Nutley, shot a team match on the latter's grounds on Feb. 22, each club putting in five men, who shot at 25 targets each, from unknown traps and angles. Frank E. Butler was referee. The fact of having to shoot up hill with trees for a background, made the work far below the average. Scores: Yauticaw—R. K. Cooke 10, G. A. Ward 5, W. S. Condit 10, E. R. DeWolfe 7, G. R. Deakin 5, total 37. Nutley—J. W. Spear 4, S. Davis 13, J. Richardson 6, A. C. Brown 9, Chas. Husby 4, total 36. Sweepstakes—No. 1, 10 targets: F. Seale 10, W. Rusby 4, Thatcher 1, C. Rusby 3. No. 2, same: Richardson 5, W. Rusby 2, Davis 5, Thatcher 1, J. Spear 3, C. Rusby 1, Brown 3, Hemmerly 0. No. 3, same: Richardson 3, C. Rusby 3, Davis 5, Thatcher 4, W. Rusby 3, Brown 2, Hemmerly 2, Spear 2, Seale 0.

Every holiday the members of the West Side Gun Club, of Newark, hold an all-day's shoot, the principal event being for the target championship at 25 bluecock targets per man, and for the live bird championship at 10 live birds each. On Washington's Birthday the former event was contested, there being members on hand. The first was won by Henry C. Koegel, who broke 20, O. Meisel 16, W. Buob 16, Ferd. Hilfers 14, L. Bischof 14, W. Drastel 14, J. Schoppeler 13, H. Groel 12, J. Weber 12 and J. Gerst 10. Then came two 10 targets, in the first of which the scores were Koegel 10, Drastel 8, Weber 6, Buob 8, Gerst 7, F. Seitz 7, Hilfers 8, Schoppeler 8, Groel 8, O. Meisel 6, L. Bischof 6. No. 2: Drastel 5, Buob 7, Gerst 5, Seitz 6, Hilfers 8, Groel 5, Meisel 5, J. Jaquin 5. In the final 5 targets Meisel broke 4, Jaquin 3, Hilfers 3, Weber 2, Seitz 2 and Buob 2.

The return match between the Brighton Gun Club, of East Orange, and the Roseville Gun Club, of Newark, took place on the former's grounds on Feb. 22. The result was a victory for the home shooters by the appended scores: Brighton—S. Badgley 18, Harry Canfield 18, W. H. O'Malley 14, Geo. Gower 14, J. Ackerman 14, Edward George 12, total 103. Roseville—B. Rist 9, T. S. Meeker 11, Abe Wheaton 10, G. Wheaton 10, R. Garrity 14, J. Decker 14, Geo. Huff 14, total 88. Sweepstake at 10 targets following above: J. Ackerman, Sr., 6, Canfield 8, Gower 8, Geo. Kautcher 7, O. Balder 3, J. E. Harris 3, Harry 3, H. Rist 7, Meeker 7, Badgley 8, T. W. Voorhees 6, J. Harrison 1, A. Dukes 9, H. F. Loverel 4, J. Ackerman, Jr., 6, A. Wheaton 5.

We are informed by Mr. John A. Hartner, the major-domo of shooting in and about Baltimore, Md., that on April 11, 12 and 13, the ever-lively Baltimore Gun Club will hold its tenth annual tournament at Baltimore. Although Mr. Hartner does not name the grounds we presume the shoot will take place at Acton's Park on the opposite side of the Patapsco River. The shoot will be under the management of H. A. Penrose of New London, Conn., and E. D. Miller of Springfield, N. J., which is proof positive that there will not be much loss of life and excitement, but that "hustle" will be the word all through. Programmes will be out in a few days. Watch for them, as the events will be worth entering.

The gold championship medal of the West End Rod and Gun Club of Newark was shot for on its Grove street grounds on Washington's Birthday, each member shooting at 20 bluecock targets, 18 yds. rise. Oscar Leuddeke and M. Neigert tied on 17 breaks each and shot off at 10 targets each, when Leuddeke pulled out a winner, breaking 9 to Neigert's 8. Neigert is a member of the Newark Police Club and is a reliable shot with either revolver, rifle or shotgun. The other scores in the main contest were: J. B. Young 16, Spann 11, A. Leutheusser 16, F. Braech 10, E. Womelsdorf 10, A. Freund 8, Kolbenschiag 10, Burckhardt 10, Winters 11, F. Neigert 10. This club holds a live bird shoot once each month.

The Ideal Manufacturing Company, of New Haven, has just put upon the market a new loading machine which has several original features to commend it to the sportsman. It is arranged to measure with great nicety loads of black or nitro powders, from 10 grs. to 40 grs., and from 1/4 gr. to 5 drs. It is also provided with a "cut-off stop" not to be found in other similar machines, by means of which the measures are accurately and uniformly filled, without suffering from the jar of the machine.

The Glenmore Shooting Club, of Philadelphia, held its semi-annual club shoot on Feb. 17, each member shooting at 35 targets. The scores were: Carlton 27, Buckley 28, Thompson 23, Kuhlman 15, Kurtz 20, Day 25, Herz 22, Bial 22, E. B. Bial 22, H. Bial 22, Cassidy 22, Morris 17, Turnbull 15, Corcoran 24, Melville 22, Kearney 21, Shiltz 16, D. Duffy 20, R. Duffy 21, Cunney 12, Fitzhugh 8.

The Wilmerding Gun Club, of Pittsburgh, held a shoot on Feb. 16 and the following scores were made out of a possible 25 targets: Dr. Fix 19, S. S. Bishop 17, W. Sharrard 16, W. Brush 16, J. Wampler 16, F. McIntosh 15, A. Mackert 13, F. Hepping 10, O. M. Reich 10. In a 10-target sweep Mackert broke 9, Fix 8, McIntosh 8, Brush 8, Bishop 7, Sharrard 7, Wampler 6, Hepping 3.

The Amateur Gun Club of Newark held a shoot on Feb. 22, when the attendance was light but the sport lively. At a 25-target match between W. Gehring and J. Minion, Gehring won, breaking 18 to Minion's 15. In a series of 15-target sweeps there were the results: Gehring shot at 50, broke 29; Ganz shot at 50, broke 25; McKean shot at 30, broke 15; Lum shot at 20, broke 11.

On Feb. 15 the West Toronto Junction Gun Club and the Victoria Gun Club shot a match on the latter's grounds, the teams comprising seven men each, and each man shooting at 25 targets. The Junction team won by a total of 128 breaks to the Victoria's 120. W. Davage was referee.

Fredrich's shooting grounds at Waverly, near Elizabeth, was the scene of the initial shoot of the Owl Gun Club on Feb. 22, each man shooting at 25 bluecock targets. O. Bonnett broke 23, J. Grabach 18, F. Heller 17, A. Brohm 15, J. Brocker 11, A. Arom 14, F. Keller 10 and H. Holzhauser 10.

Elliott Smith, President of the American Wood Powder Co., shot a match at Class's Morristown grounds on Feb. 22, against Arthur Dean. The conditions called for 25 live birds for \$25 a side. On the fifteenth round Smith was shot out and Dean took the purse.

The Amateur Gun Club, of Newark, will hold a team shoot on its grounds, on March 17, the losing team to pay for an oyster supper. The teams will be: Gehring, Ganz, Lumpert and Metzler, against Lum, Rist, Minion and Sonnenburger.

In the club shoot of the Central Amateur Gun Club of Newark on Washington's Birthday, at 25 targets each, Dryer broke 11, Fink 9, Spragg 8, Poole 8, Sanders 5, Oaneccaro 5, Marsh 5, Selver 3 and Griffiths 3.

Next Thursday will be Newark Gun Club day at John Erb's grounds. There will be the usual open sweeps in addition to the club shoot.

C. H. TOWNSEND.

## The Hillside Like the McMurchy System.

CHESTER HILL, Pa., Feb. 22.—What indicated a big shoot was spoiled by the snow that fell last night. But there were enough stars in the band to keep the trap going from twelve o'clock until dark. There being no printed program, the races were made to suit the shooters and two 15 target events were shot on the McMurchy system and they gave great satisfaction. Some kicking was done at first by those getting 14, but when it was found that they would not have got any more had the purses been divided 10, 30, 20 and 10 per cent, they saw what a good scheme it was, and a great many more races of this kind will be shot at Philadelphia in the near future. The shooters of Philadelphia want to congratulate Mr. McMurchy for finding out a plan where dropping will not be rewarded.

The principal event of the day was 25 targets, \$2.50 entrance, Mr. Carlisle getting away with first money with 23 out of 25. To event No. 13 a large turkey weighing 20 lbs. was added to first money, and our old friend Green (Wm. Garvin), got away with the turkey and money in fine style, being the only one to get 15 straight. Taking the shoot altogether it was a success, as are all the shoots given by this club as the management of said club is very liberal and all the shooters like to go to see them even if their grounds are so unhandy to get to. If this club could get grounds convenient to the railroad, there would not be a more popular one in the State.

## Rochester Rod and Gun Club.

ROCHESTER, N. Y., Feb. 23.—Inclosed you will find the scores of our club tournament held on Washington's Birthday, in all the events except the team race, which was an optional sweep and shot under the old style of money division. The purses were divided as suggested by Mr. Harvey McMurchy in his new handicap, an illustration of which appeared in your last issue. This system certainly prevents dropping for place, and the general opinion was that it would do first-rate for races of 15 targets or more, as in 10 bird events so many get in the ties there is hardly any chance of a man winning where there are large numbers of entries and the shooting rather difficult a straight score would pay more money than under the usual division of purses.

Mr. E. C. Meyer and H. M. Stewart were chosen captains to divide the club members into teams and shoot for a supper, the losing side to settle the bill. Owing to the stormy day they were only twenty members present, they were the old stand-bys, and always turn out when wanted.

The feature of the team race was the last squad, which was composed of only two men, one from each side, and they were of about equal rating. On this squad depended the result. Mr. Quirk proved himself equal to the occasion, but alas! Mr. Maguire (whose real name by the way, is Thos. H. Kent) must have lost his nerve, he certainly lost the team race, for he only succeeded in getting a small piece out of 4 of the 15 targets. However, we all enjoyed the supper and want just such another race soon.

No. 1, 10 birds: Tinsdale 8, Glover 8, Mann 6, Austin 7, Boest 5, Preston 4, Hicks 7, Whitney 9, Squire 5, Stewart 8, Palmer 7, Worth 5, Quirk 9, Beyer 9, Meyer 9.

No. 2, 15 birds: Worth 12, Borst 10, Truesdale 7, Palmer 8, Squires 13, Beyer 12, Whitney 10, Stewart 14, Hicks 10, Stewart 11, Preston 10, Mann 7, Gardner 13, Austin 11.

No. 3, 15 birds: Worth 13, Squires 10, Stewart 10, Meyer 15, Whitney 11, McGuire 10, Beyer 11, Borst 7, Burton 3, Gardner 7, Glover 12, Palmer 11.

No. 4, 10 birds: Mann 10, Preston 7, Maguire 7, Andrews 7, Quirk 6, Hicks 6, Worth 10, Stewart 7, Whitney 8, Austin 8, Meyer 8, Truesdale 6, Gregg 8, Beyer 10, H. H. H. 6, Borst 6, Gardner 5, Burton 3, Babcock 6.

## A SNAKE UP A TREE.

FAR-REACHING effects often follow the most trivial happenings. A celebrated English preacher ascribed his conversion to a train of thought prompted by hearing the distant barking of a dog. One day last autumn, in Missouri woods, a blacksnake climbed a tree. It was a common snake, an ordinary tree and an every-day climb; but it has been read of and thought about and written upon from Missouri to Maryland, from Mississippi to Massachusetts, and from New Jersey to Michigan. And all because Mr. Horace Kephart, of St. Louis, happened to see the snake on the tree trunk and wrote about it to FOREST AND STREAM.

For one thing this shows, as numerous other discussions in our columns of the ways of snakes have shown, that snakes are a popular subject. People like to talk and to write about them. Most persons actually know very little truth about snakes. They imbibe false notions from infancy up. What they think they know is often error. Even the children's papers deal out snake lies; and more's the pity, in pretended good faith, like the hideously silly story in *Harper's Young People* of a link snake which, when broken to pieces and scattered about, collects itself together again. Before the average man may know the truth here he must divest himself of error; he cannot learn the facts of snake life until he shall have unlearned the fables. This is emphatically true as to the popular notion of the harmful character of all snakes. We feel very sure that the letters which we have printed in response to Mr. Kephart's inquiry must have their share in influencing those who may read them to entertain a more sensible regard for harmless snake life. It may be that the killing of this blacksnake on a tree trunk in Missouri woods will thus be the means of assuring to some others of the serpent tribe, from the human beings who encounter them, immunity from revolver balls, stones and clubs.

There are few tasks to which the average man addresses himself with more cheerful alacrity or more buoyant complacency than to the regulation of the universe by decreeing and executing the death penalty upon certain forms of animal life, which he is pleased to condemn as noxious or superfluous. If he happens to come upon a hawk with a game bird in its talons, inconitently he kills the hawk and exhorts all sportsmen to kill all hawks that the earth may be rid of them. If he surprises a snake making a meal of bird's eggs, he stamps it to death and condemns the entire ophidian tribe. If he sees the birds making away with his small fruit, he runs for his gun to kill them. Thus man constitutes himself an unreasonable factor in disturbing or maintaining the balance of

nature. Whether the effect of his interference in any particular case may be beneficial or injurious must for the most part depend upon circumstances and conditions of which he is ignorant. But whatever the result, the individual prosecutor, judge, jury and executioner never wavers in his conviction that he has done something to help run the universe on better business principles.

## NUISANCES TO BE ABATED.

JUDGE HOUGHTON has handed down a decision in Saratoga county, N. Y., in the case of Harvey Cook against State Game and Fish Protector C. H. Barber. Cook had set-lines in Lake Lonely; and the protector destroyed them. Thereupon Cook brought suit to recover the value of the apparatus, on the claim that the law under which the protector had summarily destroyed the lines was unconstitutional and repugnant to that clause of the United States Constitution which forbids the taking of private property without due process of law. Cook claimed, moreover, to have secured permission from the riparian owners to fish as he pleased. Judge Houghton disposes of both of these contentions, holding that for protective purposes the State has jurisdiction over all waters tributary to the navigable streams; and that the law in the case is not unconstitutional.

It will be recalled that this same question of the right of protectors summarily to destroy nets as nuisances has been passed upon by the Court of Appeals. This was in a Jefferson county case reported in our issue of Feb. 27, 1890. Suit was brought against Protector Steele to recover the value of unlawful nets destroyed by him. In the lower court Judge Williams found for the plaintiff, but the General Term reversed the decision and the Court of Appeals also sustained the law. The case was then carried to the Supreme Court of the United States, where it yet awaits decision. We believe that the end will be to affirm the constitutionality of the statute. In the meantime, netters and set-liners may not hope to rob the public and escape punishment by any question of the integrity of the law which declares their unlawful contrivances to be public nuisances and as such subject to summary abatement. He does not read the signs of the times aright who deludes himself with the notion that the public is not growing every year more intolerant of the use of nets and set-lines and all like contrivances for game fish in the inland waters of the State. They are regarded as nuisances to be abated, and even if the present law should be overthrown by the United States Supreme Court, another statute would be devised to accomplish the required end. The nets must go, the set-lines must go, the fish pirates must go.

## OPPORTUNITY.

THE old saw runs that opportunity makes the thief. It makes the "game hog" too. One moose may suffice for the sportsman, who because he is a sportsman goes through toil and fatigue and patient waiting to secure it; but no one has yet determined how many moose must be slaughtered to satiate the killing propensities of those pseudo sportsmen, who because they are not sportsmen are led into moose yards and given opportunity to fire into game under conditions closely simulating the taking off of the family cow, when she has gone dry and the country butcher has dickered for her as so much tough beef on the hoof. One day this winter some Indians discovered a moose yard about seventy miles from Quebec, and repairing to the ancient city made their find known to two individuals who had in them the making of game butchers when opportunity should offer. In due time the savages—Indian and white—were upon the stalled game; and when the white contingent returned to Quebec, they boasted of having "brought down" seven of the snowed-in creatures. They had improved their opportunity. They had improved it in their own way. Their way is not the way of the man who hunts his game. The impelling motives of the moose hunter and the moose yarder are as radically different as the two methods of getting the game. It would be quite as difficult to conceive of the one "downing" the helpless game in the snow, as of the other undertaking a real moose hunt man fashion. The hunter may have reason to exult in his exploit and to relate its doing with pride, but why anyone should boast without shame the killing of seven moose found in a yard by Indians, is a question which will puzzle most white men.

The Province of Quebec limits non-resident hunters to

one moose in a season. The limitation is proper, and no reasonable man will object to it. One moose, fairly hunted, brought down after a long expedition into the woods, as the winning of an arduous and skilled pursuit, is reward enough. But where Quebec makes a mistake is in not putting some limitation upon the destructive propensities of its own residents; for there are not many moose in the Province, and the supply should be drawn upon with discretion.

## FATHERS AND SONS.

THE time has long since gone by when one might go into the field taking thought of himself alone and making no account of those who are to come after him. As we of to-day are given opportunity of shooting and fishing, so must we see to it that the blessed heritage is passed on unimpaired to those who shall justly hold us to account for our stewardship.

Among the FOREST AND STREAM amateur photographs, of which reproductions have been given, there was one which pictured two deer hunters watching on an Adirondack runaway. The hunters were a man and a boy—father and son; and the picture had a special and peculiar interest when it was received at this office, for it recalled and gave point to a declaration which had been made years before by the man, when his boy was a babe: "I intend to do what I can, so that my boy may have just as good hunting in the Adirondacks as I have had." It is this spirit which should animate and control not only the individual sportsman for his own blood alone, but the entire body of sportsmen for those who are to take their places.

## SNAP SHOTS.

THE Florida *Citizen* makes a sensible plea for the protection of birds of plumage. Its demand for their preservation is not based upon sentiment, but upon the hard business fact that the birds add to the attractiveness of the State for winter tourists; and it cites as a case in point the pelicans of Port Tampa, which were formerly so harried by shooters that it was impossible to get within 200 yds. of them. Subsequently "shooting was prohibited, and the pelicans have since become so tame that they gather upon the bars only a few feet away from the docks and hotel, and visitors find real pleasure in watching their awkward and grotesque antics, and in observing their methods of fishing." This recalls the tame pelicans which frequented Mr. Kirk Munroe's wharf at Biscayne Bay, and about which he once wrote in our natural history columns. It is a condition which might exist at all tourist-frequented points in Florida if common sense could only have sway.

We learn with a regret which will be shared by others of the death of Dr. Nathan G. Daggett, of Schenectady, N. Y., who for many years was a contributor to our columns over the pen name "Dorp." Dr. Daggett was one of the unnumbered multitude of those who seek in pursuit of game and study of wildwood creatures the upbuilding which comes of life in the open air. He was a close observer of nature, and few readers will fail to recall his frequent studies of the ways of the ruffed grouse.

A bill has been introduced into the New York Legislature providing that county supervisors' ordinances relating to game and fish "shall apply alike to all citizens of the State of New York;" and repealing all ordinances already passed by boards of supervisors discriminating in favor of or against citizens of any county or counties. This is sound to the core; but is it possible that such a statute is required to prevent these churlish measures? Something is wrong with the constitution of the State if under it citizens of one county may cut off those of another from the common privileges of all citizens of one State. Non-resident fish and game laws are not in keeping with the spirit of the age. They ought everywhere to be abolished.

Few persons realize the rapidity with which the choice portions of the Adirondacks have been acquired by private parties, and the extent to which they have been converted into preserves, from which the public are excluded. Something like 565,000 acres of Adirondack lands are now fenced or posted as game and fish parks. And the end is not yet.

## The Sportsman Tourist.

### CALIFORNIA NOTES.

OUR winter in northern California has been very wet thus far. It has rained, upon an average, about three days out of every week. The winter duck shooting has been poor, in consequence, as the birds haunt the overflow, leaving the regular ducking grounds untenanted. Quail shooting was as good as usual, early in the season, but has been very poor since New Years. As the close season is now at hand, the birds will escape further molestation, which will give all the better sport next year.

Our two years' close season for deer did great good throughout the State. It gave them a much needed rest; and last fall a hunter could go out any day, with a fair prospect of coming home with a good buck.

Many deer were slaughtered unlawfully, but as the law stopped the marketing of the carcasses and skins, it stopped the depredations of the market-hunter and the skin-butcher, and so saved thousands that would have been otherwise killed.

If a law could only be devised that would adequately punish the wanton fool, who goes into the mountains and shoots down deer indiscriminately, just to prove his skill with the rifle, and leaves the carcass to rot, how it would delight the heart of the true sportsman.

And, by the way, speaking of wanton slaughter reminds me of something else. What should a man do, who catches boys in *flagrante delicto*, shooting harmless song-birds—and rare ones at that? Some of your readers may remember that about a year ago I wrote an article about the American dippers or water ousels that haunted Auburn ravine every winter. Well, this fall they came back about their usual time, and some two weeks thereafter I caught two boys coming up the road which skirts the stream, one of them carrying an old muzzleloading shotgun, with the barrel tied to the stock with twine, and the other a string of harmless birds, six of which were water ousels. Was I angry? Oh! No! But what could I do? The boys were too young to be prosecuted, and as the gun had not burst and killed at least one of them, what was there to do?

And so even the harmless ousels go, and we seem to be powerless to prevent it. It makes one sick of their kind, to dwell upon the subject. Oh! that every man could have a little feeling in his heart for the dumb creatures, and not go on his way, taking precious life in wantonness! When abroad in the woods and fields I often think of those lines of Wordsworth's:

Ah, what a warning for a thoughtless man,  
Could field or grove, could any spot of earth  
Show to his eye an image of the pangs  
Which it hath witnessed—render back an echo  
Of the sad steps by which it hath been trod!

The sportsmen of the Pacific slope deeply regret the absence of FOREST AND STREAM from our great Midwinter Fair. Great numbers of them, the scribe among the other unfortunates, were unable to visit Chicago, and hoped they would be able to form its personal acquaintance this winter in San Francisco. Our Fair is a magnificent showing of Western pluck and daring, and in many things is better worth visiting than was the great one at Chicago—so say our visitors—but there, I won't say another word, as some one would be sure to say, "There, there's that infernal Californian, bragging as usual!"

Just one thing more and I am done! How pleased I am that everything is settled regarding powders! Here I had been struggling along the best I could in my humble Western way, trying by actual experiment in the field to determine the best kinds and quantities of powders to use in different kinds of shooting, and here come Messrs. Tenner, Von Lengerke and various other more modest men who cover their identity, like myself, under different *noms de plume*, and settle the whole matter. If any man can arise from a perusal of all this ballistic lore without being thoroughly convinced of the superiority of good, old-fashioned black powder, it must be because he has a mental squint.

You will never catch me using "chained wild beasts" to kill quail with. I've been shooting for forty years with black powder, and I am glad that I won't have to be tempted to make any further experiments with anything else. "Old friends are best. King James used to call for his old shoes; they were easiest for his feet."

Talking about wild beasts has reminded me of a story that I must tell before I close. "I'll tell the tale as 'twas told to me." A rancher over in the lower foothills of Nevada county was awakened the other night by a racket in his barn shortly after he had retired. There was a cow and a week-old calf in the stable end of the barn, and no other occupants. The man heard the calf bellow, followed by a furious pounding and thrashing, mixed with loud snorts from the cow. He jumped up and hurried on his outer garments, lighted a lantern and ran for the barn. The man came from Pike county, Missouri, and is a most "amoozin' old cuss," as Artemas Ward used to say about his kangaroo, and I will let him tell his story in his own words. Said he:

"I lit out fur the barn at a powerful smart gait, an' opened the door an' looked in, an' the ole cow kim at me a-chargin'. I jest slammed the door in her face an' stuck in the pin, an' went to the main door an' went in. I looked over the manger an' spoke to her, kin' o' soothin' like, but she was powerful mad an' skeered up. She had the calf in a corner behin' her, an' was a-switchin' her tail an' a-shakin' her head, an' every now an' then a-turnin' to kinder grunt at her calf an' gi' it a slat wi' her tongue, kind o' encouragin' like, an' then she'd charge forward agin. Wal, I cuddin't see what all the critter anyhow, when all at once I heered suthin' a-spittin' like right over my head, an' I hilt the lantern up an' I seed two o' the dad burnest great green eyes on one o' the beams over where I was a-stannin' at ever I seed in my life. I didn't stay thar long, I tell ye, but scooted out the door, slammed it behint me an' put a brace agin it, an' put out fur the house. I roused my boy out of bed to hol' the lantern an' got my old Winchester down, an' see 'at thar was plenty o' cartridges in her, an' we went back. I hung the lantern on the tines o' a pitchfork, pushed it through the crack o' the door an' pulled my hat down over my eyes an' got down on my hams, so 's to hev the light over my head, as I could see better that-a-way. By an' by I got a good bead on the critter an' turned loose. The thing cum down kerchuck on the punshins in a snarl an' then went ter turnin' han'springs. The ole cow

started in a-charging agin; the boy got skeered up an' dropped the lantern an' run, an' fur a fac', I got in a right smart chance of a hurry to git back to the house myself. I waited a while till I cuddin't hear nothin' but the snorts of the cow an' then lit a cannle an' went back. I peeked in an' seed suthin' a-lyin' still on the punshins, an' I went in an' thar lied the biggest mountain lion 'at ye iver seed, as dead as a doornail, wi' a bullet through his head."

It seems that the cougar leaped in through a small opening made in lieu of a window in the back of the stable, with the intent of having veal for supper. He was charged so furiously by the cow that he could not escape by the way he came and took refuge on the beams overhead. The calf was torn somewhat upon one shoulder, but not severely.

AUBURN, Cal.

### DANVIS FOLKS.—XXIV.

#### Dark Days.

SAM'S chores were done betimes next morning, and his breakfast was hardly eaten when he announced an abrupt departure by saying that he had an errand at the village.

"What be ye in sech a tew for?" Huldah asked. "You haint aout o' terbacker, I know, fer the's nigh a paper full in the sullerway, an' it haint a week sence you got a paound o' powder an' four paounds o' shot." She could think of no other possible errands that demanded such immediate attention. She followed Sam to the door and laid a hand on his arm. "What is 't, Sam? The's suthin' a-pesterin' on you, I know by your looks. Why don't you tell what 't is? Haint your wife the one you 'd orter tell yer troubles to?"

"No man ever had a better one," he said, earnestly. "It haint nothin' much. Don't ye cross no bridges till ye come to 'em, Huldah," and he hurried away at as swift a pace as ever took him to a runaway, barring the exigencies that demanded running. He wished it was night, that he might run now, but it would not do, for every old woman on his route would sally forth to know if he was going for the doctor and delay him with no end of questions.

When he entered Bascom's store he was startled to see how bare it had become since he saw it last. Half the shelves were empty, and the tempting display of the counters had shrunk to a forlorn array of odds and ends. A sharp-eyed stranger was prowling softly about with a note book and pencil in hand, and Bascom was lounging near, in apparently careless attendance:

"Why, good mornin', Lovel. Glad to see you. Mr. Whitney Mr. Lovel. My friend, Mr. Whitney, is helping me take account of stock. Lovel's a particular friend of mine, Whitney. Greatest fox hunter in the country."

Mr. Whitney nodded, looked suspiciously at Sam and went on noting down memoranda.

"Say, Lovel," Bascom continued, hurriedly, "I want to go fox hunting with you, or rabbit hunting. That suits me better. What do you say to going some day next week?"

"I don't never hunt rabbits," Sam answered, with a preoccupied air. "Break my dogs never to foller 'em. I'd like to see you a minute, Mr. Bascom."

"Certainly, certainly, step this way. Well, then, call it foxes, though I never could kill a fox; I aint sharp enough for them," and he led Sam to the dingy little counting room, whither the lynx eyes of Whitney followed them till the door closed upon them.

"What can I do for you, Lovel?" Bascom asked with solicitous good humor.

"Look a here, Mr. Bascom," said Sam in a low, restrained voice, and dashing at his subject as a bashful man does when he dare not hesitate. "I want you to gi' me some s'curity fer what I've signed wi' ye on them bank notes. It's run up to nine hundred dollars an' up'ards, an' ef anything should happen it 'ould knock me gally west."

"Why, certainly, Lovel, I'll be glad to secure you. What do you say to a lien on the stock in the store?"

"Why, seems 's 'ough it looks kinder slim," Sam said doubtfully.

"Well, perhaps, I've had a big trade lately, but it's worth a good deal more'n nine hundred. I shall be getting in my winter's stock next week, though, an' I can fix you then so you'll feel easy enough."

Sam shook his head. "I guess I'll take a lien on what you've got, an' you c'n gi' me another when you git your new goods in."

"All right, Lovel. I'll attend to it right off, to-morrow." Sam's countenance fell. "You see I can't attend to it to-day on account of helping Whitney. To-morrow will do just as well, won't it, Lovel?"

"I'd a good deal druther hev it made out to-day."

"Then, again," continued Bascom, "the town clerk and the 'Square have both gone to V'gennes. Went by early this mornin' and we couldn't get the papers made out."

"Wal, I s'pose I'll hafta wait," said Sam, turning to go. "You don't blame me none, Mr. Bascom? I haint got nothin' but the farm an' the's three o' folks dependin' on me, an' it 'ould be awf' tough if anything should happen."

"Why, of course, but you need n't be uneasy. But say, if you are," and he sank his voice to a whisper, "why don't you deed the farm back to your father?"

"No, sir," and Sam's face flushed, "I haint no slink ef I be a dumb fool."

"O, there's no harm in your doing that if it would make you feel any easier. That's all it would be for, anyway. But do as you like. Come down in the mornin' and we'll fix the lien."

He followed Sam to the outer door and looked after him with something of concern in his restless eyes, and then saying to himself, "If he will be a blasted fool he must take his chances with the rest," he returned to his uneasy lounging.

That night he was speeding behind Hamner's best horse toward the lake on his way to Canada, a fugitive from Danvis, where he was never seen again.

On his way to the village next morning, Sam was met by the ill tidings already running like wildfire along the quiet roads, that Bascom's store was closed, everything in it attached by distant creditors, and he gone, no one knew whither. Sam went on to receive complete assurance of the rumor, and then returned to his home, bearing the burden of a heavy heart. His white, set face frightened Huldah when he entered the kitchen.

"Be you sick?" she asked anxiously; but he did not answer till she had followed him into the bedroom. Then seating himself on the bed, he drew her to his knee, and with desperate rapidity told her the whole story of his wretched entanglement with the unscrupulous adventurer. She listened to the end without speaking, and then holding his face with both hands close to hers, she said:

"Sam, why didn't you tell me afore? I don't blame ye one mite fer nothin' but that. You hed orter ha' tol' me, an' mebbly I wouldn't ha' let ye, for I allers mistrusted that Bascom. He was tew clever an' tew false-eyed."

"Yis," said Sam, "tew dumb clever an' cute fer sech a dodunk as I be. He kep' me a-thinkin' it 'ould be all right tu-morrer, tu-morrer, wi' his promises. On'y yist-d'y he promised faithful tu gi' me security, an' naow all he hed is 'tached up an' he's gone an' lef' me tu face the music alone. Ev'rythin' we've got is jes the same as gone. Them bank fellers tu V'gennes don't show no marcy."

"Mebby father 'll help us, so 's t we can save the farm," said Huldah.

"I wouldn't ask him no more'n I'd eat my head off. He never thought none tew much on me, an' naow he'll think less on me. He'll tell you tu come hum wi' Bub, an' le' me go tu the Ol' Scratch."

"No, Sam, he knows I wouldn't never leave you, jest as well as you do," said Huldah, fervently stroking his frowzy, flaxen poll. "We're young an' tough an' we've got one another an' aour boy, an' what's the hul worl' compared? Don't you be downhearted."

"I know it all. But what hits me the hardest is what's goin' to become o' father an' Uncle Lisher an' Aunt Jerushy. They're all on 'em 'most past cuttin' the' own fodder. An' what ef we sh'd be sick er suthin'? The'd be nothin' fer 'em but tu go on the taown. It's like a chunk o' lead in my heart."

"They shan't never," she said, with suppressed vehemence, "we'll work aour fingers tu the bone fust. But there'll be a way aout somewheres. It's took us sudden an' we've got tu think."

"I've tried tu, but my head's all in a whirl an' my idees is all in a whew, like dry leaves in a whirlwin'."

"Well, we'll think it aout some way," said Huldah hopefully.

"The sheriff 'll be here tu rights," said Sam, "fer them bank fellers is sharper on the scent of a dollar 'an Drive on the track of a fresh-started fox. I'd rather take a wus lickin' 'an ever I got yit 'an tu see him a levyin' on the stuff an' the land that gran'ther cleared on the fust pitch 'at was made in Danvis. He could ha' settled at the lake ef he hedn't ben so feared o' fever 'n' aig. Mebbly ef he hed, an' I'd ha' ben raised there, I shouldn't ha' ben sech a tarnal fool. But then agin, mebbly I wouldn't ha' faoun' you. Anyhaow, the sheriff can't take you an' Bub away from me. Wal, I s'pose I mus' go tu werk, ef it is lunsome business, a duin' fer you do' know who. But it's better 'n mumpin'. Duin' anythin' is. But fust off I've got tu tell father an' Uncle Lisher, an' it's about the toughest job in the hul business."

"Wal, an' I'll talk it over wi' Aunt Jerushy," said Huldah.

"What a coward I be," Sam exclaimed. "Lord, I wish 't I c'd run off int' the woods an' hide, er lay daown an' sleep an' never wake up tu remember nothin'."

"O, no you don't nuther. You wanter live an' see what kin' of a hunter the baby's goin' tu be?" said his wife.

At length, facing the painful duty of inflicting pain, Sam called his father into the shop and in the fewest possible words, unsparing of self-condemnation, as a penitent of his own scourge, he told the ill tidings to the two old men. Uncle Lisha heard them with an attention divided by his work, after the first few words, listening while he entered the bristles in the awl holes with untrembling hands and drew the waxed ends with slow, strong pulls. When Sam concluded he said:

"Wal, good airth an' seas! The' haint no use o' cryin' over spilled milk. I guess the' won't none of us die afore aour time comes."

Timothy Lovell, although appalled by the calamity which threatened to break up the household wherein he had found such quiet contentment, offered only the mild reproof:

"You wan't ezackly preudent a-signin' wi' a man you didn't know no better," which he tempered by saying, "But you meant well an' hedn't no idee but what 't 'ould come all right."

Sam waited a little, giving them opportunity to say more, but they did not avail themselves of it, and for the ease of his mind he went forth to find some work to lay his hands to. His first look abroad revealed the well-known figure of the constable, rocking and swaying up the road, in his thorough-brace sulky, a species of carriage used by no other person in the community, save by the doctor.

The officer hitched his well-known white horse much too conspicuously in front of the house and then began to levy on the personal property in a disagreeably calm and businesslike manner. Sam had always liked Constable Beers and had voted for him at every March meeting for years, but he hated him now, and swore that he should never have his vote again. He, however, relented when the constable, having made his rounds, turned to him and said with a sigh of regret:

"Darn it all, Lovel, the' haint pus'nal prop'ty 'nough tu half satisfy the claim, an' I've got tu 'tach the land. I'm tormented sorry, but I've got tu do my duty. You musn't lay up no hard feelin' agin me as twix man an' man."

"I didn't know but you luffed tu, same as butchers luster kill critters," said Sam. "They haint nothin' agin the critters, but they like the business."

"Wal, then I don't," said the constable, and then in a loud whisper, though no one was in ear shot, "if you had any idee this was comin' why in tunkot didn't you deed the land back tu your father?"

"Probably, 'cordin' tu most folkses idee, 'cause I was a dumb fool."

ROWLAND E. ROBINSON.

### A Stray Carrier Pigeon.

CENTRAL LAKE, Mich., Feb. 19.—The Detroit Journal reports the arrival of a carrier pigeon with a silver band marked "G. H." around its neck at the hotel at Ottawa Beach. It was probably lost in the late storm. It makes its home with the hotel keeper, who sends messages by it from the woods to his house. Whose is it? KRLPIE.

## MEN AND SNAKES.

Editor Forest and Stream:

I have been much interested in the article on "Men and Snakes" by "Coahoma" in your issue of Feb. 24, and fully agree with him in his estimate of the brutality and barbarism of such of the human race as kill on sight every living creature that is large enough to attract their attention and not so large as to make them afraid to attack it. I often think when I read the account of some very large bags of game made by certain "sportsmen" that the element of slaughter is entirely too prominent a feature, and that the birds have been killed for the mere pleasure of destruction. I recently read, or rather looked over—for I could not bear to read much of it—Sir Samuel Baker's "Rifle and Hound in Ceylon." I never met with an account of more heartless and useless butchery. Elephants and buffalo, elk and deer were ruthlessly slaughtered; sometimes as many as a dozen in a single day, not to supply the needs of the camp, but for the mere excitement of killing, while the carcasses were left to rot upon the ground. Buffalo cows with calves by their sides were relentlessly shot down and left, in most cases to pollute the air. I am glad to be able to add that this happened when Sir Samuel was a comparatively young man, and I hope that before his death, which occurred a short time ago, he was able to see the folly of such wanton destruction.

There are, it seems to me, but three general excuses for destroying the lives of the lower animals. First, for use as food or clothing; second, because such lives may be harmful to the best interests of man; and third, for purposes of study. I am an ardent lover of hunting and fishing, and fully understand the passion that these pursuits inspire in the breasts of their devotees, I do not believe that such sports can be justified if the game so taken is not put to economic uses. In one sense at least I believe in pot-hunting. To me the pleasures of the field consist in the charm of nature's works among which I am led, the excitement of the search, the uncertainty of the result, and the emulation of matching my skill against the natural cunning of the game, but when the first flush of final triumph has passed away I must often confess to a feeling of sadness for the beautiful and happy life thus brought to an untimely end.

There is one point, however, in which I cannot so fully agree with "Coahoma." He speaks of the blacksnake as a "perfectly harmless creature." In my experience there is no more persistent and merciless robber of birds' nests than this same blacksnake, at least in the northern part of the country. I have had the satisfaction of ending the career of several of these fellows, taken in the very act in a tree a few yards from the ground, and have known of many other cases. They eat either eggs or young birds, as they may chance to find, and are skillful climbers of trees in the search for their prey. It is true they do destroy mice, but they also catch and devour toads and frogs, and these are "perfectly harmless creatures," the toad, at least, being moreover a very useful animal in fields and gardens from the great number of insects which it destroys. The blacksnake and various other of the medium-sized and large species are persistent hunters of toads and frogs, and probably destroy vast numbers of them. Against the mice which the snakes catch and eat, must be set the birds' eggs and young and also the toads and frogs, and I very much fear that the balance of the account will show on the wrong side for the snakes.

The smaller species, like the grass snake, garter snake, etc., do undoubtedly live to a great extent on insects, and in this respect must be classed as useful creatures; but I have found on several occasions a very small snake in suspicious proximity to the despoiled nest of a ground-building bird, which nest, to my certain knowledge, had contained eggs but a few hours before, and I have no doubt that the sly little wriggler in question was the culprit. If a choice is to be made between the snakes and the birds, there can be but one voice in the matter. The birds have generally endeared themselves to all observing people by their sprightly manners, graceful forms, beautiful plumage and agreeable notes; while snakes, which have none of these pleasing attributes, are generally held in detestation and aversion even by those who can give no good reason for the feeling. When, however, the food habits of these creatures are examined, other and more important points of difference are discovered. The investigations now being made in the food habits of birds lead to the conclusion that they are a race that cannot well be spared, and any element in nature which either destroys them or hinders their increase has need to show some very strong points of usefulness in other respects.

While I am willing to accord to snakes the "right to life, liberty and the pursuit of field mice," I must assert that they do not confine their pursuit to the field mice alone, but follow and destroy creatures that stand in the other scale of the economic balance. On the whole I do not believe that the snakes in this country occupy a position of great importance from either an economic or aesthetic point of view. They are not valued as an article of food, like fish, they do not supply a cheerful and pleasing feature in the landscape like birds, and the results of observations upon their food habits does not lead to the supposition that they are of great use in this respect, so that while all needless killing is to be deprecated, it would not appear that the snakes stand in any such important relations to other factors in the economy of nature that their taking off would seriously disturb the balance.

U. S. DEPARTMENT OF AGRICULTURE, Washington, D. C.

Editor Forest and Stream:

I have just read "Coahoma's" article wherein he reads Mr. Horace Kephart a lecture for shooting a blacksnake. Instead of censuring Mr. Kephart I wish to tender him my congratulations. I say kill every blacksnake in the land if you can. If "Coahoma" had been troubled in his mind as I have been troubled in my mind by the misdeeds of this God-cursed reptile, he would lie awake nights devising means to destroy it.

If he had lived in the woods alone for nine years and had entered into a compact of friendship with the birds, had furnished them food and nest material and protection in return for their songs and confidence, had waged a desperate conflict with the blacksnake to protect their

eggs and young, he would understand my feelings toward the blacksnake and other species nearly as destructive.

I was never a snake killer until I began to study bird life. At the present time I kill only such species as I know live mostly on birds and their eggs. The blacksnake (*Coleuber constrictor*), the milksnake (*Ophibolus eximius*) and the garter snake (*Eutania sirtalis*) are the three species most to be dreaded.

When these snakes increase in number the song birds decrease, and when it happens that snakes "winter kill," for a year or two thereafter birds increase rapidly. In another article I will give my experience in relation to the increase and decrease of birds on the Cape. I cannot speak for other localities.

HERMIT.

GLOUCESTER, MASS.

Editor Forest and Stream:

Allow me to thank you for the courteous recognition of my "plea for snakes" in your editorial columns. If you will permit me to play the role of critic upon your kindly criticism I think I can point out a fallacy in your observations which appears to be the underlying ground for much of the unreasoning persecution so generally waged against the harmless varieties of the snake family.

In the present enlightened state of intelligent minds I hope the recognition of a simple fact, as disclosed by learned searchers in the philological and historical aspects of Bible writings, and read in the indisputable records of nature by those qualified to interpret her writings, will not incur the charge of introducing a question of religious controversy into your columns. I assume that all intelligent readers accept what has become a mere truism of science and history, as recognized by all advanced teachers, both secular and divine; that the earth is older than any philosopher will undertake to compute; that the age of the human race is far greater than is assigned to it in Genesis; that the story of the Garden of Eden is a pretty and ingenious traditional myth of the early Israelites, held in common with the cosmogonies of other early races of men, but committed to writing at a comparatively late period in Hebrew history. The role assigned to the serpent in that drama has impressed itself on the minds of men as being what the lawyers would call an *a priori* investiture, whereas it is in reality purely *a fortiori*. In plainer terms, the natural fear and aversion to serpents which had grown up from man's experience suggested the part assigned to the serpent in the myth. Those people inhabited a country where deadly serpents abounded and they readily attached to them the idea of typical evil. But even in the present day, in India a practical distinction is made between venomous and non-venomous snakes, as a variety of the latter known as house snakes is not only tolerated, but cultivated, for their usefulness in destroying vermin in the dwellings. The Garden of Eden myth, so long regarded as history, has implanted in the minds of men, especially the more ignorant, a superstitious belief that a divine injunction rests upon them to destroy every snake that is unfortunate enough to come within their reach. This is pretty hard lines for the innocent varieties of the snake tribe, and it is to be hoped that advancing enlightenment will liberate them from such a cruel piece of barbarism and also emancipate men from the stigma of a gross superstition.

COAHOMA.

Editor Forest and Stream:

I was much interested while reading the article contributed by "Coahoma" treating upon snakes, and can truly say that his sentiments on that subject fully coincide with mine. I have often wondered why so many persons look with horror upon everything of the serpent kind and always kill them if possible to do so. Whether it is owing to the stories taken from heathenish mythology and told to one from childhood up, or to the awful yarns that one often hears about the terrible doings of some members of the ophidian tribe, or to other causes, I am unable to say, but it is certainly true that nine out of every ten persons—many of whom ought to know better—seem to have a fear more or less of snakes, even those of the most harmless varieties, and always try to maim or kill them.

I would no more think of killing or even hurting a non-venomous snake than of killing or wounding a toad, frog, lizard or a warbling bird; in fact many and many a time have I stopped to watch with the greatest interest the lithe and graceful movements of a snake, especially if a constrictor, and would consider the investigation of it as interesting as of any other creature belonging to the lower orders of nature's animate children.

One August day while riding I saw a green snake, and having caught it took it to my home in Asbury Park. The little fellow was about 2ft. in length and "as handsome as a picture." The little snake drew a crowd, and I was not only amused but surprised to note the ignorance shown about the timid, inoffensive thing. Some of those present were certain it had a stinger in its tail; others that its red forked tongue was its stinger; and others thought it must certainly have fangs; so I advised me to kill it before I was bitten or stung; as they saw it crawling up my sleeve they surely thought that some mishap would befall me, but after toying with the creature for awhile and explaining about it to them, scarcely one of the onlookers but would dare to handle it, thus showing what effect a little information about such matters has upon many persons.

A. L. L.

Editor Forest and Stream:

Five or six years ago I was passing out of my yard, carrying in one hand a setting pole, when I perceived at the side of a plank walk an object, evidently animate and of very peculiar appearance. It was nearly globular in shape, had eyes bright and protruding, and certain attachments, the nature of which I could not well make out. Its appearance was strikingly peculiar, and it was some little time before I found that it was one of my toads, and that it was endeavoring to keep from being pulled under the sidewalk. By means of the pole I succeeded in eliminating the puller, which proved to be a garter snake of moderate dimensions. Him I killed, and the pulley, evidently much relieved in mind, but with one hindleg badly lacerated, managed to retire from the scene of conflict to some place where it might nurse its wounds in peace.

This, I believe, was the last snake I have killed, and had he been pursuing his legitimate avocation at a distance from my garden, I should have wished to spare his life.

I was reminded of this occurrence on reading the letter

of "Coahoma" in a recent number of the FOREST AND STREAM, and the accompanying editorial. I liked "Coahoma's" letter, and coincide with him in the views therein expressed.

It is a good many years since I have killed a snake without some sufficient reason. Considered simply as snakes, I was never afraid of them. I should fear them merely as I would a panther or a grizzly, when possessing the apparent ability to do me harm. When a boy I felt some pride in compassing the destruction of a very large snake, as I would now in exhibiting a fine pair of antlers as a trophy.

Of the senseless, unreasoning dread aroused in some mental organizations on the sight of a snake, I know nothing. I am not fond of them, and do not like to handle them. Neither would I from choice handle any sort of worms or caterpillars, though I have had some experience in this regard.

Some old stories go without saying until questioned. The questioning sometimes serves to show the grain of truth which underlies a mass of fable.

For example, I believe in the power of the snake to "charm," as it is called, birds and perhaps other creatures, whose nervously susceptible organizations render them peculiarly susceptible to this influence. Similarly I believe that the same power is possessed by the domestic cat, for I have seen it exercised.

I doubt the existence of any "natural enmity" between the dog and cat, and this is also the opinion of a lady of excellent sense and judgment, with whom for many years I have been on terms of intimacy.

This lady has a natural dislike, perhaps a horror, of bugs, snakes, and creeping things of whatever description, yet she has never been known to conduct herself otherwise than sensibly when in their immediate vicinity. She tells me that her dread of a "tomato worm" is far greater than that she has for snakes.

Many children have been known to play with snakes. They are a common object of worship among savage tribes, either as representative of the good or of the evil principle, and are highly honored among others. In some parts of South America they are valued (so I have read) as household inmates, for the protection they afford against vermin.

The unreasoning dread of and desire to kill all sorts of snakes which exists, I think, mainly among those peoples possessed of a written literature, is, I believe, largely a taught quality, and if the old snake story referred to by the editor had been placed among the uncanonicals, it would have been better both for humanity and for the snakes.

I think with "Coahoma" that in these days—the last of the nineteenth century—it is well for those who prefer fact to fancy to consider seriously whether, after all, they haven't been a little too rough on the snakes.

I would like to meet "Coahoma."

KELPIE.

CENTRAL LAKE, Mich., March 1.

## For Anatomical Material.

PHILADELPHIA, Feb. 21.—Editor Forest and Stream: Being much interested in the anatomy of the mammalia of America and having been invited to undertake the management of the recently created Wistar Institute of Anatomy and Biology at Philadelphia, I have determined to appeal to all lovers of science, especially to those sportsmen having scientific tastes, to send to me for study and preservation the bodies of any of our characteristic quadrupeds which may come under their notice. It is a matter of common observation that these animals are every year becoming more rare, and many of them are threatened with extinction. Does not a great responsibility rest upon those whose professional training fits them for the work of acquainting the scientific world with the structure of these animals? No time must be lost in bringing together in a building appropriate for the purpose carcasses of the Rocky Mountain goat, Rocky Mountain sheep, the pronghorn antelope, the different species of deer, the mountain cat, the marsh hare and the water hare. The bison, it is true, is now in a measure protected, and it is not likely that it will now become extinct. Yet even here it is desirable that no opportunity be wasted of investigating its anatomy. Other animals which are common to both Europe and America do not properly belong to this list. But the above remarks will apply to them as well as to those peculiar to our fauna.

If the proper spirit be entertained, I am positive that no question of remoteness of hunting ground should serve as an obstacle to success in making collections. Let me suppose that it were known that a body of rhinoceros could be procured from the Northwest coast, is it reasonable to imagine that it could not be brought home in a condition fit for dissection? If a government vessel can make a voyage for the express purpose of procuring a few bones of the great auk, it is equally rational to organize an expedition to bring in the preserved bodies of rare quadrupeds, no matter how distant their haunts may be from the centers of civilization. Zoölogical science is one of equal dignity with geographical science, and the same pains ought to be taken to procure valuable materials for study in one instance as the other. But I acknowledge that a request for the bodies of animals, let me say like those of the sea otter and the musk ox, is a little off from the main motive of this letter. At least, I hope to obtain through the kind offices of your readers the bodies of animals which are yet to be found within our own territories.

HARRISON ALLEN, Director.

## Grouse Chicks and Bantam Mothers.

TOLEDO, O., Feb. 22.—A correspondent of last week's FOREST AND STREAM (Mr. Redmond, of Rochester) queries whether the ruffed grouse hen would take kindly to the chicks hatched from game bantam eggs placed under her. Judging from my own experience in a case of this kind, she undoubtedly would. One of my grouse hens some five or six years ago hatched and reared to full maturity four game bantam chicks, her own eggs not having been fertilized. They remained with her until the pugnacious little rascals (the cockerels) became so abusive of their foster mother they had to be removed. In the wild state the foster mother would in all probability exercise the greatest care over chicks hatched under her, but she would be very likely to become disgusted with their thick wits, and their inability to fly within a week, and the chances are that they would all perish before they had learned how to take care of themselves.

JAY BEEBE.

## LEAD-POISONED WILDFOWL.

NEW YORK, Feb. 24.—*Editor Forest and Stream:* I have read with interest your articles on lead-poisoning and "croup," and am glad to be able to contribute one or two facts bearing on the subject.

At Narrows Island the goose pen stands on the border of a channel known as the Little Narrows, which, in times of severe cold weather, is always open, and during a freeze-up is a great flyway for ducks. Gunners shooting along this channel at such times have for many years scattered shot over the marsh, the water and the mud.

Until a year or two since the goose pen stood partly on the marsh and partly over the muddy shore, and inclosed no high land. The live decoy geese and ducks being unable to supply themselves with sand or gravel, were industrious in searching through the mud for the hard particles necessary to the proper digestion of their food, and until recently we were constantly troubled by having our decoy geese and ducks sick with the "croup." However, after the death of Capt. Ryder, our former superintendent, we moved and enlarged the goose pen, so that it now takes in a piece of high ground, where there is some sand and plenty of broken oyster shells. We also give the geese the best corn we can buy and every once in a while feed them with grass. As the birds can now readily obtain sand and fragments of oyster shells, they supply their wants with these substances and are thus much less likely to take in any considerable quantity of the shot which may still remain within the limits of the pen. It is of course evident that to keep these captive birds in a state of health they should be surrounded as nearly as possible by natural conditions.

MEMBER OF NARROWS ISLAND CLUB.

[The finding of this metallic substance in the gizzard of these birds calls to mind a case noticed at the time in *FOREST AND STREAM*, where the gizzard of the dusky grouse killed in Washington Territory contained, besides the usual gravel, a dozen little nuggets of gold. The contents of this bird's gizzard is still in our possession.]

*Editor Forest and Stream:*

I see that Mr. Hough, in *FOREST AND STREAM* of the 10th, touches upon the lead-poisoned canvasbacks of the Texas coast. While I am not prepared to say anything about the birds being placed on the Northern market I can testify to the truth of the fact that the ducks on the Texas coast do swallow lead shot and other metallic pellets.

Last November a party of gentlemen, Messrs. Albert Steves, Ed. Dreiss, F. Hensel and the writer, of San Antonio; Col. Sam Allen, Percy Allen and Will Dumble, of Houston, camped a few days on the banks of Lake Surprise, twenty-five miles northeast of Galveston, and any of the gentlemen named above will testify to the truth of the accompanying clipping from *Texas Field* of December, 1892.

Ed. Dreiss, one of the shining lights of the San Antonio Rifle Club, came up to me with a bluebill drake dangling from his girdle and addressed me as follows: "See here, old man. I found this duck in the lake and I brought it with me. Is it fresh?" and he handed the bird over for inspection.

I examined it. Looked at its eyes, which were in good condition, and I told him the bird had evidently been killed that morning, and advised him to keep it.

Upon examination of the bird after we had returned to the sloop, we found that there was no visible shot mark on the duck, so we picked it clean. There was not even an abrasion of the skin and the duck was in fine condition—as fat as butter. The absence of shot marks excited our curiosity, so we held a post mortem on the carcass. Removing the gizzard, we cut it in two and we found thirty-nine pellets of shot therein. A number of the pellets had evidently been digested, as the sizes and shapes clearly indicated.

Right here we did a foolish thing, by moving ten miles up the bay to the "lone tree," where ducks were reported plentiful as mosquitoes in August.

We found the ducks, but the country was too open and we very soon concluded that we had enough. Here, again, our friend Dreiss came across the source of another mystery.

In a little puddle he espied a bluebill drake, sitting upright. He approached it, trying to be wary. "Get up, you son of a duck, and I'll put more shot into you than your brother had in his gizzard yesterday."

But the bird sat there and uttered not a word, which fact worried Dreiss. On the hold hunter came, and when within a few feet of the bird, he noticed that the duck was evidently hurt. He picked it up and carried it to the boat, where a minute examination disclosed the fact that externally the bird was uninjured. It was picked clean, its gizzard taken out and on cutting it open it was found to contain fifty-eight pellets of shot, some of them as large as No. 4.

For want of a better theory, it is accepted that the ducks, upon searching the bottom of the lakes and sloughs, wherein they had been feeding, came across the pellets and swallowed them as grains of sand, and that they died for want of breath superinduced by too much lead in the system. One man told us that they were led astray, and his bones lie bleaching on the swamps of West Bay.

The shot were preserved by the writer and are mailed to *FOREST AND STREAM* to-day, with the recommendation that an invitation be sent to doubting Thomas on the banks of Lake Michigan to examine the same.

I also have it from the market-hunters of the Lake Surprise region that canvasbacks do not confine their metal diet to lead, but often pick up bits of iron, copper, pieces of percussion caps, etc.

O. C. GUESZAZ.

## A Canadian Samson.

BELLEVILLE, Ont., Feb. 24.—Recently a few deer strayed from the northern townships to the vicinity of this city, where animals of their species have not been seen for many years. It is reported that two of them, which crossed the Bay of Quinte in continuance of their journey southward, have been killed by some bloodthirsty vandals.

The following sensational story is furnished by the *Watchman*, a newspaper published in the town of Lindsay, in this district: "The strong men are not all dead yet. A short time ago the cook in Gray and Millard's camp at Wahnapitae was returning home from one of the neighboring camps, when he was somewhat startled to see two full-grown lynx standing in the pathway and evidently determined to dispute the right of way with him. Roderick Findal, who by the way is a regular Hercules, standing 6ft. in his stockings and stoutly built in proportion, was not to be daunted by two wildcats. He advanced steadily upon them, but when he was about 15ft. away from them the largest one leaped straight at his throat. Findal was too quick for it, however, for he dodged, and seizing it by one of the hindlegs as it flew past him he dashed its brains out against a tree. The other one sprang at him, but fell a little short, and before it could recover, a kick from Findal's heavy boot ended its career. The boys were somewhat surprised on his arrival at camp with the two animals."

R. S. B.

## DOMESTICATION OF WILDFOWL.

*Editor Forest and Stream:*

In England during the winter there is a bird called the bean goose (*Anas segetum*), and I have just discovered that we have a goose bean with us this winter.

A few years ago I reported to *FOREST AND STREAM* a flock of thirteen wild geese (*Branta canadensis*) that Mr. Norman Pomroy, of Lockport, secured, by their alighting among his domestic geese during a severe storm and following them into his barn, when he closed the entrance.

Some of the wild birds mated with the domestic geese, while the others held to their first loves. By clipping the wings of the wild species Mr. Pomroy has succeeded in keeping the original number about the same, and has raised many of the hybrids for the market. I have seen him on the street with a sleigh box full of them. But he has learned that it does not pay to keep the hybrids for breeding purposes, as they do not mate among themselves nor with the full blood stock. They lay eggs, but as they are not fertile they do not produce young.

Occasionally during the spring freshets Mr. Pomroy will lose a pair of the wild species, probably while they are in search of a nesting place. They will follow down the small brooks until they reach the Eighteen-Mile Creek, where they are killed by the spring shooter, who does not suspect that they are other than wild geese, until he finds the clipped wings.

But I have strayed from my story of the goose bean. On Jan. 3 Mr. Pomroy brought to me a male bird of the wild species, which had been killed by one of his neighbors named Bean (this is where the goose Bean comes in). Bean saw in his field a flock of geese and at once identified them as of the wild species, as he had often seen Mr. Pomroy's birds while passing his place. He did not stop to consider that it was out of season for these birds to be

MR. POMROY'S WILD GESE.  
From photo by Master Pomroy.

passing south or north, but securing his gun started for them. Stealthily creeping along the fence until he got as near as he thought he could possibly get without alarming them (he might have walked up within a rod of them), he selected the largest male bird for his target and fired. The other birds did not seem to be alarmed at seeing one of their companions flopping about, but seemed to enjoy the circus. Not until then did it occur to the goose Bean that he had shot one of his neighbor Pomroy's *Branta canadensis*. His excuse must have been a tame one when he presented the dead bird to Mr. Pomroy, who, I know, has been offered a good round price for the bird within the past two years, and who also assured me that Mr. Bean would pay for his early wild goose chase. The bird was in good condition and weighed 16lbs. after hanging up for two days.

J. L. DAVISON.

LOCKPORT, Feb. 22.

[But according to the law in the case, the wild geese, once out of Mr. Pomroy's own fields, are *ferae naturae*, and may be "reduced to possession" by any one.]

*Editor Forest and Stream:*

In your issue of Feb. 24 Mr. E. Hough, who "is just out of live wild ducks," mentions that I am in need of them. For years it has been my hobby to have our beautiful wild ducks around me, but I have great difficulty in getting them. Of wood ducks I have a fine flock and bred twenty-eight young last year; my three pairs of green-winged teal laid many eggs, but they were not fertile. The minks killed my bluewings and my solitary pintail pines for a mate. Neither redheads nor canvasbacks seem to be attainable, and I find it hard to get even widgeon or baldpate.

Last summer a gentleman, whose name I had never heard before, but who knew of my hobby, wrote me from the South that he had several wing-tipped ducks saved for me, and that they were feeding well and promised to live, but before my letter of thanks reached him some animal broke into the inclosure and killed a couple, while the others escaped.

The wood duck, which bred about most ponds and streams in my boyhood days, is almost unknown in the Eastern States now, and visitors constantly ask of what country my birds are native. I know that I would shock some good men if I should say that boys with guns had killed off these beautiful birds, and therefore I will only refer to the fact that I look back at my own youthful gunning and regret that I destroyed many things in an unthinking manner that were of no use to me further than to satisfy my desire to kill something, but a boy is a barbarian, and I was one.

I am trying to make amends for my early cruelty by breeding some of the beautiful creatures that are fast disappearing.

FRED MATHER.

COLD SPRING HARBOR, N. Y.

## Linnean Society.

A REGULAR meeting of the society will be held at the American Museum of Natural History, New York, Tuesday evening, March 27, at 8 o'clock, for reports of officers for 1893-1894, and election of officers for 1894-1895.

## Game Bag and Gun.

## DIXIE LAND.—I.

[From a Staff Correspondent.]

## Birds, Bottles and a Consequence.

CHICAGO, Ill., Feb. 7.—One day last December, when I was busy executing the "nicely dove-tailed fabric" of a Chicago business day—the sort of a day that costs hair and pigment, and carries with it the soft and musical tinkle of coffin nails to come—I got tired, which made me angry, and therefore rebellious. Being rebellious, I quit working, put my feet into the middle of the desk and undertook to read a society novel by way of change.

The society novel proved to be pretty hard work, too, and of it one's recollections are vague. That there was a *grande dame* in it, however, I remember, a leader of the *haute noblesse*, who didn't do a thing but only drink champagne before breakfast and never ate anything less than a canvasback duck, and wore diamonds, oh! dear. This *grande dame*, whom we may call my lady Ten Streycz, because I forget her name, had, if my memory serves (the janitor's wife has the book now), no acquaintances but artists, lords, "journalists" and dramatic critics, and as near as I can learn all these people lived on canvasback, quail and champagne. They were in the heart of the city. Nearly all the lords, artists, "journalists" and critics I ever fell in with sat on a stool and ate Wiener wursts and coffee, anyhow Wiener wursts, but that wasn't the way of the people in this book. They had birds and bottles, never anything else. The book fairly reeked with birds, bottles and good society. Of two-thirds of all that I don't know anything, though I confess I had not supposed that a lady in good society would wake up in the night and eat terrapin, and *marrons glacés*, and *crème de menthe* and things, and put in the rest of the time on birds and bottles, as appears from this book to be the custom.

## Couldn't Find Any Marrons.

But the book had attached to it an idea. I wondered if all the people who really do eat canvasbacks and terrapin and birds, know where all these things come from and how they are obtained, and what the actual supply is to-day. This, naturally, set me thinking of the trip into the Texas canvasback country, and the thought of that made me want to go again and spy out some more country. To make it short, I did go, and did spy out some country, and am now back and am going to tell about it. While I am not able to say that I have found a place where one can have sport at *marrons glacés* and *crème de menthe*, I do say that I visited country where an artist, a "journalist" or a sportsman can go and have pleasure each in his own line and plenty good enough for him—indeed good enough for a lord or a dramatic critic—where canvasback, terrapin, oysters, quail, deer and turkey can still be found, and where, moreover, one can escape the heavy hand of the northern winter and so cheat life of one of its terrors.

Of this country I shall take great pleasure of writing in this and subsequent issues of *FOREST AND STREAM*, for it appears to me that the territory visited is by all odds the best sporting section now left in the United States. This remark I make not altogether in regard to any one narrow portion of the region traversed, but as applying generally to Missouri, Arkansas, the Indian nations and Texas. To be specific as to the route by which to get there, I may name that taken by myself, namely, the Chicago & Alton to St. Louis, the Iron Mountain road from St. Louis to Texarkana, the Texas & Pacific from Texarkana to Longview, the International & Great Northern from Longview to San Antonio, and the San Antonio & Arkansas Pass railway from San Antonio to Rockport, the latter, on the Gulf Coast, being the limit of the journey. This is a long trip, with a great deal of country to it, but any one who makes that trip can, in proper season, have the certainty of a most varied line of sport. He can have, at the proper points and in proper season, probably the best quail shooting in the country, probably as fine duck shooting as can be had anywhere, doubtless the best turkey shooting and as good deer hunting as he will get in the United States, good fair bass fishing, and lastly, what is without question, the best tarpon fishing there is anywhere on our coast.

That these are broad statements I know very well, but it is the virtue of such trips as this to show the truth or the inaccuracy of such statements, and I think the story of what we saw and did will be proof enough for the above claims, though of course the shifting of the game supply might make the story locally more or less inaccurate in some regards a year from now. The climate and the people will not be changed in a century, let us hope.

## Out of the Ice.

It does not take long, in these days of railroading, to get out of the ice and snow into a country which Providence intended for human habitation. Leaving Chicago, whose climate never did contemplate the dwelling here of human beings, at 11 in the morning, the gliding Alton train got me into St. Louis about 7 o'clock in the evening, appetite and spirits rising with the thermometer. At this landing I did not have a bird and a bottle, but happening to fall foul of a lunch counter where the ham had a juicy, untrammelled, out-for-a-trip look, and the eggs were more golden and inviting than eggs ever are at home, I created widespread havoc. Ten hours before I would have shuddered at the thought. Hunger begins when you pack your bag for a shooting trip, and increases as to the square of the distance from home and work.

At 8:30 you take the Iron Mountain out of St. Louis, and in the morning you awake at Little Rock, not yet twenty-four hours out of Chicago, but quite clear of the snow and ice. In fact, it is only forty-five hours from Chicago to San Antonio, Tex., and there you are in paradise, only five or six hours more from the Gulf Coast.

## Little Rock.

At Little Rock one is hungrier than ever, and needs the breakfast he gets at the Hotel Richelieu. For, of course, on this trip the shooter will stop at Little Rock, for reasons which will appear; and the proprietor of the Richelieu being Joe Irwin, one of the best shots and best posted sportsmen of his State, and moreover a *FOREST AND STREAM* man and a pleasant gentleman all around, there is no place else in Little Rock for a shooter to think

about but the Richelieu, which incidentally is probably the best hotel in the South anyhow.

My appetite and I created another havoc at the Richelieu breakfast table, and there Mr. Irwin and I had a talk.

#### A Great Game Country.

"You are now right in the center of one of the best game countries you ever saw," said Mr. Irwin, "and I never lived in a section where I had better sport. You can see that gray timber across the river, there? That is the way we go after ducks. The mallard shooting in our overflowed country is simply magnificent. This fall the birds were so thick that it was really hardly sport to shoot. Very fine bags were made right off the bridge over the Arkansas River, in the middle of the city. Everybody had ducks. By going out eight or ten miles we had as fine shooting at mallards as any place in the United States ever had. The big cypress swamps made great inducements to the birds, and I will show you what hard cover they use to go into. In the fall it is not the least trick in the world to make a bag of fifty birds on some of our best waters hereabout. We will not allow shipping out of the State here, and do not want any visitors here who will kill all the birds they can, but I do not hesitate to state that you never saw better duck shooting in your life than there is right around here. Even now (Jan. 1) the mallards are hanging around the swamps, and once in a while I hear of a good bag being made.

"Of jacksnipe we do not have so many in the fall, but in the spring the jacksnipe shooting over at Devall's Bluff, east of here on the big prairie, is as good as you can get anywhere. A good shot can kill his hundred a day there if he wants to, and five or six dozen will not crowd him very hard. The prairie over there used to be full of prairie chickens until wanton shooting killed them out. A party of Memphis shooters came in there and killed 1,500 in a few days. They piled them up and left them to rot.

"There are no deer or turkeys right near town, or, at least, not in hunting numbers, though I know of two flocks of turkeys within three miles and have killed deer within ten miles of town. We usually take the railroads and run out into a little wilder country when we want to make a hunt for that sort of game."

"Have you many quail about here?" I asked.

Mr. Irwin spread out his hands. "My boy," said he, "you don't know what quail shooting is." And later developments taught me what he said was truth.

"At this hotel," said Mr. Irwin, "we no doubt serve more game than all the other hotels of Arkansas. This fall mallard ducks went begging at 10 cents apiece. Quail bring from \$1.25 down to 40 cents a dozen. Turkey and venison I can always get in season. I used to manage some of the Fred Harvey eating houses along the line of the Santa Fé road, and I have traveled some and shot a good deal, but I believe I can safely say I never was in a game country like this. We don't advertise it much and we won't have anybody but sportsmen come in here. We do not report how big the bags made here sometimes are, because we do not care to be jumped on by the snarlers of the sporting press."

#### The Non-Resident Law.

"One of the sheriffs over in the New Madrid marsh country has been enforcing the non-resident law and has collected about \$800 in fines. This law is thought by our best authorities to be unconstitutional. We do not apply it to sportsmen who come for sport and who do not want to ship game. Men of the latter sort we don't want here and we won't have them."

"And now," continued Mr. Irwin, "come on down and see my dogs."

These I had already seen before I got into the hotel—Nancy, a handsome liver and white pointer, high-headed, gentle and dignified, and Jack, a stubby and singularly muscular one of the same breed, a liver, pepper and salt, a veritable romp and rogue of a fellow, never tired and never still. Nancy came from Ohio, but Jack was native born, albeit of good strain. In Arkansas the love of blood in horse, dog or man has the strength prevalent throughout the South.

And now we visited Mr. Irwin's shooting room, where were all kinds of loads, all sorts of shells, and every manner of shooting appliance imaginable, a very paradise to lounge and talk in.

This was Sunday. The next morning we went to the gun store of course, and met a dozen of the shooters around town, and some more dogs, and had a pleasant hour or so there.

#### Right in Line.

The Dickinson Arms Co. is managed by Mr. Dickinson, a young man of just the right quality for the place. Mr. Dickinson is ex-secretary of the State Sportsmen's Association, one of the best of its shooters, and thoroughly acquainted with the needs of shooters. No visitor contemplating a trip to Little Rock need bother about taking any ammunition with him, for he can get just as good ammunition here as anywhere. All the nitros and their relative excellence, E. C., Schultze, American wood, S. S., Walsrode, etc., are an old story at Little Rock. I was surprised to find so large and complete a stock of the most modern sporting appliances of every sort—something to be remembered by all shooters who think Arkansas is a country of black powder and muzzleloaders still. Arkansas is nothing of the sort. It is right in line with the modern phases of sportsmanship in every regard. Little Rock is a great place for the sporting papers, and the good shots there are good as any—as some of the Northern shooters who visited last year's Arkansas State tournament learned at their own expense.

By this time I was hungry again, so we went back to the hotel and ate lunch, and then talked shoot and dog till evening, when I was hungry some more, in spite of two meals of generous proportions. Chicago was gradually fading away in the distance.

Weather at Little Rock, Jan. 1, clear, bright and warm, the trees green. Here I laid off overcoat and overshoes. No snow, no ice. Clearly, this was one of the lands Providence meant to be inhabited by the children of men. All the local sportsmen couldn't do enough for the stranger, and we had already enough plans laid out for the rest of the winter.

#### The Way of the Country.

"Of course, you'll be here a few weeks," said Mr. Dickinson, "and we'll get up a duck shoot or so for you."

"You'll be here for a while, of course," said Mr. Irwin's

friend, Mr. Croxton, a famous quail shot and the owner of some good dogs. "We'll just go up to Plummerville or some other place on the Ft. Smith road, and if you can't kill fifty quail a day it's because you can't shoot."

"You'll be here for a time," said Mr. J. E. Rose, once a well-known Cincinnati shooter, and now stationed at Little Rock as superintendent of the St. L., I. M. & S. R. R. "I'll tell you what we'll do. We'll take a private car and just run up the road into the Nations. We can get all the quail, ducks and deer you want."

"You'll be here for some days," said Dr. J. H. Lenow, "and we'll have a little trap event for you. I've got on a little race with another man here, and you just ought to see me do him."

"Of course," said Mr. J. M. Lightfoot, a total stranger, whom I met on the train out of St. Louis, and to whom I introduced myself when I overheard him talking nitro powders to a fellow-traveler, "of course you'll be down in this country for several weeks, and I want you to come right on down to my place—I live at Pittsburg, Texas, on the Cotton Belt Road—and give our boys some of your time. We've got a club of about 30 who shoot and fish. You can get bird shooting anywhere about there, and we'll get up a camp hunt after deer for you. We've got plenty of bird dogs and hounds, and I want you to come and stop with me."

"You will be going on South after a bit," said Mr. Woodcock, the other stranger with whom he was talking, "and you'll be at Fort Worth on your journey, and you must stop there and see us."

From the above judge what manner of man the Southern sportsman is. We have not his like in the cold and calculating North. Providence, never intending to have this Northern country inhabited at all, certainly has permitted only cold blooded beings to remain there, when it comes to the matter of comparison with more hospitable climes.

#### Mallards In January.

The next day, Tuesday, we heard a friend of Mr. Irwin's telling about some mallards that came into the cypress swamp every evening, about nine miles out of town, and concluded to try them, accordingly driving out that evening with the gentleman to the spot in question. The country crossed was gray and thick with winter cover, broken by cotton fields and crossed by the wide cypress slash which made back from the river. Miserable negro cabins dotted the fields. On the road we passed a covered wagon drawn by oxen, the driver, tall and bearded, walking by the side of his yoke, while a white-faced woman and a gradation of white-headed children filled the wagon from front to back. Behind the wagon rode a tall, slim, white-faced boy. Another boy of similar description led on leash four or five hounds. This was a drifting outfit of squatters, going they knew not where, and probably cared little, provided they struck timber with game in it. I noticed that the thin face of the father of the family was aquiline, haughty, handsome and actually aristocratic looking. In the jumbled nationalities of the city it is the rarest thing to find a face of which one can say so much. The American typical face dwells south of Mason and Dixon's line, and I presume that if there is a real American aristocracy anywhere, it is to be found in the country so restricted. The aristocrat of the North is not to be distinguished from the man with a deranged stomach. The symptoms are the same. In the South the ideas are separable. I prefer my Arkansas moving squatter, who would divide his last hock with me, or kill me cheerfully if I insulted him, to the Hebrew with the diamond pin, who joggles one in the street car, and to insult whom would be impossible.

#### An Inferno on Earth.

The late Dante Alighieri, although a trifle bilious in temperament, had good points as a descriptive writer, and with training would have made a good fire reporter. I never read his Inferno without feeling bad, especially if it is one of the editions illustrated by Doré. Sometimes I think that Dante, or Doré, must at some time have hunted mallards in a cypress swamp. At any rate, if you want an idea of a cypress swamp or "sloshing" such as that we were now approaching, you need only to look for one of the Doré Dantes. Here you have an Inferno on earth, desolation absolute. Silent, gray, cheerless, almost malignant in its forbiddingness, it lay before us, mile after mile of gray trunks, lopped arms and hideous deformities. There were figures and faces in the tortured trees, a sub-human, sullen life in their dead ghastliness, an expression as of suffering endured until an endless hatred of mankind had taken its place, and until an evil intention had stamped itself irrevocably upon limaments distorted by ages of rebellion and ages of just punishment—Inferno set on earth for men to profit by. Try a cypress swamp and see if you can escape this feeling that it has an actual and intelligent evil intention against you.

There are three planes in a cypress swamp; that which is in the air, that which is in the water, and that which is in the mud. You encounter the features of all three, and you know not which to most anathematize. Into this three-fold Inferno, level as a floor, covered visibly with dead gray trunks standing in slimy water, we were to penetrate as far as we could before evening. For into this fastness, which certainly should protect them if anything on earth could, came the wily mallards every evening, just before sundown, flying from no one knows what distance, coming in high up over the middle of the swamp, and then descending in thunderous flight of hard-stretched wing to the quiet pools among the wiry scrub which lay far out in the heart of the great roosting ground. Into this roosting ground, in the not so very sportsmanlike purpose of doing a little roost shooting at evening, we, as specimens of the most bloodthirsty and relentless of all animals, man, were to penetrate as best we might, were to slip, stumble, swear, get wet, muddy, tired and very likely lost, in our endeavor to keep the birds from having a single place of safety on earth, or an hour in the day to take a peaceful snooze. It is no wonder mallards are suspicious.

The ground, as I have said, was level as a floor, and the water caught us just about three inches below the top of our hip boots. The bottom was very level and had no holes or depressions in it, but such walking no mortal man ever did see before. Submerged logs, limbs and brush heaps caught at one's legs incessantly, and continually the feet slipped on logs lying dormant in the mud. Tufts of harsh grass and vines with briars, and buck brush, and impenetrable thickets turned us from our path at every hand. One slipped and put his hand

against a tree and at once found it covered with needle-like thorns six inches long. Tired and breathless, he stumbled over a sunken log too big to step over easily, and—there! the water was over the boot tops, and the rest made no difference now.

We went into the swamp not over a quarter of a mile, probably, and I should think it took us over three-quarters of an hour to make that distance. The gray dead trees were then all around us in every direction, and without keeping one's bearings carefully, one could only guess which was the way toward the edge, for the water left no trail. Mr. Irwin's friend took us in and took us out all right, for he had shot there before, but a stranger would best keep pretty close to the shore.

My friends posted me in the hollow butt of a great log, which made a natural blind, and went on into the swamp a hundred yards or so further, Mr. Irwin, having on wading trousers, getting further in than the rest of us. After they had gone I looked about me, and it seemed to me that I never was in a lonelier place in my life. Not a sound nor a motion was apparent anywhere.

#### The Evening Flight.

About half an hour before sundown I saw some scattered bunches of ducks drawing out over the swamp beyond me and presently heard Mr. Irwin's gun. Then there was a flitting through the trees closer in and our friend's gun spoke twice. A mallard hen crossed me high over and I dropped her, too wide to follow. Then there arose a lusty squawking from a thicket to our right and I knew that some mallards had dropped in there somehow, and would decoy the others to them, so I began to call too. Then as the shadows thickened the air grew full of mallards, high up, swinging and circling rapidly down, lighting and calling boisterously.

#### A Close Double.

A pair of ducks came in like lighting, right at me, with their hindfeet pushed out ahead of them, and would have lit actually within ten feet of me, in full, plain sight. I could almost touch the first one as I fired at it and it went down fluttering. The other started up and was not over 30 ft. from me when I fired. It too fell fluttering and swam a little after it fell. This, I think, was the most remarkable double I ever made. When I picked up my birds I found that the first one had a piece about as big as a silver three-cent piece shot out of the lower mandible. The second had a piece of just about the same size cut clean off the top of its head. Had either been struck in the body there would have been no duck to pick up. As nearly as I could tell I held just barely in advance of each bird.

An odd feature of my double was that I made it with a gun I had never shot before. It happens that in my battery I have only one gun bored close enough for a good duck gun, and my respected father, who knows a good gun when he sees it, having expressed an entire willingness to keep that gun out at his house and use it in his own shooting trips, I couldn't bear to separate two such good friends, and so was in need of another gun for this trip. Mr. R. B. Organ, of this city, who at first thought of going South with me, insisted on my taking his 12-gauge Parker along with me.

"You take her and shoot her," said he, "and if you don't find she shoots big shot, 6s and 4s, better than any gun you ever saw, I'll eat the gun when you bring it back."

"This," thought I, "is another case of the best gun on earth." But that evening, especially after I had folded up a mallard which came dawdling along over the trees about 45 yds. away—just ahead of my friend further in, whose load caught her as she was falling—I began to look at the gun curiously, and to think maybe it did shoot pretty well. Later on, down in Texas, I found that it shot better than pretty well, and was indeed the hardest-hitting gun with No. 4 shot I ever saw, while with No. 6 it performed so well that I could have traded the Texas duck shooters out of their boats and houses for it. We targeted it thoroughly there, and tried it on all sorts of long shots, and I must say the result was something of a revelation. Later on still I have learned that the gun was made with especial care for Mr. Organ by Parker Bros., they knowing that a good shot needs a good gun, I suppose. They bored a second set of barrels for it, and hit it just right, and I doubt if they ever did or will turn out a better pair than these. The gun has a local reputation, it seems, on the Mak-saw-ba Club marsh. I am sorry now that I ever let Roll Organ have it back again, for he says he wouldn't sell it for \$500. If this were my gun I wouldn't say a word about it unless I felt like it, but it being Mr. Organ's one may be forgiven a compliment, which should go to a good gun as to a good dog or good horse.

#### Nature's Protection.

But we were in the swamp and it was now dusk. Total result, six birds for the whole three of us, and an experience so unique that I shall not soon forget it in my calendar of all sorts of days and all sorts of places. The night was moonlit and the ducks came in late. As it was we heard them in hundreds in parts of the swamp not far from us. Knowing, as we all did, that roost-shooting is the worst thing in the world to do, and that night-shooting is usually branded as unsportsmanlike, we stopped at dusk and pulled out, caring more for the picturesqueness of the swamp adventure than the actual shooting, of which we only had five or ten minutes in all.

I am prepared to say that it will be a long time before the mallards are all killed off, if they must be hunted in the swamps and sloshings of Arkansas. The shooters all told me that the ducks seem to hold their own well in that country, and that this fall there were more ducks than at any time for years.

#### The Fall Shooting.

In the fall, up to December, the shooting here is great. Earlier the shooting at local wood ducks is very heavy, these birds breeding in large numbers all through this section. Flight-shooting on a flyway between two sloshings is a favorite style of sport. Mr. Irwin pointed out to me a stump in the middle of a cottonfield by the roadside.

"That is one of my favorite stands," said he, "and I have killed between thirty and forty birds there of an evening, every bird falling right out in the dry cotton field. That is the cleanest and easiest duck shooting I ever saw. This country is a natural one for ducks. The Arkansas River bottoms and those of its smaller tributaries run out into swamps, lakes, bayous and 'deadendings.' I think our mallard shooting on the acorn overflows is hardly to be beaten anywhere."

I was now so hungry all the time, in spite of Mr. Irwin's lavishness at the Richelieu tables, that Mrs. Irwin took my case in hand. Mrs. Irwin had a new chafing dish, with which she amused herself cooking for her lady friends in her own parlors, and by means of which she had learned to do oyster stews, omelettes and Welsh rarebits beautifully. In solemn conclave we all concluded that if I would eat three square meals a day and a Welsh rarebit just before retiring, I ought to be able to get along. Mrs. Irwin said she was willing to do the rarebit, the more especially as she had found a new kind mentioned in her cook book, which she hadn't tried yet. But just what connection the Welsh rarebit had with our quail hunt, I must tell another time.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

## MIDWINTER DUCKING.

It is not all of hunting to hunt. As we sportsmen grow older we become less ambitious about bringing home big strings of game and heavy creels of fish, and find more enjoyment in the simple pleasure of being out "where nature's heart beats strong." Some even give themselves up to gormandizing and then get "roasted" for it by "O. O. S."

You remember that feasting bass trip of his last summer? It's a bit remarkable how little has been written about eating and drinking since that story was published. It takes Smith to do such things to a turn.

The sportsman's life is a medley. Every string is touched and every chord struck sooner or later. If the sportsman's life with all its hopes, joys, pleasures, pains, distresses, reverses, ups and downs could be painted in colors, what a kaleidoscopic exhibition we would have. (Right here I want to warn "Podgers" not to hint at "water" colors for Oregon sportsmen). Of course, it rains in Oregon. Nobody ever said it didn't; but doubtless it might rain more. Again I must warn "Podgers" not to insinuate that it might if there were more months in the year.

But let it rain, for it seldom gets too wet for ducks and duck hunters, although this winter has been and still is a "terror." We have had heavy rains since early fall and the lakes have been brim full; so that our winter sport with the ducks has not been up to the average. As a natural consequence, we have had more time for pleasures of a social character by the bright fires in our cabins, which doubtless are just as enjoyable.

Portland is on the Willamette River, twelve miles below; the Willamette empties into the great Columbia. Six or seven miles further down, on the Washington side is Knapp's Landing. A half mile across the meadow is Lake River, a deep, dull stream 100yds. wide, the outlet for Big Vancouver Lake. Another 100yds. from Lake River is the Hotel Mead, a two-roomed structure hidden among the elms on the bank of the famous Green Lake, where J. Roberts Mead and your humble servant cook, eat, sleep, make night hideous, entertain other congenial spirits and lay plans for the circumvention of wary waterfowl. The said hotel or shanty, or whatever you may choose to name it, is provided with all that goes to make a hunter's life a happy one, indoors. Mr. Knapp, for his own and his neighbor's convenience, operates an immense old water-logged ferryboat across Lake River, by means of a cable stretched from bank to bank in the good old-fashioned way. This ferry will nicely accommodate four yoke of cattle and a wagon at a trip, but is kept locked most of the time. So Mead and I keep a boat hidden in the buck brush to make sure that we will not have to stand out in the rain all night on the reverse side of Lake River, when we go down in the afternoon; for Knapp owns all that country and lives a mile away from the ferry on the top of a big hill, where the notes from Gabriel's trumpet could hardly reach him, to say nothing of the cracked dinner horn that hangs complacently on the corner of the old hay barn by the ferry.

Well, Mead had invited our old friend George Dehardy to spend Sunday with us at the lake, and George couldn't refuse, for he dearly loves to hunt canvasback. It was arranged that I should go down Saturday afternoon on the 3 o'clock boat, sweep out, wash up the dishes, fix up the blinds and overhaul the decoys for the day's shoot; while Mead and George were to come down on the midnight boat. It was understood that I should have the ferryman leave one of our boats on the Columbia River side for their accommodation, but I changed my mind and concluded to sit up for the boys. Besides, by the time I had supper over, the dishes washed and had overhauled about 150 decoys, I would have very little margin for sleep. And then, too, a cunningly devised plan to steal some hay out of the old hay barn on the other side of Lake River, with which to repair blinds, made it necessary that I should keep the boat on my side of the river. So Mike and I pattered around with supper and decoys, until quite late and quite dark, just such a time as is generally selected for stealing chickens, hay, etc. Then we crept to the river and into the boat, and silently across. How lonely and spook-like the old barn looked. I found my way in through a hole a couple of feet square and called the dog in after me. Not that I was afraid myself, but the dog might get lonesome outside, you know. If I was a spook I would make that old barn my headquarters. Well, I was carefully gathering up hay, silently moralizing on the elevating influences that surround the sportsman (particularly the duck hunter that needed hay), when a sound came through that hole in the wall that froze the very marrow of my bones. "What the d— are you doing there?" If it had been the roar of a lion, neither the dog nor myself would have been more startled; but I collected my senses enough to stammer that I was just securing a little hay, while Mike tried to run his usual bluff. The fellow was not to be bluffed by a yellow dog, and insisted upon an explanation. By this time I had roped up enough hay and crawled out. It was one of Knapp's men returning from Vancouver, and things were soon satisfactorily squared. Then I left my boat for the boys, and he took me across on the old ferryboat and everybody was happy. While I worked away on the decoys, I heard the midnight boat whistle for Knapp's Landing over on the Columbia, and after waiting a reasonable time I lit my pipe and sauntered down to Lake River, walked out on the ferry and leaned against the cable stanchion. It was very dark and still. I could hear Mead unlock the boat on the other side and then came the muffled sound of oars. Then low voices which I recognized. George is a German, and is so honest that he can neither give nor take a joke. What

he sees he sees, and when he knows a thing he knows it just as hard as anybody. "Oh he's asleep by dis time and maybe we can't get him up;" I heard George say. "Well," replied Mead, "I know how to get him out; up the Molalla last summer, Billy and I discovered how to start him out at any time, day or night, ha, ha, ha."

As the boat passed about 20ft. above my position on the ferry, George suddenly exclaimed: "Look! der's fire on dot ferryboat." Mead stopped rowing and looked around but could see nothing, simply because I had turned the bowl of my pipe. "What's the matter with you, George?" said Mead reproachfully, "have you got 'em?" "Well," by gracious," said George, "I was sure dat I saw fire on dot boat, but I guess dot I must be misdaken." Again the boat pursued its silent way, and again George startled the midnight air with: "By Jimminy, der is fire on dot boat." Again Mead could see nothing, but by this time he was getting suspicious and yelled out: "Oh J—," no response. "Say J—," said Mead, if you don't answer I'll cut loose at you." I answered, for I knew Mead pretty well. He is generally a man of his word.

A midnight lunch, off to bed, a good sleep, breakfast before daylight, and we found ourselves out in our blinds in good time for the ducks. We got but about three dozen canvas, for there was a poor flight as usual. But we had a jolly good time. Honestly, I believe that we had about as good a time as if we had killed a hundred. Mead got about twenty birds, and was apparently perfectly satisfied. I never heard him grumble at his luck in all my life. George got but half a dozen, but he swamped his boat, got a good ducking, and felt that he had had a great time. I was the only kicker and now apologize, for I have had my share of ducks in the past, and am getting old enough now to take what comes.

That fire on the post reminds me of the story that Frank Lawler tells on Ed. Sullivan: Ed was pilot of the old hunting boat Caliope. She would drop the hunters off at their respective landings, and then, returning pick them up after dark. No lights are allowed in a pilot house. The night was dark and Ed was smoking a cigar. He thought he had picked up the last of the hunters, when he discovered a light on the shore in an unfrequented place and promptly blew his whistle, turning bow on.

Neither Ed nor Frank remembered putting anybody off there and Ed was not in the best humor over the matter. Ed looked again and the light was gone, but it soon shone out again, and in to the shore he ran to discover that the hunter's light was only the reflection of the fire end of his cigar against the glass of the pilot house, with its back ground of intense darkness.

PORTLAND, Oregon, Feb. 24.

## STOP THE SALE OF GAME.

A PLATFORM PLANK.—The sale of game should be forbidden at all times.—FOREST AND STREAM, Feb. 10.

Editor Forest and Stream:

Game which is bought in the market is not badly needed, and its absence will cause no one a pang of regret. Many a pang of regret is caused the many sportsmen who find that a few market-shooters have despoiled their pleasure grounds. Game bought in the market gives little satisfaction. Game given by friends to friends delights the giver and the receiver.

ROBERT T. MORRIS.

NEW YORK.

Editor Forest and Stream:

Your suggestion of "A plank in the platform prohibiting the sale of game at all times," meets my most hearty approval, and I think should be unanimously indorsed by every honest sportsman throughout the country.

I believe that the time is ripe, and that we should have a rigid law prohibiting the wholesale slaughter of game for market by market-hunters and trappers at all seasons of the year.

Our game birds and animals are already very scarce, and the tide of destruction against them is slowly but surely depleting our forests and fields; and the time has come to throttle the market-hunter, the pot-hunter and every other hunter whose sympathies are with selling game.

Agitate the good work. There are hundreds and thousands of honest sportsmen to-day who voice the sentiment expressed, and who are willing to uphold the plank in a platform of that kind.

D. P. FAUST.

TREMONT, Pa., Feb. 26.

PHILADELPHIA, March 2.—Editor Forest and Stream: The motto nailed to the mast by your paper, "Prohibit the sale of game," is in harmony with the inclosed bill which I prepared last year and submitted to the Legislature of this State, with some assurance of its passage, but I regret to say it failed. The preservation from utter extinction of our native wild game and fish is almost impossible unless such action as is contemplated by the inclosed bill is taken very soon. Notwithstanding efforts every year are made to restock our streams, illegal fishing and pot-hunters soon exhaust the supply. I propose to try again next year to have the bill passed, with better success I hope.

R. M. HARTLEY.

[The bill forbids the taking of brook trout for sale; selling them; hiring people to catch them; transporting them for sale. It is a good bill and should be law in every trout-inhabited State in the Union.]

ATTLEBORO, Mass., Feb. 26.—Editor Forest and Stream: I have been a reader of the FOREST AND STREAM for the last fifteen years and in that time there has been more or less said in regard to the game laws and game preservation, some good and some bad, but I think your idea is just what is needed. Stop the sale of game at all seasons. And I would suggest a small tax, say \$2, on every gun per year, the money so collected to be paid over to the different State game associations to be applied to the purchase of game for stocking purposes.

C. T. H.

ASBURY PARK, N. J., Feb. 24.—Editor Forest and Stream: Your advocacy of non-marketing of game is a long stride in advance of all contemporaries and should be heralded with delight by all true lovers of the gun. Viewed in any light such a law cannot work serious injury to any and would be of inestimable value to scores of thousands. The market-hunter and trapper of course will raise a howl, but well-directed effort in any of the honorable trades or employments will yield to that class a better income than they derive from the sale of game,

and will debar them from no privileges accorded to others. This will mean a lease of life to game and infuse new life into the waning interests of forest and field pleasures. Keep it up, and be assured of the cordial support of the great army of American sportsmen.

LEONARD HULIT.

I second the motion. Stop the traffic. Make the price of game the skill and endurance to hunt and kill it.

G. O. SHIELDS.

## OLD SCENES REVISITED.

LINDSAY, Ontario.—A few weeks since a request appeared in your always interesting journal for experiences in the forests or on the streams of Canada, this land of rock and river.

The doings of a deer hunting party of six Ontarians, who have just returned from the woods with ten fine deer, if given in detail would doubtless prove amusing, if not instructive, to the readers of FOREST AND STREAM.

As prearranged with our captain, who, by the way, is a worthy representative of Ontario's wise management of its streams and inland waters, we were to meet for our holiday hunt at Big Hawke Lake, on the headwaters of the Gull River, which takes the rainfall from the height of land east of the south branch of the Muskoka and from the west of the Madawaska, whose innumerable lakes and streams interlock with those we were to hunt upon, finding their way down to the sea by the noisy Madawaska, the Ottawa and the noble St. Lawrence. The triple chain of lakes feeding Gull River and draining the northern townships of the important counties of Victoria and Haliburton, unite their soft, dark waters in the basin of Cameron's Lake. Thence hastening over the once romantic Falls of Fenelon, they ripple softly by that mysterious, love-hallowed shore (made sacred to the memory of Ogemah and Manita by Wm. McDonnell's exquisitely poetical romance of the Indian legend of Sturgeon Point), adding to their volume, after the passage of the Bobcaygeon Rapids, another fifty miles of lovely lake scenery, when they are hustled through the babbling Otanabee into Rice Lake, and down the Trent Valley to that grand receiving basin after which our fair province was named—Ontario, the Beautiful.

Lindsay being the railroad and steamboat center of this district, was of course our base of supplies and home of the majority of the party. In years past it was, and now is, the starting point for many hunting and canoeing expeditions to the "back lakes" of Ontario; some of them going through by water to the far-famed Muskoka Lake region, others to the broad bays of Nipissing or Opeongo, while some of our venturesome boys have successfully paddled their own canoes as far as the Mattawa and beyond to Lake Yemiscaming. One of these early canoe trips was recorded (May, '77) in FOREST AND STREAM, under the heading of "Roughing It in Canada." It mentioned this town as the northern terminus of the Midland Railway system, thus illustrating the progress now made by the iron horse, whose snort and whistle are daily heard, alarming the moose and other big game among the headwaters of Big White Trout Lake, in haste to make connection with the energetic C. P. R.

A canoe trip through this elevated lake region in the month of September or glorious October is the ideal excursion, and far exceeds the luxurious travel afforded by the Pullman car with its dainty waiters thrown in, that count for nothing compared with a well-fitted double canoe, board or bark, with a fearless Canadian guide to steer the way. The sweet independence of living for weeks in your own snug canvas home, bracing the nerves with nature's own true tonic, lungs full of pure ozone, supplying a healthy appetite with A1 camp bread, fish or game, with an occasional pot of "the finest potatoes on earth" or of well-steamed porridge, or beaver-tail soup, which for nutritive properties cannot be excelled by any known productions of the most gorgeous city restaurant.

The delay and annoyance of shipping canoes on the G. T. R. is proverbial. Mr. White, the genial district traffic superintendent, admitted the grievance a just one in regard to the Haliburton branch of the G. T. R., hence but few tourists or hunters care to repeat their canoe experience on this line. I have often admired the ingenuity of a Pittsfield (Mass.) friend, who years ago used to make annual canoe trips to this part of Canada. After purchasing a Canadian hunting canoe, he would have it cut into three parts and fitted with clamps and nuts, pack it carefully into his baggage trunk and thus avoid delay and extortions.

On Nov. 2 our party with two light butternut board canoes, availed themselves of the hunter's tickets per G. T. R., good for thirty days at one fare, 200lbs. of baggage, dog and gun free, but not canoes, oh, no; not even at owner's risk of handling off and on cars, except they were billed as packages of 1,000lbs. each! We could not indorse such a "whopper," so sent them "express" in an empty box car at a charge of three prices per pound. After a tedious ride of three hours we arrived at Gelert, some thirty-five miles on our way, meeting our reliable friend Hartley with his first-class team and rig, having the care of Her Majesty's mail for Minden. He at once assisted his passengers to seats, stowed the baggage as best he could, and called for the canoes. Again we had to submit to red-tape management by the express company until our prepaid receipt was confirmed by a message from Lindsay, horses, mail and men impatiently waiting in the rain in the meantime. At last, having securely roped our canoes over the wheels we drove off at a rattling pace into the darkness, sheltered from the rain by friendly umbrellas. The time passed pleasantly, listening to the learned remarks of the doctor from Markham, and to the still-hunting stories of our artist friend from Orono.

Good fare at the Minden Dominion Hotel, with a bright sunny morning, put the whole party into pleasant humor for continuing the stage journey of four miles to Mountain Lake.

On loading up our canoes they were found right and tight and a credit to their maker, Pat Dorris of Lindsay. Passing over Mountain and Twelve Mile lakes, and the Lesser Bushkong, we found ourselves well prepared for lunch at the Peterson Line. A steady paddle of three miles under the lee shore of Big Bushkong brought us to the up grade portage of a quarter of a mile to Hall's Lake. Here we looked in vain for the wooded bay where, in the fall of '65, Toasty cut out his first doe and stopped the gallant race of his first buck. Settlers had evidently taken possession of the surroundings. After a windy pas-

stage of the lake we met our team on the north sand-beach; quickly packing our canoes and bags on the jumper we were soon in the friendly shelter of the woods on a two and a half mile portage, carelessly allowing the team to follow Charley Boy with his pheasant gun ever ready. We halted near the summit to view a remarkable production of nature—a good-sized birch tree mounted on a huge granite boulder and set like a jewel in the grip of the graceful roots.

The jumper went on its way, jumping; result being a hole in the bottom of our big canoe. However, we soon arrived at our destination and received a hearty welcome from our chief and his right and left bowers who, with the help of Caleb the Silent, had already in camp four fine deer. Hurrah for the Growler's Cabin, with its jovial French cook, Pete Grozell, Esq., and his luscious ragiboo and home-made bread. In a remarkably short time supper fit for the gods was on the table and served gracefully. The day's experience in travel and the chasing of the deer on the wind-swept lakes occupied our attention, the honors of the chase being equally divided between Ross and Rose.

Our noisy cook announced breakfast at 5 o'clock in the morning. While waiting for daylight our positions were assigned for the morning hunt, some to Crab Lake, others to Paint Lake, necessitating several miles of paddling with two or three portages on the way. When on the third portage to Paint Lake, "Toasty," as our man in gray was named, illustrated the old proverb, "More haste, less speed," when handling his "butternut beauty." Instead of depositing his canoe gracefully on his shoulder for the carry, it unaccountably performed a rapid circular movement over his head, landing bottom down on a projecting stump, with a 2in. hole to repair and miles from camp. However, "Charley Boy," as our friend from Galt was christened, came to the rescue with his cranky canoe, the Merry Go Round, that could beat all creation for its pivotal susceptibility and its constitutional objection to going in a straight course. We at once concluded not to give a buck in the lake the best chance of getting ashore. Our right bower, Mr. Rose, at once took in the situation and gave us the use of his beautiful packet bark, to watch the north shore, while he put out Polly and Dandy for a start. Shortly after reaching our positions the welcome sound of the hounds in full chase awoke the echoes of the early morning, making our youthful hunters alert and anxious to capture their first deer. One, more keen than wise, pushed out his canoe and made directly for the sound of the dogs, forgetting in the fever heat of his first attempt, the caution to lay low and let the deer swim out before attempting a capture, as the deer would be at least a quarter of a mile ahead of the dogs. This simple lesson of experience was not lost on our youthful hunter as he realized a vanishing deer followed away from the lake by the music of Dandy and Polly.

On Crab Lake better luck was had by George, the youngster hunter of the party, who was placed in charge of the Chief, in his big rowing canoe. When the buck took the water the Chief kindly restrained any premature efforts until the deer was fully half-way over the bay, when a long pull and a strong pull brought their heavy laden boat within range, a merciful ball from his .44-90 Winchester saved some savory venison from falling a prey to the wolves.

Sunday being in Canada an illegal hunting day, we gave the dogs a rest and made the necessary repairs to our canoes. A few boat nails, a little white lead, and a piece of bottom board were sufficient to make them sound and tight.

Early Monday morning all hands and the cook were ordered to pack tents, blankets and grub for Crab River Rapids. We paddled and portaged, and portaged and paddled, up to the foot of the Rapids, and at once put out Punch and Cash for a start, but with no luck at all, except a glorious, sunshiny day, a comfortable camping ground, and lots of fun at night around our immense fire. A grumbling dyspeptic would here find no time or place for his hobby. After a hard day's work through these lakes and woods, the cook's welcome call to supper would develop the possibilities and genial hospitality of our noble chief and his active supporters. When pipes were lit and the painted bits of pasteboard were displayed on the rustic board, one might lie and listen to the musical lullaby of the rapids and the whisperings of the pines, whose mystical voice seemed to invite the weary hunters to that peaceful rest which their fragrant beds of balsam alone could give, or waking suddenly from the land of dreams of fallow, blue-coated deer with tantalizing flags erect, and tempting to the chase, the dreamer would start up to the thumping command of "play to the king," or "down with your pedes," given with a resonant French accent, sufficient to arouse the loudest sleeper in that romantic spot.

Among the relics of a departed race of hunters were found samples of the Indian skinning knife and bits of pottery. On the granite shore of Big Kenise Lake, where we watched for deer, a number of pre-historic "pot-holes" were found, the largest one measuring fourteen by twelve inches in diameter, with a depth on the cliff side showing a circular action of over nine inches, while the pot itself was some ten in depth below. The markings of the revolving stone or aerolitic pestle appeared plainly visible, yet a degree of even smoothness characterized the hole.

At the sandy outlet of the lake we observed the footprints of a large black bear. A few days later a well grown cub was taken in a steel trap by our neighbor, Wm. Otto.

A fine fat doe rewarded us for our trip to Kenise's Lake, but other guns than ours were in waiting for the spoils of the chase, so after killing two more we decided to return to the cabin on the hill, where we arrived in good time before the rain and snow and frost of the following week set in.

On Trout Lake we enjoyed better luck, although the weather was decidedly wintry, and we found it cold watching on the Three Brothers. A day or two before the close of the hunt our chief kindly allowed Pete, the cook, the use of his rifle and a strong board canoe for a day's hunting. As luck would have it the deer came to Pete's watch. As it was his maiden hunt a considerable degree of buck fever was, in his case, excusable. By rapid paddling Pete came within range of the deer, when bang! bang! went two heavy shots from the big Winchester. The buck swam bravely on untouched, and rapidly nearing the rocky point ahead. A third cartridge refused to enter the chamber, so Pete made another

desperate effort with his paddle, and literally taking the bull by the horns, he recklessly fought for their possession. The buck, probably realizing Pete's predicament, refused to turn. Fortunately for the cook, who after being pushed by the buck some 40yds. to the shore, it was found to be too rocky for good footing. By considerable effort on Pete's part with his paddle he pushed both deer and canoe off the shore, with the buck's head over the gunwale of the canoe fast in his vise-like grip. Again and again did the buck push his captor to the shore, the hard maple paddles descending in vain over the head and nose of this monarch of the glen. Pete having lost his split paddles in the melee, the buck again tried to reach the shore. In the words of the cook, "he looked a big fat beauty, and a pity to lose him," so seizing him by the opposite horn with one hand and by the nose with the other, at the risk of a capsize in the lake, he turned the deer on his side and held his nose beneath the cruel waters. When the next watch, who spied the contest and splashing of the waters by the struggle—arrived after their fastest mile on record—the deed was done, and Pete announced the victory in the exciting words, "It is a buck! it is a buck!" the rents in his clothing and his blood-bespattered face and his split canoe proving the contest between the plucky Frenchman and this antlered beauty a severe one and a true statement not easily forgotten.

Charley Boy very neatly dressed the deer and we took a hand poling him over the soft portage of one-third of a mile to our lake, where he was landed high and dry at our cabin on the hill. His weight was given at 195lbs. On examination of the rifle it was found to contain a half of a Dominion Company's brass shell. This being the third time that this shell bursting had occurred we concluded that the charge of 90grs. of powder was in excess of the capacity of the .44 shell. Pete vowed he wouldn't do the like again for all the bucks in the country.

The following day, in a snowstorm, Charley scored his first, a fine fallow blue-coat doe, thus ending an interesting hunt, all hands agreeing that the beautiful Indian summer weather of our Canadian open season is decidedly the best time for hunting, and that the objection of the pot-hunters, who appear more anxious to save marketable meat by a late season's shooting, are outweighed by the testimony of an old hunting friend, an educated M. D., who positively declares "that venison killed in the rutting season is unfit for human food," and that the cry of a certain class of still-hunters against the use of hounds in the chase is, in the light of scientific medical testimony, only bosh. It is a well known fact that more deer are disabled and destroyed by the stealthy practices of the still-hunter in the frozen season than by the running of deer with dogs before the smaller lakes are covered with ice, when their easy escape, in the majority of cases, is an assured fact.

Apparently an act forbidding the sale of venison will alone preserve the deer. W. A. G.

**The New .25cal. Shell.**

SACKETTS HARBOR, N. Y.—I realize that the statements one makes in our paper have a far-reaching effect. Nearly a year ago the FOREST AND STREAM published my first endeavor to introduce a new .25cal. straight shell. Since then I have received numerous inquiries concerning its progress from many of your readers, who naturally look to me for further information. I am sorry to be obliged to inform Messrs. E. A. Leopold, E. T. King, F. H. Ticknor, my good friends "Barrister" and J. H. Barlow, manager of the Ideal Co., also many others who have kindly displayed interest in this shell, that I am unable to report any tangible results, notwithstanding the expenditure of much time and some money in endeavoring to bring it within the reach of those who appreciate its advantages.

Last May the largest arms company in this country wrote that they would have it ready in a month. I waited three months and then inquired in person concerning its progress, being told that it would be ready in two weeks.

Five months later they stated that nothing had been done about it! It is not known to what extent the prevailing hard times have influenced the company in this matter, but if responsible for their alarming lapse in veracity, it behooves us all as honest sportsmen to be on guard against such pernicious influences.

Hoping that some other company may be induced to make this popular shell, the original model is reproduced. Meanwhile the writer will not cease his endeavors, which, please understand, are entirely disinterested.

The new cal. .25-25-100 c. f. cartridge, made expressly for the rifle. Shell 2 1/4 in. long, straight, using the 88grs. and 98grs. bullet

(Ideal molds) and 25grs. Fg. Hazard powder (Ideal charger). Also a round ball with light charge. Specially adapted to both hunting and target practice. W. L. CARPENTER.

**A Louisiana Ducking Record.**

FRANKLIN, St. Mary Parish, La., March 2.—In your issue of Feb. 24 a mistake was made as to the size of the bag we made on our trip to Abbeville. There being one cipher left off the number made quite a difference and doesn't appear much to the credit of our country as a place for "game, and lots of it," not to mention our reputations as pretty good shots. The number was 840, quite an unusually large kill for us. The time consumed was two full days. F. A. F.

**Cold in Michigan and Massachusetts.**

CENTRAL LAKE, Mich., March 1.—I am told that Torch Lake and Grand Traverse East Bay froze over last week. A friend writes me from Islington, Mass.: "A few flocks of quail have lived through the winter hereabout, but the poachers have thinned them." KELPIE.

**While Reading "Forest and Stream."**

With the unerring skill of a "Diamond Walt" I lay low the mysterious "Arabian spike buck" with the deadly .22 short. Anon I am gliding down the Patuca, lulled to sleep by the rhythmic plash of mahogany paddles pulled by bronze-skinned boatmen. Lost in wonder and admiration, I wander amid the sublime grandeur of the Yellowstone Park, that gallery of art in which every work is a masterpiece. With my trusty rifle I face the grizzly in his mountain home, and rob him of his shaggy coat. Oh, fond delusion! I hunt the game of every clime, drop shells beside cold Yukon's rolling tide and torrid India's "coral strand." From the realms of FOREST AND STREAM I banish race and creed and meet my brother man as brother. "The world is mine!" WISBTON WISE.

**Camp-Fire Glickerings.**

"That reminds me,"

**A Story from the Levees.**

MY father appreciates a good joke as much as anybody, laughs as heartily over it, or relates it with as much zest. Especially is he amused by any unsportsmanlike exploit of a would-be sportsman, or the woeful tale of a less fortunate companion in the chase, of "shot too small," or "shells not loaded right." The more lamentable is it, therefore, that it remained for me to have this bit of (profane) history from other than his lips.

There is a law in this State requiring levee officials to kill all hogs found at large within a certain distance of the levee. In order to comply with this regulation father is always equipped with a carbine and plenty of cartridges during his frequent tours of inspection over his "line." Not infrequently does he bring the little rifle into play, and having become attached to the seemingly tame sport, he enjoys it to the fullest.

"Did you hear about the Major shooting hogs with Captain —'s gun last summer?" I was asked.

I had not heard.

"He was riding by the Captain's place when he ran on to a big drove of hogs. It took him only a few seconds to get his rifle out of its scabbard, and he was bringing her down to a bead on a big fellow when Captain — hurriedly rode up.

"Hold on, Major, I want you to try my new gun!"

"The Major 'held on,' long enough for him to go into the house and bring out a bright Winchester. While his eyes sparkled with delight (for he admires a new gun) the Major took a deliberate aim and fired. A clean miss! He tried again—again no hog. By this time the drove had become frightened and started off at a gallop. Also, several negroes appeared on the scene, and one opened the gate of the mule lot, while the others headed the hogs that way.

"Click, click—bang! Click, click—bang!" the gun said several times in quick succession. Not a feather!

"In a fit of desperation the Major grabbed up his carbine, but as he raised it to his shoulder the gate closed behind the last of the swine, and they were safely separated by a high rail fence from the strong arm of the law.

"The disappointed marksman began an examination of the new gun, the Captain looked on complaisantly. Making a discovery, the former cast a smile of humiliation toward the latter, who returned a grin of exultation. The story was told without words. During his short stay indoors the Captain had accomplished wonders, by adjusting the sights with a hammer, and dispatching his servants around by a side route, to run in the hogs, which happened to be his own." TRIPOD.

MISSISSIPPI.

**Sea and River Fishing.**

**EARLY FISHING EXPERIENCES.**

WHILE rummaging in my garret one day last winter, I came across a little tin box, the sight of which, with its contents, consisting of rusty fish hooks, chunks of lead, split shot, bits of line and a battered cork, carried me back, I would not like to say how many years, to recollections of my happy school boy days and memories of "Green Fields and Running Brooks." I have always been fond of fishing, and my earliest recollection of the sport was catching minnows on a pin hook when I was five years old. But it was during my rustication at boarding school that I had the most pleasure in this way. One of my early efforts at letter writing was from one of these institutions of learning, and was written to my mother, on hearing of the death of an aunt, and this letter shows the bent of my mind at that time. The substance of the epistle ran thus: "I am very sorry to hear of the death of Aunt Ann, and hope she has gone to a better place; please send me some fish hooks."

Every spare hour I could get was spent with hook and line trying my luck with the finny tribe, and there was not a stream within five miles of the school I had not fished in, and many's the string of trout, chub, sunnies and cattie I brought home. I had while at this school a fishing rod that was very highly prized by me, and was the envy of all the boys. It was a long pliant cedar that I had cut in the swamp, and from which I had peeled all the bark. As it was well seasoned, it was light, tough and elastic. One of the boys had a grudge against me, and knew he could not hurt my feelings more in any way than by destroying this rod, and I am sure I never felt more hurt than I did, as I came out of school at recess one day, and saw my precious rod lying by the wood pile chopped to pieces. This common cedar rod was to my eyes at that time the most beautiful rod in existence, and one that I thought could not be replaced, as I was sure there was not such another in all Beaver Dam swamp. That I gave that boy a sound thrashing goes without saying.

Not far from the school was an old quarry hole full of water, that every one said had no fish in it, but one rainy Saturday I thought I would try it, and was rewarded by a large catch of sunnies and cattie. When I returned home with my string, the much astonished boys tried to pump me as to where I caught them. I guarded the secret for some time, but finally it was discovered, and the place was soon fished out. One day while fishing in this quarry hole, I discovered a white turkey hen setting on her nest, which I made up my mind I would capture as soon as her brood was hatched, as I thought she had no owner, there being no habitation nearer than a mile. But my calculations were all upset when an old colored man appeared upon the scene and said to me: "Doan you tetch dat turkey, honey, it b'longs to me, it do, and Ise a watchen it."

One of our best fishing places was under the dam at the old iron furnace, where the water pouring over its breast had ploughed out a deep pool. Below the dam the stream wound its way between banks that were carpeted with fresh green sod, and numbers of large sycamore trees grew close to the water's edge, leaning over the stream until their tops nearly met, forming a beautiful arch of green through which the mid-day sun could hardly penetrate. I used to go up there and lie down under one of

these trees, and watch the flakes of foam that came down from the dam, get into the eddies and swirls of the deep hole under its roots, where they would sail, turning and twisting slowly round and round, until getting too near the outer edge, they would be carried swiftly down stream by the rapid current, among the rocks, where they were dashed to pieces. I would sometimes lie close to the water's edge and watch the sunfish guarding their spawning beds, darting with wonderful rapidity and ferocity at the minnows that were hovering around, and pouncing upon the spawn at every chance.

The spot so beautifully described by Whitecomb Riley in his poem "On the Banks o' Deer Crik," reminds me forcibly of this place:

"On the banks o' Deer Crik mile or two from town,  
'Long up where the mill race comes a loafin' down,  
Like to git up in ther'—'mongst the sycamores,  
And watch the worter at the dom a frothin' as she pours.  
Crawl out on some old log, with my hook and line,  
Where the fish is just so thick you can see 'em shine  
As they flicker round your bait, coaxin' you to jerk,  
'Tel yer tired ketchen 'em—mighty nigh as work."

In one of the low lying fields near by there were some deep ditches in which large eels abounded, and many's the night I have sat out for an hour or two hauling in the great slimy, squirming fellows. I used to cogitate and plan to invent some way in which I could get them off the hook without the terrible struggle that followed each capture, and finally adopted the following plan: On my way to the ditches I picked up several large stones, which I put in my basket, my idea being to hit each eel, as soon as caught, on the head with one of the stones, stunning it for a time, and enabling me to remove the hook. My plan worked like a charm, each eel was carefully let down into the basket, and after perhaps several attempts was hit on the head with one of the stones. They bit well that night, and when it was time to go home my basket was half full. I wound up my line, took the basket by the handle and lifted it, when behold the bottom came out, and my eels were squirming all over the grass, most of them escaping into the water. The stoning process had completely destroyed the basket, and it took my allowance of pocket money for several weeks to get a new one.

The ways of my youngest boy of ten remind me very much of my boyhood days, and nothing gives me more pleasure than to see the little fellow making his preparations for a day's outing. He will spend a long time of the evening before getting his tackle ready, and will be up betimes in the morning digging bait, and with a lunch in his pocket and rod over his shoulder, will give a happy good-bye as he starts off. Returning toward night, besmeared with mud and wet to the skin, he will show with pride his string of mill-roaches and sunfish, excitedly relating the experiences of the day. Those happy boyhood days, like the water that turns the mill, have passed, never to return again, but with how much pleasure do we look back upon them, feeling that the love of nature, and the love of the "gentle art," then instilled into us has had its influence on our whole lives, helping to make us purer and better, both physically and morally.

EDWARD A. ROBINSON.

BALTIMORE, Feb. 22.

## OUANANICHE.

Editor Forest and Stream:

I have read with much pleasure, and great interest, Mr. A. N. Cheney's article in FOREST AND STREAM's issue of Jan. 27 last in reference to ouananiche. In fact, I enjoy all of his articles to the same extent. He is a thorough fisherman in all branches of the art, and to me an instructive writer.

In the article above mentioned I want to agree with him on some points and disagree on others.

I firmly believe that the landlocked salmon of Lake St. John, its tributaries, and its outlet, the Saguenay, and named by the Indians ouananiche, or little salmon, differs quite a little from the landlocked salmon found in Maine and New Hampshire waters. The difference does not lie in appearance or genealogy, as they are unquestionably *sui generis*. But their bringing up has been different and their behavior varies accordingly.

There is no question about the descent of either or any of them. They are the direct progeny of the salt water salmon (*Salmo salar*) that, through some convulsion of nature, or accident, have become landlocked and unable to return to the sea.

It has been demonstrated also by practical tests made by the Canadian Government that young salmon fry taken from the sea salmon hatchery at Tadoussac and placed in landlocked fresh waters, would thrive as well as they would have done had they been left in their native element.

Now, as to the difference between the ouananiche of Canada and the landlocked salmon of the States.

In the former case the ouananiche were born and grew to full size in the rough tributaries and outlet of Lake St. John, in waters than which none can be wilder or more rough. They are found where the water boils and tumbles the most—rarely in the still water.

Their life being passed constantly in such rough water, they are a terribly strong fish, able to ascend through the swiftest current, or mount the wildest fall. Hook one in the turmoil of waters, and his action is apparent; a fighter, every inch of him, and to the last I have yet to find a fish his equal, black bass and trout to the contrary notwithstanding.

Here is where the ouananiche's bringing-up stands in his stead. Born of fighting stock, he fights his native element constantly, and he fights his foe, the fisherman, successfully. I say successfully, advisedly, as I have never individually, nor have I ever seen any one else land even one-half of the ouananiche that have taken the fly.

I can refer to my most successful catch last season on the Fifth Falls of the Mistassini River, where in four hours I safely landed fourteen and lost seventeen. I retired with an arm lamed to such an extent that I was unable to cast for fully twenty-four hours.

The fish that I brought safely to net I was forced to play from fifteen to twenty-five minutes each, and they leaped from the water fully six to eight times as a fair average.

So much for their fighting qualities. The Lake St. John waters are all comparatively shallow as rivers naturally are, and while the ouananiche is a deep-water fish, it can-

not get deep enough to not be able to see the fly. The consequence is that you can take any rapid at any time of day, understanding of course that you are fishing the right waters at the right seasons, and secure a successful return from your fly-casting.

As a contrast to this, let us look at the other side, the landlocked salmon of the States. These are confined to and practically found only in lakes of various sizes, a few occasionally being taken in the streams. Bred and raised in the deep, quiet waters of a lake, their bringing up is far more quiet than the ouananiche, and they are better behaved. The muscle development is not so great and they are far from being as great a fighter. This fact is patent on its face.

Then, too, they are a lake fish and remain in deep water, too deep for fly-fishing, except perchance at twilight when the smaller fish will jump and can be taken. This leaves much of the fishing to be done by trolling with a spoon. That I will pass over, as I consider trolling for landlocked salmon worse than a sacrilege.

In the foregoing lies my argument as to the fact that there is a great difference in the fighting qualities of ouananiche and landlocked salmon, and accordingly something of a difference in the fish themselves.

I must differ with Mr. Cheney when he says that "little salmon" does not properly describe the ouananiche, stating that they will run to 25 lbs. weight. This may be true of the landlocked salmon of the States, but is not true of the ouananiche of Canada. In seven years' experience my largest fish has been 7 lbs., and one weighing 8 lbs., caught by a guide, is the largest I have ever seen. I have made particular inquiry, and with the exception of a sort of fairy tale, a legend as it were, that Mr. Price, one of the great lumber firms of that name, had many years ago caught one of 14 lbs. in the Petite Decharge of Lake St. John. I have never seen or heard of one to exceed 8 lbs. I have questioned guides and Indians alike, and they invariably reply, "*Les ouananiches sont petites.*"

The ordinary catch as made will not vary but little from an average of 3½ lbs. Occasionally one of 4, 4½ or 5 lbs. is taken, but rarely will the average exceed 3 to 3½ lbs. If excessively large fish are extant, they have never been caught, or even seen.

The weight in the New Hampshire lakes is still another indication that those landlocked salmon are different from the ouananiche, since if any of these latter existed, they would long since have been caught or at least seen.

From all this, I conclude that by right of baptism by the *habitans*, from the fact that a difference in the two fish is shown to exist, from the fact that the fish of Lake St. John is a stronger fish, and a greater fighter than that of the States, that it is but fair that the denizens of Lake St. John should hold to themselves alone the right and title to the name ouananiche, and that their pseudo relatives of the States should adhere to their proper name, landlocked salmon. When they usurp their name, they usurp their thunder as well, and that they are hardly entitled to.

The landlocked salmon has the reputation, and doubtless is, a hard fighter. I do not form any judgment from actual experience with them, but formulate my ideas entirely from the experience of others. I have met many fishermen at Lake St. John and elsewhere, who have fished both the Maine and Canada waters, and all agree that the ouananiche is a greater fighter, and a more difficult fish to land.

If I am in error I shall be only too glad to be convinced of it, but there is nothing that can make me believe that any fish can exceed, or even equal quite, the king of freshwater fish, the gamiest of all—the ouananiche of Lake St. John.

EUGENE MCCARTHY.

## THE MOHICAN ROD AND GUN CLUB.

THE organization of the new Rod and Gun Club at Glens Falls, N. Y., was completed the evening of March 1 by the adoption of a constitution, a name and the election of officers provided by the constitution. The name is the Mohican Rod and Gun Club, the Indian portion of it being intimately associated with the forests and streams of this region through J. Fenimore Cooper's novel, "The Last of the Mohicans."

The Indian name Mohican or Mohegan, is that of a tribe of Indians, and the word is derived from Muh-ha-ak-nuck, meaning "a great water that is constantly in motion," that is, flowing or ebbing. The Mohicans were allied to the Manhattans, Pequots, Narragansetts and Nipmucks, and occupied the territory from Long Island Sound to the Penobscot. It will be remembered by the great army of FOREST AND STREAM readers that "Injun Levi," the tutor of the immortal "Nessmuk" during his boyhood, was a Nipmuck, Nepmuk, or Nepmug (as it is variously spelled) Indian, and in "Forest Runes" "Nessmuk" explains how he came by his pen name as a heritage from his tutor.

Holden says of the Mohicans: "The territory subject to their domination and occupancy extended from the Connecticut to the Hudson as far north as the southern extremity of Lake George. According to Schoolcraft, these Indians were among the tribes of the Algonquin stock. \* \* \* The early attachment which was formed with the first English colonists of Connecticut by the politic Mohicans no doubt contributed in a great measure to their preservation during the harassing wars which prevailed through the colonial peninsula for the first fifty years of its settlement."

Dr. Edward Eggleston, the novelist, once told me that these Indians were undoubtedly skilled in the manufacture of weapons for the chase and for war, and manufactured flint arrow heads, fish hooks, skinning knives, spears, etc., for barter with other tribes. There is evidence existing to-day, or was within a very short time, that one great workshop of the Mohicans for making tools employed in taking fish and game was situated near Joshua's Rock, on Lake George, and the lake was probably a highway over which the Indians from the north came to trade with this tribe of savage sportsmen.

Upon the adoption of a constitution and a name, the club re-elected the officers chosen at the initial meeting, as given in FOREST AND STREAM, and in addition Mr. F. F. Pruyne, cashier of the Merchants' National Bank, vice-president, and the following board of directors: Daniel L. Robertson, Joseph A. Powers, John M. Davies, W. E. Baldwin and Norman R. Gourley. As a symbol of the club there was adopted the figure of an Indian head and bust with a tortoise, the totem of the tribe of Mohicans, on his breast.

The modern sport-loving Mohicans have no fear that a

band of warlike Iroquois will drive them from their hunting and fishing grounds, as their prototypes were driven, and to signalize the era of peace, good will and brotherly feeling, Col. Marshall McDonald, the chief on the Potomac; Charles B. Reynolds, the sterling chieftain of the Manhattans, and Arthur C. Gould, a worthy chief of the same tribe, and John H. Halsted, a chief of the Mohawks, with a lodge at Peekskill, were proposed as honorary members.

To further cement the "early attachment" existing between the Mohicans and the English, the club extended its invitation across the "great water that is constantly in motion," to London, inviting Robert B. Marston and William Senior (whose totem is a "Red Spinner"), in amity to become honorary members of the Mohicans. To their kinsmen the Caughnawagas in the land of the beaver, the Mohicans also extended honorary membership to the person of the great chief, E. T. D. Chambers, who lodges at Quebec.

The organization of the Mohican Club was timely, for, according to the Glens Falls *Star*, two black bears were seen yesterday in a piece of woods bordering almost upon the corporate limits of the village, and the *Star* this morning calls upon the club for action before the village itself is invaded. Last fall three deer were seen within the corporation, so with deer and bear at hand, fish and small game only will require attention at the outset, but the club is just now more interested in finding a home and in preparing grounds, than in either shooting or fishing.

A. N. C.

## BOSTON AND MAINE.

WHAT is termed "the Boys' Party" of the Monomoy Brant Club is booked to leave Boston on March 28 for the spring shoot. This will be the second party to visit the club's shooting ranch for the season of 1894. It will include seven or eight members of the club and invited guests, and the names of the happy individuals I will try to give as soon as the list is fully made up. Prospects are reported to be bright for a good brant season. Word comes direct to me from a member of the club that brant have been seen at and near the club's shooting grounds nearly all winter. The Monomoy Brant Club is one of the oldest shooting clubs on the coast and has some of the best sportsmen in its list of membership. The members are not nearly all of them in favor of spring shooting, but they are aware that very few brant could possibly be taken at any other season.

It may not be exactly Monomoy Brant Club news, but it is worthy of mention that there is to be a wedding this week down there in Chatham. Mr. and Mrs. George Bearse have issued invitations for Tuesday evening, and some of the members of the Brant Club have received them. Their daughter Ina Georgie is to be married to Mr. Luther Studley Edwards, of Chatham. Mr. Bearse is captain of the club's gunners, and is very popular with the members of the club.

The Gilbert trout bill had not got fully through the Senate on Saturday, though there is little doubt but what it will go through. The question of the House amendments was not then decided, viz., exempting trout under six in length from being sold legally during March and April, and exempting the counties of Hampden, Hampshire, Franklin and Berkshire from the provisions of the bill. Mr. Gilbert and his friends are accused of fighting for even this last pound of flesh left to the cause of the poor wild trout in the State of Massachusetts.

Already the interest in spring fishing is beginning to be noted. I have lately met several of the regular visitors to the Rangeley Lakes, and they have begun to discuss the annual and very interesting question, as to when is the ice going out? I find that there is a feeling of discontent among what may be termed the regular sportsmen, as to the amount of fishing to be obtained in the Rangeley waters. The feeling is that vacationists and summer residents have badly over-fished the more noted of Maine trout waters. One gentleman, a visitor to the Rangeleys regularly for many years, tells me that he was badly left as to getting any trout at the old haunts last year, and that he, with a party of friends, will try the waters that are to be reached via the Aroostook Railroad this year. It is true that a great sporting country has been opened up by the opening of this road, but I suggest to him that, from all accounts, there will be a dozen sportsmen for every new point, and that the new fishing grounds will doubtless be as badly overdone as the old.

SPECIAL.

## California Fly-Casting Tournament.

A LARGE body of enthusiastic anglers assembled at the Palace Hotel, San Francisco, on Tuesday evening, Feb. 20, to hear the report of the committee on programme and rules of the fly and lure casting tournament to be held during the Midwinter International Exposition in Golden Gate Park, San Francisco, May 4 and 5. Among the most noted anglers present were John Benn, the well-known fly-tyer; Capt. Cummins, one of the veteran anglers of this coast; W. J. Golcher, E. P. Allen, official time keeper at the Chicago tournament; H. E. Skinner, Wm. Murdoch, of the Fish Commission; Alexander Badlam, and the committee, consisting of Col. G. C. Edwards, A. M. Cummings, W. J. Matthews, J. Siebe, J. E. Shain, W. D. Mansfield, and Messrs. Golcher and Allen, previously mentioned. In addition there were over forty anglers present.

Col. G. C. Edwards, of the University of California, officiated. Mr. W. D. Marshall, the secretary-treasurer, assisting. After a brief address, Col. Edwards stated the objects of the meeting and requested the anglers present to discuss the rules and programme and make what suggestions they saw fit. After considerable discussion the following programme was adopted:

### CONTESTS.

1. Fly-casting for distance.
2. Fly-casting for distance and accuracy combined.
3. Light-rod casting for distance, accuracy and delicacy combined.
4. Fly-casting with salmon tackle for distance.
5. Lure (spoon-minnow and bait) casting for distance and accuracy.

The tournament will be held at the lagoon at the foot of Strawberry Hill, Golden Gate Park, a most excellent selection, sheltered, easy of access and an excellent place for the spectators to view the work.

The Chicago platform was aft. from the water. Ours will be but 1 ft. Consequently I do not expect the long distance casting will be as successful as regards record breaking as Chicago, as the caster will not have the same advantage in retrieving his line as the Chicago contestants had. There will be a very large local entry. Our best sportsmen are taking hold of it. The rules will be given next week.

NANUQUOI.

The Megantic Club.

The annual meeting of the stockholders of the Megantic Fish and Game Corporation was held at the Westland Hotel, Portland, Me., on Tuesday, Feb. 27, at 2:30 P. M. There were present Messrs. F. A. Foster, L. Dana Chapman, Arthur W. Robinson, F. L. Brown and Dr. Heber Bishop. (Proxies 143.) The treasurer's report proved the financial condition of the club to be excellent. Assets \$13,513.54, and liabilities \$1,891.25.

Mr. Arthur W. Robinson of Boston was re-elected Clerk and Dr. Geo. W. Way of Portland, Me., Assistant Clerk. The following were elected Directors for the ensuing year: Mr. Alexander Taylor, Jr., Mamaroneck, N. Y.; Messrs. Walter C. Prescott, Frederick A. Foster, L. Dana Chapman, Arthur W. Robinson, Boston, Mass.; Dr. W. G. Kendall, Atlantic, Mass.; Messrs. W. K. McClure, Plainfield, N. J.; Chas. A. Kilham, John W. Dunklee, A. R. Brown, Seth Perkins, James Brown, Boston, Mass.; Mr. Philander Cutler, Binghamton, N. Y.; Mr. Nathan F. Tufts, Charlestown, Mass.; Mr. W. A. Macleod, Boston, Mass.; Mr. Frederick L. Gilbert, New York, N. Y.

ARTHUR W. ROBINSON, Clerk.

The Vermont Trout Law.

*Editor Forest and Stream:*

I read with interest Mr. H. C. Kirk's comment on the proposed plan for protecting the trout in Vermont waters by posting all small streams and the headwaters of larger ones, and I consider his remarks most sensible from his point of view. I have no wish to provoke a controversy with anyone, but think, as Mr. K. says, the matter should be discussed, and I hope to see some expression of opinion from Vermont anglers.

I think all will agree that almost any plan would be more feasible than the six-inch law, as it is now enforced, but it seems an open question whether the proposed plan would be a great improvement.

If all small streams were posted, without exception, it would close many of the mountain streams which do not act as feeders to a larger stream where trout are found, but empty direct into some of our larger rivers. Trout of more than 6in. are now taken in these streams, and there would be many more if they were given any chance to grow—that is, the six-inch law would be ample protection for such streams if it could be enforced.

I may be wrong, but I cannot see that the proposed law would be any easier to enforce than the present one, especially if it allowed the taking of trout of any size in waters not posted. It would be very easy for any one so disposed to take all the small trout they cared for in the smaller streams, and to do it in such a way that it would be difficult to prove they were not taken from open waters. The headwaters of our mountain streams are located, as a rule, where witnesses of illegal fishing are not apt to be plenty.

I certainly do not think that under the proposed law even so many fingerlings would be returned as at present (though the number now returned must be very small) especially in the larger streams, where the taking of small trout would be lawful. But as matters are at present it would simply legalize what is almost a common practice. Of course in some favored localities the six inch law is well observed, either from principle or because it is not too easily evaded; but as a whole I think it safe to say the six-inch law is doing very little toward keeping up the trout supply. Any one who was fairly well posted would say the same of this section, and I have found it so in other parts of the State.

This being the case, the proposed measure may be of more value than the present law, and if so, I sincerely hope it may be given a trial.

The time for the usual tinkering of the fish and game law is approaching, and of course no fellow can tell what will be sprung on us next; but for one I would suggest that it might be well to devise some means of enforcing the present law before trying a new departure, which, as far as stated, seems to present the same difficulties and may not have its advantages.

ROD.

Game and Fish Bills at Albany.

(From our Special Correspondent.)

ALBANY, March 5.—The following bills have been introduced since the summary given up to Feb. 16:

ASSEMBLY.

No. 551. By Mr. Bradley.—Makes close season for ruffed grouse, partridge, all grouse and all pheasants, Jan. 1 to Nov. 1; woodcock, Jan. 1 to Aug. 1. (Amends Sec. 164.)

No. 764. By Mr. Rider.—Protects Mongolian pheasants for three years.

No. 783. By Mr. Van Amber.—Permits taking frostfish in inland waters with nets, at such times and under such rules as the Fish Commissioners may prescribe.

No. 818. By Mr. Van Amber.—Permitting rabbits to be killed between Aug. 15 and March 15 in counties of St. Lawrence, Franklin, Essex, Clinton, Lewis, Warren, Hamilton and Herkimer.

SENATE.

No. 887. By Mr. Parkhurst.—Amends Sec. 203 by providing that supervisors' enactments shall apply to all citizens of New York State alike, and repealing all ordinances already adopted which discriminate against citizens of other counties.

"Among the Ozarks,"

THE LAND OF BIG RED APPLES, is an attractive and interesting book, handsomely illustrated with views of South Missouri scenery, including the famous Olden fruit farm of 3,000 acres in Howell county. It pertains to fruit raising in that great fruit belt of America, the southern slope of the Ozarks, and will prove of great value, not only to fruit growers, but to every farmer and home-seeker looking for a farm and a home. Mailed free. Address J. E. Lockwood, Kansas City, Mo.—*Adv.*

Where to Find Game.

Where to find game is oftentimes a perplexing question. The sportsman who strikes a good spot generally keeps the information as close as possible, in order to enjoy exclusive privileges.

Along the line of the Baltimore & Ohio Railroad in Virginia and West Virginia, such places are numerous, and it is remarkable how little they are known. The mountain streams abound in gamey fish. The South Branch of the Potomac is considered the best black bass fishing stream in America, the Cheat, Youghiogheny, Potomac and Monongahela Rivers are all excellent fishing streams. The hills and valleys adjacent are fairly alive with game—partridge, wild turkey, grouse, pheasant, wild pigeon, quail, rabbit and squirrel are plentiful, and in the back country thirty or forty miles from the railroad, deer and bear can be found.

Good hotels are convenient, and horses and guides can be secured at reasonable rates.

For circular showing fishing and gunning resorts reached by the B. & O. R. R. address Chas. O. Seull, Gen'l Pass. Agent, B. & O. R. R., Baltimore, Md.—*Adv.*

A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the **FOREST AND STREAM** one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$6)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals.

For \$3 a bona fide new subscriber for six months will receive the **FOREST AND STREAM** during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

The Kennel.

All those who love a dog because it is a dog, and not merely a medium for the accumulation of dollars and cents, are invited by the editor to consider this department as one in which they can discuss amicably any subject that is of interest to the canins fancy, without fear of their communications being subjected to personal comment or ridicule.

FIXTURES.  
DOG SHOWS.

March 7 to 10.—City of Straits Kennel Club, at Detroit, Mich. Guy D. Welton, Sec'y.

March 13 to 16.—Mascoutah Kennel Club, at Chicago, Ill. J. L. Lincoln, Sec'y.

March 27-30.—Philadelphia Kennel Club, at Philadelphia, Pa., Dr. D. B. Darby, Sec'y. Entries close March 16.

April 17 to 20.—New England Kennel Club, at Boston, Mass. D. E. Loveland, Sec'y. Entries close March 31.

April 18 to 21.—Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.

May 15.—Portland Kennel Club, at Portland, Ore. D. L. Williams, Sec'y.

FIELD TRIALS.

Sept. 5.—Manitoba Field Trials Club, at Morris, Man. R. J. Gallagher, Winnipeg, Sec'y.

Nov. 6.—International Field Trials, at Chatham, Ont. W. B. Wells, Sec'y.

THE COLUMBUS DOG SHOW.

The dog show of the Columbus Fanciers' Club Co. (Columbus, O.) was a great success, the club coming out well ahead financially, although the admission fee (25 cents) was small. The *élite* of the city patronized the show. Each day saw an increased attendance and interest. The members worked diligently to make the show attractive and to interest the people in it. They deserve the success which came from their efforts. The third day's receipts brought in a balance above expenses, and the fourth day was all to the good.

The show was held in the building 21 North High street, on Feb. 28 and March 1, 2 and 3. The building had been used for a store. The arrangement of it inside was most inconvenient for dog show purposes. Three floors were used, the first for the large dogs, the second for setters, pointers, etc., and the third for small dogs. An elevator and stairway afforded means of ascent to the upper floors. Had there been a fire the fate of the dogs in the upper floors was easy to predict. Still, it was the best building the club could secure in a central location, and they did the best they could.

The benching was wooden, and of course marred the general effect of the show. But, with this show such a proven success, the club will undoubtedly make its next show first-class in all its appointments.

There were 277 entries catalogued. The quality of the dogs was better than the average, several famous kennels competing. The club was particularly fortunate in its dates coming between the New York and Detroit shows.

Mr. H. A. Bridge was superintendent. He was assisted in his work by the treasurer, Mr. A. T. Dempsey, Mr. Geo. F. Mooney, secretary, Messrs. J. D. Poston and W. H. Eakins. Every effort was made to please the exhibitors, and that they succeeded is attested by a testimonial to the club, signed by most of the exhibitors present.

The dogs were fed on Spratts patent biscuits. The club should endeavor to secure a building for its next show which has sufficient space in one room to bench all the dogs. It mars the effectiveness of the display when the dogs are divided up in two or three rooms, and in a building where three floors are used the danger from fire is great.

GREAT DANES (*E. Burdick Elliott, Judge*).—There were nine present, of which the greater part were exhibited by the Kennel Lawrence. Major McKinley, the only entry in the challenge class, was absent. Earl of Wurtemberg was easily first in dogs, with Lawrence Leopard second, the same positions as they had at New York last week. They were fully reported in **FOREST AND STREAM**. The great bitch Portia Melac was shown in good condition. She excelled her two competitors, Kelpie and Francis, in every respect, they being second and vhc. respectively. Of the two puppies, Lawrence Vera, excellent in legs and feet, good body, head and symmetry, was easily first. Lawrence Minka, second, is light in bone. The Kennel Lawrence took the kennel prize.

DEERHOUNDS had no entries.

BOZOS (*George Bell, Judge*).—Mr. Hanks's kennel was well represented and took most of the prizes, including the kennel prize. In challenge class Leekhoi was first, with Vinga reserve. In open dogs Leekhoi II. was first, Colonel Dietz second. Zlobelis had two competitors in the bitch class, Lady Dietz, second, and Gipsy Queen, hc. The latter was third at New York, while Lady was vhc.

GREYHOUNDS (*George Bell, Judge*).—Master Rich, well-known, was the only entry; he was in good condition.

AMERICAN FOXHOUNDS (*George Bell, Judge*).—Ranger II. was the only competitor and he was awarded second in the challenge class. He is not an American type precisely and probably that is why first was withheld.

POINTERS (*Major J. M. Taylor, Judge*).—Pointers as a lot were not remarkable for quality. There were 24 all told. Rush of Lad won over Tempest in challenge dogs. Both show coarseness, though they are strongly built. Wild Lilly had a walkover in challenge bitches. There were seven heavy-weight dogs. Stanley, first, is a toppy looking dog, but is deficient in short ribs, is good in front, but light behind; head somewhat plain, and is lacking in smooth finish. Molton Banner, second, is stockily built, too heavy in neck. He stands squarely on good legs and feet. The reserve, King Hamlet, is leggy and straight in shoulders. The Sheriff, vhc., is heavy in skull, but is a fairly good large dog. The only heavy bitch, Carrie G., was fat, light in bone and wide in ribs. Ridgeview Tenny was first in dogs under 55lbs. and also won special for the best pointer. Last week he was a heavy-weight and won second at New York as such. Second was won by Dictator. He has good legs and feet, heavy neck, plain head. He is very heavily built and carries too much lumber. Lad of Rush, the reserve, is a muscular, compactly built dog, plain in head, good in body, back, legs and feet. Fanny Kirk was first in bitch bitches. She has a fairly good head, is straight in shoulders, is throaty, has good legs and feet. She was very closely pressed by Pet S., the latter quite symmetrical, smoothly built and muscular. She does not carry her ears well. Fan Fan II., the reserve, is light in muzzle and her ears are set too high. Light lower thigh, body well ribbed. Spotted Goat easily beat American Boy in puppy dogs, and Miss Drake had no competitor in the bitch class.

ENGLISH SETTERS (*Major J. M. Taylor, Judge*).—Breeze Gladstone and Bohemian Girl had a walkover in the challenge classes for dogs and bitches respectively. The latter is quite throaty and shows some effects of old age. The dog class had 19 competitors. They were but little above ordinary in quality. Rodfield, first, was thin in flesh. He stands badly in front, elbows in, feet out. His head is fairly good though his lips being scant gives his muzzle a light appearance. Still, he was the best in the class. Second went to Pierce Hill, short in muzzle, heavy skull, fairly good legs and feet, a shade flat in ribs and long cast in body. Mac

Murdo, the reserve, is plain in head, has good legs and feet, neck too short, fair general symmetry. Five dogs received vhc., Chesterford Surprise, quite a good setter though slightly throaty and head deficient in stop. Young Howard, a good setter plain in head and too thin in flesh, Budd Noble, and Ben Hur of Riverview, good vhc. dogs, and Netherwood Nymrod, the latter third at New York and Ben Hur of Riverview fourth. There were 14 bitches in the competition. Latonia, first, stands on good legs and feet, a fairly good head deficient in stop, and back slightly swayed; on the whole, quite a fair bitch. Belle of Brownstown, second, is short in neck, plain head, shoulders too heavy, good legs and feet. Arline, the reserve, is throaty. She is a good vhc. bitch. Florence Gladstone, Dorna Gladstone and Brownie received vhc. about their merit. There was but one entry in the dog puppy class, a trimly built fellow, muscular and symmetrical, though his tail had more curve than was desirable. There were two puppies in the bitch class. Queen Emma, first, is long cast and lacking in symmetry, while Gypsy Queen has a light narrow head, was thin in flesh, yet is quite a fairly good puppy. Mr. J. Shelley Hudson took the kennel prize.

IRISH SETTERS (*Major J. M. Taylor, Judge*).—Kildare Glenmore took first in the challenge class over Seminole; Kildare was entered to compete for specials only. Edna H. had no competition in the corresponding bitch class, Queen Vic being entered to compete for specials only, she winning the special for best Irish setter. Finglas had an easy win over his six competitors, second going to Dawn; light in barrel, head not clean cut, out at elbows. The reserve went to Pemberton, a dog rather coarsely built. There were five bitches, of which Bessie Finmore was first and Ruby Glenmore II. was second. Rosamond and Kildare Gladys, the reserve and vhc. respectively, are ordinary. The three puppies were about average in quality. The Oak Grove Kennels won the kennel prize.

GORDON SETTERS (*Major J. M. Taylor, Judge*).—Nearly all the winners are well known. Leo B. had no competitor in the challenge class. Lady Gordon took first in the challenge bitch class, Lady Waverly the reserve. Heather Lad was first in the open dog class; he is smoothly turned, is short of feather, carries himself well. Duke of Wellington was second, the reserve going to Pride of Finlay, a large, strong dog, with a smudgy tan. Dwight Effie was first in bitches; head long, muzzle narrow, throaty, well-ribbed body, good quarters, legs and feet. Second went to Highland Yola; good in head, heavy in build and tan not free from a mix of black. There was but one more competitor in the class and but one in the puppy class, Dwight Effie. Dr. Dixon's kennel took the special for the best kennel and for the largest exhibit, while Heather Lad took the special for best dog.

BEAGLES (*George Bell, Judge*).—The beagles were but ordinary in quality. Doctor easily disposed of Parthenia in the challenge class. In the open class for dogs, 15in., Sir Thomas took first. He is long and light in body and lacked beagle character and expression. In the corresponding bitch class there was but one entry, Actress, coarse in head, light in bone, good body. In the open dog class, 13in., Clarion of Glenrose, first, was too fat and gross in appearance, but had many good points, and seemed a good beagle if properly fitted for showing. Adam, second, was very ordinary. In bitches, 13in., first went to Cleopatra of Glenrose, wide in ribs, light in head, wide in front, good legs and feet. An ordinary bitch, Topsy Turvy, second, just escapes weediness. The kennel prize was taken by the Glenrose Beagle Kennels.

SPANIELS (*George Bell, Judge*).—Field spaniels had one entry, Newton Abbott. Cocker were quite well represented, the Swiss Mountain Kennels and Mr. Edwin M. Fiske respectively having strong teams, the former winning the special for the best kennel. Four faced the judge in the challenge class for dogs, Middy winning first and Jay Kay second and Othello reserve, all noticed in the New York report last week in **FOREST AND STREAM**. In bitches Miss Waggles and I Say were equal first, Realization the reserve. In open dogs King Kole, first, stands out at elbows a bit, is not first rate in head, good body, legs and feet, and good symmetry and cocker character. Douglas, second, is a bit heavy in head and light in barrel, and is lacking in general symmetry of make up. In bitches Fashion was placed over Lady Fidget, the latter better in shoulders, shape of body and general symmetry and cocker character. Lady's head, too, is cleaner cut. She is a trifle out at elbows, but is muscular and well built, has the better feet, though Fashion is well built and quite a good cocker. The reserve went to Dart, plain in head, light muzzle, good body and coat. In dogs, other than black, Dandy S. won with something to spare. He is light in bone and stands a trifle high on legs. Brantford Rufus was second and St. Lawrence Prince, a coarse dog, reserve. In the corresponding bitch class there were two, Ruth S. first, and Lady Silk, a leggy bitch, lacking cocker character, second.

MASTIFFS.—These were badly represented, as there was only one poor specimen, with a very moderate head and badly carried tail, but fair body.

ST. BERNARDS.—These were well represented. In the challenge class Ito was again beaten, and this time by her kennel companion, Fernwood Bruce; a correct decision, as the dog scores well in size, coat, body, front and movement. Ito moves very slouchily, is very wide in front, indifferent in coat, dips in the back, and as far as her head is concerned, although it is of fair type, with good girth and depth, her prominent, staring eye should always handicap her. Both she and Bruce lack quality and expression. The open dog class proved an easy win for Mrs. Lee's Grand Master, lately noticed. Between Napoleon and Duquesne, second and third, there is little to choose, but I thought the latter might fairly have had second place. Napoleon is the taller dog of the pair, but his body is not in proportion to his height, hence he is leggy, and is also straight behind. Duquesne scores well in body, coat, stifles and action, and in head there is but little to choose between them. Both are well shaded, with fair expression, have good skull properties, but are deficient in muzzle. In bitches there was nothing to touch the well-known Sunray, of the Swiss Mountain Kennels. Arline, with her sound body, capital bone, legs, feet and movement, made a good second, but her faulty head and large ears will always keep her back in decent company. Santa Rosa came third. She is a big bitch, standing over plenty of ground, but lacks quality and type in head, and her coat, at present, is not of the best. Juliet is a good, sound mover, with fair type, but is on the small side, light in bone and out of coat. Neulena fully deserved her two letters, a bitch having a nice, quality showing head, good shadings and coat, but weak in muzzle. Fernwood Rose II. was rather badly used with only two letters, for she is a good, big-bodied bitch, with a good coat; her head is against her, but no harm would have been done had she got another letter. Victoria Fernwood lacks quality, is weak in muzzle, but has a good coat and sound body.

In smooth dogs Lawrence Garza, an improved dog in body, easily won. His head is of nice type and quality, and he now moves fairly well, but is decidedly on the small side. Rex Alton, second, is too small in head and light in bone and body, and also moves poorly. His head is of nice type and quality, however, and he was properly placed second in this class. Casper is a big dog, far too long in face, lacks depth of muzzle, has good bone, too much coat and moves very badly. Noble vhc., a good sound dog by old champion Apollo, with good body, bone, legs, feet and movement, but only moderate in head, was hardly used in being beaten by Casper, but the judge took exception to his color, a rich orange brindle. In bitches it was of course a case of the sweet symmetrical and typical Lady Judith first, and the

rest nowhere. This bitch is a good one, full of quality and character, excellently proportioned, with grand bone for her size, capital legs and feet and a good mover; she has too much coat, but all the best smooths nowadays seem to suffer from this defect. Sunol made a good second; she is just a fair bitch, but lacks in head properties and character as compared to Lady Judith. Fernwood Goldie, although present, did not come up to the scratch and was not a competitor. In puppies there were only two, but one was so bad that he was rightly sent out without a notice, and the other, Fernwood Columbus, a fine well grown youngster, with good bone and substance, but shows the same lack of quality as his sire and dam, Fernwood Bruce and I. O. Lady Judith rightly captured the St. Bernard club special for the best bitch, her most formidable opponent being Sunray, and her kennel companion Grand Master had likewise no difficulty in winning that for the best dog. The kennel prize went to the Fernwood Kennels over the Alta Kennels, but there is room for difference of opinion here, but the judge gave it to the winners because they were the more level lot. It is a pity that Grand Master and Lady Judith had nothing better than Santa Rosa and Juliet, shown in poor shape, to back them up.

**COLLIES.**—These were one of the best collections in the show. In the challenge class Wellesbourne Charlie had an easy task to defeat Sir Walter Scott III., who, although never in the same class, has deteriorated considerably in head and expression. In the class for bitches Flurry III., quickly coating up again, had just as easy a task as her kennel companion, Cora II., being her only opponent. In open dogs Christopher scored an easy win. He is in grand coat and condition and retains his head well. Toronto Wonder, with enormous coat and grand coloring, could not be denied second place. Orme, third, is a nice quality-showing puppy, with excellent ears and expression, good coat and action, but he is decidedly cheeky, and will, I think, get thick in head before long. Curzon, yhc., has good ears and a fair head to commend him, but in coat and body he is very faulty. Heather, an old-fashioned black, tan and white, with a good coat of right texture and fair ears, but a bad thick head and poor expression, deserved his two letters. In bitches Chesterford Hattie was an easy winner; she was described last week. Between Bertha II. and Chesterford Lilly it will always be a close thing. Bertha scores in body, while Lilly is far the best in coat, and in head and ears there is but little to choose between them. Grange Nellie has gone all to pieces and is now very thick in head, and her light-colored, full eye makes her still more common. She has a good coat. Her two dog puppies shown in open class are both good in coat, but are coarse and common in head. Mattie II. is a very poor one, with shocking ears.

**FOX-TERRIERS.**—That good bitch, Grouse II., was the only representative in the challenge class, and rightly won the special for best in the show. In open dogs Avondale Mixture, a good "varmint" looking terrier, with good coat, fair head and ears, nice front and bone, rightly won from Poverino, who has thickened in head and loaded up in shoulders. Nabob, third, was very thin and light, but his good head, ears and expression and coat were rightly recognized. Hillside Royal was very hardly used with only two letters. He has a good, clean, punishing head, good ears and coat and a nice front; his legginess seemed to me to be his worst fault. The wire-hair, Ebor Larchmont, too, might well have had another letter; he is certainly thick in head and open in coat, but he is a fair stamp otherwise. In bitches Chicago was an easy winner; a nice quality bitch, with good terrier character, a bit short in head and somewhat small and light all over. Maple Leaf, second, has good bone, body and coat, good legs and feet, but a poor head and badly carried ears. Jess Frost, the wire-hair, came third; her thick head and full eye must always tell against her. Richmond Jesmine is very weedy all over; weak in head, light of bone, leggy and too long cast.

**POODLES.**—Only two put in an appearance, and the Russian scored over the Frenchman, beating him decisively in head, eye, ear and body.

**BULLDOGS.**—This grand breed had only two representatives, one in each class, Wal Hampton and The Grayen Image, but they proved to be the chief attractions of the show.

**BULL-TERRIERS.**—Champion Crisp was absent and left the competition between the kennel companions Attraction and Starlight, and the former's cleaner head and neck rightly entitled her to the blue. In open dogs Cardonna von with a good deal to spare from that good little one Principio. Topsparkle, third, has a good eye and expression and a long, clean head, and had no difficulty in defeating the recently imported Bellerby King, who is a poor one, cheeky in head and weak in jaw, and does not get one ear up. In bitches a very moderate one, Edgewood Modesty, had no difficulty in scoring, as Dot is a round-skulled bad one, with uncropped ears.

**BASSET HOUNDS.**—Two competed in the dog class but Bent won very easily, scoring tremendously in head properties, length, bone and crook. Fritz is a bad one, light in bone, too high on the leg and short in body, with a poor head and expression. Bet, the only bitch shown, is a nice, typical bitch, with plenty of bone, good crook and body.

**DACHSHUNDS.**—Fritz R., although in the challenge class, is a bad one, and the judge rightly withheld first and only gave him a red ribbon, which is more than he could get in a decent class. Jay, shown in poor condition and very shaky on his pins, nevertheless is such a good-headed and typical-bodied hound that he got the blue all the same. In bitches Jargonelle, who had evidently only recently been attending to a family, was so much superior to Nellie S. in type, bone, length of body, looseness of skin and all round quality that she easily scored.

**SKYE TERRIERS.**—In the challenge class Endcliffe Maggie and champion Sir Stafford met, but the champion had to take a back seat this time. The bitch scores in head, size and general character and was also in the best coat. In open dogs Elphinstone noticed last week, won as the only other entry was a nondescript. In bitches Queen of the Skyes and Princess May were placed in the order named as at New York.

**BLACK AND TAN TERRIERS.**—There being no challenge class provided Broomfield Sultan competed in the open and of course made a show of the class. Glenwood, second, is a big dog inclined to coarseness, but is a good terrier, with good length of head, capital eye and nice color and markings. Chesterford Victor changed places with Rochelle Oolah and was this time placed over him. He scores in head and eye and expression, but is not as good in body. In bitches the Chesterford Park Kennels' two had the class to themselves. This time Rochelle Mab was placed over Betsy, the Toronto winner. The winner has the best head but loses in markings and size to Betsy.

**TOY TERRIERS.**—Only two entries and one was a nondescript, the other was of the usual black and tan, apple-headed persuasion.

**ITALIAN GREYHOUNDS.**—These were better represented. The winner was far the best in head of the three dogs shown, but lacks arch of loin. Between second and third there was little to choose. Trixie, the winner in bitches, was the best Italian shown; a really nice one of good size, and were it not for her broken foreleg could win in the best of company.

**PUGS.**—In the challenge class for dogs Curtis, a much-improved dog, rightly beat Cashier. Curtis is a good-headed one, but smutty in color and inclined to be leggy. Vega was the only entry in challenge bitches; a good headed and bodied little one that can hold her own with the best. In open dogs Drummer won, with Patsy Bolivar second and Finsbury Dude third, but had the order been reversed the decision would have been more correct. Drummer has a

good, well-wrinkled head, but is heavy in ear and is beaten very easily in other respects by the other two dogs who were placed behind him. Dude was shown too light, but has a good head, nice ear and is a capital bodied dog of nice size. Boliver might also have carried more flesh and carries one ear poorly, but in size, style and character he scores. Sir Douglass is too large, has an excellent skull and wrinkle, but is too long in muzzle. In bitches that grand bitch Haughty Madge easily scored; it is hard to find fault with her, except she might be a shade smaller and have a trifle smaller ears. Lady Verne, second, should have given way to Miss Decima in spite of the latter's poor shape. Lady Verne has a good skull and fair muzzle, but a bad, light eye, crooked front and poor feet. Mabel E. is excellent in body, but poor in head. The puppies were poor ones. The German-Howard Kennels won the kennel prize by the help of Al Von, who was entered for specials only, but this should undoubtedly have gone to the Rookery Kennels with Haughty Madge, Finsbury Dude, Vega and Curtis.

**MISCELLANEOUS.**—Two really good dogs competed, and it must always be a matter of the judge's individual preference for the breed to decide between them. That good Irishman Jackanapes, looking really well, was placed over that grand foxhound bitch Rosemary. Deyr, the Welshman, was the other competitor.

#### LIST OF AWARDS.

**MATIFFS.**—Dogs: 1st Eberhart & Heywood's Tiger. ST. BERNARDS.—CHALLENGE—1st and 2d, J. B. Lewis's Fernwood Bruce and I. O.—OPEN—Dogs: 1st, Alto Kennels' Grand Master; 2d, Lee Chamberlain's Napoleon. Reserve, C. E. Caughey's Duquesne. Bitches: 1st, Swiss Mountain Kennels' Sunray; 2d, J. B. Lewis's Arline. Reserve, Alto Kennels' Santa Rosa. Very high com., M. O. Eberhart's Fernwood C. G. Essen's Laura C. and Alto Kennels' Juliet. High com., W. G. Hetlick's Fernwood Rose II. and A. T. Dempsey's Neulene.—SMOOTH-COATED—OPEN—Dogs: 1st, John W. Fornot's Lawrence Garza; 2d, J. C. Donnell's Rex Alton. Reserve, Andrew Rogers's Casper. Very high com., Frederick H. Smith's Noble. High com., Jas. W. Berry's Mountain Guide. Bitches: 1st, Alto Kennels' Lady Judith; 2d, Swiss Mountain Kennels' Sunol. Puppies: 1st, J. B. Lewis's Fernwood Columbus; 2d withheld.

**GREAT DANES.**—OPEN—Dogs: 1st and 2d, Kennel Lawrence's Earl of Wurttemberg and Lawrence; 3d, Leopold. Reserve, Theo. Wolfram's Count Frederick. High com., Dr. L. A. Anderson's Jeff. Bitches: 1st, Kennel Lawrence's Portia Melac; 2d, W. F. Dorn's Kelpie. Very high com., Theo. Wolfram's Francis. Puppies: 1st and 2d, Kennel Lawrence's Lawrence Vera and Lawrence Minka.

**BORZOIS OR RUSSIAN WOLFHOUNDS.**—CHALLENGE—1st and 2d, Chas. Steadman Hanks's Leekhol and Vinga.—OPEN—Dogs: 1st, N. M. Wanner's Leekhol II.; 2d, Chas. Steadman Hanks's Col. Dietz. Bitches: 1st, A. E. Pitt's Zlobelie; 2d and high com., Chas. Steadman Hanks's Lady Dietz and Gipsy Queen. Puppies: 1st, Chas. Steadman Hanks's Lady Dietz.

**GREYHOUNDS.**—Dogs: 1st, W. G. Fite's Master Rich. FOXHOUNDS (American).—CHALLENGE—2d, Seminole Kennels' Ranger II.

**POINTERS.**—CHALLENGE—Dogs: 1st, A. F. Hockwalt and W. H. Winkler's Rush of Fend; Wm. Giddard's Temper. Bitches: 1st, Geo. W. Lovell's Wild Lily.—OPEN—55LBS. AND OVER—Dogs: 1st, W. H. Clark's Stanley; 2d, G. O. Smi.h's Molton Banner. Reserve, J. C. Kinnane's King Hamlet. Very high com., B. H. Whiteley's The Sheriff. Com., J. W. Clabaugh's Spotter and J. G. F. Holston's Tip Top. Bitches: 1st, Rudy & Close's Carrie G.; 2d, UNDER 55LBS.—Dogs: 1st, Netherwood Kennels' Ridgeview and Lawrence; 2d, E. F. Seibel's Dictator. Reserve, J. L. Adams' Lad of Rush.—UNDER 55LBS.—Bitches: 1st, J. G. F. Holston's Fannie Kirk; 2d, H. T. Schmitt's Pet S. Reserve, C. E. Connell's Fan Fan II. Com., Dr. J. A. Hartman's Chloe II.—PUPPIES—Dogs: 1st, G. F. Mooney's Spotted Goat. Com., John Seibolt's American Boy. Bitches: 1st, G. F. Mooney's Miss Drake.

**ENGLISH SETTERS.**—CHALLENGE—Dogs: 1st, F. G. Taylor's Breeze Gladstone. Bitches: 1st, J. S. Hudson's champion Bohemian Girl.—OPEN—Dogs: 1st, P. T. Madison's Rodfield; J. S. Hudson's Pierce Hill. Reserve, F. G. Taylor's Ben Hur of Riverview. Netherwood Kennels' Netherwood Nymrod, F. F. Dole's Young Howard, Chesterford Park Kennels' Chesterford Surprise. High com., C. K. Rogers's Daniel Boone, J. S. Hudson's 2d Apollo Hill and Monte Cristo III., Posten & Co.'s Cinch. Com., B. H. Whiteley's Ightfield Rhiwallas, J. J. Cairlo's Dan C., J. E. Bell's Doctor W., A. E. Davis's Kent the Third. Bitches: 1st, Posten & Co.'s Nellie. Reserve, F. Deuel's Belle of Brownstone. Reserve, J. S. Hudson's Arline. Very high com., Posten & Co., Florence Gladstone, A. T. Dempsey's Dorna Gladstone, Mrs. Dix's Brownie. High com., Posten & Co.'s Speckle Gown, F. Pastre's Nellie Kitson. Com., D. L. Smith's Jenn, H. Fitzpatrick's Del Elaster.—PUPPIES—Dogs: 1st, C. W. Butties's Rod's Tornado. Bitches: 1st, G. Battison's Queen Emma; 2d, Chester Stands's Gypsy Queen.

**IRISH SETTERS.**—CHALLENGE—Dogs: 1st and reserve, Oak Grove Kennels' Kildare Glenmore and Seminole Kennels' Finglas; 2d, D. Scobla's Dawn. Reserve, J. J. Scanlan's Pemberton. High com., J. Pence's Rex Leroy. Bitches: 1st, W. H. Eakins's Bessie Pimrose; 2d, Kildare Kennels' Ruby Glenmore II. Reserve, Dr. Wm. Jarvis's Rosamond. Very high com., G. W. Lang's Kildare Gladys. Com., W. Shaw's Forest Moss.—PUPPIES—Dogs: 1st, Wm. Kirby's Kay; 2d, Kildare Kennels' Kildare Odin. Bitches: 1st, Kildare Kennels' Kildare Neville.

**GORDON SETTERS.**—CHALLENGE—Dogs: 1st, Dr. S. G. Dixon's Leo B. Bitches: 1st and reserve, Dr. S. G. Dixon's Lady Gordon and Lady Waverly.—OPEN—Dogs: 1st, J. R. Oughton's Heather Lad; 2d, Dr. S. G. Dixon's Duke of Wellington. Reserve, J. M. Loomis's Pride of Finlay. Com., S. L. Siebolt's Pilot of Lorraine. Bitches: 1st, J. R. Oughton's Dwight Ellie; 2d, Highland Kennels' Highland Yola. Puppies: 1st, J. R. Oughton's Dwight Ellie.

**COLLIES.**—CHALLENGE—Dogs: 1st, Chestnut Hill Kennels' Wellesbourne Charlie. Reserve, J. Hawks's Sir Walter Scott III. Bitches: 1st, Chestnut Hill Kennels' Flurry III. Reserve, Seminole Kennels' champion Cora II.—OPEN—Dogs: 1st and reserve, Chestnut Hill Kennels' Christopher and Orme; 2d, F. Anderson's Toronto Wonde. Very high com., Seminole Kennels' Curzon. High com., J. Hawks's Westminster Wonder and F. H. Smith's Heather. Bitches: 1st and reserve, Chesterford Park Kennels' Chesterford Hattie and Chesterford Lilly; 2d, Semolne Kennels' Bertha II. Very high com., J. Hawks's Grange Nellie.

**FIELD SPANIELS.**—CHALLENGE—1st, B. F. Lewis's Newton Abbot Torso.

**COCKER SPANIELS.**—CHALLENGE—Dogs: 1st and very high com., Swiss Mountain Kennels' champion Middy and Red Doc; 2d, E. M. Fiske's Jay Kay. Reserve, C. F. Sackett's Othello. Bitches: Equal 1st, E. M. Fiske's champion I Say and Swiss Mountain Kennels' champion Miss Waggle. Reserve, E. M. Fiske's Realization.—BLACK (not over 25lbs.)—Dogs: 1st and very high com., E. M. Fiske's King Kole and Wildfire; 2d, Swiss Mountain Kennels' Douglas. Reserve, J. Kennedy's Raven Chancel. Bitches: 1st and very high com., E. M. Fiske's Fashion and Corktown Cleo; 2d and reserve, Swiss Mountain Kennels' Lady Fidget and Dart.—ANY OTHER COLOR (not over 25lbs.)—Dogs: 1st, Swiss Mountain Kennels' Dandy S.; 2d, E. M. Fiske's Brantford Rufus. Reserve, C. T. Sackett's St. Lawrence Prince. Bitches: 1st, Swiss Mountain Kennels' Ru h S.; 2d, J. W. Ayers's Lady Silk.

**IRISH WATER SPANIELS.**—1st, B. F. Lewis's Kitty of Cork.

**FOX-TERRIERS.**—CHALLENGE—1st, Charles Steadman Hanks's Grouse II.—OPEN—Dogs: 1st, Leroy Jones's Avondale Mixture; 2d, Dr. Darby's Lansdowne Poverino. Reserve, F. A. Miller's Nabob. High com., James Ferris Bell's Hillside Royal and C. S. Hanks's Ruby Pailley. Bitches: 1st, Leinster Kennels' Chaucer; 2d, Hamilton Fox-Terrier Kennels' Maple Leaf. Reserve, Woodlawn Park Kennels' Jess Frost. Very high com., C. S. Hanks's Richmond Jesmine. Puppies: 1st, Hamilton Fox-Terrier Kennels' Maple Leaf; 2d and reserve, C. S. Hanks's Seacroft King and Seacroft Trial.

**POODLES.**—1st, Dr. S. Nandain Duer's Bismarck; 2d, Eberhart Pug Kennels' Moughlow.

**BULLDOGS.**—1st, Woodlawn Park Kennels' Wal Hampton. Bitches: 1st, Frank F. Dole's The Graven Image.

**BULL-TERRIERS.**—CHALLENGE—1st, F. F. Dole's Ch. Attraction. Reserve, Luzboro Kennels' Crisp.—OPEN—Dogs: 1st, Dr. Rush S. Hudekoper's Cardona; 2d, Wentworth Kennels' Ericdpo. Reserve, F. F. Dole's Topsparkle. Very high com., F. L. Dever's Bellerby King. Bitches: 1st, Frank F. Dole's Edgewood Topsy. Reserve, Harry Fletcher's Dot F.

**BASSET HOUNDS.**—Dogs: 1st, Doc Short's Bent; 2d, W. E. Caylor's Fritz. Bitches: 1st, Doc Short's Bet.

**DACHSHUNDS.**—CHALLENGE—Dogs: 1st, O. Seidel's Fritz K. L.—OPEN—Dogs: 1st, Windrush Kennels' Jay. Bitches: 1st, Windrush Kennels' Jargonelle; 2d, L. O. Seidel's Nellie.

**BEAGLES.**—CHALLENGE (15in.): 1st, B. F. Lewis's Doctor; 2d, Glenrose Beagle Kennels' Parthenia.—OPEN—Dogs: 1st, T. Zschetzke, Jr.'s Mogie. Bitches: 1st, Spring Hill Kennels' Actress. Dogs (13in.): 1st,

Glenrose Beagle Kennels' Clarion of Glenrose; 2d, E. Marshall's Adam. Bitches: 1st, Glenrose Beagle Kennels' Cleopatra of Glenrose; 2d, Dr. Short and E. Williams's Topsy Turpy. Com., L. Bierstead's Lady.

**SKYE TERRIERS.**—CHALLENGE—Dogs: 1st, H. R. Caner's Endcliffe Maggie.—OPEN—Dogs: 1st, C. A. Shinn's Elphinstone. Bitches: 1st and 2d, C. A. Shinn's Queen of Skyes and Princess May.

**BLACK AND TAN TERRIERS.**—Dogs: 1st, Dr. H. C. Foote's Broomfield Sultan II.; 2d, S. D. Ripley's Glenwood. Reserve, Chesterford Park Kennels' Chesterford Victor. Bitches: 1st and 2d, Chesterford Park Kennels' Rochelle Mab and Betsy.

**TOY TERRIERS.**—1st, F. Rogers' Muggins; 2d, withheld.

**ITALIAN GREYHOUNDS.**—OPEN—Dogs: 1st, Mrs. W. G. Benham's Adonis; 2d, P. H. Hoyt's Roma. Reserve, P. H. White's Ingersoll.—Bitches: 1st and 2d, F. H. Hoyt's Irene and Trixie. Reserve, Mrs. C. P. Howard's Schalls.

**PUGS.**—CHALLENGE—Dogs: 1st, Rookery Kennels' Curtis; 2d, Eberhart Pug Kennels' Eberhart's Cashier. Bitches: 1st, Rookery Kennels' Verga.—OPEN—Dogs: 1st and 2d, German-Howard Kennels' Al Von and Drummer. Reserve, Eberhart Pug Kennels' Patsy Bolivar. Very high com., Eberhart Pug Kennels' Sir Douglas. High com., Rookery Kennels' Finsbury Dude. Bitches: 1st, Rookery Kennels' Haughty Madge; 2d, Eberhart Pug Kennels' Lady Verne. Reserve, German-Howard Kennels' Miss Decima. Very high com., German-Howard Kennels' Penrice Queen. High com., Eberhart Pug Kennels' Nabel G.—PUPPIES—Dogs: 1st, German-Howard Kennels' Young Penrice. Bitches: 1st, German-Howard Kennels' Sateen II.; 2d, F. W. Puderer's Drummer Lilly.

**MISCELLANEOUS.**—1st, Woodlawn Park Kennels' Jackanapes; 2d, Chestnut Hill Kennels' Rosemary.

#### SPECIAL PRIZES.

St. Bernards.—Best kennel, J. B. Lewis's St. Bernard Club medals.—Best dog, rough or smooth, Grand Master; best bitch ditto, Lady Judith. Great Danes.—Best kennel, Kennel Lawrence. Great Dane Club's President's cup for best dog or bitch, Portia Melac. Russian Wolfhounds.—Best kennel, Chas. S. Hanks's Pointers.—Best in show, Ridgeview Tenney. Best with full trial record, Lad of Rush. Best owned in Columbus, Pet S. Best puppy ditto, Spotted Goat. English Setters.—Best kennel, J. Shelley Hudson's. Best owned in Columbus, Latonia. Cocker Spaniels.—Best kennel, Swiss Mountain Kennels. Fox-Terriers.—Best kennel, Seacroft Kennels. Best in show, Grouse II. Beagles.—Best kennel, Glenrose Beagle Kennels. Skye Terriers.—C. A. Shinn. Black and Tan Terriers.—Best kennel, Chesterford Park Kennels. Italian Greyhounds.—Best kennel, Dr. F. H. Hoyt. Pugs.—Best kennel, German-Howard Kennels.

The prize \$30 to first, \$10 to second, for the one bringing greatest number of dogs was equal first \$50 each, B. F. Lewis and T. A. Howard.

#### American Mastiff Club Meeting.

The annual meeting of the American Mastiff Club was held at the Madison Square Gardens, Friday 25, at 3:30 P. M. There were present Dr. Derby in the chair, Messrs. Atwood, Boudreau, Cook, Glazier, C. A. Lougest, C. N. Lougest, Marshall, Head and Stephenson. Treasurer's report was read, approved and referred to auditing committee. By motion it was ordered that the secretary's reports for the past two years be printed. The secretary announced that the executive committee had selected for photographing, Mr. Glazier's Ingleside Mating, Dr. Lougest's Lady Diana and Mr. Higg's Brampton Beauty, and that the photographing had already been done at Sarony's, the two bitches being taken in a group. As soon as proofs were received and approved the printing would be ordered and the photographs distributed to the members by mail.

The president rehearsed the action of the executive committee regarding the proposed Columbian show. All the club's cups and medals had been offered, and in addition a valuable lot of special cash prizes aggregating no less than \$250 which had been contributed by members of the club. The committee had also interested itself to secure the appointment of a judge who should be acceptable to all, and through its influence Mr. C. Court Rice, secretary of the Old English Mastiff Club, of England, had been asked to come over and judge the mastiff classes. For this occasion the rules governing the awarding of some of the cups were suspended, and all the special prizes, cups, medals and cash prizes were offered open to the world.

The president also stated that for some time the executive committee had been desirous of adding to the valuable list of special prizes a replica of the famous bronze group showing mastiffs pulling down a bear. This work of art, by the celebrated French sculptor Barye, showed with remarkable truth the mastiff as he existed sixty or seventy years ago, and would make an exceedingly striking and appropriate trophy for this club.

While matters which seemed of more importance had been given precedence, this had been held in abeyance, but the executive committee had lately taken it up, and while as yet a sufficient fund had not been secured for its purchase, still he was happy to inform the meeting that a sum so large had been promised by some of the members as to place beyond reasonable doubt the early acquisition of this valuable trophy by the club.

Mr. Glazier introduced a resolution leading to the appointment of a committee to secure for the club, to be held as its property and offered as a special prize at the various shows, a casting in bronze showing a typical head of the mastiff of the present day.

The membership of this thriving club is sixty-two. After the election of officers the meeting adjourned. The list of officers for the coming year is as follows: President, Richard N. Derby; Vice-Presidents, Robert Lenox Belknap, Francis T. Underhill and George G. Stephenson; Secretary, Herbert Mead. Executive Committee—Richard N. Derby, Robert Lenox Belknap, Francis T. Underhill, George G. Stephenson, Charles C. Marshall, J. L. Wuchell, W. P. Stevenson, Herbert Mead, James Lenox Banks and J. K. Boudreau. HERBERT MEAD, Sec'y.

#### English Prize Winners in Novice Classes.

*Editor Forest and Stream:*  
I would like you to inform me through your columns whether imported dogs with a long list of winnings can compete in novice classes under the A. K. C.? Under the C. K. C. they cannot. When one sees such well-known warriors as Cribbage and Janet competing in novice classes such as Class 167, at the late New York show, it seems quite a surprise. I am not kicking because I was beaten, as it is no disgrace to be beaten by such dogs, but is it reasonable that dogs, champions of their breed in England, should compete as novices out here? I was under the impression that the A. K. C. passed a rule to that effect, but on looking it up could not find it. COMPTON KENNELS.

COMPTON, Que., Feb. 23.

[The new rule, XV., Sec. 3, reads: "The novice class shall be for a breed for which a regular class has been provided, and for competition in which a dog shall not have won a first prize in an open or novice class at any recognized show." The present reading of this rule is, to our mind, entirely too ambiguous. We suppose it is understood to refer merely to shows held under A. K. C. rules, the club at the time the new rule was made having revoked the treaty with the Canadian Kennel Club; and, as the A. K. C. does not recognize English wins, the dogs that come over here must start at the bottom of the line, and therefore are to all intents novices until they win in our open classes. Still, this might have been shown more plainly in the wording of the rule. It does seem rather ridiculous and discouraging that a dog with a big list of winnings at the best shows in England can enter a novice class here; it frustrates the object for which the novice class was made.]

Comparative Table of Entries at W. K. C. Shows.

Smooth collies and bobtailed sheepdogs have 2 each this year.

New York Awards.

SPECIAL PRIZES.

**MASTIFFS.**—Best kennel, Dr. C. A. Loughead. American Mastiff Club special; Westminster challenge cup for best dog or bitch under 2 yrs., Ingleside Miting; silver challenge cup for best American-bred dog or bitch, Beaufort's Black Prince; Taunton gold medal (breeder's prize) for best American-bred under 2 yrs., not filled; silver challenge cup, best dog, Beaufort's Black Prince; ditto, bitch, Lady Diana; silver medal, best dog or bitch under 12 mos., not filled. The Old English Mastiff Club special did not fill.

**ST. BERNARDS.**—Best kennel of roughs, Argyle Kennels; smooths, E. H. Moore. St. Bernard Club of America medals, open to members of the Club only; Club medal for best American-bred dog or bitch over 12 mos., Alton, Jr.; bitch, ditto, Lady Alton; ditto rough-coated dog, Altoner; ditto, bitch, Uarda; best American-bred smooth-coated bitch under 12 mos., Miss Thelma; ditto, rough-coated dog, Wash Erdman; ditto, bitch, Princess Eulalia; best stud dog, to be judged by two of his get out of different bitches, the same to be sired in America, Sir Bedivere; best brood bitch, to be judged by two of her produce out of different litters, born in America, Miss Anna, New York Herald medal; best rough-coated dog, Sir Bedivere; ditto, bitch, Lady Livingston; smooth-coated dog, Alton, Jr.; ditto, bitch, Lady Alton. Westminster challenge cup, value \$500, donated by W. C. Reick, Col. Ruppert, Jr., and the W. K. C. for best American-bred St. Bernard, sired in America, and born on or after March 1, 1890, open to all, Alton, Jr. Best in show, Sir Bedivere.

**BLOODHOUNDS.**—Best in show, Victor.

**GREAT DANES.**—Best kennel, J. A. Lawrence's. Great Dane Club of America special; President's challenge cup for best dog or bitch in the show, Fortia Melac. Herald medal for best in show, Fortia Melac. Best harlequin dog, Lawrence Leopard; ditto, bitch, Phryne.

**RUSSIAN WOLFHOUSES.**—Best kennel, H. W. Huntington's. National Greyhound Club special; Best dog, Argoss; bitch, Vinga. W. K. C. challenge cup for best in show, Argoss; ditto, bitch, American-bred, Argoss. Herald bronze medal for best in show, Argoss.

**DEERHOUNDS.**—Best kennel, Hillside Kennels. National Greyhound Club medals: Best dog, Hillside Warrior; bitch, Hillside Komola. W. K. C. challenge cup for best in show, Hillside Komola. Herald medal, Hillside Komola. Best American-bred, Hillside Komola.

**GREYHOUNDS.**—Best kennel, A. W. Purbeck. National Greyhound Club medals: Best dog, Gem of the Season; bitch, Southern Beauty; Monroe challenge cup for best greyhound, and the Herald medal, Gem of the Season. Mr. Horatio Nelson, president of the National Greyhound Club, and the best American-bred that has won two courses in public competition, Master Rich.

**FOXHOUSES.**—Best kennel, The Governor's Kennels.

**CHESSPAKE BAY.**—Best kennel, B. Alton Smith.

**POINTERS.**—Best kennel, T. G. Davey. Best kennel of four that have been run at any public field trial in the U. S. or Canada, Hempstead Farm Kennels. Best dog sired by W. K. C.'s King of Kent, Prince Regent; ditto, bitch, Kent's Belle. Pointer Club of America special; Best heavy weight dog, Lad of Kent; ditto, bitch, Wootton Game; light-weight dog, Duke of Hessen; ditto, bitch, Lady Gay Spanker. American Field cup and the Herald medal for best in show, Lad of Kent.

**ENGLISH SETTERS.**—Best kennel of four that have been run at any public field trial in the U. S. or Canada. Blue Ridge Ken. English Setter Club special, open to members only: American Field cup for best dog, by a member six months prior to closing of entries, Breeze Gladstone. Best that has been placed at any public field trial in U. S. or Canada, Breeze Gladstone. Silver medal for best dog that has been awarded very high com. or better in its regular class, and also Herald medal, Breeze Gladstone. Polhemus cup for the best dog owned by the exhibitor 6 mos. prior to date of closing entries, Breeze Gladstone.

**IRISH SETTERS.**—Best kennel, Oak Grove Kennels. Herald medal for best in show, Queen Vic.

**GORDON SETTERS.**—Best kennel, Dr. Dixon's. Herald medal for best in show, Duchess of Waverly; Gordon Setter Club of America special, open to members only: Best dog in open, Heather Lad; ditto, bitch, Venus; second best dog in open, Richmond Prince; ditto, bitch, Venus. Best dog, to have been property of the owner 6 mos. previous to the closing of entries, Heather Bee.

**IRISH WATER SPANIELS.**—Best kennel, Gardner and Blaisdell.

**CLUMBER SPANIELS.**—Kennel did not fill. Best dog, Dash; bitch, Glenwood Bosker.

**FIELD SPANIELS.**—Best kennel, R. P. Kearsby. American Spaniel Club's special, open to members only: Newton Abbot cup for best bitch, Bridford Ruby; pup, dog or bitch, Princess Bolus; other than black, Bridford Ruby; black dog, Warwick (A. E. Foster's dog did not compete); best black bred by a member of the club, Warwick. Herald medal for best in show, Juxes.

**COCKERS.**—Best kennel, Swiss Mountain. American Spaniel Club's special, open to members only: Best American-bred black dog pup, Barefoot; ditto, bitch, Chloe Hersom; ditto, pup, dog or bitch, any color, Cherry Boy II.; best headed, Black Duchess; trio bred by exhibitor, donor not to compete (Swiss Mountain Kennels), Riveau Kennels; best black in open, Riveau Reine; best other color, Tanita; best dog or bitch, other than black, never having previously won a first prize, Ned W.; best bitch in show, Miss Waggle; best dog, any color, Brantford Red Jacket; best liver and white dog or bitch, Tanita; black and white, dog or bitch, Othello; best moving of any breed, Tanita; best liver-colored, St. Lawrence Prince; best stud dog with three of his get, Brantford Red Jacket; Herald medal for best in show, Miss Waggle.

**COLLIES.**—Best kennel, J. Pierpont Morgan's. Collie Club of America offers, open to members only: Collie Club trophy, value \$500, for best American-bred, the winner of the trophy to receive a silver medal in commemoration of award, Roslyn Wilkes; president's cup, value \$300, for best collie, winner receives silver medal in commemoration, Sefton Hero; grand annual collie sweepstakes (open to all) for collies born in U. S. or after Oct. 1, 1892, 1st, Hempstead Trefoil; 2d, Hempstead Trefoil; 3d, Cragstone Pinto; 4th, Idum II.; res., Glenfey; very high com., Melancholy; Club Medal of Honor, for best stud dog

to be judged by two of his get out of different bitches, which may be the property of different owners, Christopher; best dog in open class owned by a member (winner of trophy and president's cup not to compete), Christopher. Best in show, Sefton Hero (2).

**POODLES.**—Best kennel, Meadowmere Kennels. Best poodle, Lion; best black curly-coated dog or bitch in open, Rajah.

**BULLDOGS.**—Bull Dog Club of America prizes, open to members only. The grand trophy for best dog or bitch in show, His Lordship; Porter cup, for best in show, opposite in sex to winner of the grand trophy, Salen; puppy bowl, best American-bred dog or bitch between 6 and 15 mos., Rustic King II.; American Field bulldog cup for best American-bred dog or bitch, Handsome Dan; Sawyer cup, for novice dog or bitch, Nugget; English Bull Dog Club's silver medal for second best in show of same sex as winner of Porter cup, The Graven Image; ditto for same sex as winner of Grand trophy, King Lad; best American-bred puppy under 15 mos., opposite in sex to winner of puppy bowl, Juno; best American-bred opposite sex to winner of American Field cup, Lady Grace; best pair (dog and bitch), His Lordship and White Venn. Best kennel, E. K. Austin (2); best stud dog shown with two of his get, Pathfinder; ditto, bitch, did not fill; breeder's winner of puppy bowl, Woodlawn Park Kennels; best dog, His Lordship.

**BULL TERRIERS.**—Best in show, Streatham Monarch; Tubby Hook cup for the best dog owned by exhibitor 6 mos. prior to date of closing entries, Streatham Monarch.

**BOSTON TERRIERS.**—The Boston Terrier Club special: Best dog, Prince Walnut; best bitch, Nankin; best exhibit, H. J. Clark; best dog or bitch, Nankin.

**DACHSHUNDS.**—Best kennel, E. A. Manice; Dachshund challenge cup, Polly Finders.

**BEAGLES.**—Best kennel, Hornell-Harmony kennels; best beagle in show (3), Royal Krueger.

**FOX TERRIERS.**—Best kennel, H. W. Smith. The American Fox-Terrier Club special: Best in the show, Saint Cribbage; best in open classes, Warren Safeguard; best in puppy classes, Blenton Votary; best brace, Saint Cribbage and Sister Janet; best wire-haired, Saint Cribbage; best brace of wire-haired, Saint Cribbage and Sister Janet; grand challenge cup for best fox-terrier in show, Saint Cribbage; Stud Dog Stakes of 1894, Beverwyck Royalist and King Pin; the first division of the Eighth Grand Produce Stakes of 1893, Beverwyck Royalist; best fox-terrier, Saint Cribbage (2).

**IRISH TERRIERS.**—Best kennel, W. J. Comstock; best in show, Jack Briggs.

**BLACK AND TAN TERRIERS.**—Best brace, Prince Regent and Gypsy Girl; White English Terriers.—Best brace, Spring and Loney; best under 12 mos., Nobility.

**DANDIE DIMONT TERRIERS.**—Best brace, Heather kennels' Ainsty Daisy and King of the Heather.

**BEDLINGTON TERRIERS.**—Best brace, W. H. Russell.

**SCOTTISH TERRIERS.**—Best brace, Brooks and Ames.

**SKYE TERRIERS.**—Best brace, C. A. Shinn.

**YORKSHIRE TERRIERS.**—Best kennel, F. Senn.

**PUGS.**—Best kennel, Seminole Kennels; best in show, Haughty Midge.

**TOY SPANIELS.**—Best kennel, F. Senn; best in show, Tokio, (Jap.)

**ITALIAN GREYHOUNDS.**—Best brace, Spring and Sprite; best in show, Spring.

Spaniels at New York.

Editor Forest and Stream:

That the thanks of spaniel breeders and exhibitors are due to FOREST AND STREAM for securing Mr. Wilmerding's report on the spaniels he judged at the late New York show will, I am certain, be admitted by all. The enterprise and push of this best of all kennel papers are proverbial, but on no occasion in the past has a spaniel report written by either judge or reporter excited the conjecture and speculation as to how the judge would explain his decisions as the one in question and the pity of it all is that it would have been to the credit of the judge and fairer to those who entered their dogs, counting on Mr. Wilmerding following in his footsteps of previous years, if he had, before the entries closed for New York, come out in an open letter and given us the homely which is the prelude to his report on the spaniel judging at New York show, 1894, I would ask him where would the 100 entries (there were actually 92 dogs benched) he boasts of have been? what dogs would breeders have selected to conform to the worthy President of the spaniel club's new theories of what we have, and what we should have? It would take more space than you could spare for me to go through Mr. Wilmerding's report and I therefore think the best and quickest way will be to select a few of his leading criticisms and look at them in a quiet and friendly way.

**Irish Water Spaniels.**—This valuable and useful breed he dismisses with four lines. No criticism. Gives no reason for placing the dogs as he did, which would, judging from his knowledge of the breed, have been vastly interesting.

**Clumber Spaniels.**—Mr. George K. Preston who owns the two entries and who is an enthusiast on this valuable and handsome breed, and who will not stop until such time as he can show a kennel of quality will, I am certain, be surprised, but hardly be impressed by the worthy judge's knowledge of the breed to read the criticism on Dash.

**Field Spaniels.**—In field spaniel challenge class Newton Abbot Torso is described as a poor specimen not worthy of mention. Now, I claim that he is far and away a better dog than Brailford Mohawk, and in head, front legs and general quality points ahead of Newton Abbot Farmer, placed second

A prominent spaniel man looking over the awards in this class had the cruelty to remark that he wondered how the mischief Mr. Wilmerding could give Black Prince vhc. and ignore Torso. On the error in the catalogue being pointed out to him, he singularly enough made the same remark about Prince that Mr. Wilmerding makes in his report about Torso ie. "How, the dickens, did he ever get into the challenge class?"

The criticism on the new dog Colehill Rufus is very refreshing reading. In his poor condition he should not have won, but he was points ahead of at least two in the class. Our friend the judge makes a great point of his crooked front legs, but this fault did not set Farmer back in the challenge class. Yea, verily! Consistency, thou art a jewel!

It is all very well for a judge to encourage size as well as quality when judging cockers, but it is far from well for him to sacrifice all quality for size. A coarse headed, narrow chested, weedy looking cocker of 24lbs. will look larger than a typical dog of the same weight built on the proper lines. Cockers are very deceiving and had the judge placed each of the dogs in the cocker challenge class on the scales he would have been surprised to find that there was not a dog in the class weighing less than 22½ lbs., so that his criticism—"Red Jacket, first, should be retired, shown too fat"—is much on a par with that of "Middy, unnoticed on the small order, toes turn out, toish." Had the fat been taken off Red Jacket and had Middy been shown in proper flesh, about a pound heavier, there would not have been a pound weight difference between the two. Red Jacket, good little dog that he has been, has gone off so much in head he should most decidedly have taken a back seat to Middy.

In challenge bitches Miss Waggle won, Black Duchess vhc.

The judge describes Black Duchess as a "Beautiful little bitch, gray in muzzle, good in mouth, on the small order." "Miss Waggle" as having "an open loose coat, front legs not so good as they might be." "I Say," winner of the second, "shown poorly, coat rough, ears high." Miss Waggle shown rather fat weighed 24lbs. Black Duchess shown too light in flesh weighed 22lbs. Admitting that on condition Miss Waggle won, what is this "on the small order," our friend the judge is now raving about? Will he kindly give us the weight of his old friend Champion Doc? If I remember rightly when Doc was winning he was in Mr. Wilmerding's opinion just about right. I saw him weighed on two occasions, once he barely pulled the scales down at 22lbs. and once 22½ lbs.

Black Duchess won the special for best headed cocker in the show. This takes us back to the days of Miss Obo II. It took Mr. Wilmerding quite sometime to educate himself up to placing her first over Doc although she was his ideal weight—24lbs. If head quality at last compelled Mr. Wilmerding to place Miss Obo II. over Doc, why, when there is only a difference of 2lbs. in weight between Miss Waggle and Black Duchess—and other points are about equal—did not he place Black Duchess over Miss Waggle? The open dog class is a corker. Four dogs in that class should have beaten the winner Donovan, and these are their names, not in the order they should have been placed, but picked out of the catalogue: "Woodland Prince," Jumie II., "Pickpania" and Commodore.

It may be interesting to notice the opinion of various judges on Donovan: "Donovan, reserve, is very coarse and growing coarser, light eye, badly set ears and too long a body." (F. H. Mercer's report, N. Y. show 1893). "Is of the spaniel order." (James Watson's report, N. Y. show 1893). "Who is coarse." (E. M. Oldham's report, N. Y. show 1893). "Coarse all over." (American Field's report, N. Y. show 1893). They say judges and reporters differ. This must be an exception.

One more case, and I will conclude. If a dog is large enough to receive vhc. in the novice class, surely he ought to have a notice in the open. Douglas, unnoticed in the open class, received the award of vhc. in the novice class. Some people are cruel enough to say that as the judge after carefully examining the novice class on Monday evening for about 30 minutes, postponed giving his decision until the following morning. A night in the land of nod with the catalogue under his pillow did much to soften his hard feelings against poor Douglas whom he describes as one of the hated "small order." It may interest Mr. Wilmerding to know that Douglas weighs over 20lbs.

That the New York show judging of spaniels, 1894, was unfair to spaniel exhib

## AMERICAN KENNEL CLUB.

Annual Meeting at Madison Square Garden,  
Feb. 22.

In the absence of President Belmont, Vice-President Thos. H. Terry presided. There were present: Associate members, Dr. H. T. Foote, A. Clinton Wilmerding; American Mastiff Club, Geo. G. Stephenson; American Pet Dog Club, T. F. Rackham; City of the Straits Kennel Club, W. H. Muir; Collie Club of America, B. Shotwell; Great Dane Club of America, A. H. Heppner; National Beagle Club, H. F. Schellhass; New England Kennel Club, Edward Brooks; New Jersey Kennel League, E. H. Morris; Omaha Kennel Club, Dr. M. H. Cryer; Pacific Kennel Club, James Mortimer; Portland Kennel Club, W. L. Washington; Southern California Kennel Club, James Watson; Washington City Kennel Club, F. S. Webster; Westminster Kennel Club, H. B. Cromwell.

The minutes of the last annual meeting were approved. Credentials were read and accepted as follows: New England Field Trial Club, Wm. E. Baylies; Columbus Fanciers' Club, T. A. Howard.

The secretary read the result of the mail vote for election of officers for Associate Members as follows: President, H. B. Cromwell; Vice-President, Edward Brooks; Secretary, A. C. Wilmerding; Delegates, Thos. H. Terry, Dr. H. T. Foote and A. C. Wilmerding.

Secretary Vredenburg read his annual report as follows, and it was adopted:

NEW YORK, Feb. 21, 1894.—To the Officers and Delegates of the American Kennel Club.—Gentlemen:—I herewith beg to submit my annual report for the year which ends to-day. The year has been one of peace and we have been fairly prosperous, although we have felt the effect of the hard times in the falling off of our receipts for registrations and the sale of stud books. By a comparison of my financial reports of 1893 and 1894 will be found that we registered 465 dogs less in the year ending Dec. 31, 1893, than we did during the previous year, and you will also find that our stud book shows a decrease of \$238.50. Our annual dues were the same in both years, and the Associate dues were practically the same, there being a falling off of \$190 only, being a difference of but 20 Associates. One gratifying item in such a comparison is in our receipts for advertisements, which shows an increase of \$266.25. We have paid on account of legal expenses \$1,938.53, which leaves a balance of \$1,850 to pay, which we have until Dec. 31, 1895, as arranged by our advisory committee.

As directed at the last quarterly meeting of the executive committee, we have added to our plant a new card index at a cost of about \$335, which improves the machinery of the club and will be a benefit to all having business with us. This addition will last probably ten years longer without any further outlay of money. We have no other liabilities other than our legal expenses except the cost of publishing Volume X. of the stud book, which will cost about \$1,000. The actual cash balance to our credit on Jan. 1 last was \$2,815.82.

The club held one special meeting and its regular stated executive committee meetings in February and May, but made a failure of our September meeting by trying to hold it in Chicago, at which time and place we made two attempts, but failed both times to secure a quorum. We, however, completed our regular meetings by holding an adjourned meeting in New York in October, and closed the year with the regular December meeting. The average attendance at the four quarterly meetings was nineteen, an increase of five over the previous year. It is fitting that I should here state that there was one bright spot in our Chicago experience, and that was the hospitality of the Mascoutah Kennel Club. Its officers and members had arranged to receive us and entertain us as guests of honor. The quarters at banquet provided for our comfort and pleasure deserved our recognition, and it is but paying them a small compliment, although a just one, to thus publicly acknowledge our appreciation of kindness, courtesy and hospitality.

The advisory committee has held but three meetings during the year, investigating and acting on twelve cases submitted to it. This committee has made two ineffectual attempts to hold later meetings for the purpose of investigating several cases referred to it at executive committee meetings. The illness of Mr. Terry, the absence in Europe of Messrs. Belmont and Reick, and the failure of Dr. Perry to appear, made it impossible to obtain a quorum, and as a consequence the matters referred to the committee at the two last executive meetings are still in abeyance.

Our list of active members embraces sixty-one clubs, with applications from three now pending. We have lost during the year by resignation three clubs, with resignations from two now pending.

Our list of associate members consists of 236, with applications from four now pending. We have lost by resignations twelve, by death three, dropped for non-payment of dues sixty, while forty-five were admitted.

By the copyrighting of our bench show rules, only members of this association have the privilege of holding shows governed by them, which is certainly a step in the right direction, as it protects exhibitors from irresponsible managers, over whom we have no power to control.

Our relation with the Canadian Club have changed during the year. The American Kennel Club having cancelled the compact that had been in force since 1889. We deemed such action a wise one, and at a meeting a report on the subject of a more advantageous compact by a joint committee of the two associations will be submitted to you for your consideration.

The following comparisons are hereby submitted: During 1893 there were twenty shows held in the United States by club members of the American Kennel Club against twenty held in 1892. Entries at these shows amounted to 7,512 in 1893 against 6,253 in 1892. Absentees 669 in 1893 against 500 in 1892. The total number of judges employed in 1893 was sixty-seven against fifty-five in 1892. It would, therefore, appear from the above figures that 1893 was a great improvement in dog show affairs over the previous year and was likewise an improvement over 1891, which was really a banner year. The present year has started well, the entries at the Westminster Kennel Club show being an increase of almost 100 over 1893, which during the present depressed state of affairs must be a surprise to every one who watches such matters.

In closing my report I beg to tender my thanks to the delegates for their uniform kindness and courtesy to their secretary. Respectfully submitted,

A. P. VREDENBURGH, Secretary.

Mr. VREDENBURGH.—In connection with my annual report there is another report I have to make, which came in subsequently, which is as follows: "In accordance with the notice given at the December meeting of the executive committee, Mr. James Watson formally protests against the action of the executive committee in the matter of the reinstatement by it of Geo. W. Patterson, without giving the plaintiff in the case, Thomas Shillock, or his agent, James Watson, notice of the re-opening of the case on the appeal of Patterson."

It will be recalled that Mr. Watson protested at the aforesaid meeting of the executive committee, but afterward suspended action, preferring to make his protest to the association at its annual meeting. The following is the protest in full:

PHILADELPHIA, Feb. 17.—A. P. Vredenburg, Esq., Secretary A. K. C.—DEAR SIR:—In accordance with notice given at the December meeting of the American Kennel Club Executive Committee, I now appeal to the club against the reinstatement of G. W. Patterson until he makes restitution to Mr. Shillock for his dishonored draft.

The advisory committee has not yet made a decision in the matter, rendering a decision in this case, even though the same is awaiting investigation by Mr. Reick as to there being any possibility of a ruling in the statement of Mr. Patterson's own witness, Mr. E. H. Moore. Mr. Reick proved very conclusively that Mr. Moore was mistaken, the service of the bitch bought by Mr. Patterson appearing in its regular order in Mr. Shillock's stud book.

The blackest point against Mr. Patterson is his own admission of his false statements regarding his stoppage of the draft. In his letters he writes Mr. Shillock that the non-payment was all the fault of the bankers, that he had orders sent to straighten things out, and all this before he had seen Mr. Moore, while at the same time the draft was stopped by his specific orders. I submitted perfectly independent testimony as to the truth, together with my own statement regarding my seeing her by special appointment when she came to the stand.

Mr. Shillock offered to do all a man could be asked, and more than there was any real necessity for him to concede, while Mr. Patterson held on to both bitch and money until the bitch died and the bank failed.

It was a deliberate fraud, the penalty of which should not be removed in a haphazard way. The obligation of Mr. Patterson's desire for reinstatement is plainly indicated by his many entries made in the stud book since then. Yours respectfully,

JAMES WATSON.

The treasurer's report, as published in the January Gazette, was accepted.

Officers were elected as follows: President, August Belmont; Vice-President, Thomas H. Terry.

## ELECTION OF COMMITTEES.

Mr. VREDENBURGH.—The first committee being the advisory committee it will be necessary to elect two members, the present incumbents being Dr. P. J. D. Taylor and G. Reick.

Messrs. Perry, Brooks, Taylor and Reick were nominated.

Mr. HEPPNER.—I would call the attention of the club to the inadvisability of nominating as members of that committee persons who live outside of the city for the reason that it is hardly possible to get a full attendance of all the members of such committee, and besides I think it is asking too much of non-residents to come here and attend every meeting; for the additional reason that some of the meetings are very important and matters come up which need special action. Dr. Foote, who was appointed teller, announced that fourteen bal-

lots were cast, which resulted in Mr. Brooks being elected as one of the members of the advisory committee, and a tie vote for Mr. Reick and Mr. Taylor. The chair directed that another vote be taken for the election of a second member of the advisory committee, which resulted in the election of Major J. M. Taylor.

On motion of Dr. Foote the secretary was directed to cast a ballot for Messrs. James Watson, Dr. M. H. Cryer and Wilson Fiske as stud book committee.

The field trial and coursing committee as elected is as follows: Messrs. Webster, Taylor, Baylies and Whifton.

The committee on rules and constitution is as follows: Messrs. Watson, F. S. Webster, Dr. H. T. Foote, H. F. Schellhass and A. P. Vredenburg.

Mr. Vredenburg then called up the protest of Mr. James Watson to the reinstatement of Mr. G. W. Patterson which had been read, and in which Mr. Watson claimed that the reinstatement of Mr. Patterson was unjust, the plaintiff in the case not having been notified of the re-opening of the case.

Mr. HEPPNER.—I move that the protest be laid on the table in view of the fact that a resolution was passed at our last meeting on recommendation of the advisory committee that the American Kennel Club hereafter do not consider cases where fraud is not conclusively proven.

Mr. Schellhass moved that the American K. C. refuse to indorse the action taken by the executive committee in this matter, and that it does indorse the action of the advisory committee. A rising vote resulted in the motion being lost, six to seven. The protest was laid upon the table and the meeting adjourned.

[The action taken as to the arrangement with the Canadian K. C. was reported in our last issue.]

## Meeting of the Executive Committee, Feb. 22.

In the absence of President Belmont, Vice-President Thos. H. Terry presided.

Associate members, Dr. H. T. Foote, A. Clinton Wilmerding; American Mastiff Club, George G. Stephenson; American Pet Dog Club, T. F. Rackham; City of the Straits Kennel Club, W. H. Muir; Collie Club of America, J. S. Shotwell; Great Dane Club of America, A. H. Heppner; National Beagle Club, H. F. Schellhass; New England Kennel Club, Edward Brooks; New Jersey Kennel League, E. H. Morris; Omaha Kennel Club, Dr. M. H. Cryer; Pacific Kennel Club, James Mortimer; Portland Kennel Club, W. L. Washington; Southern California Kennel Club, James Watson; St. Louis Kennel Club, J. M. Taylor; Washington City Kennel Club, F. S. Webster; Westminster Kennel Club, H. B. Cromwell.

The minutes of the last meeting were approved. The secretary read his quarterly report as follows:

NEW YORK, Feb. 21, 1894.—To the Executive Committee of the American Kennel Club.—Gentlemen:—Since my last report the following applications for admission to membership have been received: Jan. 15, '94, Philadelphia Kennel Club of Philadelphia, Pa., Jan. 23, '94, Brunswick Fur Club of Dorchester, Pa. These applications are in regular form and both are eligible for election.

The following resignations have been received and hereby are tendered: Jan. 18, 1893, Bexar Field Trial Club of San Antonio, Texas; Dec. 30, 1893, Red Valley Fanciers and Hunt Club, of Gloversville, N. Y.; Jan. 6, 1894, Virginia Field Sports Association, of Richmond, Va.; Jan. 15, 1894, Keystone Kennel Club, of Philadelphia, Pa.; Feb. 14, 1894, Blue Grass Kennel Club, of Lexington, Ky.

Art. X. of our constitution says "the annual dues of clubs shall be \$10, payable on or before Jan. 1. Any club failing to pay said dues within the specified time shall forfeit all right to representation in this association and such clubs may be suspended or dropped from the roll." It will therefore appear that the last three named clubs did not forward their resignations until the time for the payment of the annual dues had passed, and it now rests with you whether their resignations are in order or otherwise.

Credentials have been filed by the New England Field Trial Club, named Wm. E. Baylies as its delegate. Mr. W. A. Power is the present delegate.

I would report that the secretary of the Rhode Island Poultry Association advises me under date of Jan. 27, that Mr. G. E. Cromwell who was accepted as its delegate at the meeting of the executive committee in May last, is not their delegate, nor is he a member of the association. A resolution declaring "that the Rhode Island Poultry Association no longer has a legally accredited representative in the A. K. C." would be in order.

Since our last meeting the Illinois Kennel Club has paid the claims of the A. K. C. and also of F. W. Chapman, who requests to be allowed to withdraw his charges against that club. This action places the club in the position of again being restored to its full membership and the suspension of the club may be suspended or dropped from the roll. It will therefore appear that the last three named clubs did not forward their resignations until the time for the payment of the annual dues had passed, and it now rests with you whether their resignations are in order or otherwise.

Credentials have been filed by the New England Field Trial Club, named Wm. E. Baylies as its delegate. Mr. W. A. Power is the present delegate.

I would report that the secretary of the Rhode Island Poultry Association advises me under date of Jan. 27, that Mr. G. E. Cromwell who was accepted as its delegate at the meeting of the executive committee in May last, is not their delegate, nor is he a member of the association. A resolution declaring "that the Rhode Island Poultry Association no longer has a legally accredited representative in the A. K. C." would be in order.

Since our last meeting the Illinois Kennel Club has paid the claims of the A. K. C. and also of F. W. Chapman, who requests to be allowed to withdraw his charges against that club. This action places the club in the position of again being restored to its full membership and the suspension of the club may be suspended or dropped from the roll. It will therefore appear that the last three named clubs did not forward their resignations until the time for the payment of the annual dues had passed, and it now rests with you whether their resignations are in order or otherwise.

The Continental Kennel Club, of Denver, Col., has found it necessary for its own advantage to reorganize, and in doing so has changed its title to that of the Western Kennel Club Company, and respectfully requests this association to recognize it as such and to make the necessary change in its records. Referring to the conflict between the Portland Kennel Club and the Oregon Kennel Club, which matter was referred to the advisory committee for investigation, I beg to report that the two clubs have settled their differences and have consolidated and reorganized under the name of the Columbian Kennel Club, of Portland, Ore. I would therefore suggest that the club be at once re-instated upon our books in place of the Portland Kennel Club, and that the annual dues paid by the said Portland Kennel Club for the year 1894 be credited to the account of the consolidated club. Pursuant to the suggestion of the A. K. C. at its last meeting, the New Jersey Kennel League has preferred charges against Dr. L. R. Sattler for misconduct in connection with dogs and dog shows, said misconduct having occurred at the late Newark show, for which Dr. Sattler was duly expelled from the club.

The New Orleans Fanciers' Club advertises conditional upon the number of entries. This being in direct conflict with the A. K. C. rules now in force (Rule VIII.), I promptly advised the club that the rules must be enforced, and that any deviation from them would be met with prompt action, and that the club would be held to a strict accountability for any deviation therefrom.

The following prefixes have been proposed for: E. Willard Roby, for the prefix "Robin," J. R. Oughton for "Dwight," G. Gordon Hammill for "Hill-Top," C. A. Pratt for "Argyle," James L. Little for "Newcastle," Lucien Carr, Jr., for "Stanwood," Wm. F. Ford for "Mohawk."

These claims do not conflict with any now registered, and I would recommend allowing the same, except that of "Robin" should apply to dogs only, and "Mohawk" to collies only.

I beg to submit the following amendments to the constitution: NEW YORK, Jan. 3, 1894.—Gentlemen: I have the honor to acknowledge herewith preamble and resolutions adopted by you and passed by the American Kennel Club at its December meeting. If after my service of several years I have succeeded in retaining your confidence and esteem, I am quite content. Passing as many others have done upon me, I am sure that the A. K. C. is a pleasure to contemplate the stability the editors of the "Forest and Stream" enable us to view with equanimity the spasmodic attempts made in certain quarters to belittle the progress and impair the usefulness of the one club that stands between the public and would-be malcontents, in the character of a watchdog. Though I have severed my official connection with you, I beg to assure you of my continued interest in all that concerns the dog world, and I am sure that you are all my members, and while I believe and trust that no occasion may arise during my life, devotion or interest, nevertheless should such occasion recur I may be counted on as ready to enter the ranks and do my utmost to uphold its dignity and usefulness. To the president, officers, delegates and members of the club I tender a greeting for the new year that is about to dawn upon us, and wish you prosperity, not only collectively but individually. Believe me, gentlemen, very sincerely yours,

JAS. L. ANTHONY.

To Messrs. Vredenburg, Lincoln and Schellhass, special committee, American Kennel Club.

The following letter has been received by the chairman of the stud book committee:

SAN FRANCISCO, Cal., Dec. 3, 1893.—James Watson, Esq., Chairman Stud Book Committee. Dear Sir: I wish to call your attention to a resolution passed at the 23rd of Oct. by the R. C. St. Bernard bitch, Lady Gladys, E. P. Schell, San Francisco. The resolution was that the stud book be closed to all dogs bred by the R. C. St. Bernard bitch, Lady Gladys, and her breeders, but never heard of F. E. Raymond. Valour, who is given as the sire, is a well known name, but the only Valour I ever heard of was the sire of Mammoth, and was dead before Lady Gladys was born. Moreover, he was of a different breeding. Mr. Schell has recently been expelled from the Pacific Kennel Club for issuing false pedigrees and I challenge the correctness of this one. Can it be verified. Yours respectfully,

A. RUSSELL CROWELL, Kennel Editor, B. S.

The Pacific Kennel Club has never advised the A. K. C. of its action, and therefore no action has been taken in cancelling any of Mr. Schell's registrations. I would recommend that the charge at A. Russell Crowell be referred to the Stud Book Committee for investigation, the result of which to be reported to the Executive Committee of the Executive Committee possible, embodying such recommendations as the committee may deem proper in the premises. Respectfully submitted,

A. P. VREDENBURGH, Sec'y.

The treasurer's report was read and accepted, as follows: NEW YORK, Feb. 20, 1894.—To the Executive Committee of the American Kennel Club.—Gentlemen:—I herewith beg to submit my quarterly

report of all moneys received and disbursed by me during the year 1894:

Balance on hand Jan. 1, 1894.....	\$2,815.82
Receipts from all sources to date.....	1,545.00
Disbursements for same period.....	\$4,360.82
	\$3,436.41

I also beg to report the following clubs in arrears for annual dues for 1894, bills for same having been mailed to them Dec. 1, 1893: Minneapolis Kennel Club, Illinois, Ohio, Akron, Des Moines, Pennsylvania, Burlington County, Rhode Island, West Michigan, Androscoog, Elmira, Cincinnati, Georgia, Washington, German Mastiff, Southern California, Duquesne, English Setter, Central City, Mohawk Valley, Bexar. Respectfully submitted,

A. P. VREDENBURGH, Treasurer.

Mr. Vredenburg was duly elected Secretary and Treasurer.

The resignations of the Bexar Field Trial Club, Mohawk Valley Poultry and Kennel Club, Virginia Field Sporting Association, Keystone Kennel Club and Blue Grass Kennel Club were accepted.

The secretary reported the application of the Philadelphia Kennel Club for membership of the American Kennel Club.

Dr. CRYER.—I believe that it is due to this club that a letter written by this same club upon its resignation from the American Kennel Club a year or so ago should be withdrawn.

Mr. Fiske.—I move that the application of the Philadelphia Kennel Club be accepted contingent upon a retraction of the letter referred to and an expression of good will. At the time that letter was sent this club was in a deal of trouble, and this letter gave our enemies a great chance to grow. It had the effect of bringing up questions of doubt as to what we were doing, whether we were proceeding properly or not, and it was to some extent the cause of the dissatisfaction that has been heard of in the West for the last year or so, and which finally culminated in the talk of an opposition club. This Philadelphia Club desires to hold a show next month, and if we do not accept them as members now it will interfere with the success of their show, but I think it is only just that they should retract, as I have before stated.

Mr. BROOKS.—I move as an amendment to that that they be required to publish their letter of apology in the public press.

Mr. SCHELLHASS.—I move as an amendment that their application be accepted subject to retraction of that letter, which shall be subject to the approval of the president or vice-president of the club.

Mr. BROOKS.—I withdraw my amendment.

Dr. CRYER.—I desire to say that I know a great many of the members of the Philadelphia Club and have been most courteously treated by them, and I feel a warm personal friendship for them, but I must look to the dignity of the club, and I think a retraction of that letter and an expression of good will would be calling for nothing beyond what is proper. In fact, I think some of the members of the club—and I have been informed by one of them—desire that an apology should be made to this club.

Mr. WATSON.—I agree with the opinion which seems to be so freely expressed, that there is something due to this club from the Philadelphia Club. A great many statements in that letter were to my knowledge absolutely false. For instance, as to the statement contained in that letter that their delegate was not accorded due courtesy at the meetings of the American Kennel Club. I know that no one has ever given me an opportunity to state his views than was Mr. Child, the delegate of that club. In fact, he was particularly requested on a number of occasions to give us his ideas on matters under consideration when he was a delegate of the club.

The motion as amended by Mr. Schellhass was seconded and carried. The Brunswick Fur Club was admitted to membership.

Concerning the matter reported by the secretary to the effect that Mr. G. E. Cromwell, who was accepted as a delegate of the Rhode Island Poultry Association at the May meeting of the American Kennel Club, was not now a member of that society, on motion of Mr. Schellhass the resolution suggested by the secretary was adopted as follows: That the Rhode Island Poultry Association no longer has a legally accredited representative in the American Kennel Club.

Mr. VREDENBURGH.—As I have reported, the Illinois Kennel Club has paid its dues to this club and also the claims of Mr. F. W. Chapman who preferred charges against said club, which charges have been since withdrawn. The Illinois Club was suspended and I call your attention to the fact that the suspension has been removed. They have, however, failed to pay their dues for 1894.

On motion of Dr. Foote the suspension of the club was removed. The request of the Continental Club, of Denver, Col., the same having reorganized and changed its title to that of the Western Kennel Club Company, and requesting this club to recognize it as such, was granted.

Mr. VREDENBURGH.—The Portland and Oregon kennel clubs have healed their own differences. Each club appointed committees which met and reported a plan by which both clubs reorganize into one and change their name and request this club to recognize it as the Columbian Kennel Club of Portland, Oregon. I have recommended that the club as it now exists be substituted upon the books in place of the Portland Kennel Club, and that the annual dues paid by said club for the year 1894 be credited to the account of the consolidated club.

WASHINGTON.—This consolidation was made in the interest of harmony by the Portland Kennel Club, and in doing so they do not in any way admit that the charges brought against it are true. I have been authoritatively assured that the date of their charter as given is the correct date, but they concluded that the kennel interests of that part of the country demanded that there should be but one club, and that they should all work under one organization.

The New Jersey Kennel League's charges against Dr. L. R. Sattler for misconduct in connection with dogs and dog shows was referred to the advisory committee.

On motion the following prefixes applied for were granted: By E. Willard Roby the prefix "Robin," By J. R. Oughton, "Dwight," By G. Gordon Hammill, "Hill-Top," By C. A. Pratt, "Argyle," By James L. Little, "Newcastle," By Lucien Carr, Jr., "Stanwood," Wm. F. Ford applied for the prefix "Mohawk."

Mr. VREDENBURGH.—These names do not conflict with any now registered, but I think there should be an exception to the prefixes "Robin" and "Mohawk."

Mr. SCHELLHASS.—I move that the prefixes be allowed unreservedly. Mr. VATSON.—I offer an amendment to that, that they all be allowed with the exception of "Mohawk," while that has not been a registered prefix, yet we do not want to allow any prefix that might conflict with any usage. For instance, the Mohawk Kennels have been in existence a long time.

Amendment accepted, and the motion as amended seconded and carried.

Mr. A. Russell Crowell's communication in reference to fraudulent entries was referred to the stud book committee for investigation.

It was carried that clubs which are in arrears be notified that they must pay within thirty days from notice, or be dropped from the roll.

Dr. CRYER.—Before we adjourn I desire to state that in looking over the stud books that we have been revising, and also in glancing over the catalogue of this show, I find entries of dogs entered at former shows under one name and now entered under a different name, the change being made by a subscriber or purchaser of the dog. This is confusing to the stud book compilers, and confusing to the public. For instance, there is one bitch in this show entered under a different name than that under which she was entered at some former show. She is in the champion class. She has bred puppies under one name, and it is possible that she will have puppies under a fourth name. I desire to suggest that it would be a good idea in order to remedy this abuse that this club should pass a resolution by which after a dog has won a prize and he has been properly registered in the stud book, the name of such dog should not be changed without the consent of either the stud book committee or the executive committee for some good reason, and not on account of a mere whim. I move that the secretary be directed hereafter to see to it that any dog already registered in the American Kennel Club Stud Book shall not be re-registered under a different name.

The matter was referred to the stud book committee. The meeting then adjourned.

## Pacific Kennel Club.

Editor Forest and Stream: At the last meeting of the Pacific Kennel Club they voted to postpone holding a bench show for one year, as the bench show committee reported that they could not secure a suitable hall for holding a show. The Midwinter Fair managers declined to entertain any proposition for holding a show at the Fair grounds on account of the lack of space. Considering the great chance of failure from a financial standpoint the show was postponed. HORACE W. OREAR, Sec.

SAN FRANCISCO, Cal., Feb. 20.

[Since the above was mailed we learn that there is a feeling among many of the members that the show should be held, and our latest advices intimate that a show will take place after all.]

DOG CHAT.

Philadelphia Show.

The premium list of the Philadelphia Kennel Club's coming show is in the mail. The judges' list is a very strong one, in fact one of the best yet selected. Mastiffs, great Danes, bloodhounds, fox-terriers (smooth and wire-haired), toy spaniels, toy terriers and miscellaneous, are given to Mr. James Mortimer. St. Bernards, Newfoundlands, poodles, bulldogs, bull-terriers, black and tan terriers, Irish, Scottish, Dandy Dismont, Skye and Yorkshire terriers and Italian greyhounds, to Mr. C. H. Mason. Greyhounds, deerhounds and Russian wolfhounds, to Mr. H. W. Smith. Pointers, to Mr. Chas. Heath. English setters, to Mr. Francis G. Taylor. Irish and Gordon setters, American and English foxhounds, to H. Clay Glover, V. S. Collies and pugs, to Dr. L. C. Sauveur. Spaniels and Chesapeake Bay dogs, to Mr. E. M. Oldham. Beagles and dachshunds, to Mr. A. C. Krueger. Dr. Alex. Glass is the veterinarian.

Mastiffs and St. Bernards are given challenge prizes of \$15 and open class prizes of \$15, \$7 and \$3. Pointers and setters, collies and fox-terriers get \$10 in challenge and \$10, \$7 and \$3 in open classes. The other breeds vary from \$10, \$5 and \$3 to \$7, \$5 and \$3 for open classes. In the latter category we find spaniels, but considering the importance of the breed and the fact of the specialty judge officiating, we scarcely consider this a fair division of the spoils, although classification No. 2 is provided. Kennel prizes of \$10 are given in most of the breeds. The special prize list is a valuable one, the mastiffs, fox-terriers, spaniels and collies being the breeds most favored; \$25 cash is given to the best two couple of American foxhounds and most of the other breeds are already provided for. Spratts Co. bench and feed and Sanitas attends to the disinfecting. The entries close March 16 with Geo. D. B. Darby, Philadelphia, Pa. With the strong list of officers and the sentiment which always surrounds this club's shows, the list should bring at least 500 entries, especially as the show practically marks the close of the circuit. We still think that if the dates were changed to the week following Chicago, a better entry would result.

The Manica challenge cup for the best American-bred dachshund, value \$350, will be offered at the Boston show. The entry fee for this competition is \$5, which must be sent to the FOREST AND STREAM, 318 Broadway, New York, which has charge of the competition. The fees constitute a sweepstakes which go to the winner of the cup each time it is competed for. The cup becomes the property of the exhibitor winning it five times. Entries for this special close March 31. Mr. Manica has won the cup twice and Mr. Matthews once. The cup is solid silver and a very handsome trophy. It should provoke keen competition.

Louisville (Ky.) Kennel Club.

About fifty lovers of the dog answered the call for a meeting at Louisville, Ky., Feb. 26, to organize a kennel club in that city. The Louisville Kennel Club is the result, and a corporation was formed with a paid-up stock of \$3,000. Gen. John B. Castleman, Dr. D. W. Vandell and Col. C. P. Atmore, three prominent citizens of the Blue Grass State, are the chief movers in the club. A show is to be held beginning May 15, and \$2,000 in prizes is promised. Application for membership in the A. K. C. has been made. At a later meeting the officers elected were: President, D. W. Vandell; Vice-Presidents: Henry S. Tyler, C. P. Atmore, Col. J. R. Castleman, Roger D. Williams, Norvin Harrie and Morris Belknap; Secretary, Marc Mundy; Treasurer, James Clark, Jr. The dog show committee is made up of D. P. Ritchie, Stanley Adams, J. J. Hagan, A. F. German and T. J. O' Bryan; Veterinary, Dr. A. Harthill, Jr. The advisory committee, numbering twenty-seven, comprises the remaining club members. The only definite action taken concerning the coming show was to donate 20 per cent. of the gross gate receipts to the Children's Free Hospital.

The date claimed for the next International field trials, at Chatham, Ont., is Nov. 6.

Mr. Lacy will attend the Detroit and Chicago shows, therefore correspondents sending items of interest or business connected with the Kennel Department should address their letters to the Forest and Stream Pub. Co.

Those who have attended the New York dog shows should not miss reading the admirable paper in the March Century, descriptive of the Madison Square Garden.

The steamship Cevic of the White Star Line, which arrived on Tuesday last (Feb. 27), had on board an English setter dog consigned to Mr. R. W. Armstrong, of the Cragstone Kennels, Highland Falls, N. Y. This dog is Bald Rock, by Prince Rupert out of Pride of the Valley. He will be shown first at Boston next month.

The Rinada Pointer Kennels are selling out their dogs, and as this kennel contains some excellent blood, this is an opportunity to get good stock at low figures.

Dr. Kitchell has returned the cocker Bambo to his former owner, Mr. E. W. Fiske, and having purchased Jasper from Mr. Laidlaw, will try for some "any other colors" soon. Mr. Fiske has purchased most of Mr. Geo. Bell's well-known cockers. It looks now very much as if our Walker House friend is deserting the breed in which he was until quite recently so successful an exhibitor. He still keeps his eye on the spaniel men, however, judging from his telegram received during the Spaniel Club dinner.

The Philadelphia Kennel Club will celebrate the fifth anniversary of the granting of the club's charter at the May dinner. All fanciers will be pleased to see this club once more a member of the A. K. C. It speaks well for the club to find so many of its charter members still busy in the fancy and in field trials.

The specialty show in connection with an exhibit of farming implements, etc., to be given under the auspices of the Hempstead Farm Co. at the Madison Square Garden in the early part of May promises to be an interesting event. The St. Bernard, Collie and Spaniel clubs are making great efforts to insure a success. The judges will be chosen by ballot by members of the different clubs. Mr. Oldham received the vote of the Spaniel Club and will officiate. The other judges have not yet been decided upon. The company guarantees the prize money which will be, we are informed, the same as given by the W. K. C., the specialty club merely supplying the judges.

Mr. T. S. Bellin will take the fox-terrier and other terrier classes, excepting Boston terriers, at Boston show. The dates April 17 to 20 include the Battle of Lexington Day.

Mr. A. C. Bradbury, manager of the Maybrook Kennels, joined the order of Benedictos on Wednesday last. Mr. Bradbury is well and favorably known both in kennel and coursing ranks, and we are sure his many friends will join us in wishing the couple every prosperity.

We have not received a list of the entries at Chicago, but understand the entry is a very large one. Both Battery D and the Second Regiment Armory will be used to bench the

dogs in. It is a pity this club cannot bench its show in such a building as the W. K. C. is favored with. Splitting the show in two parts, as is necessary at Battery D, the effect of a big entry is lost, and at the best benching is cramped and confined.

The Northwestern Beagle Club will hold a meeting during the Chicago show at Battery D on Thursday, March 15, at 2 P. M. Mr. G. C. Buckstaff is the secretary.

The Omaha Kennel Club is discussing the advisability of reducing the membership fee to \$10 in order that a larger membership may be secured. The club is out of debt and in a prosperous condition. The club proposes to hold a dog show in the fall. Their former effort having been such a success they are tempted to try their fortune once more.

Fred Kirby has given up his store in Philadelphia and will devote his time to boarding and conditioning for and handling dogs at shows.

Mr. Coleridge C. Vickery severed his connection with Spratts Co., March 1, after being assistant manager for

DR. L. C. SAUVEUR. Judge of Collies, N. Y. Show, 1891.  
DR. H. T. FOOTE. Judge of Black and Tans, etc., New York Show, 1891.

eight and a half years. As an earnest of the esteem in which he was held by the employees of the firm, they presented him on Saturday evening last with a handsome gold mounted ebony walking stick, suitably engraved. This will be highly prized by Mr. Vickery, not only on account of its value but more especially that it shows the estimation in which he was held by those with whom he was brought in daily contact.

Dr. L. A. Anderson of Cincinnati, Ohio, will match his trotting dog Jeff, a great Dane against any dog in the world for \$500 a side, a half mile, best two in three. Also he will trot Jeff, 100 yds., against any pony under 13 hands high, or any bicycle rider under 12 years of age, or any sprinter or any bicycle rider, standing start, or any sprinter, 400 yds., for \$100.

Fox-Terrier Stud Book.

Editor Forest and Stream:

The Fox-Terrier Club have undertaken the production of Vol. V. of the Stud Book as a continuation of the valuable

E. A. WOODWARD.  
Judge of Bulldogs, New York Show, 1891.

work of reference hitherto produced by Mr. L. Upcott Gill, publisher, 170 Strand, London, and hope that every one interested in fox-terriers will insist in making the registration of pedigrees in it accurate and complete.

The registration of pedigrees and show records will be continued from the close of Volume IV. of the Stud Book (February, 1892) to the end of December, 1893.

Those desiring to register their dogs should at once apply for forms to Mr. Hugh Dalziel, Woking, England, who has been appointed to continue the compilation of the work.

Secretaries of shows held from the first date mentioned, will be doing good service in the interests of the fox-terrier by sending copies of their catalogues to the editor.

All winners at shows held under Kennel Club rules will be registered free, and a small charge of 1s. 6d. will be made for the registration of other dogs; but the club reserves the right to refuse registration to dogs whose claims to pedigree they may consider do not justify their entry in the Stud Book. It is often desirable to register dogs of good blood that are not exhibited, and this applies with special force to brood bitches.

J. C. TINNE, Hon. Sec'y of  
The Fox-Terrier Club.

LYMINGTON, Hampshire, Eng.

The Spaniel Club Dinner.

THIS pleasant re-union of spaniel owners and their friends, has become quite a feature of the New York dog show, and is looked forward to each year by the owners of the "long-ears." That the interest in it is growing, is evidenced by the increased number who participate each year over the year previous.

At Zangheri's Restaurant twenty-eight sat down to a long T-shaped table, profusely decorated with flowers and fruits, while strains of soft music from guitars and zithers located in an adjoining alcove, during the meal, made all "as merry as a marriage bell." It was no "state affair" either—entirely informal, and a pleasant and jovial meeting throughout.

After doing full justice to the menu Français we turned over a new leaf and found the following "greeting:"

"The more I see of men the more I admire dogs."  
TO THE "CROWD."  
(Grabbed from last year's Menu.)

We started last year with "ein cock(er) tail,"  
Then "leerry and Eggs(ception)" just out on bail.  
Then oysters and soup ("noodle, noodle and noodle"),  
Then "Dogfish on toast," which cost lots of boodle.  
"Calves' Brains à la bow-wow," went off with a push.  
Backed up with Bordeaux ("a good wine needs no Bush"),  
Punch à la Roman—brewed by our friend Kirk.  
Cigarettes, "Old(ham) Judge," helped us all thro' our work.  
Kitchel collared the lettuce at old Perth Amboy.  
While the ice cream from Keasbey (Hollow Bricks) gave great joy.  
Assorted cakes (V. H. C., H. G. and C.).  
The kind Bell and Willey ne'er chase up a tree.  
Old English Cheese—sweet, dark and tender,  
Filled, we soon found, with many an active member.  
To go with the cheese, but they proved deuced hard,  
"Spratts biscuit (Doggone good)," was next on the card.  
Fruits, "plums and other things," followed in a row.  
From the ranch of Foster (Judex's boss) on the hills of Tuxedo.  
In café noir we had the "Black—the kind that ever wins,"  
Its strength and tint just covered right our landlord's many sins.  
For Garcia Cabbageros, we had "Watson's low and long,"  
And for music—well, "Auld Lang Syne,"  
and "Where is my Little Dog Gone?"

SELAH!

Then we looked around to see who were there.

A. Clinton Wilmerding presided, faced by Treasurer Oldham; Wm. D. Murphy, the silver-tongued orator, who entertained all present with his pleasant talk, and told how he knew more about cameras than he did about dogs; E. W. Fiske, who looked on without Amazement; E. G. Brown, who couldn't eat because Cherry Boy wasn't there, so he talked; R. P. Keasbey, who supplied the "hollow bricks" last year; E. M. Oldham brought his beard with him, and some good songs (says he's going to have his beard trimmed short for next dinner); Dr. Kitchel says he's going to be an actor some day, but we noticed he didn't do any stunts; A. E. Foster wanted to gather up all the bones left from the English partridges for Judex—says Judex's father was an English dog; "Hail Fellows well met" kept his end up with the rest; W. T. Payne sat where he could reach the doughnuts; Henry Jarrett didn't sit in the gallery either; Geo. H. Whitehead helped hold the table down; A. W. Smith's stories were good, but he couldn't help it, he has just joined the club again; C. E. Idell, M. A. Viti and W. S. Brooks kept passing the "joke" and thought the table was too "long and low;" Andrew Laidlaw and C. M. Nelles both liked Canada for a small place, but thought New York pretty good, especially just about February; Geo. P. Preston, Jr., made a speech on tariff reform; A. B. Forsyth says he has a winner and is going to get there; A. E. Rendle was a "Bandit" in disguise—says he'll win at the Specialty show; Messrs. Atherton, Contoit and Lacy responded individually and collectively to the toast to the press; Mr. Wilmerding made a speech of welcome, and spoke pleasantly of the relations between the Spaniel Club and the sporting papers. After the cloth was removed all gathered around the piano where song followed song in quick succession till midnight, when the party broke up.

Correction.

Editor Forest and Stream:

In your report of heavyweight pointer bitches, at New York show, you say Devon Fan got reserve. I would state that, as Fan was very heavy in whelp, she was not judged, and Mr. Heath, the judge, is my authority for the statement that he did not award her the reserve, or in fact judge her. She has only been shown and judged once since imported last year, when she won first open class at Boston, 1893.

BRIDGEPORT, Conn., March 3.

Hunting and Coursing.

FIXTURES.

April 17.—South Dakota Coursing Club's inaugural meeting, at Mitchell, S. D. Entries close April 16. S. S. Batley, Sec'y; Fox Kenney, Judge; Joseph Dodd, Slipper.

New England Beagle Club.

Editor Forest and Stream:

A meeting of the New England Beagle Club was held at Young's Hotel, Boston, Feb. 19, at 2:20 P. M., the following members present: F. W. Chapman, H. H. Brown, H. V. Jamieson, F. W. Cliefeld, Henry Hanson, B. S. Turpin, Thomas Shallcross and W. S. Clark. President Chapman in the chair. Minutes of last meeting read and approved. It was voted that the secretary write to Mr. O. F. Joslin, of Oxford, Mass., representative in the Massachusetts Legislature, that the N. E. B. C. heartily approve the extension of the close season on rabbits, and respectfully recommend that the bill now before the fish and game committee be amended so that the close season shall extend from March 1 to Oct. 15. Voted that the treasurer make a report of the club's finances at the April meeting. Mr. C. S. Matteson, South Shaftsbury, Vt., was elected to membership. Adjourned 3:30.

W. S. CLARK, Sec.-Treas.

The Kenmore Coursing Club.

At a call meeting of the executive committee of the Kenmore Coursing Club, H. C. Lowe and T. W. Bartels present, J. Herbert Watson absent, it was arranged that the club hold its next meeting at Goodland, Kan., Oct. 16 and subsequent days. There will be two stakes: The Goodland Stakes, for all-age greyhounds, open to the world. The Kenmore Derby for greyhounds eighteen months old or younger at night of the drawing. Five dollars will be charged non-members for entering a dog; this will give them the privileges of the club during the meeting.

The president's cup, valued at \$100, will be donated by Dr. Q. Van Hummel. The citizens of Goodland guarantee \$500 added money for the stakes. This will most emphatically assure a large entry and is worthy of the time and efforts of coursing men from all over this country.

A party of hunters from Chilmark, Mass., made a raid on the rabbits last week and brought home twenty-two cotton-tails.

## ALTCAR COURSING CLUB'S MEET.

The first meeting of the Altcar Coursing Club, announced for Feb. 20, 21 and 22, was unfortunately opened under very unfavorable conditions, it being extremely cold for three successive days, but this did not deter the enthusiastic coursing men from their purpose to hold a spring meeting, and as this was the introductory meeting the club was more anxious than ever that it should be a success.

The evening of the 19th, after the drawing, a banquet had been arranged for at the commodious Rock Island Hotel and "the boys" sat down to the repast with the best of feeling, making merry till a late hour. Toasts were responded to by the president of the club, Mr. L. F. Bartels, ex-Mayor Smith and others, Dr. J. M. Norman of Denver making a most masterly effort, fairly outdoing himself with his wit and clever allusions to the exciting experiences of the sportsman. As a clubman he is one of the most popular men in Denver, and as an entertainer is a host in himself.

The club originated in Denver and is composed of sportsmen from that city and Colorado Springs mostly, with the addition of several coursing men from other parts of the country. The members are all active coursers and it might fairly be said that the opening meeting was a success in spite of the great disadvantages that the club labored under with the very severe weather they unfortunately encountered. On Tuesday morning a bitter cold wind was blowing from the north and the light snow was drifting considerably, but, nothing daunted, the horses were ordered out and with faces well wrapped up the cavalcade went away to the coursing ground hopeful that by braving the elements for a day that the morrow would bring forth sunshine and warmth.

The drive of six miles brought us to the locality where the Kenmore Club did most of their coursing in October. The ground was found to be in nice condition, there having been but little rain during the season, the soft, thick buffalo grass prairie making a padding almost like a velvet carpet. The light snow did not interfere with the running in the least, and the hares were fairly plentiful, although it was said that hundreds had been killed during two or three months. And such hares! Great, big, fat whitetails, but their muscles seemed to be hard, and away they would go, leading the best brace of greyhounds a merry dance.

The cold weather had driven the hares to their burrows, which accounted in a measure for the scarcity of them, compared with what we found last October.

The piercing cold wind kept every one dancing about, and old Jack Frost kept up a merry jingle with our fingers and ears, and slow progress was made. Many a poor soul would have gladly exchanged coursing for stove hunting. But in spite of all, the numbers on the card were rapidly diminishing, and barring the two last courses was run through, the committee keeping the dogs in the slips until the judge was unable to see a hare when it left its form.

When a halt was called we were about ten miles from the town. We struggled in chilled to the marrow, but were made happy with a warm repast and a genial fire. Such is coursing in February in western Kansas. It should more properly be called a winter meeting. After consultation in the evening it was decided to make another effort in the morning, but after driving five or six miles it began to snow, and blow, and after running the two remaining courses on the card the crowd returned to the city.

There was considerable exchange of opinion as to the advisability of dividing the stake; but the prevailing sentiment was in favor of making another effort in the morning. The meeting was improperly advertised for three days, limited, the judge was employed for that time, and although the weather had not perceptibly softened, it was decided to make one more effort to run the stake.

After dinner, the boys being hungry for more jack rabbit, it was proposed to take a bit of a hunt on foot, using for their coursers the beaten dogs of the day before. A dozen or more walked into the suburbs and had a most enjoyable time, raising fifteen jacks and coursing in the old-time way of running until the dogs were about satisfied.

In crossing a path T. W. Bartels's Beau Brummel lost his footing and fell, striking his shoulder and turning a complete somersault, falling on his back and wrenching his neck most severely. He stiffened out, and our pleasure was turned to sadness as we saw him lying prostrate, apparently dead. With a generous dose of a stimulating fluid he soon revived and was taken to the town in a carriage. He was badly injured, and it is feared that it may be some time before he fully recovers. Aside from this, it was a very enjoyable afternoon's sport.

Bright and early the next morning we were in the saddle, and although the cold had lessened very little, a goodly crowd went to the grounds. Among others we saw a few brave and enthusiastic ladies. Hares were less numerous than the day previous, and it was difficult to keep even decently comfortable. However, the second series was run through; but poor human nature could not endure any more, and a division of the stake was made among the eleven dogs remaining in.

Mr. Green, of Colorado Springs, judged and Ralph Taylor, of Colorado Springs, did the slipping. Judge Green may be well versed in various things such as the care of cattle, sheep, etc., but as a coursing judge he is a most lamentable failure.

We may be prejudiced on account of the wretched work he did at Great Bend, but the second trial only confirms the opinion then formed, that the old gentleman has had too little experience of late years, and this sentiment seemed to prevail with the majority of the contestants.

Ralph Taylor did fairly well at the slipping, considering the poor pair of slips he was obliged to use. If anything he walks too fast and does not pick his ground with the best of judgment. He could slip his dogs while moving up more rapidly and a bit more in line with the hare. He is improving with every meeting and we trust he will yet rival Mr. Brett.

The weather, of course, had its influence in preventing the management from maintaining order, but if the management of any coursing meeting will keep in mind the fact that the smoothness of a meeting depends largely on the field officers and their ability to maintain order they will have better meetings. Liquor drinking and drunken men should not be tolerated, for it not only corrupts morals, but creates the impression that coursing men are other than what they are—sober, honest, enthusiastic gentlemen. The weather was so cold that we can make allowance for this meeting, but hereafter it should be rigidly sat down on.

The prominent contestants were Dr. Q. Van Hummel, of Indianapolis; H. C. Lowe, of Lawrence, Kan.; C. G. Page, of Aurora, Ill.; D. C. Luse, of Great Bend, Kan.; J. R. Cochran, of Winfield, Kan.; L. F. and T. W. Bartels, J. M. Van Norman and H. Warrington, of Denver; Sam W. Vidler, of Colorado Springs.

Those who were out for their first meeting here were C. A. Kitzmiller, of Kearney, Neb.; O. M. Wilhite and Mr. Newton, of Emporia, Kan.; F. A. Withers and P. J. Donohue, of Pueblo, Col. Unfortunately, Mr. Mitchell Harrison, of Colorado Springs, the collie man of the East, was detained at home on account of sickness in his family. He has recently taken an interest in the long-tails and a taste of a public contest would have whetted his appetite, as in most instances, once a courser always a courser. His dogs were good ones and he is getting into the interest in the right way, viz., to get good ones and get to the front at once. We need more like him.

The Goodland Kennels were strictly in it at the finish, and are pursuing the right course to encourage the sport. They have a good kennel, are breeding up and will make their own famous as a coursing center. They have plenty of en-

thusiasm and sand, and will be in at the finish. The interest is spreading rapidly, and we wouldn't be astonished if over a dozen meetings were held during the season.

The entry in the stake amounted to thirty-three, less than was expected, but they were a choice lot, with the exception of four or five, and in the division, as will be seen, there were two each in four kennels and one in another, and had the stake been run off there is no telling where the first money would have landed. Nine dogs left in received \$53 each. Had the stakes been held open one more day they would have closed pleasantly, as Friday was a delightful day. Stakes should not be limited to any number of days. A stake once open should be run off. If the weather is unfavorable a postponement can be had from day to day. The interest of any one cannot be subserved unless he has satisfaction for money and time and trouble expended in fitting up his greyhounds, and we trust that hereafter the programme of a meeting will be so worded that a deciding course can be the only outcome of the meeting.

I was well pleased to see such an equal division among the kennels represented at this meeting. When all of the sportsmen of the country are assured that there is a perfectly honest contest the ranks will be swelled to overflowing. Other game is getting scarce, but the jack rabbit remains and multiplies. It is a high-toned sport, a clean sport, a hunt for wild game, a scientific contest and properly enjoyed by all ages and both sexes. The whirlwind of enthusiasm in coursing that is sweeping over the country will end in a deluge of public meetings, and then will my prediction be fulfilled, that coursing will yet be the leading sport of the country. The meeting just closed was characterized by harmony and good feeling, all differences were healed up and the boys went to their homes thirsting for an opportunity to try their favorites again in the near future.

## First Round.

VICTORIA—ROY'S VANISH.—In the opening course Roy's Vanish led from the slips, turned to Victoria, but she failed to hold possession, letting Vanish in for a good sequence of points, the hare taking to a hole. Roy's Vanish won.

LANARADZO—BORDER RUFFIAN.—Border Ruffian scarcely gave the big fellow a look in; worked his hare strong, the hare again working for a hole.

REAR ADMIRAL—PUNCH.—Admiral led six lengths up, wrenched strong, turned the hare, placed Punch for a turn, letting Admiral in, Punch laying off, using too much head work, having speed enough, but was holding it for the occasion. Admiral killed and won.

ST. CLAIR—BREAKAWAY.—St. Clair showed a wonderful burst of speed in the run-up, showed superiority throughout and won handily, the hare going to earth.

GRAND FASHION—PRINCE RUPERT.—Fashion showed to the front from the slips, had the best of it over his brother, but Prince Rupert having an injured foot prevented him from showing his real merit, but gamely ran the course. Fashion won, the hare going to earth.

MELLITA—BON BO.—Mellita went fast from the slips, working the hare rapidly, placed Bon Bo for exchanges, but Mellita won with considerable in hand.

LONE WIDOW—RHEA.—Lone Widow hung in the slips, letting Rhea away four lengths, the hare favoring Lone Widow, she making a terrific drive for a kill, but bunny was too quick to the turn. Rhea went in, and working the hare away in front of Widow, wiped off the score by a small margin, the hare escaping. Rhea won.

ROOK—BEAU BRUMMEL.—Rook led up to the hare, turned to Beau Brummel for a few exchanges, but Rook had the best of it for several points. Beau Brummel then came into the work, but was unable to wipe off the score. Rook won. Before they were taken up another hare was started, and Rook carried it away for a mile and holed it, but being in pretty good condition, it didn't seem to distress him, and the wait of two days will get him to the slips in good form.

KING CROW—RHAON DHU.—Again the slips failed to work, King Crow hanging, giving Rhaon Dhu three lengths to the good, but when under way King Crow held his position, the hare going straight away, with but a feeble wrench or two, going to a hole. Another trial would have been very satisfactory and proper.

LORD CLIFTON—VALKYRIE.—Clifton led up four lengths but Valkyrie drew up, making a racing go-by, but no subsequent work followed, the hare clearly outfooting them. Valkyrie won.

ECHO—BOUNDAWAY.—Boundaway was out of the slips in good form, raced up for a turn, served himself, drove the hare away from Echo, but she came up strong and from a turn led away from the big fellow, turned and wrenched strongly. Echo saved a go-by as the hare took to earth. Boundaway won.

BUSTER—BONNIE BELL.—Buster was beaten pointless in a good working course.

CHIEF—MISS LOTTIE.—In this course a most unfortunate accident happened. As Taylor pulled the slips the strap on his arm separated from the string and the dogs went away still in the slips, and after a long run one of them was out of the slips, the other dragging them to the finish; the dogs were uninjured and in the next trial Miss Lottie led up, rattling her hare about and only letting the big son of Al. Farrow in for a bit of work. Miss Lottie won.

QUICKSTEP—JUST IN.—Quickstep led to the hare, Just In working out rather wild, waiting for the turn, when placed did a bit of clever work. Quickstep getting a rattling go-by won, the hare going to earth.

BATTLE ROYAL—JUDY.—Battle Royal put it all over Judy, never letting her have a look in.

PRINCESS MAY—TOPSEY.—Princess May ran up a score of a dozen points or more, scoring like lightning, beating Topsy pointless.

LADY LYON A BYE.—She ran with Just In. Both scoring rapidly on a hard, strong hare.

## Second Round.

ROY'S VANISH—BORDER RUFFIAN.—Border Ruffian simply snuffed out Roy's Vanish, showing a very pretty bit of coursing. He led five lengths to the hare, and came again from the turns very strong, never once letting up in his clever work.

REAR ADMIRAL A BYE WITH LORD CLIFTON.—Clifton had a very unsatisfactory trial with Valkyrie, and it was the desire of his nominator to see him have a trial with a dog that is known to be very fast up to the hare, and Rear Admiral had proved himself a good one. Clifton led from the slips three lengths, turned the hare, came again with a whirlwind rush, making a masterly kill. If he had a bit more stay would be a very dangerous dog in any stake.

RHEA A BYE WITH BREAKAWAY.—Grand Fashion being drawn lame, Rhea ran a bye with Breakaway, a very clever little red Babazon bitch. They gave us a pretty exhibition and exchanged about even, Rhea killing the hare.

MELLITA—ROOK.—A cotton-tail was sighted in his form, but thinking it a hare they then drew around, ready for the slip, but discovered their mistake, and as they were getting away without disturbing him a meddlesome young chap thought to catch him in his hands; but the little brown fellow avoided him, and as he ran out the dog saw him, and in the slipper's effort to quiet them Rook got out of the slips and ran a pumping course alone, injuring one of his toes. Mr. Lowe courteously allowed the course to remain over until another course was run; but when the dog returned it was thought wise to draw him, and Mellita ran a bye with St. Clair. She killed one hare, and as they were about to take her up a second hare jumped and she carried that to a hole. She was looking dangerous in the stake.

RHAON DHU—VALKYRIE.—Valkyrie showed a bit in front, but slipped and nearly fell, turned the hare, placing Rhaon

Dhu, he holding in front to a turn, but in his effort to kill took a severe tumble, rolling over and sliding along the ground, but was up and gamely at the work, getting placed to Valkyrie's turn, again driving the hare back to the crowd, for a moment obscuring the view of the judge, but Rhaon Dhu's advantage was too great and did not affect the decision. He brought it away again, and the second time came a cropper, but not being injured was up again before Valkyrie could score, driving the hare to earth and won.

BOUNDAWAY—BONNIE BELL.—The big Boundaway went out of the slips strong, raced up to the hare for a couple of wrenches and a turn, placed Bonnie Belle, she accepted the gift greedily, rattled up several wrenches and a kill of merit. The hat came off very properly, giving it an undecided. As they were called to the slips again Mr. Vidler withdrew Boundaway, giving the course to Bonnie Belle.

MISS LOTTIE—BATTLE ROYAL.—Battle Royal was drawn from some cause not known by your correspondent and Miss Lottie ran a bye with Bon Bon. Bon Bon put it all over Miss Lottie, giving one of the grandest exhibitions seen on the grounds at this meeting. She was able to go to her hare, came away for repeated go-bys, tripped, and after considerable subsequent work drove the hare to earth.

QUICKSTEP—LADY LYON.—Quickstep made the run up, placed Lady, she taking up the work, but in a hundred yards the hare took to the ground. The judge decided it no course and to another slip Quickstep led up, turned the hare, went out wild, Lady making several strong wrenches and a kill of merit, giving Lady Lyon a full measure for her kill. The course could very properly have been given an undecided, but the elements probably influenced the decision as it was getting rather cold and everybody was anxious to get to the city. Quickstep got the course.

PRINCESS MAY A BYE WITH BATTLE ROYAL.—Battle Royal was drawn a course or two before.

This ended the running for the day and the stake also as well, as will be seen elsewhere.

## First Round.

Goodland Kennels' b. & w. b. Roy's Vanish (Walnut—Lady Graham Glendyne)	beat	J. H. LeMoynes' r. b. Victoria (Babazon—Verdure Clad).
St. Patrick Kennels' b. & w. d. Border Ruffian (Dingwall—Miss Kitten)	beat	D. C. Luse's f. d. Lanaradzo (Trales—Dick's Darling).
Goodland Kennels' b. & w. d. Rear Admiral (Major Glendyne—Lady Alice)	beat	F. A. Withers' w. & f. d. Punch (St. Patrick—Ticket).
H. C. Lowe's w. & b. d. St. Clair (Lord Neversettle—White Lips)	beat	J. L. Peebler's f. b. Breakaway (Babazon—Daisy B.).
H. C. Lowe's b. d. Grand Fashion (Lord Neversettle—White Lips)	beat	Charles Kitzmiller's w. & b. d. Prince Rupert (Lord Neversettle—White Lips).
H. C. Lowe's b. b. Mellita (Lord Neversettle—White Lips)	beat	St. Patrick Kennels' bd. & w. b. Bon Bon (Dingwall—Miss Kitten).
Goodland Kennels' w. & bd. b. Rhea (Major Glendyne—Daisy Dublin)	beat	H. C. Lowe's b. & w. b. Lone Widow (Lord Neversettle—White Lips).
Goodland Kennels' b. d. Rood (Major Glendyne—Humming Bird)	beat	St. Patrick Kennels' b. & w. d. Beau Brummel (Dingwall—Miss Kitten).
Soden & Wilhite's bd. & w. d. King Crow (Trales—Tenees)	beat	Johnston's b. & w. d. Rhaon Dhu (Major Glendyne—Daisy Dublin).
Van Hummel's bd. b. Valkyrie (Lord Neversettle—Parterria)	beat	J. H. LeMoynes' bd. d. Lord Clifton (Lord Neversettle—Parterria).
Broadmoor Kennels' f. d. Boundaway (Lord Neversettle—Parterria)	beat	C. F. Hoeckle's b. b. Echo (Swift—Venus).
St. Patrick Kennels' b. & w. b. Bonnie Bell (Dingwall—Miss Kitten)	beat	A. C. Lighthall's f. d. Buster (Goldust—Lady).
Broadmoor Kennels' f. b. Miss Lottie (Lord Neversettle—Parterria)	beat	H. Warrington's w. & b. d. Chief (Al. Farrow—Menlo Bell).
Broadmoor Kennels' r. b. Quickstep (Lord Neversettle—Parterria)	beat	Soden & Wilhite's bd. & w. b. Just In (Trales—Tenees).
H. C. Lowe's bd. & w. d. Battle Royal (Lord Neversettle—White Lips)	beat	F. A. Withers' bd. & w. b. Judy (St. Patrick—Venus).
H. C. Lowe's w. & b. b. Princess May (Lord Neversettle—White Lips)	beat	P. J. Donohue's be. b. Topsy (Arkansas Traveler—Nancy).
Soden & Wilhite's r. b. Lady Lyon (Trales—Tenees)	beat	A bye.

## ii.

Border Ruffian beat Roy's Vanish. Bonnie Bell a bye.

Rear Admiral a bye. Miss Lottie a bye.

Rhea a bye. Quickstep beat Lady Lyon.

Mellita a bye. Princess May a bye.

Rhaon Dhu beat Valkyrie.

Nine divided.

## National Beagle Club Meeting.

**Editor Forest and Stream:**  
A regular meeting of the National Beagle Club of America was held at the A. K. C. room, 44 Broadway, New York, on March 2, '94. President Kreuder in the chair. Meeting was called to order at 4:30 P. M.

Present were H. L. Kreuder, George Laick, J. W. Appleton, H. F. Schellhass, G. W. Rogers, John Bateman, Geo. B. Post Jr. and A. D. Lewis.

Minutes of previous meeting were read and approved. Treasurer's quarterly report was read and ordered placed on file. The report showed a good cash balance in Treasurer's hands. Mr. Appleton reported that he had purchased the New York W. K. C. show special, and forwarded it to Mr. C. S. Wixom whose Royal Krueger was the winner of same. A letter from the Northwestern Beagle Club regarding the fixing of dates for beagle field trials of 1894 was read and ordered placed on file.

It was voted that the N. B. C. of America claim the week beginning with Oct. 29, for its coming field trials. The Secretary was requested to notify all other beagle clubs of the fact, also the A. K. C.

Voted that we donate a special prize to consist of a piece of silver plate valued at \$20 to the City of Straights K. C. shows, to be awarded to the best beagle the get of a dog or bitch having been placed at any beagle field trial held in America. Open to all.

New England K. C. made application to the N. B. C. of America for a special. Voted that we donate a special prize to consist of a piece of silver plate valued at \$25 to the New England K. C. show, the same to be awarded to the best beagle the get of a dog or bitch having been placed at any beagle field trial held in America.

The Philadelphia, Chicago, Columbus, O., Portland, Ore., Kennel Clubs applied for specials which were, on motion, not granted. Messrs. W. A. Power, A. C. Krueger, and Aug. A. Knobloch offered their resignations from the club and the same were accepted. Mr. W. H. Ashburner offered his resignation from the N. B. C., and Mr. H. F. Schellhass was on motion appointed a committee to ascertain his reasons for resigning. Mr. F. W. Chapman offered his resignation from the N. B. C. of America, and Mr. J. W. Appleton and Geo. B. Post Jr. were appointed as auditing committee.

The Secretary was requested to notify all members who are in arrears with their dues that they must pay up by April 1, and that in case of failure to pay they will be dropped from the club.

Meeting adjourned at 6:10 P. M.

TARRYTOWN, N. Y., March 3.

GEORGE LAICK, Sec'y.

Messrs. E. B. Bailey and S. S. Horton of Windsor Locks, Conn., together with the East Granby sportsmen Seth Share, George and Charles Owen, Chas. Stedman and De

Gray, will hunt wily reynard with a capital pack which they secured from Virginia. The last two snowstorms have interrupted the sport temporarily, and the foxes, that is if any have escaped, have been having a few days off. Not far from thirty-five foxes have been shot on the mountains and plains this season. Collector Bailey has shot seven, Horton half a dozen, Sharpe eight, the Owen twins from twelve to fifteen, and De Gray half a dozen. From eight to twelve dogs hunt in the pack and the sport is superb.

• • • • •

Altcar Club Business Meeting.

At the business meeting of the Altcar Coursing Club, held on the evening of Feb. 21, the following officers were elected for the ensuing year: President, L. F. Bartels, Denver, Col.; Vice-President, Mitchell Harrison, Colorado Springs, Col.; Secretary and Treasurer, S. W. Vidler, Colorado Springs, Col.; Executive Committee: Frank Robinson, Goodland, Kas.; Dr. J. M. Van Norman, Denver, Col.; F. A. Withers, Pueblo, Col. Members of the Coursing Board: T. W. Bartels and S. W. Vidler. The secretary reported seventeen members in good standing. A special vote of thanks was given to the press for their interest in trying to further the interests of coursing. Also to the citizens of Goodland for the courtesies shown to the club. Adjourned to the call of the president.

National Fox Hunters' Associations.

LOUISVILLE, Ky., Feb. 27.—*Editor Forest and Stream:* We would be pleased to have you publish the following news note: The committee appointed by Admiral Joubert, president of the National Fox Hunters' Association, to draft a constitution and by-laws, will meet shortly at the hunting lodge of Francis J. Hagan, Esq., near Louisville. The committee consists of Dr. A. C. Helfenger, Roger Williams, W. S. Wade, Willis C. Goodman, W. S. Walker and F. J. Hagan. The committee will also draft rules and regulations for the conduct of the field trials and consider the most suitable location for the national meet to be held this fall. They desire to have expressions of opinion on these subjects from every hunter, and ask every one interested to favor the committee with their views at length. Letters should be addressed to R. D. Williams, Lexington, Ky., the chairman of committee, or to H. L. Means, secretary of the club, Louisville, Ky.

HARRY L. MEANS, Secretary.

HUNTING AND COURSING NOTES.

The celebrated Kinney-White pack of Worcester, Mass., has been meeting with misfortune. While hunting a couple of weeks ago Fly, a very fine Walker bitch, broke her hind leg, and on last Tuesday, while hunting over nearly the same ground, their young July dog, Jumbo, was run over by the cars and killed. Fly's leg has been set, but the break is a bad one and it is doubtful if she will ever again be herself in the hunting field. She was one of the leaders of the pack, very fast, with an excellent nose, great endurance and an abundance of fox sense. Her loss is a severe one.

• • • • •

Mr. Turpin, the well known secretary of the Brunswick Fur Club, has just been presented with a hunting horn by Mr. D. M. Morris, of Camp Point, Ill. "It is a beauty and anything of the kind I have ever seen." There is no reason to believe that "Bradley's" will earned record for modesty is in danger, for though he may now blow his own horn it will be for the benefit of his hounds and not their owner.

• • • • •

Messrs. George Goddard, David M. Bearle and A. B. F. Kinney, of Worcester, and J. L. White, of Milbury, all members of the Worcester Fur Co., had a good hunt Feb. 27, with the noted hounds Logan, Argie and Ben of the Kinney-White pack, and Joe J., owned by Mr. Goddard. Mr. Goddard shot a fox in Purgatory county in front of the hounds; three other foxes were started, but the hunters failed to kill.

• • • • •

The Worcester Fur Co. closed its fox hunting season Feb. 28. Henceforth no foxes will be killed in the vicinity of Worcester except by farmers. The unwritten law, which all sportsmen respect, makes March 1 the beginning of the close season. The season just ended has been the most successful the company has ever known. The secretary has the record of 169 brushes, and possibly a few more may be reported, as some of the sportsmen were out the last day. The best previous season's record was 137.

• • • • •

The Hempstead Town Council have decreed that no more bagged foxes may be hunted in the township. This is sure to be unwelcome news for the Meadow Brook Hunt Club, which has been in the habit of turning down foxes; but those having made good their escape are said to have become entirely too numerous for the health of the neighboring farmers' poultry. If this is the case, there should be some good natural hunting down Hempstead way.

Yachting.

A curious problem in measurement is mentioned in the *Field*, in the case of a yacht on the Clyde, of the "fish torpedo type," the after end being conical, or more properly cigar-shaped, with circular cross sections. For convenience of construction, about six, of the point or after end is built as a part of the rudder, making a ball and socket joint with the actual end of the boat. The question arose whether this conical end, which was of solid mahogany attached to the brass plate of the rudder, should be measured as part of the waterline length. The matter was referred to the Y. R. A., which decided that as the cone was solid, and did not add to the buoyancy or power of the boat, it should not be measured as part of the waterline, but that if it had been hollow, it should be so measured. The *Field* very properly points out that under such a ruling a boat might be built in two halves, one of course being solid wood, and claim to be measured for but half of its length.

To us the decision seems weak in that it does not touch the real principle involved, the carrying out of the fair and legitimate form of the boat; as distinguished from a plane surface of no material bulk used purely for steering. In the case in question the use of the cone was to carry out the lines of the hull to a fair ending, and as such it should have been measured. So far as the mechanical point of hanging the rudder, while it might have necessitated the ball and socket portion, it did not call for the main part of the small cone, which was added solely for the sake of a more perfect form of hull. Under such a ruling it would be possible, and probably advantageous, in the case of the ordinary sawed-off catboat with immersed transom, to affix to the latter a solid block of wood shaped to carry the lines to a fair ending and thus avoid all drag and dead water. This piece, of course, would not be measured, but might be of material addition to the length. Knotty questions of this kind are not uncommon in yachting, but if a really satisfactory solution is to be found it must be based on

some definite principle, such as, in this case, of the form of the hull rather than on abstract points of detail or construction.

The report that Valkyrie will return home in May for want of any suitable adversaries on this side, has caused "Thalassa" to train his heaviest guns in *The Field* on American yachtsmen. After indulging in some very severe and disagreeable remarks, he ends as follows: "The only possible excuse which can be urged in defense may be that these American Cup defenders require so many extra hands to keep them up to their canvas even in moderate weather, that they are unsuited for regatta racing around a coast. If so, it would appear that cup defenders are not even 'racing machines,' because they cannot be raced under the ordinary circumstances attending a series of regattas. They seem to form a class by themselves, and apart from any other useful purpose than the defense of the Cup."

In the last sentence, at least, Thalassa is perfectly right, and this, with one or two other circumstances, offers very good reasons why they may not be in commission next year. American yachting is, as Thalassa evidently does not know, radically different from British, in that racing is local rather than general; there is no such thing as a racing circuit, as in Great Britain; and at present at least, there are no racing classes with any claims to vitality. At the best, the racing is but desultory, the one great event is the New York Y. C. cruise in August, covering ten days, with five or six cruising runs, prizes being given in each class for such yachts as may care to compete; and two or three special races, such as the Golet cups. As a rule, the spring races are local affairs about New York, the regatta of the Eastern Y. C. attracting few yachts and often none to Boston; and in the fall there are a few regattas and special races. In place of thirty or forty starts, few large yachts average ten in a season unless in a Cup year.

Even at its best, and just now it is at its very worst, the season's racing offers comparatively little as few owners of large yachts race them steadily and regularly in all the races open to them. In the case of the Cup defenders there is an additional reason for not racing them in the ordinary regattas, in that they are a most useless and undesirable class, built for a special purpose and entirely unsuited to the requirements of even the wealthier yachtsmen.

The origin of the so-called 90ft. class, none of which thus far have been much over 87ft., was purely accidental, the length of Genesta, the challenger of 1885, calling for a defender larger than the then existing singlestickers, all 70-footers. The success of the American yachts of 80 to 85ft., and also the success of the British cutter Clara in the 53ft. class, led to the idea that Americans were stronger in the larger, and weaker in the smaller, classes, and was the cause of the peculiar requirements of the new deed of gift, which, if lived up to, would restrict all Cup racing to yachts of 90ft. waterline.

In view of the success of Puritan, Mayflower and Volunteer on the one hand, and of Clara and Minerva on the other, it is not surprising that Americans have striven to prevent challenges from smaller yachts; but the result of this policy has been that with each successive contest the winning yacht has been of a less desirable size and type.

Even when yachting is at its best, there is no place in American racing for a singlestickler of over 70ft. waterline; the various Cup defenders have been kept moving at times through special efforts and unusual inducements to the class in the way of costly cups and trial races; but as soon as the interest relaxes they are converted into schooners. If there was no place in yachting for Mayflower and Puritan there is certainly none for Vigilant and Colonia; they were built in an emergency, not because any one wanted such yachts, but because it was absolutely necessary that the club must have them. They have cost much more than they are worth to yachting, and now that their special purpose is accomplished there is no disposition to waste further money in racing them. The only possible reason for so doing would be in chivalrous appreciation of Lord Dunraven's desire for more racing on this side; and it is by no means certain that this reason, and no other, may not set the whole fleet a sailing by May.

A Cruise On the Miramichi.

A LEAF FROM FEDORA'S LOGBOOK.

A glance at the map will show that the lower Miramichi, on the gulf coast of New Brunswick, is an ideal water for small yacht cruising. The lower reach of the river, with Bay du Vin on one side and Neguac Bay on the other, is 12 or 15 miles wide; and a line of low islands and sand-bars called beaches, shuts this expanse of water in from the gulf. The water is from 10 to 50ft. deep, with no obstructions except shallows that make out from certain points, and the bottom is generally bare mud. How placid and pretty this broad expanse of sheltered water is in fair weather; and what a contrast it presents to the outer bay when an easterly gale is sending white-coated rollers to thunder against the beaches; but when it is vexed by a strong westerly wind it kicks and snarls and jumps in a way that makes the yachtsman long to be outside on the open sea.

It was 4 o'clock in the afternoon when Fedora, flying the pennant of the Vice-Commodore of the Miramichi Y. C., cast off from her moorings at Chatham for a three days' cruise. "The storm drum went up as she was passing the signal station, but her crew did not entertain the thought of turning back. They had planned this cruise for days, and had found it difficult to get out of their offices to start, and now were not to be stopped by a storm drum. Sandy, who had had considerable experience about Prince Edward Island, had confidence in the boat. Stanley knew nothing about yachting, and trusted the others to get the best of the storm. And the skipper rather enjoyed the thought of a battle royal between the boat and the elements."

Fedora was 32ft. 6in. load line, 8ft. beam and 4ft. draft, and carried 3,000lbs. of iron ballast inside. She was schooner rigged, and mighty handy is the schooner rig for amateurs on a cruise.

The light breeze freshened, and the yacht bowled along past Middle Island, Black Brook and Bartibogue. Past the green grassy banks, the mill race, the mills and the villages, in a style that gave promise of reaching Bay du Vin Island Basin, where she was to anchor for the night, early in the evening. The boys grew hilarious as the motion of the yacht, the changing scenery, the pure air, and the sense of freedom intoxicated them. "Let us set the kites; up with topsails and main topsails!" they cried eagerly, but the skipper's experience and sense of responsibility made him remember the storm drum and forbid the setting of light sails.

Past Sheldrake Island, the site of the first leper hospital in Canada, if not in America, went the yacht, with the wind so nearly dead astern that it was necessary to jibe in order that the Point Cheval shoal might be cleared. The skipper looked to windward before giving the order to haul aft the main sheet and saw the child of the storm drum so close behind that jibing was no longer safe. There was a dark keel in a moment, and the rigging began to whistle as the gale struck it. The staunch little craft heeled before the blow, plunged ahead, straightened herself up and raced onward.

"Lower the mainsail!" Down it came as fast as it could come with the yacht before the wind, but a slack toppinglift got a turn around the yard of the gaff and held it when the sail was hauled down. Sandy climbed up the mast a few feet and got the gaff clear in some way. The skipper was watching his boat, anxiously calculating his distance from the point, and wondering if there was water enough under him to get safely over the shoal in the nasty chop into which the gale had already lashed the water. No man can sail a craft properly and at the same time watch the crew settling sails or clearing fouled halliards. One of the Point aux Car to starboard were left behind, and then came a six-mile stretch across the head of Bay du Vin.

Darkness came on prematurely, the sky becoming black under a pall of cloud, and the bay had grown pretty rough. But the wind was steady, there was an absence of vicious squalls, the beacons showed their lights and the skipper knew the way into port. It was pretty delicate work, however, to enter the basin in the intense darkness.

The range lights were crossed at what was judged to be a safe distance from land, and then the yacht jibed and hauled close in to the island.

It was necessary to skirt a low sandbar, which was invisible in the darkness, and round its point into a basin that was equally invisible, a background of forest adding to the impenetrable darkness. With nerves at high tension, and silently calculating the distance sailed, the skipper kept her going ahead until he thought she must be off the entrance, hauled sheets aboard, and stood straight in for the frowning wall of portentous blackness. Sandy lowered the jib and stood by the anchor. After standing in until the calm of the water and the lightness of the wind spoke eloquently of shelter, the helm was put down and an anchor dropped.

Soundings showed five fathoms and good holding ground. This was no proof, however, that the boat was too far from the land, as the Basin is very deep and has hold water up to part of its shores. So the second anchor was dropped, the tent set up (it being too warm for three persons to sleep in the small cabin), lantern and oil stove lighted, and supper served. The spread was not elaborate. Hot coffee (Turro condensed), cold meat and bread and butter, with Bass's ale, was good enough for the yachtsmen that night.

A flash of lightning revealed the outlines of the Villiston fish establishment close aboard. The Skipper knew that he had anchored as far in as possible. The land showed that the yacht was not dragging, and the cruisers went to sleep, though the novelty of a first night on board and the thunder and lightning that set in made them wake very frequently.

It grew calmer toward morning, and they slept till after the sun had said good morning to the heaving waters of the bay and basin. Where did the boat lie? The boat was too far from the land, as the Basin is a deep and safe anchorage but rather difficult of access in some winds. It is on the inside of the island and can be reached only from the Bay du Vin side, the broad passage to the eastward being very shallow. It is excellent salmon water, and there is a freezer and icehouse for preserving and packing the fish caught here and brought in from the other stations.

One of the curious things about the island is the veteran light-keeper, who points out the grotto in which he used to live, with almost as much pride as he shows one over the new house which the government has built for him and his second wife. By the time breakfast was over the wind was blowing hard and threatening to blow harder. It was a 'sou'wester, and a nasty chop was on the water. The yachtsmen had had a vague hope of catching a few salmon, but they gave up. The sails were reefed and Fedora beat up the channel, crossed the bar, stood out into the bay and cruised about for three or four hours.

The wind whistled through the rigging, the spray dashed over the yacht, and the prospect of cooking a meal was so poor in so rough a sea that Fedora was put before the wind and reached back into the basin. The gale increased, and double reefs were tied down before starting in the afternoon. A strong adverse tide set in the channel, and it soon became evident that the yacht could hardly stem it in the teeth of the wind, under her reduced canvas. After making a few tacks, without any progress, she stood too close in to the main land to get out of the strength of the tide and have somewhat smoother water to tack ship in, and caught on an oyster bed while in stays.

"Wear her!" Help her around with the boat hook!" was the order, and the crew pushed and pulled at their hand ropes. It was the only thing that could be done in that gale and sea, and it was done at the peril of having her driven hard and fast on the reef to leeward. As she swung around the mainboom went over, a flying jibe, the yacht heeled, slipped off the oyster bed (Sandy narrowly escaping a plunge bath), leaped wildly forward straight for the line of breakers a few rods distant, then rounded up as the sheets were flattened, and, lying well on her starboard bow, headed far ahead of the rest of the boat, to show that she would make the entrance. She was in the trough of an ugly sea, taking the tide-driven rollers on her weather bow, and the sheets of spray that went up and over her as she plunged into wave after wave were blinding for the helmsman.

In port once more, anchors down and sails furled, the cruisers went on shore for a ramble and a chat with the fishermen and light keeper. They prepared to start for the Point Cheval shoal, but the weatherwise fishermen predicted an equally bad blow from the same quarter for the morrow, and as the wind had somewhat abated, it was suddenly resolved that a start be made at once, and part of the distance covered that night, so as to make sure of getting home next day. It was so late that a start had to be made at once, in order that the channel might be cleared and the bar crossed before dark, and supper was postponed until the second day.

So with reefed jib and mainsail and full foresail Fedora left the anchorage and stuck her nose into the wind and sea. She was carrying too much sail for comfort, but it was all necessary for working out of the channel, and when a safe offing had been made the wind had fallen considerably. It was very dark and there was a heavy head sea. No attempt was made to cook anything, but Sandy and the Vice-Commodore in turn went forward and fished some of the roach trout out of the larder. Instead of coffee, they were content to wash down their suppers with beer, which they drank from the bottle. Stanley—poor Stanley—wanted no supper. He had been wrestling all day with his stomach, the bottom of which had been trying to get into his throat, and his opponent had triumphed. Stanley was sick.

Sailing in a sea of fire! That was what Fedora was doing. The bay was burning in down in the depths were thousands of torchlight processions. Tongues of brilliant flame leaped upon the bowsprit as it plunged into the crest of a wave, and played around the end of the mainboom as the yacht rose to surmount a roller. Tongues of flame licked the bows and sides. Imagine a cluster of brilliants as large as the waters within the range of vision, sparkling in the darkness as brightly as in gaslight, and you will realize the scene that met the eyes of the cruisers. It was a phosphorescent sea, and the most brilliant and variegated hues. It was spectacle which the skipper, for one, would not have missed for a great deal, and one which will never fade from his memory.

Above, a starless sky; around, an inky atmosphere; beneath, a sea of fire. It was glory enough for a lifetime. The atmospheric pall was pierced by the Oak Point lights straight ahead on the north shore, and after the yachts had been kept on the port tack a couple of hours it was surely time for going about. But there was no shore in sight, and the light looked very far off when soundings showed the shore to be quite near.

"Ready, about! Hard a-lee! Sheets!" Around she comes in fine style, the skiff falls into line after making a wild plunge to windward, and a long reach is made toward the other shore. Another reach bare the lead shows five fathoms, and Stanley asks if the boat is to be run ashore, so intense is the wall of darkness in which the bowsprit is buried, and another board off shore is made. And now the Point Cheval shoal, which lies right ahead, troubles the skipper's mind, and he is cautious about standing off too far. After a mile has been made, the lead is cast, and when it shows 8ft. the yacht is put upon the port tack again. So with short boards and the free use of the lead, the lead is crossed and another reach is made. The Point Cheval light and the range of the Oak Point lights show that the shoal has been passed, and then a long reach is made for Napan Bay.

As the tide is now running out and the wind getting light, the yacht barely escapes missing the mouth of the bay and being forced to anchor on the upper edge of the shoal; but she holds the weather gauge of Point Cheval, and getting into shelter, rounds up and anchors when the lead shows 8ft. of water. Sails were snugly furled, the tent set, coffee served, an anchor light hung up and the unbroken sleep that comes on the second night of a cruise, after the wakefulness of a first night on board or in camp, came without waiting to be wooed.

Morning. Where is the gale that the fishermen promised? Not in Napan Bay. A cloudless sky, a bright sun and a gentle west wind. Beefs were shaken out, anchors lifted and sail made at once to take advantage of the good tide, as progress would be slow indeed above Sheldrake Island against wind and tide. The yacht reaches out of the bay, makes two or three short boards to pass the island, takes a long reach across to Bartibogue church, ventures in so close as to catch her heel in the mud, but is quickly poled off, and after passing Black Brook, is able to lay her course close hauled for home. Coffee is made, the cold boiled, canned meats are opened and the last meal of the stormy cruise is eaten. Smooth water, a favorable tide, a gentle breeze, plenty to eat and drink, but alas! the end of the cruise is near.

No two cruises are alike. Fedora has been on more eventful ones, and pleasanter ones, but the phosphorescence has burned the memory of this one into the mental log book of his skipper, and he has chosen it as the theme of this yachting yarn. If he has succeeded in making the reader catch a little of the spirit that animated him on the cruise, the story will not be wholly devoid of interest to him who has felt the exaltation and the joy of yachting life.

J. L. STEWART.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

### Model Yachting About New York.

SO MUCH pleasure may be derived from the construction and sailing of model yachts, and so much practical information as well, that it is strange that the sport has not grown more rapidly in the twenty odd years since it first became known about New York. In England there are many clubs, and though good water for this purpose is not always easy to find, the sport has received the attention which it deserves from designers and those mainly interested in large yachts. The facilities for obtaining all necessary materials and fittings are far greater than in this country, and the sport receives much support from the monthly paper, *The Model Yachtsman and Canoeist*, published at Hull.

On Independence Day, 1872, model yachting was initiated on the large lake in Prospect Park, Brooklyn, Long Island, by an organization known as the Prospect Park Yacht Club, with the following officers: Com., James Flemming; Vice-Com., Geo. Sherwin; Pres., Sam. Avila; Sec., John H. Fisher; Treas., Jos. Peto; Meas., Henry Heltman. Yachts, seventeen—fifteen schooners and two sloops. The yachts were measured over all for time allowance in racing.

There being a great lack of interest on the part of the Park Commissioners, little attention was shown toward model yacht racers and the accommodations for the storage of models in the Park grounds were limited to a few members, while the only convenience near to the lake was that of a rickety shanty outside of the Park grounds, situated across the old Coney Island road, now avenue. Those who were less fortunate in securing storage for their craft in either of these places were obliged, after a day's sport, to carry these yachts to the cars, or, as in some cases, those who lived but a short distance from the park conveyed their models to their homes on improvised hand wagons, and trying were the toils of conveying yachts to their respective store-houses, as the number of cars going to and from Prospect Park was small. As some of these models were very valuable, great anxiety was felt on the part of their owners as to their security; nevertheless under such adverse circumstances the sport was greatly enjoyed.

Such a condition of things continued until the year 1876, when a united effort was made to obtain better accommodations near the lake, the outcome of which attempt resulted in securing the out-house belonging to the pumping station, which is located about 200ft. from the margin of the lake, which exchange was indeed very agreeable. But even this state of things was doomed to be disturbed by various causes, which led to the decline of the sport, as local jealousies evoked by kindred yachtsmen soon led to the organization of several yacht clubs, each of which were striving to out rival their opponents, and all aiming to impress the Park Commissioners with the idea that they alone were the original and *bona fide* club.

It has been well said that "In union there is strength," and it was demonstrated that the divided influence thus brought to bear upon the Park Commissioners did not accomplish that desired effect, viz: the erection of a building suitably arranged and situated upon or near the lake for the storage of model yachts.

At this time, 1876, there were in existence three yacht clubs, the Prospect Park, which was the parent yacht club; the Long Island and the American Y. C. (not the present American Model Y. C.) all of which clubs were striving for recognition by the Park Commissioners

Model Yacht Club has urged the necessity of more commodious storage. Model yachtsmen are at present engaged in testing the rule now employed as described above. There are a few opponents of the rule, but some such rule is necessary since with the old rule of l.w.l. alone there were produced big, unwieldy and heavy displacement boats, carrying enormous sails, which if reproduced on a large scale would be undesirable as to handling and the possibility of losing their spars. The changes that have taken place during the interval of 23 years are very clearly shown in the accompanying illustrations:

No. 1 represents one of the old timers of 1872-76, with short stumpy overhang, the result of length over all measurement for time allowance at that time in vogue. This model was rigged as a schooner in one sense and a sloop in another, her fore and mainmast being stepped very close together, in fact only an apology for a foresail being possible, the mainsail predominating.

The mast, sails and rigging of this model have long since been lost or destroyed. A great number of models of that time were "dug out" from the solid block, as was this one. The dimensions are length over all 60in., l.w.l. 50in., beam 16in., draft 12in., with lead keel.

Model No. 2 was of the 1878 order of stumpy class, but was lengthened as shown in 1889, showing very fine lines; a great improvement

FIG. 1.

FIG. 2.

FIG. 3.

FIG. 4.

FIG. 5.

over previous keel boats. It subsequently received the lead center-board, which eventually became quite a fad, and did seem to improve the sailing qualities of all boats fitted with it. The dimensions were length over all 78in., l.w.l. 60in., beam 21in., draft 16in., construction, oak frames and floors, oak stem, keel and sternpost, planking of cedar 3/16in., deck white pine, crowned very much, for no known reason.

No. 3 shows a wonderful stride, as can readily be seen, a departure from the theories of hollow waterlines, this model having abnormally full waterlines, yet showing remarkable speed; in fact, with no equal in her class. She was designed and built in 1892, making her first appearance in the season of 1893, carrying all before her. Her ballast is in the form of a bulb at the lowest edge of a brass fin, giving her great stiffness. Her dimensions are: Over all, 81in.; l.w.l., 52.9in.; beam, 15in.; draft, 14in. Construction, stem, keel and sternpost of cedar, frame of white holly bent, to shape, planking Spanish cedar and deck white pine. The illustration at the head of this article shows one of the modern model yachts under sail, from which an idea of the rig can be obtained.

The mode of measuring yachts employed by the American Model Y. C. necessitates the use of a large tank.

A straight edge is fastened across one end of the tank, acting as a stop for the after end of the l.w.l. as the yacht floats in the tank. A long rule divided into inches and tenths is attached to the top of one of the sides at right angles to the straight edge; then a T square is applied and slid along the rule until it comes in contact with the fore

edge of the stern at the l.w.l. The marking on the rule shows the length of the yacht on the l.w.l.

In conjunction with the l.w.l. the sail area also plays an important part in the measurement for time allowance. First the actual area of the sail is obtained by dividing into triangles, then the square root is extracted from the l.w.l., which sum divided by 2 gives the corrected length. The larger yacht is taxed at the rate of 10s. to the inch over a mile course, and in proportion according to the lesser or greater distance sailed.

Strenuous attempts have been made to evade this rule, which have resulted in some odd looking models, an unusually odd one being owned by one of the members, she having been built for the second class and measuring 44in. on the l.w.l. Her peculiarity lies in her under-water structure, where she measures at least 60in. in length. This yacht, however, has proven to be very fast in a breeze, but in a moderate wind she does not do so well, due to her large immersed surface. There can be no mistake as to the fact that this model is a most decided effort to cheat the existing rule.

It might be interesting to know how these models are sailed on and off the wind, one of the great difficulties to overcome. Some English model yachtsmen use weighted rudders, one for windward work and one for reaching and down the wind (in fact some owners have their pockets full of rudders of a variety of weights) thus causing loss of time in changing.

On the American model yacht a rudder (not a weighted one), is attached in the same way as on a large yacht, but with the tiller shipped aft, passing under a threaded wire which is placed across the deck just over the tiller. Then there are two nuts which travel on this wire, one on each side of the tiller, and the tiller is allowed to play between them, these nuts being used to gauge the play of the tiller when steering the yacht on a reach or down the wind. An eye is fastened to the tiller, through which a sheet is led from the main boom to a cleat fastened alongside the heel of the bowsprit; this cleat being of sufficient length to be bored with about one dozen holes, half an inch apart. A pin with an eye arrangement having the sheet attached, is placed in one of these holes and can be shifted fore and aft at pleasure.

The main sheet is led in a similar way, a snap being used on the traveler so that when about to sail on a reach or down the wind, the main sheet is cast off, at which time the other sheet before mentioned takes effect on the tiller and thus jams the rudder to leeward as far as is necessary to preserve the balance of the yacht on her course. This mode of steering has proven to be a very satisfactory one, and is universally used (with slight modifications) by all yacht owners of the American Model Yacht Club.

The advance in yacht designing is quickly followed by the model yachtsmen, and just now the fin-keel is as prominent in model as in large yachts.

In handling the yachts, each owner uses a small flat bateau and a pair of oars, following or rowing beside his craft and attending to sails or rudder, or starting her on a new tack, as the course and wind requires.

Too much cannot be said in favor of model yacht sailing, as it invigorates both the body and the mind. Those indulging in this sport acquire considerable skill in handling a skiff, requiring quickness of decision in the manipulation of their yachts.

To appreciate model yachting, one must watch thoroughly the tactics required in handling a model in a close race. Appended are some of the growing clubs in the States: American Model Y. C., Brooklyn,

MODEL YACHT OF 1893, SHOWING OWNER IN ROWBOAT.

MODEL YACHT OF 1893.

to such a degree as to prove detrimental to yachtsmen, since the Commissioners, who were at one time favorably disposed to the participants in this enterprise, became disgusted and concluded that there should not be built any house for the storage of model yachts.

Aside from those who were immediately engaged in this sport, but few persons were interested sufficiently to investigate it; not even the reporter, who is always ready to grasp any new ideas and adventures and promulgate them to the public, seemed at all inclined to touch on this subject. The *Times* and *World* were the only daily papers which finally brought the sport to the attention of the public; and the *Mercury*, a weekly paper, occasionally rendered service in this direction, but aside from these papers others would comment upon it as child's play, and thus from time to time ridicule it. Those engaged in its practice were frequently called cranks, and the spectators idiots, and perhaps in some instances this term was well applied to the latter because of their nonsensical suggestions to the model yacht experts.

This condition of things existed for a short time only, when some of the members, headed by the Bros. Dayton, of the different yacht clubs, decided to make Gowanus Bay, in South Brooklyn, the rendezvous for the further continuance of investigations regarding the theories connected with the science of model yachting. Gowanus Bay in those days was a very fine spot for such a purpose, but in recent years it has become the receptacle of the city's debris, and by this means the greater part of the once beautiful bay has become obliterated.

Permission was granted to the Manhattan Club to sail their model yachts on the large lake at the northeast section of Central Park, New York, but after a thorough test this lake was proven to be worthless for the purpose of sailing model yachts, on account of the interception of the winds by reason of the topography of the surroundings; the east and northeast boundaries of this lake being hemmed in by massive trees, and its south and west shores by very high ground; hence the Manhattan Club abandoned this lake and located themselves at the foot of East 110th street and East River, New York, where storage for their yachts was obtained.

Launching their model yachts from this point they sailed through Little Hell Gate, or by way of the Kills, the intricacies of which are probably understood by a number of our readers, to Borey Bay, where some very fine sailing was obtained, and close contests ensued. This club finally disbanded, and two of its members joined the present American Model Yacht Club.

During the years 1880 to 1887 the interest which was shown in model yachting was waning; there was much sailing, but few new yachts were either designed or constructed.

The leading yacht club of the day was the American Model Yacht Club (this club at present holds a position similar to the N. Y. Y. C. in yachting). It was founded in 1876 and reorganized on Sept. 2, 1887. Prominent yachtsmen were elected as officers: Geo. W. Lyon, Com.; W. V. Hanson, Pres.; G. W. Townley, Treas.; J. Alvah Scott, Sec'y and Meas. The club at that time had 17 models, which were classified according to their length on the l.w.l. into first class, embracing those 53 to 63in.; 2d class 42 to 53in., and 3d class those 30 to 42in. in length; the rule applied for time allowance being l.w.l., whereas the present rule embraces both sail area and the l.w.l.

The election of a new board of officers in 1892-3, brought about a change, viz: W. V. Hanson, Com.; Geo. W. Lyon, Vice-Com.; Geo. W. Townley, Treas.; Harry Melvin, Sec'y; Frank Nichols, Meas., and new boats were added at that time, making 45 yachts in the club. The large lake at Prospect Park, situated at the southwest end, and which is exposed to the strong west and southwest winds from the Atlantic, has an area of about 200,000sq. ft. (the only drawback being the trees and shrubbery which have grown since the early days), a desirable place for model yachting; and the out-house, as stated above, being located about 200ft. from the margin of the lake, affords facilities far superior to that of any inland waters in the immediate vicinity of New York city or Brooklyn. At certain directions of the wind—say south by west, a course to windward of seven-sixteenth of a mile can be obtained, but the majority of windward races are over a course of three-tenths of a mile.

The rapid growth, however, in the membership of the American

N. Y.; Philadelphia of Pennsylvania; Connecticut, of Connecticut; Minnesota, of Minnesota; Midget, of Boston, Mass.

Many of the old hulks of '72 still remain in the boat house, stacked one upon the other in the loft, awaiting resurrection by their owners, who have forgotten them or have moved to unknown parts. The sight of these outbuilt and neglected old craft always brings back to the writer the recollection of many happy days spent on the lake twenty-two years ago.

FRANK NICHOLS, American Model Y. C.

### International Racing.

THE latest news in yachting comes by cable from the other side to the effect that Mr. Iselin will fit out *Vigilant* if Lord Dunraven really wishes to meet her. Of the rumored challenge for 1895 the *Field* speaks as follows: "Some weeks ago we announced on good authority that probably two noblemen would be associated in challenging for the America Cup, and in building a new cutter for the purpose." This was telegraphed to America, and it has now been telegraphed back that the two noblemen are Lord Dunraven and Lord Wolverton, and that the yacht will be 70ft. long on the waterline. This announcement is evidently mostly guesswork, and as a consequence is incorrect. It was well known in this country last season that Lord Wolverton was interested in *Valkyrie*, and also in America, as in September we saw a reference to the fact in an American newspaper; but it does not follow that the same two noblemen will set out in quest of the America Cup again. With regard to the 70ft. boat, does it seem likely that any one would challenge with a 70-footer, while either *Vigilant*, *Jubilee* or *Colonia* could be called upon as a Cup defender?

### YACHT NEWS NOTES.

The Larchmont Y. C. has announced the following dates for the season: Spring regatta, June 9; annual regatta, July 4; annual sail, July 14 to 21; Flint cup for cabin cats, July 23; fall regatta, Sept. 1; Larchmont cup, Sept. 15.

The South Boston Mosquito Fleet Y. C. has elected the following officers: Com., James T. Powers; Vice-Com., M. C. Thore; Fleet Captain, F. D. Perkins; Sec'y., F. A. Lynch; Treas., William Elliott; Meas., M. W. Ransom; Board of Directors, T. A. Maguire, C. J. Moriarty, D. N. Palmer.

The Greenville Y. C., of Greenville, N. J., on March 1 elected the following officers: Com., C. P. Morton; Vice-Com., Alonzo Peniston; Recording Sec., Harry Kattenstroth; Financial Sec., Chas. Mitzelius; Treas., A. Boushaw; Meas., C. D. McGeehan; Sergeant-at-Arms, Wm. Greville; Trustees, C. D. Morton, H. M. Prichard, Alonzo Peniston, C. Dr. McGeehan and Chas. Mitzelius.

The Court of Appeals has affirmed the judgment of manslaughter in the second degree in the case of the *People*, respondent, against Thomas Welsh, appellant. The appeal was from a judgment finding the defendant guilty of manslaughter in the second degree for the killing of Francis Jenkins through the sinking of the sloop yacht *Amelia* by the tug of which Welsh was pilot.

### Shifting and Live Ballast.

Editor *Forest and Stream*: A misprint in my letter concerning shifting live ballast in your issue of Feb. 24 makes a portion of it unintelligible.

In the second line of the paragraph next to the last one, the word "increase" should be "measure," so it will read, "and consequently they measure the righting power of the ballast, etc." SEXTANT.

### Canoeing.

Our readers may remember the case of an "inventor," fully described in the *FOREST AND STREAM* some three years back, who sent out circulars among canoeists claiming to hold a patent on the familiar battened lug sail, with its parrels and other gear, and demanding a royalty from all who used it. Serious claims for damages and royalty were made on some canoeists about New York, backed by intimations of legal proceedings, but needless to say, were never pressed. We had the pleasure of an interview with the "inventor," in which we were able to refer him to full descriptions and illustrations of the sail, then just introduced here from England, which we had published some years prior to the date of his alleged invention and patent. The matter dropped and nothing more was heard of it; but we are reminded of it by the rudder gear described in the *Yachtsman*, and which is identical with another and much older device which, by his own confession, was well known to the new claimant.

#### A Simple and Ingenious Invention.

From *The Yachtsman*, Jan. 25, 1894.

The accompanying drawing represents a very ingenious invention for shipping or unshipping the rudders of small boats. The idea is simplicity itself, and will be easily understood. A is a gudgeon working on a rod bolted to the stern of the boat. C and D are two gudgeon hooks, which catch the rod from opposite sides and unship the rudder, all that is required is to lift it until A comes off the rod, and then pull the rudder to one side so as to clear one of the hooks, push it a little way aft, and it is unshipped. To ship the rudder again, engage the hooks on the rod before slipping the gudgeon A on the rod. The drawing is slightly misleading, for it shows the gudgeon hook C slightly bent round the rod on the near side, whereas it should leave that side entirely open in order to avoid any difficulty in unshipping.

Mr. Dickson J. Laker, the inventor of this contrivance, writes as follows:

"I inclose for your inspection a rough model showing method adopted by me in fitting the rudder to a 14ft. center-keel boat. Doubtless you have seen, or are otherwise familiar with, Stephens' rudder gudgeons, and the fittings now sent you resemble them generally; the essential point of difference lies in the two lower hooks placed one above another, and separated by a distance of 3in. or so in the rudder tested. Most owners of small boats have experienced difficulty at one time or another in shipping the rudder as generally hung, in a bit of a jump. Fitted, however, in the way illustrated it can be shipped without difficulty and without profanity in rough water. The hooks being slipped on the rod at its upper part, and then lowered until the eye on the rudder embraces the rod. I think this plan simpler than the one originated by Mr. Stephens, as no casting is necessary for the lower gudgeons, and any smith can make the hooks, etc. The cost also would, I think, be less. The rod on boat's stern is 3/4in. Muntz metal. It is riveted to a copper eye at heel of post, and runs through another, screwed through transom into post. The hooks and eye on rudder are copper. In conclusion, I have tested the gear thoroughly during a whole season (on an exceptionally large and heavy brass rudder), and it has given entire satisfaction, being amply strong and efficient, and I have no hesitation in recommending it for boats, canoe-yaws, etc.; in fact, any small craft in which the rudder is not a fixture."

Mr. Laker is a benefactor to boating men, for he has not patented his idea. It is open to any one.

The following is from the *Yachtsman* of Feb. 15, 1894:

To the Editor of the *Yachtsman*:

Sir—After a good deal of consideration, I have decided to patent the invention so kindly noticed in your issue of the 25th ult. That there appears to be nothing to deter others from adopting this course seems to me a sufficiently substantial reason for my so doing, without taking into consideration any pecuniary benefit likely to accrue therefrom. As I imagine you will require some public avowal of my intention, please accept this rather lazzard notice as such. I may add that I have taken steps to secure the invention, and have made arrangements with a prominent firm for its manufacture at an early date.

Yours, etc.,

DICKSON J. C. LAKER.

We can heartily indorse the remarks of the *Yachtsman* and of its correspondent as to the ingenuity and simplicity of this device; in fact, Mr. Stephens, after puzzling for a very long time over the problem of getting what was in effect a solid ring on to the rod with both ends closed, was rather elated over its successful solution by means of two split braces (or gudgeons) placed one above the other, with the open sides facing in opposite directions. The idea was new then—some time in 1883—and we have never since come across any device involving the same principle. So far as Mr. Laker's part in the device, as described in the above quotations from the *Yachtsman*, it may be summed up very briefly: What is good in it is not new, and what is new in it is not good.

The use of a rod and four braces, or gudgeons, is very old, but the splitting of the lower rudder brace introduces an entirely new mechanical principle, original so far as we have been able to learn with Mr. Stephens.

In first experimenting two common cast braces were used, one side of each cut away, being placed a little distance apart, just how much mattered very little. Later on a pattern was made for a single reversible casting which, when two pieces were properly fitted together, made a neater and more shipshape finish than the two braces. This was a mere immaterial detail of construction and did not affect the principle. The device was never patented by Mr. Stephens, but was given freely for the use of fellow boating men and canoeists, being fully described in the *FOREST AND STREAM* and "Canoe and Boat Building for Amateurs," the description being copied in various nautical publications, and the gear used in this country and England for some years. We are not posted on the British patent laws and the legal aspect of the case, but there is a moral side to it on which we hold some very fixed opinions by no means complimentary to the honesty and good faith of this eleventh hour "inventor" who now proposes to exact from his fellow boating men a tribute for something which *does* belong to them as surely as it *does not* belong to him. The following description and illustration of the rudder gear,

as originally published in the *FOREST AND STREAM*, will enable our readers to judge just how much of a novelty there is in the device illustrated in the *Yachtsman*. The construction is really very simple, though difficult to show in a drawing.

"The rudder shown is of mahogany, a cruising rudder, but as effective for ordinary work as a drop rudder. The lower side, below the keel, is sharpened to a fine edge. The rudder hanging is shown in the small drawing. The part attached to the boat or canoe consists of an upper and lower brace of the usual form. A and C, with a rod E, 1/4 in., running through them and screwed into C. On the rudder is a common brace, B, at the top. At the bottom is a split brace, D, made of two castings, a and b, both exactly alike, but fastened on opposite sides of the rudder. The upper sides of the pair are shown at 1, the fore ends at 2, and the lower sides at 3. It will be seen that by laying the rudder horizontally with the port side, D, uppermost, the opening between a and b, Fig. 2, will admit the rod E. Now if the rudder be raised to a vertical position, the two hooks embrace the rod E, the upper brace B is dropped over the top of E, and the rudder is fast, only to be released by raising B off the rod and dropping the rudder horizontally. In practice the split brace can be put on or off the rod by inclining the rudder to an angle of 45 degrees, without laying it horizontal. With this gear there are no detached parts, the work may all be done at the upper part of the rod, just below A, and it is not necessary to grope under water to ship the lower plate. The rudder can only be detached by raising B from the top of the rod, and the rudder lines when attached prevent it rising so far of itself."

Forest and Stream, Nov. 22, 1883.

#### Reforming the A. C. A.

Editor Forest and Stream:

Anent the Holden-Burns-Cartwright controversy regarding reform in the A. C. A.; please come with me and we will call on a couple of the Atlantic Division clubs.

Let us first take the Fourteenth Street Ferry and visit the land of the Boo-Hoos. Here we find the Hoboken Canoe Club, a flourishing little organization, with a membership of about 25. About one-half of these are A. C. A. men. As a rule, do they attend the Association meets? No. Why not? Because they haven't time to go so far from home, and if they had they wouldn't consider it worth the expense. And trouble. Is that all? Then, too, they do not care enough for racing. Is racing all they do at the Association camp? Theoretically, four days are given over to racing, but somehow the days are too short to admit of all the races, so some of them have to be postponed. Then there are camp fires and entertainments, and individual parties make short cruises and go on picnics; but eliminate the racing feature and the Association camps would be dull places indeed to spend two weeks. There probably would never be another Association camp. Why is this?

Because the average canoe man attending the Association meets does not care enough for canoeing and camping. If he could afford it he would be, and he is when he can afford it, a yachtsman. Aren't the races interesting? Yes, very. But a horse race is interesting, and so is a bicycle race or a yacht race, or a pugilistic encounter, or a wrestling or fencing bout. In fact, any competitive trial of strength and skill is interesting.

You say the Hoboken Club does not go in for racing. What do they do? They have an annual club cruise lasting two or three weeks, which every member is expected to attend, and there are usually fifteen or more participants. They cruise up the Hudson probably as far as Foughkeepsie, or down to the Shrewsbury or up the Sound. They know their home waters, the Hudson River, like a book. They are familiar with all the desirable camping spots, Egg Beach, Croton Point, Grassy Point, Camp Cowslip, Cold Spring, Polopel Island. During the balance of the season you may come over here on any Saturday afternoon and you will find five or six of the members getting ready for a cruise to Egg Beach or somewhere else, to spend Sunday in camp. They have a club house on the Shrewsbury. They are all musicians and several of them are vocal artists. The club also encourages the culinary art, giving prizes for new camp dishes, and the men are all accomplished chefs. Do they have fun? Lots of it. And are they enthusiasts? You bet! And you say they do not attend the Association meets? No, they do not. They enjoy cruising better. Do they know the Association librarian? I am afraid not. Could they give him some points? Perhaps.

Now we will go out to the Passaic River. What day is it? Why is it Labor Day, sure enough. This is the Iantche Canoe Club, is it not? Yes. What is it noted for? Chiefly for having the largest percentage of A. C. A. men in its membership of any canoe club in the Association, and for being the best represented club at all the Association and Atlantic Division meets. It has, perhaps, forty A. C. A. members, among them some of the handsomest and best known canoe men in the country. They are fond of cruising. They were once, but they have "graduated" from that class. What do they do now? They hold a regatta on Labor Day, and build racing machines, and attend the Association meet. Is that all? No. They give a few "smokers" every winter. If you were to call here on a Saturday afternoon or a Sunday during the summer what would you see? You'd see several of them holding down chairs on the balcony and swapping fishy stories.

What are those two buildings across the river? They are two other canoe clubs. How do they compare with the Iantche Club? Why, where Iantche sits there is the head of the table. Do they ever hold regattas? Certainly. Does the Iantche Club take part? No, they take all. Then they must be a very active club? They are—on Labor Day. Why on Labor Day particularly? Because all three regattas are held on that day.

Who are those four handsome men down on the float? They are the champion club four, Palmer, Douglass, Stewart and Duguid. What have they done? They have never been beaten in a club four race. Is that remarkable? Well, now! Who is that distinguished looking man in the white duck sailor suit? Does he own the river? No, but he is captain of the club. Oh, I see! Who is the man that they are all taking their hats off to? That is Mark Freeman. That has he done? Why, he is even a bigger man than the Captain. He has beaten Douglass in the single paddling race. How nice! Will he attend the Association meet? Most decidedly.

Who are those men huddled together at the end of the float? They are from the river. Who is the one with the yellow whiskers? That's McLees. What does he do? He leads forlorn hopes against the Iantche men in paddling races. Doesn't he ever win? Never in the paddling races, but generally in the swimming and hurry-scurry races. Why is it that he excels in those races? Because he is generally the only entry. Would it not be a good idea to give him the prize without a contest? It might save the spectators some fatigue.

Where did you say he was from? Rutherford. Where is Rutherford? Up the river about six miles. For what is he placed noted? Chiefly for being the home of Mr. John Trusty Holden, alias "Cycle Oar." What does he do? Why, he writes letters to the papers. Why does he do that? He wants to reform the A. C. A. Does it need reforming? Mr. Holden thinks it does. Well then, why doesn't he reform it? Because he never attends the meets, and he has nothing to

say in the management unless he does. Why is that? Because only those attending have an opportunity to vote. And they are usually only a small percentage of the membership? Exactly. Well now, tell me more about Mr. Holden. What does he want particularly? He wants more for his money. What does he get now? A list of his fellow members. Is that all? No; occasionally he gets a prospectus of a canoe cruise to Palestine or a circular requesting him to solicit advertisements for the year book. What does he ask for? He asks the Association to issue a monthly paper, I believe, containing general information for canoeists, such as new styles in canoes, sails, paddles, fittings, cruising routes, camp sites, waterways, directions for stowing duffle, making lobscouse, etc. Would it be difficult to publish such a paper? Not at all. Who would collect and edit the information? Mr. Holden might if he were asked. Is Mr. Holden a practical canoeist? No, he is a theoretical one. Wherein? Why, he is a member of the Association, but does not attend the meet. I see! Does he sail or paddle? No. Does he cruise and camp? No. Does he race? No. What does he do? He rides a bicycle.

PULEX.  
NEW YORK, Nov. 2, 1893.

#### The Star and Crescent.

The third annual dinner of the Hartford Canoe Club was held at the Heublen, on Feb. 25. About thirty-five persons were present and did full justice to the excellent menu provided. Among the canoeists from out of town were Com. Dorland, ex-Com. Winne, Rear-Com. Schuster and Purser Knappe of the Eastern Division, and several men from the Springfield and Holyoke clubs. The dining room and table were handsomely decorated with flags and flowers, and at each place was a miniature flag bearing the private signal of the individual members. The menus were hand-painted, furnished by a friend of the club. Com. Dorland was elected an honorary member of the club, and was presented with a silk H. C. C. flag. The music was furnished by the Crescent Mandolin Club of Hartford. Historian Cheney, who so admirably "shook off den weights" at the Haddam Island meet in 1893, read the club history for the past season and wrote off in manner of hits to his fellow-members, besides giving an excellent account of the doings of the club.

#### CANOE NEWS NOTES.

The executive committee of the Hartford C. C. has made the following appointments for the ensuing year: Regatta Committee: D. S. Morrell, T. B. Lewis, T. S. Cheney; Signal officer, R. A. Wadsworth; Measurer, W. D. Morgan.

The Washington C. C. launched its war canoe on Feb. 22 for a paddle on the Potomac. In the evening the eighth annual dinner took place at the National Hotel. The annual election was held during the evening resulting as follows: Com. A. Devine; Vice-Com., L. P. Libbey; Sec'y, J. A. Oliver; Treas., J. F. Oertel.

On Feb. 24 the Buffalo C. C. elected the following officers: Com., E. W. Dunston; Vice-Com., H. D. Pulsifer; Sec-Treas., F. D. Wood. Trustees: G. L. Kelley, C. P. Forbush, F. R. Rosceel.

#### A. C. A. Membership.

ATLANTIC DIVISION: J. Herbert Carpenter, Sing Sing; Richard M. Woods, Arlington, N. J.; Chester W. Osborn, Wendell Andreas, New York. CENTRAL DIVISION: E. A. Tobey, Troy, N. Y.

### Rifle Range and Gallery.

#### Jersey men at the Targets.

The team match between Collins and Plaisted, of the Greenville Club, and Hansen and Boyce, of the Excelsior Club, 50 shots per man, was shot off in Armbruster's Park, on Saturday last. The weather conditions were fine. There was a large number of local riflemen present to witness the contest. Hansen shot in good form, putting up the good score of 1,073. His partner, Boyce, was in hard luck and gave Hansen very poor support. Plaisted was also somewhat erratic in his shooting, but the good work of his partner, Collins, was sufficient to win the match by the small margin of 10 points.

After the finish of the match a turkey dinner at the Hotel Armbruster was in order, followed by rifle chat, speeches, etc. A return match will be shot in the near future, when the Excelsior team expect to down the Farmers. Scores:

	Hansen	Boyce
Hansen	19 20 17 25 23 15 32 19 23 23—206

#### Schmidt vs. Steuber.

The first half of a 100-shot match between A. W. Steuber and I. Schmidt was shot on the ranges of the Our Own Rifle Club, Hoboken, N. J., for a pair of \$500. The scores were very much below the average of both men, but better results are looked for at the next match, March 8, on the ranges of the Miller Rifle Club.

A W Steuber	I Schmidt
20 25 25 22 21 23 23 23 24—231	
23 21 22 25 25 24 23 22 22—232

#### Port Chester Rifle Club.

PORT CHESTER, Feb. 25.—There was a match shoot here on Washington's Birthday between Val Horn of the Heidenreich Rifle Club of New York City and J. E. Smith of the Port Chester Rifle Club. Conditions, 50 shots each man at 200yds., German 25-ring target, any rifle, and 50 shots at 100ft. open air range, 22cal. rifles. Horn and Smith have had two matches previous to this and Smith was the winner in each case. This match was for a dinner for shooters and friends and each man seemed to have lots of them. Horn is a member of the Port Chester Rifle Club also, and made the boys hustle here on many an occasion before. The shooting at 200yds. was done first and Horn made a mistake in this respect as this was his weakest end of the game. Had he shot the short range match first the result might have been different. Horn brought several of the Heidenreich boys up with him to spend the holiday, and I guess they had a good time. He also brought that old timer at the targets, "Birdie" Vogel, as his assistant and coacher. The following are the scores, 50 shots, 200yds., in 10-shot strings:

Smith	Horn
200 200 212 193 195—1000	
188 198 186 189 183—944	

Fifty shots, 100ft:

Horn	Smith
218 235 231 233 230—1137	
224 238 226 237 224—1120	

RDD.

#### Beideman Rifle Club.

BEIDEMAN, N. J., Feb. 24.—The following shows the weekly scores of the Beideman Rifle Club, week ending Feb. 24. Conditions 25yds. strictly off-hand, outside range. Targets J. L. Wood 241, W. Gilbert 240.

L. Gardener 246, Wm. Wurlinge 242, J. L. Wood 241, W. Gilbert 240.

Pistol score, 1/4in. ring, possible 250, 15yds.:

J. L. Wood	W. Gilbert
25 25 24 24 24 24 23 23—238	
24 24 23 23 23 23 23 21—227	
E L Gardener.....25 24 24 23 21 19 19 18—221	

W. GILBERT, Sec'y.

General Comments on the Drift of Bullets, and Rifles and Rifle Shooting.

BY ARMIN TENNER,

Superintendent American Testing Institution.

THE projectiles as employed for our modern breech-loading rifles are mostly of a cylindrical elongated shape. The center of gravity of a bullet of this kind is found somewhere behind its transverse axis. The effect of this condition is noticeable when such a bullet is brought in a position horizontal to its longitudinal axis and so subjected to the laws of gravitation, i. e., allowed to drop.

It will display a marked tendency to reach the ground with its rear part first, or in other words, it will tip in its course of falling. A bullet fired from the rifle is affected by the same laws of nature in a similar way, and this from the first moment after quitting the muzzle. Its course of flight is thereby more or less disturbed and the resistance of the air with which the traveling projectile meets now comes in as another cause, tending to make the bullet shift from its regular path. This pressure of the air acts in the direction of the bullet's tangent path. As long as the longitudinal axis remains true to the direction as originally imparted to it the effect of the resisting air will be confined to the arched portion of the projectile, and in this case the influence named will only show itself in the way of a retarded velocity.

A bullet, traveling in the direction of its longitudinal axis is shown by Fig. 1.

FIG. 1.

Before the bullet has traveled very far the effect of gravitation, in conjunction with the air pressure, will assume larger proportions, the projectile will form a slight angle to the original direction of motion, which is likely to grow in degree as the tangent path of the bullet becomes more curved and now the resistance of the air will meet a larger part of the bullet's lower surface in front of the center of gravity, and thus produce a similar effect to that caused by gravitation, namely to lift the point of the bullet and to make the latter assume a position something like the one illustrated by Fig. 2.

FIG. 2.

The two disturbing forces named combined may, under certain conditions, prove powerful enough to cause the bullet to tip or "keyhole," and to make it rotate or spin around its transverse axis, which at the same time constitutes the axis of the bullet's largest momentum of inertia. In such an event, it will of course be impossible for a projectile to move in conformity with the fixed laws in question and to describe a regular trajectory.

Ever since the rifle barrels with the spiral twist have taken the place of those with grooves running in a parallel direction to the soul or bore, derivation has ceased to be an important factor in rifle shooting. With the aid of the spiral twist the tendency and possibility of a bullet to rotate around its transverse axis, i. e., to tip or "tumble," has nearly been annulled, and also the disturbing effect of the pressure of the air on surface inequalities and the chances for variations in the position of the center of gravity have been greatly lessened.

Generally the spiral twist in rifle barrels turns from the left to the right, and hence the bullet will rotate in the same direction, a fact to be borne in mind by the reader for the purpose of comprehending more readily the following observations pertaining to the derivation of bullets.

THE DERIVATION OF BULLETS.

The "deflexion," drift or deviation of a bullet solely due to an irregular or low speed of rotation or to the effects of gravitation is called derivation. To determine the exact extent to which a particular bullet is subject to derivation is quite a difficult task, and frequently deviation and derivation are confounded with one another. This rather perplexing question can only be solved somewhat like satisfactorily by means of a properly constructed and working shooting machine.

As previously remarked, derivation no longer constitutes an important feature in rifle shooting, the subject is nevertheless sufficiently interesting and instructive to be treated here more exhaustively. The causes and effects of derivation have been the object of extensive experiments and researches for a long period, in fact, ever since rifled barrels came into use; but comparatively little of a definite character was established in the premises until Prof. Magnus, of Berlin, Germany, devoted his attention to the solution of this problem. Magnus started and conducted his researches upon the theory that the conditions for the pressure to which a rotating bullet is subject are the same whether the bullet be in motion and the air in a state of rest, or the air be in motion and the bullet at rest, provided the air can be brought to move against the bullet at the same rate of speed which may be imparted to the latter.

Carrying out his experiments upon this basis, Magnus employed the so-called Bohnenberger's apparatus, as illustrated in Fig. 3, but replaced in the same the spherical bullet by one of a cylindrical-elongated shape.

The arrangement of this apparatus may briefly be described as follows: The longitudinal axis of the projectile turns between steel

FIG. 3.

points, which are fastened to the inner ring *a*; the latter can easily be moved vertically within the middle ring *b*, thus permitting to give the longitudinal axis of the bullet every desired position toward the horizontal plane. The middle ring *b* again turns in a horizontal direction in the outer ring *c*, which has a stationary position upon the frame.

To maintain the longitudinal axis in any desired position, the projectile and the two inner rings are arranged so that their centers of gravity meet exactly the center of the outer ring. Now in order to force the bullet to rotate around its longitudinal axis, a small pulley is attached to the point of the former and this again is provided with a string which, upon being pulled, sets the bullet in a lively spinning motion.

As the rings are all made to turn around their axes. As soon as and when the bullet is set in motion, a comparatively great amount of force is required to cause the ring to turn, and this for the reason that, through the effect of the rotation imparted to it, the axis of the projectile assumes a high degree of stability and displays a tendency to retain its position. If a force is brought to act against the bullet in the direction through its longitudinal axis but not through its center of gravity while the projectile is in a state of rest, the latter will turn readily around the center of gravity in the direction of the applied force, thus spinning around a transverse axis running through the center of gravity, and the natural result is, the bullet will soon tip or "keyhole."

When, on the other hand, a force is made to act (under similar conditions otherwise) against the rotating bullet, the latter will not move in the direction of the force, its movements will then be on a plane perpendicular to the direction of the force. These phenomena are quite in accord with the theorem of the parallelogram of rotation, which establishes that every incitation toward lifting the point of the bullet must, in consideration of the prevailing rotation from above to the right, cause a spinning around a new axis projecting with its front end somewhat to the right from the original direction of the longitudinal axis of the supposed vertical plane.

Admitted even that these experiments as here roughly outlined, do not exactly conform to the state of affairs as they exist in reality, for the reason that the bullet as employed by Magnus did not swing absolutely freely, they have nevertheless convincingly shown that the point or front end of a traveling bullet cannot and will not accommodate its turning motion to the sense of the incitation as caused by the point of a bullet is incited to shift to the right, the point must at the same time assume a slight downward direction and thus lean toward the tangent path, bringing the latter again on a line with the axis of the bullet.

That such is really the case is best proven by the spherical holes made by the elongated bullet on the target. If the longitudinal axis of the bullet would retain, throughout its course, a position as shown in Fig. 2, or one similar to the same, the holes on the target would be of an oval instead of a spherical shape.

Magnus has further demonstrated the fact that it is erroneous to suppose that while a projectile continues to rotate around its longitudinal axis, the point of the former will, at the same time, spin in an upward direction, and that in reality the bullet does not perform either of these movements of rotation, but that both culminate in a common turn around an entirely new axis. Efforts have been made all along to find the means for avoiding or annulling the effect of the resistance of the air, but they have only until quite recently been crowned with something like success. Further attempts are still and continuously made in the same direction. Prof. Hebler in Zürich, Switzerland, assisted by the Austrian ballistic engineer, Mr. Krnka, has constructed for his military small-caliber rifle an elongated torpedo-shaped bullet with a channel running through the entire length of the bullet and assuming at the rear end the shape of a funnel.

This projectile is provided with a sabot in its center, made of papier maché or soft metal, which is arranged to leave the bullet immediately the latter quits the muzzle. The bullet is made preferably of steel, the sabot of copper. The inventors claim for this bullet the highest degree of accuracy—flat trajectory—and neutralize the velocity of 2,800 ft. per second is claimed for this bullet, which is nearly 700 ft. more than that obtained with any rifle bullet now in existence. The diameter is only about  $\frac{1}{16}$  in., and the inventors assert that it will do effective work up to a distance of nearly 6,000 yds. Of course such a bullet is intended for military purposes only; it will not serve the hunter, but may, perhaps, assist in the rifle shooting of the future.

A similarly constructed bullet, as said to have been lately invented also in France and is there called *balle tubulaire*. The old adage, according to which there is nothing new under the sun, again applies to these inventions. Hollow elongated bullets and those provided with sabots or guide collars have been employed in Germany in connection with the various styles of needle guns nearly thirty years ago.

[TO BE CONCLUDED NEXT WEEK.]

Rifle at San Antonio.

FOR over a month the riflemen of San Antonio have been agitated over the team match which came off yesterday. It came about in this way: Capt. Ernest August Dösch, a veteran septuagenarian, who has always held his own, and considerably of some one else's as a rifleman, made a wager, unfortunately for himself, with Chas. F. A. Hummel, the popular whistling gentleman, who sells Petznecky cleaners and gun wads. It matters not what the wagers were, but being a round two dozen quarts of Mumm's, Capt. Dösch lost the wager, but awaited Charlie's pleasure as to delivery of the goods, and about a month ago the latter made the following proposition to his confere:

Capt. Dösch to have the first choice, and the two to choose a team of eight men from the membership of the rifle club, and shoot a match for a supper, on which occasion the wine was to be drunk at the expense of the occasion to be borne by the losing side of course. It was shot on Feb. 25 as follows:

E Dösch	10 0 5 10 7 5 8 5 4 6 50
G Altman	5 0 8 5 6 4 8 7 4 4 57-173

C Hummel	6 10 7 7 8 9 8 8 7-192-1732

To say that the Dösches were disgusted at their defeat is putting it mildly, and as I am writing these lines the captain of that side is clothed in mythical sack cloth and ashes. The rudeness of Ernest Steves' peach-hued cheek was heightened by his first three shots, 4, 0, 0. Sometimes the bullet hit the top then the bottom frame of the target, but always "poodle." In the worst Texas nomenclature "poodle" means that the bullet has missed the target.

John Laylor started in badly with two fouls, but gradually improved as he shot each score of 10 shots. His face had as much expression as that of the Egyptian sphinx when the enemy fell upon him with loud huzzas. You can't down John with defeat.

The entire winning side fell on one another's necks, but did not weep. They yelled, screamed and applauded, and had there been an old-fashioned Sioux Indian on the premises he certainly would have felt at home. During the shoot—It is stated by some of the losing side, to illustrate the roseate good luck the winners were playing in, Dr. Herf, in his excitement, forgot all about the set trigger up to the critical moment. He lowered his rifle and in setting the trigger pulled the front, or business, trigger by mistake. Bang went the gun "Och," says the doctor, "das was ein poodle." But he was thrown into confusion when the faithful pointer indicated a good 9.

Uhl, surnamed the farmer, called away above the average he usually makes and close unto him came Ed Dreiss, the founder of the shot-in-the-duck-gizzard theory.

Emanuel Seffel distinguished himself on this occasion, as usual, by making the best score, an average of 8.01 in 30 shots. His shooting was close to the center nearly all the time, making a beautiful string of fourteen consecutive spot shots.

Following the great match a team shoot was proposed as follows, 10 shots per man, 200 yds, off-hand:

H Degener	5 5 6 6 6 7 6 3 10-57
C Hummel	7 9 9 8 9 8 9 7 7-82
A Altmann	5 8 8 8 8 6 8 8 6-72
Uhl	9 10 4 5 5 6 8 8 6-72
E Steves	7 5 3 8 6 8 6 8 6-73
A Guenther	5 10 6 7 9 8 8 8 8-75
G Gresecke	7 7 4 7 6 7 8 6 4 4-60-553
E Dreiss	5 8 4 10 10 5 8 8 6 7-71
E Seffel	9 10 9 5 9 6 10 7 6 10-81
Texas Field	10 7 10 9 6 8 10 9 8 8-85
A Altmann	7 9 9 6 7 8 10 7 8 10-81
A Steves	5 8 4 8 9 7 10 7 10-73
Dr Herf	6 5 3 7 10 6 7 9 10 10-73
E Leich	5 0 7 6 5 4 6 0 7 4-40
J Leyler	7 5 7 7 4 9 7 9 0 6-61-565

After which an exodus to the city was inaugurated, and the beautiful range was left to the mercy of the coyotes and a flock of goats that have shown a predilection for barking on young trees that puts to shame any dog barking at the moon.

O. C. G.

Cincinnati Rifle Association.

THE Cincinnati Rifle Association held its regular practice shoot at its range to-day and made the scores appended. Conditions, 200 yds., off-hand, at the standard target. Most of to-day's shooting was done through a snowstorm, nevertheless some fair scores were made:

Winheimer	8 7 8 6 9 5 8 10 5 9-75
Drube	10 7 10 7 10 8 8 9 8 8-83
Payne	8 5 8 10 9 8 4 10 10 5-78
Roberts	8 9 9 5 8 8 8 4 5 7-71
Louis	9 10 8 7 8 6 6 10 10 7-80
Hake	10 8 10 9 9 6 10 10 10-85
Wellinger	10 7 7 5 9 10 8 8 7 7-78
Schmidling	10 5 4 10 0 9 6 8 8 8-77
Busse vs. Luft	3 0 3 4 0 2 5 4 6 5-33

The 100-shot gallery match between R. Busse and Ignatz Luft, which has been pending for some weeks, was shot off on the Zettler range on Friday of last week. Luft is an old rifleman of experience and ability. He was one of the three who tied for the New York Independent Corps \$500 trophy at the great festival in Newark in 1888.

At the present time he is not connected with any rifle club. R. Busse is a member of the New York City Corps, also the Zettler Club. He has only been connected with rifle shooting a few years, and he had but little experience in match shooting. His connection with the Zettler Club is developing his shooting qualities, however, and he will be heard from later in the ranks of the experts. Chas. G. Zettler and William Rosenbaum acted as judges and G. W. Plaisted referee and score keeper. The conditions called for 100 shots each in 10 shot strings on the 25-ring target, \$10 a side.

R. Busse	23 24 24 25 25 25 25 25 25 25-246
I Luft	22 22 24 24 24 25 25 25 25 25-240

Smith & Wesson Team Victorious.

SPRINGFIELD, Mass., Feb. 23.—The Smith & Wesson Pistol Club, of this city, returned home from a very successful meeting with the M. R. A. on Washington's Birthday, Feb. 22, the former team winning both matches. Four of the five individual merchandise prizes were won by Messrs. Axtelle, Talbot, Wesson and Clark respectively. The outcome of this meeting reflects great credit upon the S. & W. team as it was their first attempt at a match with an outside club, and the result was all that could be desired, considering the fact that the M. R. A. is one of the strongest shooting societies in the country. The Smith & Wesson delegation used exclusively the new single shot target pistol manufactured by Smith & Wesson, shooting the long rifle cartridge, and the results obtained demonstrate the fact that this arm, in the proper hands, is a wonderful shooter. The M. R. A. used the Stevens, Wurflein and S. & W. arms.

Smith & Wesson Team	M. R. A. Team
Wesson	84
F. Hodskins	80
C. S. Axtelle	94
Talbot	85
Goodrich	88
Stebens	82
C. Clark	86
T. D. Clark	79

Zettler Rifle Club.

Ten members of the Zettler Rifle Club were present to participate in the gallery shoot on Tuesday night. In the competition for the champion medal Fred Ross again came to the front with the fine score of 245. R. Busse was second with 243. In the competition for the best score in five entries, R. Busse came in ahead, making 249. Scores: Champion medal: Fred C. Ross 248, R. Busse 243, C. G. Zettler 242, B. Zettler 241, B. Walther 241, Gus Nowak 243, H. Holges 241, M. B. Engel 241, H. D. Miller 240, P. F. Schmidt 240. Best 10-shot score, five entries: R. Busse 249, Fred C. Ross 248, B. Zettler 248, Henry Holges 247, B. Walther 247, M. B. Engel 246, Gus Nowak 244, C. G. Zettler 245, Gus Nowak 244, P. F. Schmidt 246.

# Live Birds and Targets at Rutherford.

The monthly shoot of the Bolling Springs Fish and Gun club took place at Rutherford, N. J., on Feb. 17, the scores being as below:

Class A.	
Richmond.....	1111101011111111011111-22
McAlpin.....	1011101101111111111111-22
Holmes.....	111100010110110110001-16
Miller.....	1111111110110110111111-21
Huck.....	1101111111101110111101-21
Class B.	
Paul.....	11101111100101111111001-19
Griffiths.....	1111101101101101111111-14
James.....	1111111110111111111111-21
Lenone.....	0010111111110110011001-16
Lane.....	1100101000101111111101-19
Class C.	
Burgess.....	01001010010100101001001-10

## Forester Gun Club Tournament.

DAVENPORT, Ia., Feb. 20.—The annual tournament of the Forester Gun Club commenced this morning. The weather was very bad, an stormy, a high wind from the northwest blew the snow into the shooters's eyes, almost blinding him at times, and made the shooting very difficult, and I suppose as a rule a number of shooters will read the scores and say, "I wish I had been there, what a snap I would have had." To these I will say we would all have been pleased to see you. Among the shooters in attendance were C. M. Grimm, winner of the world's championship badge; John Read, of Omaha; Harbaugh, of Georgia; Hofer, of Alaska; Black, of Rock Island; Runge, Leopold and Black, of Burlington; Grimm and Budd, of Des Moines. The entrance money ran from \$1 to \$3.50 on targets and from \$3 to \$6 on live birds. The purses divided in two to five prizes. Score:

First Day.	
No. 1, 10 targets:	Harbaugh 10, Grimm 10, Black 9, Adams 4, Davis 2, Budd 2, Read 2, Gwynn 8, Levy 8.
No. 2, 7 live birds:	Read 6, Grimm 7, Davis 4, Budd 4, Harbaugh 4, Runge 4, Maser 4, Jones 5, Leopold 2, Servis 4, Marshall 6, Day 3, Gwynn 2, Richmond 5.
No. 3, 15 single targets:	Grimm 9, Read 12, Black 12, Harbaugh 13, Budd 13, Runge 13, Gwynn 10, Davis 11, Leopold 10.
No. 4, 6 live birds:	Read 4, Grimm 6, Runge 5, Marshall 4, Richmond 3, Budd 6, Harbaugh 6, Lewis 3, Hofer 6, Leonard 5, Day 5, Davis 4, Mudd 4, Lodder 6.
No. 5, 5 pairs targets:	Grimm 6, Read 6, Marshall 7, Harbaugh 7, Budd 7, Black 4, Leopold 4, Davis 6, Hofer 4.
No. 6, 8 live birds:	Gwynn 8, Read 7, Marshall 8, Harbaugh 7, Day 3, Hofer 6, Mudd 5, Lewis 8, Budd 8, Richmond 4.
Extra No. 1, 15 targets:	Budd 13, Harbaugh 10, Black 13, Grimm 14, Read 9, Marshall 9, Runge 10.
Extra No. 2, 5 pairs targets:	Budd 8, Grimm 5, Black 6, Harbaugh 5, Severance 8, Marshall 6, Maser 5, Read 8, Leopold 5.
Extra No. 3, 20 targets:	Marshall 15, Grimm 17, Budd 18, Harbaugh 15, Black 18, Read 10, Hofer 17, Mell 16.
Extra No. 4, 15 targets:	Budd 13, Black 13, Read 8, Marshall 11, Grimm 10, Lewis 8, Harbaugh 5, Mudd 5, Hofer 11, Leopold 11, Runge 10, Davis 6.
Extra No. 5, 20 targets:	Marshall 18, Grimm 18, Black 17, Harbaugh 13, Read 13, Budd 18, Hofer 15, Leopold 16.
Extra No. 6, 20 targets:	Grimm 13, Marshall 16, Budd 18, Harbaugh 7, Read 14, Black 17, Leopold 17, Hofer 17.
No. 7, 10 targets:	Harbaugh 5, Davis 3, Lewis 5, Frederick 4, Marshall 9, Black 7, Read 9, Grimm 7, Leopold 6, Budd 10, Hofer 8, Runge 5.
Extra No. 8, 5 live birds, miss and out:	Harbaugh 2, Marshall 3, Grimm 0, Read 1, Day 0, Richmond 3, Budd 4, Hofer 1, Runge 1, Leopold 0.
Extra No. 9, 25 targets:	Marshall 20, Leopold 20, Read 17, Grimm 16, Black 24, Budd 23, Harbaugh 15, Hofer 21.
Extra No. 10, 7 live birds:	Grimm 6, Marshall 6, Budd 7, Hofer 6, Harbaugh 4, Read 7, Mudd 5, Lewis 5.
Extra No. 11, 20 targets:	Grimm 12, Black 15, Marshall 13, Lodder 11, Budd 13, Read 10, Leopold 11, Lewis 8, Hofer 12.
Extra No. 12, 10 targets:	Grimm 10, Marshall 5, Black 8, Budd 9, Read 8.

Second Day.  
The weather to-day was cold and clear, with a high wind from the northwest and a very difficult light owing to sun and snow. Among the new arrivals were White and McBroom of Genesee, Wilson of Emmetsburg, Schaffer, Cuning, Hood and Coburn of home talent and Marshall of Keithsburg. Every one knows Marshall and he is the life of any party, place or kind. Always in a good humor, but likes to raise the limit to forty cents when he has an "ace full." Twenty events were shot to-day. Scores:

No. 1, 15 targets:	Grimm 13, Marshall 11, Black 10, Easterly 10, White 13, Smith 11, Grant 8, Budd 14, Plumber 8, Huffer 10, Schaffer 10.
No. 2, 7 live birds:	Read 7, Grimm 7, Easterly 6, Norman 3, Marshall 5, White 6, Grant 5, Smith 7, Huffer 6, Jones 6, Davis 6.
No. 3, 6 singles and 3 pairs:	Budd 8, Black 10, Plumber 9, Marshall 10, White 9, Grimm 9, Easterly 7, Smith 8, Grant 7, Schaffer 9.
No. 4, 10 live birds:	Grimm 8, Easterly 7, Read 10, Marshall 8, Budd 10, White 6, Huffer 7, Davis 8, Grant 2, Smith 7, Jones 7.
No. 5, 30 targets:	Budd 17, Grimm 30, White 13, Marshall 13, Plumber 19, Easterly 13, Black 18, Smith 13, Leopold 9, Grant 4, Marshall 5.
No. 6, 6 live birds:	Grimm 4, Easterly 5, White 4, Read 4, Marshall 5, Hofer 4, Budd 5, Norman 2, Grant 2, Watkins 5, Brannigan 3, Parish 3, Schaffer 4, McBroom 5, Hichis 1, Shado 5, Curry 3, Smith 2, Jones 6.
Extra No. 1, 15 targets:	Black 12, Grimm 15, Easterly 10, Plumber 13, Budd 14, Marshall 11, Leopold 12, Reynolds 5, Colburn 10, Grant 4.
Extra No. 2, 5 pairs targets:	Grimm 7, Budd 8, Easterly 10, Plumber 13, Budd 14, Marshall 11, Black 5, Grant 6, White 5, Leopold 4, McBroom 3, Smith 6.

Extra No. 13, 10 targets:	Plumber 6, Marshall 8, Budd 9, McGinty 8, Rowe 2, White 7, Grimm 10, Easterly 5, McBroom 2.

Extra No. 14, 10 targets: Grimm 6, Marshall 6, Budd 8, Read 6, Reynolds 6, Easterly 7, Calben 6, McBroom 4, White 8.

## Third Day.

The weather to-day was cold with some snow, and the shooting both at targets and live birds quite difficult. Most every one ran out of shells of their own loading, and commenced work with the Chamberlain snuff-em-out load, 2 1/2 drs. E. C. powder, 1 1/2 oz. trap sevens, which gave the best of satisfaction. Messrs. Leonard, Davis, Kroy and Rackster of the Foresters had charge of the tournament, and everything passed off very pleasantly.

No. 1, 10 targets:	Grimm 9, Marshall 7, Hancock 4, Plumber 6, Budd 10.
No. 2, 6 live birds:	Grimm 6, Shado 4, Plumber 6, Budd 1, Baker 5, Lewis 5, Davis 3.
No. 3, 5 pairs targets:	Budd 5, Grimm 6, Marshall 6, Plumber 6.
No. 4, 10 live birds:	Grimm 9, Lewis 9, Budd 6, F. Fish 7, Plumber 7, Baker 6, Davis 6.
No. 5, 10 targets:	Baker 4, Fish 4, Henry 4, McGee 5, Ahrens 5, Shado 3, Lewis 4, Mudd 4, Grimm 5, Paddock 8, Budd 7, Plumber 8.
No. 6, 7 live birds:	Mudd 4, Grimm 5, Budd 6, Plumber 7, Davis 7, Lewis 5, Paddock 5, Baker 4, McGee 3, Fish 3, Shado 4, Brannigan 3.
Extra No. 1, miss and out, live birds:	Leonard 0, Read 2, Fish 3.
Extra No. 2, same:	Leonard 2, Fish 0, Read 0.
Extra No. 3, 10 pairs targets:	Marshall 11, Grimm 15, Plumber 9, Budd 12.
Extra No. 4, 5 pairs targets:	Marshall 7, Grimm 6, Plumber 5, Mackin 2, Budd 2.
Extra No. 5, miss and out, live birds:	Grimm 3, Marshall 0, Baker 0, Baker 0, Plumber 3, Budd 4, McGee 0, Fish 0.
Extra No. 6, same:	Marshall 2, Grimm 1, Plumber 0, Budd 2, McGee 1, Fish 1, Baker 0, Wheeler 0.
Extra No. 7, same:	Grimm 7, Budd 3, Marshall 1, Plumber 7.
Extra No. 8, 5 pairs targets:	Budd 7, Marshall 6, Grimm 6, Plumber 4, McGee 4, Fish 3, Baker 5.
Extra No. 9, 10 targets:	Grimm 8, Hancock 5, Budd 10, Marshall 7, Plumber 5, Wheeler 4, McGee 4, Lewis 3, Baker 9, Shado 6, Davis 4.
Extra No. 10, 10 targets:	Grimm 9, Budd 8, Marshall 6, Plumber 8, McGee 4, Davis 3, Hancock 2, Wheeler 5, Lewis 6, Shado 5, Baker 3, Fish 5.
Extra No. 11, 10 targets:	Marshall 8, Grimm 6, Budd 7, Davis 5, Lewis 2, Plumber 6, Shado 7, Baker 4, McGee 1, Frederick 5, Wheeler 5.

Extra No. 16, 5 pairs targets:	Grimm 7, Budd 5, Paddock 6, Plumber 6.

## Hell Gate Gun Club.

The monthly shoot of the Hell Gate Gun Club, at Dexter Park, on Tuesday of last week, was one of the most successful held by the club this winter. The weather was of the day previous had given place to a warm southerly wind, making the day a most enjoyable one for outdoor sport. The only drawback was the bright sun and the snow upon the ground, which caused some of the shooters more or less snow blindness. The main feature of the day was a series of five sweeps at targets. These were followed by two live bird events.

No. 1, 20 targets:	E. Doelneck 14, J. H. Voss 12, C. Weber 11, C. Meltzer 5, J. Schubert 5, J. Franznik 2, P. Woelfel 2, A. Moeler 1.
No. 2, 10 targets:	Weber 5, Doelneck 4, Franznik 3, Moeler 3, Moltzer 3, Schubert 3, Voss 3, Woelfel 2.
No. 3, 10 targets:	Williams 10, H. W. Voss 8, J. H. Voss 8, F. Trostel 7, Doelneck 7, Weber 6, Dannefeller 6, Brode 5, Moltzer 4, Schubert 4, Foster 3, Franznik 3, Woelfel 2.

## Pittsburgh vs. Eagle.

PITTSBURGH, Pa., March 2.—Editor Forest and Stream: To encourage friendly contests between the numerous gun clubs of this vicinity, a series of team contests have been arranged, the first of which took place last Wednesday between ten members of the Pittsburgh Gun Club and ten members of the Eagle Gun Club, of Allegheny, Pa. The weather was all that could be desired, and quite a crowd of shooters were present. The contest resulted in a defeat for the Eagle Gun Club.

## Team Shoot at Paterson.

One of the most interesting and hotly contested matches ever shot in Paterson took place at Willard's Park, on Saturday, March 3, under favorable weather conditions and in the presence of a couple of hundred people. It was a team race in which Chas. F. Lenone, of Passaic, and J. H. Outwater, of Rutherford, were pitted against W. G. E. Morgan, both of Paterson, each man shooting at 25 live birds, under old Long Island rules, for \$50 a side. T. Smith was referee, T. W. Morley and Gus F. Greiff being the judges. A feature of the match was the shooting of Outwater, who was not a whit disturbed by the "gun below the elbow" proviso, moving down 24 of his 25 birds in splendid style, and without any exertion. Lenone was away off on the question of position, and his partner's fine work alone saved him.
No. 1, 25 targets:
C. F. Lenone.....
W. Smith.....
E. W. Morgan.....
The match was followed by two 5-bird sweeps, \$3 entry, old Long Island rules to govern, the scores being as follows:
Lenone.....
Donerley.....
Bunn.....
Smith.....
Morphy.....
Appar.....
No. 2, 25 targets:
Wolf.....
Morgan.....
Keyhart.....
Griff.....
Hildum.....
Outwater.....

## Glenmore Rod and Gun Club.

The monthly shoot of the Glenmore Rod and Gun Club, at Miller's Dexter Park, on Wednesday of last week was highly interesting to the five members who were present to participate. The weather was mild and pleasant, and the birds furnished by mine host Miller, were of the usual good quality found at this popular resort.

Club event, 7 birds:	211212-7
J. G. Nelson.....	1021220-5
C. Engelbrecht.....	0110201-1
E. Helgans.....	231220-6
Sweepstake at 8 birds:	J. Schlieman 7, J. Scheylin 7, C. Engelbrecht 7, J. G. Nelson 7.
Sweepstake shoot at 25 targets:	E. Helgans 22, C. Engelbrecht 20, J. G. Nelson 18, J. Schlieman 15, J. Scheylin 13.

## Red Bank Men Can Shoot.

TUESDAY, Feb. 27, was a great day for members of the Riverside Gun Club, of Red Bank, N. J.; a great day for Parker guns and likewise a great day for Walsrode powder. It was the day for the big sweep, at 25 live birds, on Al. Heritage's ground at Marion, a sweep from which all the noted sportsmen had been barred in the hope that more amusement might be induced to enter. It made no difference, however, in the number of entries, only sixteen men going to the score. This, however, can be considered a good turnout when the stringency of the money market is considered. The management had confidently expected entries from a number of members of the Larchmont, Westminster, Carteret and Riverton clubs, but not a member of either club appeared on the grounds.

The day was a pleasant one so far as temperature was concerned, but the glare of the sun on the white snow, gave an exceedingly trying light for the eyes. The shoot began at 1 P. M., Jacob Pentz being referee and Gus Greiff scorer. The entries were A. W. Money, of Oakland; M. F. Lindsey, of Hoboken; M. H. Ruppel, of Milford; Fletcher Walters, of Arlington; T. F. Morley, of Paterson; E. M. Cooper, J. Evans and J. Ward, of Red Bank; C. M. Budd, of Long Branch; Chas. Smith, of Plainfield; John Rothacker, of Morristown; John Riggott, of Rockaway; J. W. Hoffman, of German Valley; W. G. Hollis, of Kearney; E. Collins, of Hoboken, and H. A. Penrose of New London. The birds were a fairly good lot, some as good as any one could wish for.

The shooting of the day was done by two of the Red Bank men, Cooper and Evans, who killed straight up to the last round when no one else stood to kill more than 23 birds. On the final round Cooper killed, but Evans unfortunately (17) got an 18, which was a good result. He missed this giving him \$500 all by his lone self. Cooper getting first, \$150; while third, \$60, went to Walters and Hoffman. It seemed to be a good day for Parker guns, which won first and second moneys and divided third money with a Greener, and Walsrode powder also seemed to have struck a pace, winning first and second moneys, third going to Schultze and E. C. Had there been four moneys the fourth would have been divided by two Parkers and one Greener shooting American Wood and one man shooting Walsrode. In fifth place was a Greener and Schultze; sixth place, Baker—E. C. Smith—S. S.; seventh place, Smith—American wood; eighth place, Colt—E. C., three Smith guns and two shooting American wood; ninth place, Greener—E. C.

Among the prominent visitors were E. D. Fulford, F. P. Class, J. H. Keller, Neaf Appar, C. M. Hedden, J. L. Smith, Wm. Hughes, Dr. J. C. Knowlton, E. S. Meeker and Henry Wolf. The scores were as below:	
Money (Baker, E. C.).....	0120222211111110220202-20
Lindsey (Smith, Am. Wood).....	2020222222222202022021202-18

## TRESPASS.

IOWA sportsmen are reported to be dissatisfied with a trespass law which has just been enacted. Some go so far as to declare that the law will not be observed by shooters; that the courts will not uphold it, and that the next Legislature will repeal it. An examination of the statute, however, shows that it does not differ in principle from similar trespass laws which have long been in operation elsewhere. Its text runs:

SEC. 1. No person shall hunt, with dog or gun, upon the cultivated or inclosed lands of another without first obtaining permission from the owner, occupant or agent thereof.

SEC. 2. Any person violating the provisions of this act shall be punished by a fine of not more than ten dollars for each and every offense. But no prosecution shall be commenced under this act except upon the information of the owner, occupant or agent of such cultivated or inclosed lands.

Laws of like tenor, forbidding trespass for hunting on inclosed or cultivated land without first obtaining permission, prevail in Arkansas, California (certain counties), Delaware, Illinois, Indiana, Kansas, Maryland, Michigan, Missouri, New Jersey, Oklahoma, Ohio, South Carolina and West Virginia. In Kansas the prohibition extends also to "the traveled or public road that adjoins such occupied or improved property;" and in West Virginia under certain conditions it may be extended to unclosed tracts. In Maryland the trespass regulations are county laws and bear especially hard upon non-residents. Rhode Island limits the offense, to shooting at or killing game upon the land.

In none of the States named is it necessary to post lands or to give notice against trespass. Similar statutes, but requiring that the land be posted or that notice be given, hold in Kentucky (some counties), Maine, Massachusetts, Minnesota, New Hampshire, New York, North Carolina, Oregon, Washington, Vermont, and the District of Columbia. In many instances the provisions of punishment for violations are more stringent than in the Iowa statute.

The trespass law is based upon the principle that the possessor may control what belongs to him. If a man owns or rents a house, he may forbid people to come into it; if there is a yard around the house, he may keep them out of the yard; and out of his garden and cornfield and pasture and meadow and wood lot. His lands are his own; he has the exclusive right to their use and enjoyment and privileges, including that of taking the game and the fish found on them. This is law and reason and common sense.

For the most part, taking the country over, the shooting and fishing trespass laws are more honored in the breach than in the observance. As a rule, the sportsman with his gun or the fisherman with his rod climbs the fences from the fields of one owner into those of another, and makes his way for miles through lots and woodlands without ever thinking of himself as a trespasser or being

so regarded by the owners of the lands. Where the law is enforced some good reasons usually exist for applying it. The land owner may want the game or the fish for himself or for some one else; he may not wish to have Bob White's whistle silenced; he may have been tried beyond all patience by insolent and rowdyish gunners; he may dread having his horses or cows disturbed by the uproar of gunning; he may fear fires; in short, there are a score of reasons, any one of which may be sufficient for keeping the gunners out; and it is for him to decide this, and for them to respect his decision. This is the rule, and by it every self-respecting sportsman will be governed despite the fact that the trespass regulations sometimes cause unreasonable deprivation, minister to churlish selfishness, or fortify a dog in his manger.

While a trespass law reasonably applied is decidedly for the true interest of gunners and the game supply, there is nevertheless much of hardship in this statute which has been adopted in Iowa. The hardship consists in taking away something which through long custom has come to be regarded as a right. The Iowa sportsman has been accustomed to hunt over the fields of others, not in defiance of their prohibition but as a matter of course; and quite as much as a matter of course have the owners of the fields complacently permitted him to do so. Now the statute steps in to forbid the hunting custom of the country, declares it unlawful and renders the violator liable to prosecution and fine. This is a new and unwonted condition of shooting, to which the sportsmen of Iowa may find difficulty in accommodating themselves, but which in the end may not prove more burdensome to them than are similar laws to the sportsmen of other States.

## NETS AS NUISANCES MAY BE DESTROYED.

In commenting last week on the case of a netter who sought to recover damages from a New York game protector for destroyed fishing nets, we made reference to the Steele case in the Supreme Court of the United States, of which we said, "It yet awaits decision; we believe that the end will be to affirm the constitutionality of the statute." On the very day that this was written, March 5, the decision was given out, and it does sustain the law. We have procured the full text of the opinion; it is printed in our fishing columns, and will repay careful reading.

The case was that of the owners of certain fishing nets who brought an action against a New York game protector to recover the value of certain nets which as a protector he had seized and summarily destroyed. The defendant set up for a defense that the law gave him authority to destroy the nets and directed him to do so. The point at issue then was as to the constitutional power of the Legislature to authorize the summary destruction of unlawful fishing nets which it had declared to be public nuisances, the plaintiff contending that such destruction constituted the confiscation of property without due process of law. The Supreme Court holds that the Legislature has this constitutional power.

The decision is one which will be hailed with general satisfaction by all citizens, who as public officers or private individuals and members of protective associations are engaged in conserving the food-fish supply in inland waters. Those who have been most active in the suppression of unlawful fishing contrivances know full well the impediments that would be put in their way under any other system than this of the summary destruction of nets. On the final result we congratulate in particular the Jefferson County Fish and Game Association, to whose alertness and ability in the conduct of the case the public is indebted.

Last week we recorded the decision in a State Court of a case similar to this one. It is likely to be the last one that we shall ever hear of. Unlawful fishing nets are nuisances and as such may be summarily abated.

That the sale of game should be prevented at all times is something for which the controlling sentiment of the community may not yet be prepared, but the trend of opinion is surely in that direction. The principle is one which the most sanguine may not hope to see put into practical and general operation for a long time to come. And yet non-market laws are already in force in certain localities, notably in some New York counties. Wherever tried this remedy for over-killing has proved effective. Cut off the marketing of woodcock and grouse and trout, and the good results are at once visible,

## SNAP SHOTS.

REPORTS from the Great South Bay announce the reappearance this spring in those waters of canvasback ducks in considerable numbers. Some years ago these birds were frequently killed in the Great South Bay, although—for whatever reason—canvasbacks have never been abundant there as have redheads and broadbills. What this reappearance may mean it is hard to say, but it is probably a part of the general abundance this year of ducks everywhere. If one were to believe a New York paper, we should imagine the Great South Bay a marvelously favorable feeding ground for these birds, since those killed there are referred to as weighing 7½ lbs., or about three times what the usual canvasback weighs.

The Virginia Legislature is debating the wisdom of adopting a dog tax law. There are two sides of the question, one stoutly defended by the dog owners and the other advanced by the sheep raisers. The sheep men are fortified by statistics supplied by Capt. J. C. Featherstone, of the United States Department of Agriculture. The figures show that during the year 1892 10,546 sheep were killed by dogs in Virginia; the average value of the animals killed was \$2.55, and the total amount \$26,892.80. These figures are startling, but they fail to show the full damage done to the sheep industry by dogs, for this constant menace deters farmers from engaging in the business. The Department of Agriculture is authority for the statement that the sheep killing by dogs in Virginia is only less than that in Ohio, which State leads the Union. Common sense would dictate a suppression of the curs in favor of wool and mutton.

If there is any one thing that is calculated to make newspaper publishers dissatisfied with their lot and apprehensive of the opinion which some folks must have of them, it is to receive in the mail from time to time anonymous remittances of sums of money varying in amount from eleven cents to eleven dollars, with not even a decipherable postmark clue to the location or name of the senders. For newspaper publishers who receive these favors from unknown persons are aware that the senders, who have thus parted with their money but not with their names, probably are wondering why they do not receive in return the goods ordered, and are indulging in altogether unwarrantable suspicions concerning the integrity of publishers. It will readily be understood that against such suspicious the publishers have no redress. All they have is the money. All they want is the name of the sender.

A correspondent writes in our columns to-day of a game refuge which he has provided for ruffed grouse by the very simple means of posting a tract of land and keeping off from it all shooters at all times. This is an expedient which has been resorted to in other instances known to us with no less encouraging and satisfactory results; in fact we have known of wide territories from which, save for such protected refuges, the supply of birds would have been annihilated. In the particular case cited by our correspondent the motive of the game preserver was not a selfish one; and the thoughtfulness and providence shown by him are worthy of commendation and emulation.

These are the days when there is something in the air suggestive of trout streams. March 1 is the opening date in some States; but even where the law is not up until April fishermen have been whipping the streams and playing many a fine fish—in fancy. One advantage of the fishing excursion of reverie is that no rheumatic twinges ever ensue.

A reign of ruffianism has passed by in this city. {By a new statute the dogs of New York will hereafter be impounded by agents of the Society for the Prevention of Cruelty to Animals. The dog-catcher has had his day. The old system was fruitful of imposition, robbery, personal assaults, brutality; and was responsible for at least one murder.

It is curious that so many people who dabble in ornithology or entomology or mammalogy or ophiology or conchology or ichthyology use the word "specie" as if it were a singular of "species."

## The Sportsman Tourist.

### De Music of de Houn's.

I LIS'EN to de ribber  
As it hurries to de sea;  
To de gentle breeze a-singin'  
In de ol' magnolia tree;  
To de gurgle of de trout brook  
In de floods of airy spring;  
An' de music of de hedges  
When de birds begin to sing.  
But dey's a sweeter melody,  
Dat drowns all other soun's,  
It's dat noisy, joyous chorus—  
De music of de houn's.

Across de russet woodlands  
De mellow chorus swells,  
An' fades away in distance,  
Like de soun' of chiming bells;  
But it leaves de air a-tremblin',  
Like de music dat you bring  
When you softly strike de banjo  
Down on de little string.  
You kin talk of singin' angels,  
Wid dey harps 'n' gol'en crowns,  
But fo' me de sweetest music  
Is de music of de houn's.

THE GENERAL.

### DANVIS FOLKS.—XXV.

#### Friends in Adversity.

SAM wandered uneasily about in pursuit of work that had no purpose but to keep him from thinking. At last he shouldered the ox-yoke and started for the meadow. As he passed the hog pen he fairly resented the indifference with which the hogs were taking on fat for another man's benefit and begrudgingly threw them their accustomed largess of nubbins, though they grunted lazy recognition of his accustomed footstep. It put him more out of humor to see the contentment with which the oxen and cows grazed, jowl-deep, in the aftermath, and the sheep nibbled the pasture knolls, all indifferent to impending change of ownership, though they had been so long his daily companions. The old hound alone seemed sympathetic, walking at heel, spiritless and dejected, scarcely noticing the last night's fox trail that the reeking herbage still exhaled, and meeting his occasional glances with a wistful face more troubled than his master's.

The mood of nature was as little in accord with his. The sun shone out of the soft sky with genial warmth on woods and fields not yet quite stripped of painted leaves and green grass by the final desolating blasts of late autumn. There was a full measure of hearty cheer in the notes of migrant crows and other birds that delayed departure or stayed to brave the stress of winter, only the tri-syllabic plaint of the thistle bird, gleaning the ripe weed seeds, had a cadence of sadness and farewell.

"It's all the same to the airth an' the dumb critters who goes or who comes! All but you, Drive," he said, as he slipped the ox-bow on old Bright's burly neck and fastened it in the yoke and called Broad to take his place. "But I hope wuoever gits a holt o' you, ol' fellers, 'll be good to you an' the caows an' the ol' mare. I don't want you 'bused, ner the farm nuther."

He yoked the oxen to the cart and drove them out to the field for the last shocks of unhusked corn. The plow stood in an unfinished furrow among the stubble and frost-blackened pumpkin vines. Sam drew it out and heaved it upon the cart with spiteful energy.

"By, the gret horn spoon, I won't plow another furrer fer the Lord knows who," he soliloquized in a tone that accorded with the action, and with a long look as if bidding the familiar field farewell he hauled home the last load and turned the oxen loose.

He watched them wander off in search of the choicest feed and then set himself to husking, while his vagrant thoughts wandered in futile quest of a way of escape from the troubles which beset him. His eyes went over and over the familiar interior. It was hard to realize that the old barn was passing out of his ownership. Every nook and corner of scaffold, bay and stable recalled some incident of childish sport or freak of fancy, linked with the labors and thoughts of youth and manhood so intimately that their years seemed but as days, childhood and youth but parts of dawning manhood. The rudely carved initials and figures were translated again in their old significance, the scars, the knots, the contortions of grain took on again the semblance of men, beasts and birds, that had been realities to his childish imagination. All the familiar surroundings seemed too much a part of himself to go out of his life while he yet lived.

"Consarn it," he cried out impatiently, as he tossed aside a bundle of stalks, "my ideas runs wilder 'n a haoun' pup on a back track and never gits noverhes. I'll tell ye what, ol' dawg," addressing the hound curled up in the comfortable warmth of the sunshine falling on the barn floor, "we'll go off int' the woods a day, jest you an' me, an' see ef we can't git 'em straightened out."

Drive's tail beat a rustling response on the cornstalks and his sad brow was lifted in new corrugations of inquiry.

The shadow of a figure debased the gold of the floating moats and crept along the floor till it fell upon the rustling bundle on Sam's lap, and Pelatiah's lank figure materialized behind it. Drive wagged recognition and Sam turned a surprised face over his shoulder to welcome their comrade.

The simple greetings, "Why Peltier," "Wal, Samwil," expressed a deal of friendliness, but no more was said till Pelatiah, after the custom of such visitors, seated himself, drew a bundle of corn across his knee and began husking. For a while, there was a continuous rustling of husks, leaves and stalks, punctuated by the snapping off of ears and their sharp click upon the growing pile, then as the two huskers finished their bundles together, Pelatiah said, after much embarrassed clearing of his throat:

"I s'pose it's true what I hearn about that aire Bascom a-gittin' you into sech a mess?"

Sam nodded assent and Pelatiah continued, "I'm turrible sorry, Samwil, an' I wish't I hed the means to help ye mor'n what I hev, but I hev got some, which I want you to take an' use it."

He leaned far back, straightened his left leg, went

down into the depths of his trousers pocket and brought up therefrom a dilapidated wallet from which he took a small roll of bank notes and carefully counted them upon his knee with a frequently moistened forefinger.

"I hed consid'able over forty dollars 'at I'd saved up one way 'an' 'nother," he said apologetically, as he completed the counting, "but the fun'al, an' the darker's bill an' Hamner's took above half on 't. But I want ye to take this an' not trouble tu pay it back ontill things eases up on ye."

He stretched it out toward Sam with an awkward, bashful eagerness glowing in his honest face.

"Oh, Peltier, I couldn't," Sam protested, his voice choking and his eyes moistening, "I'm a thaousand times obleeged tu ye, but I couldn't take it."

"But I want ye tu, Samwil, 't aint much, I know, but it'll help over the pitches some, mebbey," Pelatiah urged. "I'm as 'bleeged tu ye as if 't was a thaousan' dollars, but I couldn't take it. I do know when I could pay you an' I haint a thing tu s'cure ye, ev'rythin' 's 'taiched up."

"I don't care when you pay me, I want you tu take it an' use it just as if 't was yourn." Pelatiah thrust the money further toward Sam's withdrawn hand. "I didn't s'pose you'd spleen agin takin' a leetle favor f'm me, Samwil, sen I've took so many f'm you," said Pelatiah in a grievous tone and still holding out the proffered loan.

Sam looked steadily into the earnest, kindly blue eyes and took hand and money in a warm, firm grasp.

"Ef you're goin' tu feel that way 'bout it I shall hafter take it, but I hedn't ortu."

"You hedn't ortu, you got tu," said Pelatiah joyfully. "It 'ould burn my pocket tu kerry it, an' you a-needin' on 't, so there!"

"Wal, ef you will hev it so, you will, but you got tu take a note 't any rate. Come int' the haouse an' I'll write one."

Pelatiah protested, but Sam was inexorable, and after counting out the loan carefully, pocketed it and led the way to the house.

"Bad luck is good luck, when it shows a feller who his frien's is," Sam said, laying a gentle hand on his young comrade's shoulder as they entered the door.

Long before the constable posted the notice of the sale in Hamner's barroom and Clapham's store, the news of Sam's disaster was spread through half the township.

Mrs. Purington waddled across the fields to offer the balm of condolence to the distressed family. The sound of her labored breath and ponderous step on the threshold as she assisted herself with a hand on her knee to surmount it and enter the door, opened to the Indian summer warmth, was the first announcement of her visit.

Faintly acknowledging the salutations of her daughter, Aunt Jerusha, Uncle Lisha and Timothy, she slowly lowered herself into the first comfortable chair, accomplishing the feat with a final bounce and exhaling a long sigh as if she were a slowly collapsing bag of inflated india rubber. Then she rummaged forth her handkerchief and bottle of hartshorn salts and fixed a tearful gaze on the little boy who sat among his abandoned playthings, staring in bewilderment at his grandmother's rueful countenance.

"O, you poor innercent!" she wailed, in a shaking voice, portentous of a lachrymal shower. "Little you know what's afore ye, a-sittin' there, playin' wi' your mother's clo's pins, which I gin her four dozen when she went tu haousekeepin' wi' your father, which I shouldn't think he c'd endure tu look at ye, ner her, a-thinkin' what he's brung on ye. Play wi' 'em while ye can; an' it don't make no diff'ence ef ye break 'em or lose 'em, fer 'taint likely she 'll hev no use fer 'em, wi' nothin' tu heng about, on'y the clo's on yer backs, which she can't 'thout all a-goin' tu bed. An' tu think 'at you was fetched through the whoopin' cough an' the measles wi' 'Hive surrup an' lobebe an' pennyrile tea, tu come tu this, which I gathered wi' my own han's, an' nanny-berries tu fetch 'em out, a-mussin' you an' comfortin' your mother, an' broke o' my rest, which I will continuer tu, whilst I'm g'n strench't."

She put her handkerchief to her eyes and tucked the smelling bottle inside it to her nose, making her snuffling sobs do double duty, while the object of her pity lifted up his voice and wept, whereunto Drive joined a sympathetic howl.

"Fer massy's sake, mother," cried Huldah, snatching up the child and wiping his nubby nose with her apron while she tried to comfort him, "what be you makin' sech a fuss about? There, mother's man, he stop a minute an' hear Drive sing. Just see what a haowdalo you've started. What's the use hev'n a fun'al afore anybody's dead?"

"It's allers the way," whined Mrs. Purington behind her handkerchief; "jes' as soon as ye try tu comfort anybody they git mad, stiddy o' bein' grateful one mossel tu folks a-toilin' 'cross lots tu console 'em, an' a-climbin' fences an' a-scozzlin' through wet grass. I do know why that rowen haint out, a ton tu the acre, an' 'de heart a-bustin' wi' sympathy, an' both feet a-soppin' wet, an' then hev it all took so ongrateful. An' Lisher an' Jerushy," making a blind gesture toward them with the smelling bottle, frugally stopped with her forefinger; "the haint nothin' fer them, as I see, but tu be heve on 't the taown."

"Good airth an' seas, Eunice Pur'n't! Ef I come tu that 't aint no killin' disgrace. Poverty haint no crime, an' I've allers paid my sheer o' the poor tax, an' ef it's my lot tu hev some on 't used for me I shan't consider it no disgrace. But the's lots o' days' works in me an' the ol' woman yit, afore it comes tu that."

"It does seem as if some folks hedn't no shame intu 'em," she said, mournfully; and Sam, entering just then, drew upon himself the consolatory stream.

"O, dear me, suzzy day!" she said, regarding him sorrowfully and reproachfully as she slowly snuffed the hartshorn. "I do hope, Samwil Lovel, 'at you reulize naow what I aller said an' Huldah's father, what yer goo' fer-nothin' huntin' 'ould come tu in the end. Huntin' an' signin' goes han' in han'. O, dear me, suz!"

"Wal, neow," Sam said in a conciliatory tone, "I don't ezactly see what my huntin' hed tu do wi' my signin' wi' that skeezuks. He never went a-huntin' 'long wi' me. Ef I was borned a ternal fool, I do know what the huntin', 'at come arter, hed tu do wi' t. Huntin' sharpens a feller's wits an' I'm most afeared I haint hunted half enough."

She groaned and went on:

"Haow in the livin' worl' anybody c'd trust that sof-

sopin' hippercrite of a Bascom 's more'n I c'n see intu. I allers said f'm the fust 'at he was a scallywag, an' wa'n't tu be trusted a inch. He went off a-owin' me myself tew dollars—twenty dozen aigs the' was—an' forty cents, 'cause I couldn't think o' nothin' I wanted jes' then, never mistrustin' nothin'."

"You must ha' ben a-huntin' that day, mother," Sam suggested.

"Me a-huntin'?" she snorted indignantly, "nob'dy never come to no good a-shoolin' an' a-traipsin' raoun' a-huntin' an'—"

"Taint no sech a thing, Eunice Bord'n." With the hoarse whistling voice came the sound of a footfall and the emphatic planting of a staff on the threshold, and Gran'ther Hill stamped in, glaring savagely at Mrs. Purington, who at once took refuge in her handkerchief and fortified herself with repeated sniffs of the hartshorn.

"It's good fer a man's body an' soul, tu go a-huntin' ef he don't hunt like a cussed hawg, a-gawmin' daown ev'rything he comes tu. A rest tu the body an' a diversion tu the min' fer sech as can enjy sensible diversion, an' haint got a appetite fer fun'als which I haint. Would n't never go tu my own 'f I c'd git red on 't."

The good woman uncovered one eye as this indirect thrust was delivered at one of her well-known weaknesses.

"The' can't nob'dy say 'at ever I went tu a fun'al on'y f'm a sense o' duty, aouten respect tu the deceased an' tu comfort the livin'," she protested in broken accents, "but I declare tu goodness Capting Hill, I won't never go nigh yourn."

"It's hopesin' I won't give ye no 'casion fer a c'nsid'able spell yit, Eunice," said the veteran, smiling grimly, "but I didn't come here tu jaw wi' women. I come here on business wi' Samwil," and he turned toward him without the softening of a line in his stern old visage.

"Hunters is some like sogers in hengin' together, an' I heng tu you, not 'at you're much of a hunter but ye would ha' ben ef I'd hed the bringin' on ye up, but you haint tu blame fer that. I've jest hearn 'at you've got yer foot into a reg'lar bear-trap that blasted Bascom sot fer ye. That comes o' bein' tew ternal clever an' good-natered, which it is the on'y fault o' hunters, an' what allers aided me. The idee is, naow, tu git ye aout on 't, an' I come over tu tell ye 'at I've jest drawed my year's pension, namely, ninety-six dollars, nine-ty six dollars in money, an' I'm goin' tu let ye hev it long as you're a min' tu, 'thaout use, twenty year, mebbey. I shan't want it till I git kin'e ol' an' gin aout."

The while he spoke, Gran'ther Hill drew out a tanned heart-case from his pocket and took out of it a roll of crisp new banknotes which he now began to count out on the table, and having laboriously completed the unusual task, shoved them toward Sam.

"I thank ye more'n I c'n tell, Cap'n Hill," Sam said in a shaking voice, "but I can't take it. I can't give ye no s'curity, an' my note haint wuth the paper it's wrote on naow. I couldn't take it, Cap'n."

"Damn the s'curity. Gim me yer dawg. Ish'd like tu own a ninety-six dollar haoun' dawg. Come, ye got tu take it, Sammy."

Sam shook his head. "No, Cap'n, I can't take it naow, but I'll tell ye what I'll do, if wust comes tu wust, I'll ask ye for 't, an' I'm as 'bleeged tu you as if I hed the money in my pocket," and he thrust the notes back into the veteran's unwilling hand.

"Wel, ef ye won't hev it no other way, so be it," he said, returning it to the heart-case and that to his pocket.

"I don't see no way," whimpered Mrs. Purington; having regained her speech and improving the first opportunity to exercise it, "no way but fer you, Huldah, tu take Bub, an' come hum till things gits settled. The'll be turrible onpleasant things 'at you c'n jest as well git red on. The'll be the vandue, which the hull haouse 'll be run over wuss 'an a donation party, thank goodness, they won't hafter be fed—sheriff's vandue—a-peekin' intu all the charmbars, an' a-trackin' I'm sullen tu garrit, fer there'll be mud, the'allers is, an' a-seein' your vallerdest things sof' afore your face an' eyes, fer mos' nothin'. You take Bub an' come hum."

"Mother," Huldah's voice was tremulous with suppressed indignation and her face flushed with anger, "What sort of a fairweather wife du you s'pose I be, tu sneak off an' leave my man tu stan' the brunt on 't alone? It was fer richer er poorer 'at I promised tu take Sam, an' what I promise I stan' tu, jes' as he does. What hits one, hits both, an' the heft one kerries, t'other takes the' sheer on."

"I do know but you'd better, Huldah," Sam said, "It'll be almighty onpleasant for ye here, as yer mother says."

"I've gone snucks wi' you in all the pleasant things we've come tu, an' so I shall in them that haint." She tossed the boy upon her shoulder and took him to his father, into whose arms she thrust him, where, clinging to Sam's neck, he cast furtive wondering backward glances at his grandmother's woebegone face and the grim visage of Gran'ther Hill.

"Bub haint a-goin' tu leave his daddy in the ruts, is he, nor his mother nuther?" she said, kissing his plump cheek.

"Neow then, Sammy," said Gran'ther Hill, starting in his chair with a sudden recollection, "if you've got any cider 'at's good fer the time o' year as it was this time las' year I want some on 't, fer I'm nigh about kiln-dried wi' talkin' an' hearin' talk. Light a light an' I'll go ri' daown sullen wi' ye, fer Lisher and Timmerthy don't need none, 't aint nourishin' 'nough fer sech ol' critters. Why, they've gone!" as his eyes sought the corner where they had last been. Having received all they desired of Mrs. Purington's consolation they had retired unnoticed to the shop.

As Gran'ther Hill carefully descended the stairs behind Sam, placing each foot twice on every step, he ground his gums till nose and chin met, and whispered hoarsely:

"By the Lord Harry, Lovel, I'll give ye the \$96 aout an' aout if you'll jes' le me choke that mother-n-law o' yourn one minute."

ROWLAND E. ROBINSON.

#### A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$8 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$4).

# Natural History.

## MAN AND SNAKES.

Editor Forest and Stream:

Brother Kephart has "come back at me" in such a graceful manner in the snake issue that I feel impelled to send him a brotherly greeting and shake through your friendly columns. I had no intention, however, of exercising such hasty judgment as to place him in the category of game butchers, etc., but merely used his snake incident as a text for a sermon on a subject of much interest to myself, and, I hope, to other humanely disposed sportsmen.

Mr. Kephart with considerable adroitness places me in a very delicate position as between the serpent and the ladies. A gentleman of the name of Adam got into trouble in a somewhat similar conjuncture many years ago. If I have a greater weakness than for snakes it is for the ladies, and if, as Mr. Kephart intimates, the same old grudge continues to subsist between them, rendering all hope of reconciliation impossible, then I would have to separate them. I should first have demonstrated the snake's harmlessness, and if the ladies still declined to extend him social recognition on the picnic grounds (or other grounds) I would have removed him to a safe distance. In the original episode between the serpent and the women, it was the latter who had to retire and leave the serpent in possession of the picnic grounds. But in this more fortunate epoch the ladies are the undisputed presiding genii in all the Gardens of Eden that serve to brighten this otherwise unendurable "footstool," and the snakes must go if they demand it.

I will relate an incident *apropos* to the picnic occurrence. I once rescued an innocent snake from the angry attack of some Irish laborers. The snake was of a species which is very common in this country, of a general olive color, with shadings in large pattern, long and slender in shape, and which, for want of a better name, I call the bird snake, because he is a great climber. I picked him up by the head and tail, and placing him at full length on the trunk of a large tree, he very quickly climbed up out of danger. By the way, the revelation of Capt. Gallup, that snakes have feet is a very interesting one, if he has made no mistake about it.

Mr. Kephart suggests the possibility of a snake getting himself entirely "out of place" by running up his trousers' leg. I have an incident to meet that suggestion, showing the complete compatibility of such a situation. I was once walking in the suburbs of a town with a lady friend, and seeing a small snake coiled on the roadside, I placed my foot lightly on his back. In a few moments, raising my foot to see how the snake was faring, I discovered the end of his tail sticking out from the bottom of my trousers, while his head was about my knee. As this happened to be a garter snake, I recognized the appropriateness of his familiarity. I clasped my hands about my leg, and a slight kick brought him out. The lady, strange to say, did not "take a fit," nor make any demonstration, but viewed the whole proceeding very coolly.

Last summer my attention was attracted by the scolding of several bluejays about the roots of a tree near my office window. Going out to the tree, I discovered what I expected, a bird snake among its roots. I picked him up, and carrying him across the street to a Jew store, I placed him in the show case among the "fine jewelry," cravats, collars, etc. The Jew was delighted with his novel acquisition, thinking the snake would prove a "taking card," and attract customers. But he afterward told me that "de niggers wouldn't come in de store wid dat snake in dere," and so he sent his snakeship to a saloon near by, but he proved to be *non grata* to the saloon-keeper also, who dispatched him.

A word about the "glass snake," alluded to by Mr. Kephart. I was for a long time skeptical about the existence of such a creature, classing him along with stinging snakes, ghosts, etc., but did conceive that there might be a snake with an extra long tail of very brittle constitution, like that of some lizards, which theory was confirmed not long ago by seeing a specific description of a specimen by a writer who described what he himself saw, and who impressed me as being an accurate observer. The specimen, as I remember the description, was about 20in. long, and considerably more than half its length was tail, consisting of thin transverse laminae, with a very small and tender vertebral column in the middle, which readily separated, from a slight blow with a switch.

COAHOMA.

CLARKSDALE, Miss., March 6.

Editor Forest and Stream:

In his museum in St. Augustine Dr. Vedder has several specimens of the "glass snake," which is a lizard (*Ophiosaurus ventralis*), known to naturalists as the serpent lizard. It has no legs and its locomotion is that of a serpent. Back of the vital parts its body is very brittle, owing to delicate articulation, and when seized by the tail or the after part of the body it breaks in two. Dr. Vedder says that hawks sometimes strike the glass snake just behind the stomach, and make away with what they have seized of the creature; but what is left is after all the whole snake except its tail. When broken in this way it grows a new tail, but only an inch or two long, and of perfect taper. The glass snake is very slender; some of those shown by Dr. Vedder are from 18in. to 2ft. in length.

E. H. R.

Editor Forest and Stream:

I have been somewhat worked up by the various articles recently in dear FOREST AND STREAM on the snake question. "Coahoma" evidently knows what he is talking about, though I do not agree with him entirely. But I did not suppose any one living in a snake country doubted the ability, especially of the black species, to climb trees. Of course they are climbers, and pretty good ones, too. How they do it I do not pretend to demonstrate. The first big blacksnake that I remember to have seen in a tree in my boyhood days was on a limb of a small tree, some 8 or 10ft. from the ground. My attention was called to the spot by the twittering and fluttering of a bird, as though in distress. Upon approaching and gazing through the bushes, which were quite thick thereabouts, I discovered a large snake coiled about a limb, his head erect, his eyes glittering and mouth open, facing a small bird on the same limb and but a few feet away. The bird

seemed fascinated, charmed, I verily believed, by the black scoundrel, and could only flutter and feebly protest. Had I not interfered, the little thing would have soon fallen a victim, and the nest of little ones would have soon followed. I popped the robber over, when the little warbler immediately fell to the ground, where for a few moments it fluttered feebly, then seemed to gather strength as the charm passed off, raised its little head, shook itself and was off to a neighboring bush. This was a blacksnake nearly 4ft. in length.

I have killed many since, some much larger. I never spare them. Why, it is as natural for a boy to hate a snake and kill them as it is for him to eat molasses candy or go a-fishing. It is inherent and requires no education. Does it not say, "And the seed of the woman shall bruise his head with his heel." It is born in us. What singular tastes some people have to tolerate or love a snake when even the smell of the little garter or grass snake, the most harmless of all, is sickening. After handling one the odor will hang to your fingers all day.

As to tree climbing, do you not recall the anecdote of Audubon? I believe its authenticity has never been questioned. Upon one of his excursions he discovered the hole of a flicker or yellowhammer (highhole we used to call them when a boy), on a dead tree some 40ft. from the ground. The naturalist was soon up the tree, and thrusting his hand into the hole for the eggs or young birds, when with a yell he let go and came straight down the 40ft. to the ground. His attendant rushed up to him exclaiming, "My dear master, are you hurt?" Upon gathering himself up and giving himself a shake or two, he replied in his broken English, "No, but if you want see one scare snake, look in dat hole." He had put his hand on a black fellow enjoying his dinner of the eggs or young. A surprise probably to both parties.

I like "Hermit's" article and especially Mr. Beal's. It is natural to hate a snake, and I will kill them whenever I come across them, and will go out of my way, and even miss a shot at grouse to lay out a black one—one of those deceitful, merciless scoundrels, what good are they any way? They are not very good to eat, though the Indians, some of them, think so, and from curiosity when sojourning with them I have tasted roasted rattlesnake; which is a rich dish with some tribes. The meat was white and very sweet, but I don't hanker after it. But a black-snake or a water adder, augh! If we wish to preserve the eggs of our quail or grouse or even of the little warblers that make our glens and woodlands vocal we must declare war upon the crawling gormandizers. We can't have both. There is an irrepressible conflict and it is the choice between the two. For me, give me birds around my woodland home, and not the sneaking, slimy woods pirate. All things living are created by Providence for some wise purpose, we are told, even mosquitoes and roaches. Nevertheless for our own protection and comfort we kill them. Hence I am down on snakes.

JACOBSTAFF.

[Mr. Kephart's original inquiry, in our issue of Jan. 27, was not as to whether blacksnakes climb trees, for we all know that they do, but "how does a snake descend a nearly vertical surface so very slowly without perceptible muscular movement in a perfectly straight line, when its belly scales slope the wrong way for the trip?"

## Albino Specimens.

CINCINNATI, O.—I read an interesting account in a recent FOREST AND STREAM of an albino redwing blackbird, and the writer wishes to know if any one knows of another such specimen. I never heard of this freak before occurring in the redwing, although it is just as apt to happen in them as in any other kind of bird, animal or human being. Albinos should be considered rare and procured and preserved whenever possible, and I here suggest that the work of preserving be given to a reliable taxidermist, as another albino of the same type or species may never be procured again. We have in our Cuvier Club albinos, among which is a purple grackle (crow blackbird). The top of head, back of neck, back, tail, long feathers in wings and toenails are white; bill, throat, breast, legs and part of the wings black as in the ordinary color.

Another is a robin which is a perfect albino. Another is a red-tailed hawk, a perfect albino excepting the eyes which I believe are black. Two quail are not white but between pink and light brown; the heads are a trifle lighter in color than in the original type. Of two crows, one is snow white with pink eyes, and the other is a more soiled specimen, and the eyes are black. We also have albino squirrels which seem to be quite common. I remember a perfect albino squirrel whose home is under the eaves of the Cleft House at Devil's Lake, Wisconsin. This one was a very tame one and a little tapping on the tree near the house would bring him down and he would not refuse to take nuts from one's hands.

F. B. MAGILL.

## "The Leaping Ouananiche."

THE ouananiche is rapidly coming into prominence, and is attracting the attention of anglers everywhere. Little has ever been published concerning where, when and how to catch this fish; and to answer the questions constantly being asked on all sides regarding it, Mr. Eugene McCarthy has written a brochure, which will be ready in a few days. Paper, price 50 cents. Published and for sale by Forest and Stream Pub. Co., New York.

## Where to Find Game.

Where to find game is oftentimes a perplexing question. The sportsman who strikes a good spot generally keeps the information as close as possible, in order to enjoy exclusive privileges.

Along the line of the Baltimore & Ohio Railroad in Virginia and West Virginia, such places are numerous, and it is remarkable how little they are known. The mountain streams abound in game fish. The South Branch of the Potomac is considered the best black bass fishing stream in America, the Cheat, Youghiogheny, Potomac and Monongahela Rivers are all excellent fishing streams. The hills and valleys adjacent are fairly alive with game—partridge, wild turkey, grouse, pheasant, wild pigeon, quail, rabbit and squirrel are plentiful, and in the back country thirty or forty miles from the railroad, deer and bear can be found.

Good hotels are convenient, and horses and guides can be secured at reasonable rates. For circular showing fishing and gunning resorts reached by the B. & O. R. R. address Chas. O. Scull, Gen'l Pass. Agent, B. & O. R. R., Baltimore, Md.—adv.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

# Game Bag and Gun.

Communications for publication relating to business should be addressed to the Forest and Stream Pub. Co. If addressed to an individual they will be subject to delay in that individual's absence.

## TWO DEER WITH ONE BULLET.

READING an article entitled "Strange Coincidences" reminded me of two curious double shots, one of which befel me while hunting and camping in the Adirondacks. We had been fairly successful with the rod and were in no need of venison, as the two hams of a fat young buck still remained to satisfy our present needs. For several days we made no effort to replenish our larder in that line of goods until the hams had almost gone and the dismal prospect of salt ham and pork made fresh meat a necessity.

One evening, after many previous unsuccessful ones, while my friend and the guide had departed down the river with the boat, I set out to look at an old skiff on the bank, with the prospect of doing a little floating on my own account. I waited until the two hunters got well started, as I knew they would only ridicule the notion of my trying to handle the paddle and rifle alone. Taking my Winchester I started on my lonely way toward the landing, it was about a mile distant and I hoped to get there, look at the boat, and if it was all right return and get the lantern, etc., before dark. I made the trip in a half hour and found the old boat a useless hulk and in such ill repair that I gave up all hopes and started back to camp. Dusk had already advanced sufficiently to make objects rather indistinct and my progress through the brush was by no means noiseless. In one place the trail led through a patch of moss-covered tamarack and there silence reigned supreme. Just as I turned a sharp corner around a huge boulder, three large gray objects sprang from the brush with a crash, not thirty feet away. All was indistinct, but during that exciting moment I managed to recover myself enough to draw a bead on one of the fleeting objects. A puff of smoke and all was over. I ran forward eagerly to see what damage I had done, and to my unutterable surprise found a four-year-old buck lying over a log with a .45-70 through his sleek blue neck. After examining my trophy carefully I came to the conclusion that this was not the deer I had shot at. Of course this was by no means flattering to my marksmanship and sorely puzzled me. I examined all the tracks with great care and found that three deer had broken cover at my approach, and what was my astonishment when I discovered another track running horizontally with the one of the deer I had shot. Following this up a short way, I noticed spots of blood on the moss, and could hardly believe my eyes when I almost stumbled over the carcass of a doe shot clean through the heart. Gradually things unraveled themselves. Evidently I had shot at the deer running nearest to me, and that was the doe. The uncanny bullet had penetrated her fragile frame and struck the buck which was running horizontally with her on the further side. Of course I found him first, as the shot broke his spine and he fell in his tracks instantly.

I had a great laugh on the hunters who returned unsuccessful and almost frozen, and of course they would not believe what I said until they had seen the deer. This is the only instance that I know to be true, except one other, where a man has taken a quick shot at a bounding deer and had the luck to kill not only the one he fired at but a second also with the same bullet.

G. STANTON.

WASHINGTON, D. C.

## YELLOWSTONE PARK NOTES.

LAST month Capt. G. S. Anderson, superintendent of the Yellowstone National Park, sent out a party of scouts to the buffalo country in Hayden Valley to learn how the game was wintering.

The party left the post on Feb. 10 and got back on the 20th. They encountered bitterly cold weather but had few snow storms, and no trouble in getting about. They saw 50 elk on Swan Lake flat, and at the Yellowstone Cañon counted 300 on the other side of the river. About 200 were seen on Pelican Creek. Of buffalo, they saw 12—4 of them calves—on Astringen Creek, a branch of Pelican; 45 in the Hayden Valley; 9 of these being calves; another bunch of 40 with 7 calves, another of 23 with 4 calves, and two little bunches of 7 and 6 each. They also saw two buffalo on Nez Percé Creek and saw signs of more. From all this it is apparent that the buffalo are more scattered this winter than usual, and that a good many of them are on the east side of the Yellowstone River. This goes to show that they are wintering well, since when snows are deep they are apt to collect in the Hayden Valley. Besides the elk mentioned, above 300 were seen on Sour Creek and 18 in the Hayden Valley.

A week or two since a despatch appeared in the New York papers stating that poachers had killed in the Yellowstone Park a whole herd of buffalo, that the poachers had been captured by the troops, and that Capt. Anderson had them in the guard house at Ft. Sheridan. This on its face appeared to be a fake, for any news from the Yellowstone Park would not come to us from a point so distant and to the west as Boise City, Idaho. There is not the slightest reason for believing that there is any truth in the despatch.

A rumor was recently current at Livingston and Cinnabar that two men whom Capt. Anderson had in the guard house in December, have gone out to the Hayden Valley for buffalo, but nothing definite is known about this. There is probably nothing in it. An old offender is known to have recently been over on Pelican Creek with a toboggan. He was not seen, but some of the soldiers got on his trail and followed it out by Soda Butte, which he passed in the night and then went on to Cooke.

A snowshoe party from Fort Sheridan crossed over Mount Everts on snowshoes about the middle of February and saw 103 elk, besides a very large herd which they could not count more than a mile distant from them. They also saw 33 mule deer, a band of sheep very close to them, but most of them over the hill and out of sight, and about 250 or more antelope.

A few days after this the same party went through the Swan Lake basin on snowshoes, and found it full of elk which were busily employed digging at the snow to get at the grass, and seemed in good order.

## DIXIE LAND.—II.

(From a Staff Correspondent.)

## The Welsh Rarebit and the Quail Shoot.

As we were saying about the Welsh rarebit at Little Rock, Mrs. Irwin announced that if Mr. Irwin and I would come back from our quail shoot at some sort of decent hour in the evening, she would do us the favor of building for us, in her new chafing dish, and in her own parlors, a Welsh rarebit which would make our hair curl, or words to that effect. We promised faithfully to be there, and the story of how we weren't there has a great deal to do with our quail shoot.

"When Col. Felton of Chicago, and his friend, Mr. Jacus of Buffalo, were here last winter," said Mr. Irwin, "we got fair shooting one evening about three miles out of town, but I don't think there are so many birds there this winter. We will go down to Mr. Pemberton's plantation, about ten miles down the river. I haven't seen the old gentleman for some time, but he has invited me to come, and I have been wanting for a long time to go out and call on him. It's a longish drive over a sand road, so we'll have to start early in the morning."

## A Mysterious Voice.

It was a little after 4 A. M. when we ate breakfast at a neighboring all-night restaurant and began our journey in the misty gloom of the winter morning. We jogged along slowly with nothing to entertain us until just about half an hour before dawn, when we were passing a little clump of negro cabins gathered along the roadside. Here we were startled by hearing a deep voice, apparently of one in sore distress, which came from one of the tumble-down shanties. There was no light in the cabin, and it was barely gray dawn outside, all of which made the sound of the deep-toned voice the more mysterious and thrilling.

"Hold on, Mr. Irwin, there's some one getting hurt in there," said I. "Let's stop and take in the fun." So we pulled up, not ten feet from the gate near which the cabin stood, our wheels making no noise on the damp sand.

"Oh, Lawd! oh, bressed Lawd!" said the deep voice, most dismal and gruesome in the uncanny twilight. Not another sound came from the house, not a motion as of one coming to the aid of the sufferer. We held our breath in expectation.

"Oh, Heavenly Father!" resumed the voice, and then fetched a groan you could have heard forty rods. Seeing something peculiar on Mr. Irwin's face, I sat still. The voice broke out into an incoherent, jumbled chant, a singsong of half barbaric but certainly fluent exhortation.

"Send Dy powah," chanted the voice, "roun' de worl! Make de han' o' grace an' chasetisemen' felt everywhah! Yea, everywhah let light dose shine throo' ther veil er niquitousness. Pejuce Dy token, Lawd, an' make these yer people feel ther sign!"

"Get up, Bill!" said Mr. Irwin, irreverently, and we drove on. "Do you know what that old fellow was doing?"

"Why, I reckon he was praying," I replied.

"No he wasn't. He was just rehearsing his prayer."

"Meaning—?"

"Don't you see that building there with the spire on it, just back of his cabin? Well, that's a nigger church and this old fellow is no doubt the preacher. It's safe to say his wife and about eight or ten children are asleep yet in that same cabin, and he gets up early to practice on his prayer while there's no one around. These niggers are the greatest grand-stand workers on earth. When this old fellow lights in among 'em at their next meeting he'll have a prayer so fervent and fluent that he'll be congratulated on it, and if you heard him you'd think every word was spontaneous and sincere. They've got to have religion and they got to have it their own way, and I reckon our friend there believes there is no excellence without great labor."

This was a new experience for me, and so odd and unreal that I can shut my eyes and see the whole dim scene again, and hear the musical intoning of the old black hypocrite in his mutational "rasslin'" as plainly as if he were at hand.

## More Negro Nature.

Three-quarters of an hour later we had another experience of negro nature. We drove down into the sandy flat along which the Arkansas River rolled its turbid flood just a little while after daybreak, having timed our trip so as to catch the first boat of the ferry by which we were at this point to cross the river. The ferryboat, a truly nondescript craft, operated by steam generated in a risky-looking donkey engine, was operated by a negro captain and crew. Unfortunately the boat, the captain and the crew were all on the other side of the river from us, a quarter of a mile away, and there they stayed, while for nearly an hour we got along as best we could in the morning wind that swept up the valley. All our hails were answered to the effect that the boat was "Comin' right away, boss," and when finally it did churn itself across those niggers thought they had been hurrying.

## At the Plantation.

Across the river we had only a mile and a half of our journey to compass, and this we found led through a wide bottom covered on the one hand with great trees and upon the other with wide cotton fields. At the dividing line stood Mr. Pemberton's plantation house, or rather houses, for there was quite a group of smaller buildings about the residence house. Many negroes and some dogs were on the outposts as we drove up, and dominating these appeared the tall form of the planter himself.

"Come in, come in," said he, "and sit by the fire. Have you had your breakfast?" We told him we had, and that all we needed was his consent and company for a try at a few of his birds.

"Well, you'll have to eat another breakfast," said he, and Miss Pemberton insisting likewise, we yielded and did so very cheerfully. This gave me a chance at four square meals and the Welsh rarebit that day, so I had some hopes of being able to get the best of my awful appetite.

"Sit down now and take it easy," said Mr. Pemberton after breakfast. "The niggers have put your horse up and there's no hurry about going out to kill those birds. They'll be there when we get ready, and lots of 'em. You're never going back to town this day, I'll tell you that right now."

"Oh yes, we must," said Mr. Irwin, "my wife will be expecting me back."

"Well, she won't see you," said our host, calmly, as he lit his pipe with a splinter at the open fire. "You needn't think we haven't got any meat and bread in the house, because we have got a little, and you're welcome. You haven't been out here for three years, and your friend never was here at all before. He mustn't come all the way from Chicago down here for a little shooting, and then go back the first day he gets here. He'd say we turned him out. No sir, you'll never get away till tomorrow, and maybe not then."

Mr. Irwin smiled at me and gave up the unequal fight, though still verbally protesting he must go. "Well, how are birds, anyhow?" he asked.

"Thousands of 'em," said Mr. Pemberton, "and I'm mighty glad you came. I've got two of the best dogs on earth—you can't beat 'em anywhere in the world. My pup Pat has the finest nose a pointer ever did have, and Grover—you know he's a brother to your dog Jack, that I gave you—well, he's so much better than Jack that I feel sorry for you. If you came here oftener than once in three years, I might give you a good dog, some day."

"That's all right," said Mr. Irwin, "my dogs have run all the way out from town this morning, but I'll bet you'll want to tie yours up before mine get through with them." And so on, and so on; for these two always had wordy wars, the "old man," as Mr. Irwin called him—for Mr. Pemberton was in the three-score neighborhood, though still very erect and vigorous—being an unmerciful guy, as I learned later.

I ventured to ask how far out we would need to walk that morning, and Mr. Pemberton replied:

"Walk? Why, we won't walk at all. Young man, where were you raised? We'll ride to our shooting, and we'll ride when we shoot. Didn't you ever see any good shooting from horseback? Well, we'll give you a touch of that if you like."

Sure enough, after a time the colored boys brought three fine saddlers up to the gate, and filling our pockets with shells, and taking along a further supply in a saddle-horn bag, we set out at a canter through the wood.

"Isn't the old gentleman a fine horseman?" said Mr. Irwin to me, as we both fell back together.

"I was just about to mention it," said I, looking at the easy erect figure on the big black ahead of us. Indeed, I do not think I ever saw a better horseback figure in my life, and since I returned to the city I have often looked with pity at some of the fancy boulevard equestrians, wondering how they would feel if the unconsciously graceful and masterful seat of such a born horseman should appear among them.

## Among the Birds.

We were only about half a mile from the house when we struck our first bevy, and soon all four of the dogs were roading and pointing running birds on a cotton field. From that time on until evening we were hardly out of sight of the game at any time for longer than a few minutes. Quail shooting I consider to be the most enjoyable and sportsmanlike of any American sport with the shot-gun, and here we had it in quality not to be surpassed anywhere on earth. True enough I found Mr. Irwin's assertion that up till that time I had never known what quail shooting was. No Northern shooter can form any just idea of the sport, and I confess I was astonished. Here was a country perfectly level, mostly of grass-bordered cotton fields, with corn, sedge and thicket in abundance, but with none of the exasperating features of the Northern tall cover. In the North you find your bevy, say, in the open, and it takes to the timber; then you have hard finding and hard shooting. Here nearly all shooting was in the open and consequently very easy, for a quail is not a hard bird to hit when you get it out where you can see it. All the surroundings were easy and pleasant, and there were birds, birds, birds everywhere! I never saw so many. We kept track of twenty full, big bevies, though there may have been more, and as the day was in January, and as we began at about 10 or 11 in the morning and stopped before dusk, it may be imagined what the stock of game was. All alternation of shots over points was forgotten, for the four dogs kept us all as busy as we liked. And four mighty good dogs they were, too, with not a poor nose in the lot, and displaying all those steady qualities which a dog will acquire from hunting where there is plenty of game to take the edge off his eagerness. Everything was perfect, and I think mortal man will never have any more fun than we did. For the first time I saw some of the Southern method of shooting from horseback, and my belief in the powers of a good shot to make a bag that way rose very rapidly. Mr. Pemberton told me that when he was in form (he had had an attack of grip) that he thought he could kill practically as many birds from the saddle as he could from the ground. In this shooting, of course, much depends on the horse. A well-trained horse is perfectly quiet and undisturbed by the shooting. The dogs are trained in retrieving to stand up with their front feet on the saddle skirts and deliver the game without the rider dismounting at all.

It would be impossible to describe in detail a day's shooting like this, for there would be too much detail, too many finds, too much good work, too many fine shots, to remember, let alone describe. I know we did not work to make a great bag, but we had a magnificent bag that evening none the less, about 75 birds, if I remember. Mr. Irwin accounted for the most of the birds. Mr. Pemberton and I found the weather pretty warm, and along in the middle of the day took it easy, doing more talking than shooting, I fear. It was Mr. Pemberton's especial delight to chaff Mr. Irwin, and if the latter ever missed a shot, woe to him.

"Well, Joe Irwin," he would hear, "I tell you what I think. I think you'd better put up your gun and go back to the house and send one of the bigger boys out to take your place. Why, if I shot as poor as you do, I'd be ashamed to leave town, I would indeed. Seems to me like you shoot poorer every year I know you."

The humor of this was that Mr. Irwin really was shooting very well indeed, as he always does, he being one of the best field shots I ever saw, and moreover possessed of the ardor and tirelessness which do so much toward "making a good bag." But Mr. Irwin was not alone the subject of our jovial host's berating.

"Walk in there and shoot, you newspaper man," he would say to me when one of the dogs had a point. "I'll bet you can beat Joe Irwin, though there's no glory in that. Shoot now, and if you miss that bird we'll throw you in the river."

Of course under such circumstances one had to kill his bird, and this being done, it was a pleasure to hear the old gentleman say with a suppressed snort of laughter:

"Humph! Well you did happen to hit one, didn't you. I'm glad of one thing, and that is that your paper didn't send a blame little dude down here to represent it. Say, aint most all newspaper men dudes?"

I assured Mr. Pemberton that FOREST AND STREAM didn't have a dude on the staff, which seemed to please him a great deal, but didn't take the edge off from his appetite for fun. For instance, when we stopped at a small and very reluctant well at one of the bottom cabins, I asked him if the water had any malaria in it.

"Full of it," said he, cheerfully, "plumb full of it. If you drink any of it you'll have the shakes before you get to town. Better not drink any." Though all the time he knew I was bathed in perspiration and perishing of a thirst which not even an actual chance at malaria would have deterred.

And so our pleasant day wore on, full of fun and jollity, and points and kills, and with a bag which toward evening was heavy enough, in all conscience, for the most sanguine or sanguinary sportsman. In the twenty bevies of which we kept track there were probably 300 birds at least, for the bevies had not been broken up and were very large. Of course, we put up many birds the second and third time, and in fact had the whole country full of scattered birds. Two-thirds of our day was put in on a little strip of country, perhaps three-quarters of a mile long by half a mile wide.

All this part of Arkansas is full of cockleburs, which grow in rankness and profusion unknown in the North. It was easy to understand the local preference for the pointer over the setter. Indeed, it would have been fairly inhumane to put a setter into some of the burr patches we shot over, to say nothing of the labor of combing him out at night.

As my friend had predicted, we did not leave for town that night, Mr. Pemberton rebelling at all mention of it. We ate a supper which I wish I could duplicate in Chicago, and at about the time Mrs. Irwin was getting her chafing dish ready for the Welsh rarebit which should console two hungry shooters, the said two hungry shooters were basking in the warmth of Mr. Pemberton's fireplace, with no messenger to explain their delinquency.

In the morning we put in a little time along the road on our host's plantation, and picked up a few more birds. Mr. Pemberton accompanying us well on our way. We could not induce him to take a bird for his own use. "I could always get all I wanted," said he, "but they're not good to eat. Same way with a duck. A duck is too muddy-tasting for me to eat. If you want something fine just take a young cottontail rabbit." Accordingly, the last we saw of our hospitable friend, he was making off at a hard gallop across the fields, the saddle skirts of his big black saddle covered with cottontails we had shot along the thickets. And all I hope is that I may some day hand him up another, and see the smile of supreme content with which he will receive his favorite game—cottontail, in the midst of millions of quail!

Mr. Pemberton told us that the country we shot over was not long ago full of deer, turkey and bear. The former were pretty well cleaned out, and for bear, he thought one would have to go to the rougher hill or swamp country of the State. We had many a story of the old bear-hunting days.

Mr. Irwin and I were eighteen hours behind our engagement when we drove up to the Richelieu that day, to discover Mrs. Irwin sitting with the ruins of a Welsh rarebit about her and a look of reproach upon her face.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

## IN WEST VIRGINIA COVERS.

WHEELING, W. Va.—The close of the year found our covers depleted of quail. Last night whole coveys were found under an icy crust that they could not break through. In fact they were practically exterminated. A few solitary birds were heard whistling about the fields last summer. In the fall we failed to find more than one covey. Captain Booth, of the steamer Hudson and I hunted the Tomson and Johnson farms, the largest individual estates in the valley, and failed to find a single quail. Years ago these magnificent farms yielded from thirty to sixty birds in a day's hunt. Imagine our feelings, as we sat on a rail fence after the day's tramp with a couple of tired and disgusted dogs at our feet, and recalled former hunts in the halcyon days. Our day's hunt yielded but a solitary pheasant; the Captain killed him in the willows at the river's edge, a very unusual occurrence.

I endeavored to get a few birds to winter but did not succeed. Mr. G. O. Smith, of this city, purchased nine dozen Western quail at his own expense. I am marking their condition from day to day with jealous eye; and call back the old dog as he breaks from heel into their stubble home. Poor old fellow, he does not seem quite to understand why I am not willing to let him hunt pheasants in the woodland, as we occasionally pass down the wood road, and refuse to let him hunt quail in the stubble. However, I think the old fellow will find me willing to follow his lead, when the sere and yellow leaf is falling again. Some day I will take down the old gun, and with a smile of expectant pleasure will whistle for you—old dog, and you will come bounding to me with shining eyes, and fairly cover me with caresses, and then scatter the chickens right and left as you merrily lead the way to the stubble field. You will stop just at the edge of the field to wait for me; and you will trail slowly a little ways, then with head to the wind you will make one of your grand casts; and half-way around the field you will turn and come toward me, and stop with one foot raised and foam falling from your jaws, and there you will stand until I come up. The old gun will crack sharply on the open air; two birds will fall (of course, not less), and you will bring them and lay them gently in my hand. What joy will be ours on that day, old dog, until the twilight from the sinking sun has disappeared and all nature hushes down to sweet repose.

Squirrels and rabbits are very scarce here. Pheasants are fairly plenty, and seem to be holding their own. I love to stroll down through their haunts, the old wood road. There is a wild, weird beauty about these winter woods until nature awakens them. Oak, hemlock and beech deeply shade the road, and from the great trees of this primeval forest swaying grapevines swing to and fro in the shadows. Here and there evergreen trees dot the

forest roadside and embellish the sleeping forest with an emerald green. Great rocks line the roadside, and at some places form the forest floor. Scrub pines grow here and there in crevices on these rocky ledges; and where trees cast their shade moss grows in scanty patches. Around these ledges in patches of blackberry, sumack and haw bushes is the home of the pheasant. On sunny winter days these rocky shelves are his favorite dusting places. Let us stroll over and view his home. Having a good view of the road and our approach, he was on his guard. The setter comes to a stand; there is a moment of silence. Five pheasants plunge headlong into the thicket and down into the ravine below. Sure enough this is his home. At the thicket edge is his drumming log. Mark to the left. Our setter is pointing; as we take a step toward him he discovers his mistake, looks toward you and wags his tail. Never mind, old fellow; it is not necessary to apologize. Better a mistake now and then than a lost bird is our motto when hunting pheasants. Let us follow this cow path down through the thicket. What strange looking tree is that to the right of the path—a crabapple in this out of the way place. See, where they have been building! It looks as though chickens had been roosting here. A cliff rises behind, from whose abrupt walls hang festoons of gray moss that sway to the passing breeze. From the very top a pheasant hurls himself into mid air with roar that sounds strangely loud on the winter air. A stone fence slopes down to the pasture field below. A ground squirrel sounds his rasping bark, then retires to his hole in the fence, closely pursued by the setter. Along its moss-grown sides, among fallen rocks, overgrown with partidge berry and wild honeysuckle, is the home of the cottontail. It is also the highway for squirrels; in early spring many a trophy falls to the unerring rifle.

Pasture and forest descending in gentle undulations form a cross-country prospect that makes a delightful environment; in yonder springy meadow that winds between bushy thickets of alders is a splendid woodcock ground. Dull, yet picturesque, it lies under the gray winter sky. Let us turn back and cut across the woods to home. The setter has a point; they are waiting and settle in the stubblefield; the setter comes to heel, stops and looks wistfully back, then follows homeward. CUMBERLAND.

## NEW HAMPSHIRE NOTES AND NOTIONS.

MANCHESTER, N. H., March 8.—*Editor Forest and Stream:* The near approach of spring and the opening of the trout season, April 15, is looked forward to with joyful anticipations by our sportsmen, each being determined in advance to catch a few more fish this year and to put a few more days into the sport than in any previous year. Hope and anticipation furnishing a large share of the pleasures of life, fortunate indeed are we that there is no possible hindrance to taking full advantage of that phase of our temporal career. The tackle of last season will soon be under inspection, the useless discarded and new put in its place, of better design, if experience has taught that there is better to be had, the early worm will be laid in wait for and the early bird will not profit by his capture, and then the fun will begin.

The past winter has been an unusually prolific one for rabbit hunters. The strings have not run up to what they were known to thirty years ago, when the late Col. John B. Clarke and a couple of companions would go out and bring in anywhere from twenty to forty a day, but among recent seasons this has taken the lead. The best string contained fourteen and the next eleven. In the aggregate the number taken here since September has been immense. W. C. Clarke, Dr. D. S. Adams, Charles and George M. Clark, J. B. Estey and Warren F. Wheeler have been the most successful parties, nearly all of them own excellent dogs, and every one of them are adepts at the business.

During the early part of the season foxes were wonderfully thick in adjoining towns, and hunters had the best sport of their lives. So far as I have been able to learn Walter J. Whiting stands at the head with 14 pelts to his credit, and Edgar H. Kelsea next, with 9. For some reason the run of luck did not extend through many towns, as the last two months have shown slim returns from the sport. It is not that the supply of game has run out, as the farmers report foxes still plenty and as mischievous as ever. There have of late been deep snows, crusts and generally poor running, but the knowing ones advance the theory, as the principal cause of the recent poor showing, that most of the dogs used are too fast, causing the experienced reynards to go too far, and entirely out of reach, and, usually, sight of the hunter, many of those started heading for miles straight across the country, as though they had business in an adjoining county of a permanent nature.

Profiting by the knowledge of the benefit derived from the establishment of the Merrimack County Fish and Game League, the sportsmen of Hillsborough county recently met and organized a Game and Protective Association. W. C. Clarke was chosen president, and C. J. Darrah secretary and treasurer. The Association is securing a large membership and can do a great work for the fraternity in the county, if the interest of the individual members in the matter does not end with the signing of the constitution and the settlement of yearly dues, as is far too often the case, leaving all the practical work for the enforcement of the laws and the carrying out of the designs of the organization to the officers. The Association started out with the best of officers, but like a vessel on a cruise, in order to make a satisfactory voyage, it will require the co-operation of every man connected with the craft. This State has long had good fish and game laws, but like the prohibitory law of which some are so proud, they have fallen far short of accomplishing their purpose. The New Hampshire Fish and Game Law has existed many years, possessed commendable purposes and has done considerable good, but covering so large a territory made it unwieldy, many of its foremost members have died, others have moved out of the State or lost their interest, and for the past two years little has been heard from it, in fact it seems to have nearly or quite passed into oblivion. It was apparent that something must be done for the preservation of the sportsman's interests and a county association seemed the most feasible plan to pursue.

As an illustration of the lack of interest taken in the enforcement of the game laws, I may note that a deer was killed on Merrimack common, in the heart of this city, a few weeks ago, being surrounded and captured by

a mob; then clubbed to death and spirited away, few knew where and none made any effort to ascertain, notwithstanding there is a law imposing a fine of \$50 or six months' imprisonment, or both, covering such an act, yet there was no one to prosecute the offender. The animal was started in the town of Auburn and run by dogs to the scene of his ignominious death. There were those who claimed that it was lawful to kill any wild animal in the thickly settled part of the town, as they might do someone harm, or frighten a horse perhaps. If admitting that his presence here was a source of danger, after being unlawfully hounded to the place where he was liable to cause trouble, is it not the part of sound reasoning that the person responsible for his being driven to such a place should be the sufferer, rather than the deer, and made to settle all such damages, and the law-protected animal allowed life and liberty. It is my impression that those who killed that deer were fortunate that they had the dreamy New Hampshire League to avoid instead of the new County Association.

Herbert F. Green, one of the brightest young sportsmen of this city, as well as an ardent boatman, met with a fatal accident the 3d inst. While cleaning a revolver a cartridge left in one of the chambers was by some means exploded and the ball penetrated the man's heart. It was unquestionably an accident, but the circumstances surrounding it will never be understood, as the victim was alone and "what might have been" will continue to be sad words, in his case, as certainly as "what was" is deeply deplored by his hosts of friends.

A singular, and as far as I have been able to learn, unprecedented accident, occurred in my presence a few days ago. A hunter was firing at a target, using a high grade 12-bore hammerless gun, with a special smokeless shell, No. 3 primer, 45grs. Schultze powder and 1½oz. shot. When he pulled the trigger to the right barrel the primer was forced from the shell, crowded back the firing pin and followed it into the stock, accompanied by sufficient powder and force to blow a hole in the side about 4×¼ in., throwing the piece of stock 20ft. The barrel was clear, he had fired the gun thousands of times, and used many pounds of the same kind of powder with universal pleasure. Unless some one rises to explain I shall set the occurrence down as a freak of either the powder, shell or gun, with the weight of probability of capriciousness resting on the first named. Possibly the gun was made up wrong end to? PAYSON.

## STOP THE SALE OF GAME.

A PLATFORM PLANK.—The sale of game should be forbidden at all times.—FOREST AND STREAM, Feb. 10.

CLARENDON, Ark.—*Editor Forest and Stream:* Your discussion of methods for preventing the wholesale slaughter of game is indeed timely, and I believe your ideas could be successfully executed if the sportsmen of the country would lend their active co-operation—that is, use their personal influence with representatives to procure certain legislation. A personal talk with the legislator is worth months of public agitation.

Prohibiting the sale of game at all seasons would have the desired result in many of the States, but in the South a tax on guns in addition thereto would be necessary. There are very few market-hunters in the South, especially in this case in Arkansas. The colored brother with his smooth-bore musket or pot-metal breech-loader is the gentleman we want to stop. He hunts in season and out of season, and woe be unto whatever crosses his path—fat hogs not excepted. The negroes live in the country district in the midst of the game, with probably not more than one white family to the square mile, and thus situated they violate the game laws with impunity. A small tax on guns—say \$5 or \$2.50 each—would afford much relief, and, so far as the South is concerned, accomplish more practical good than anything that could be added to the game laws already on the statutes. I do not believe that such a tax would conflict with or abridge the privilege to bear arms that is guaranteed by the Constitution.

The sportsmen of this State and other States where the game is still fairly plentiful will soon be confronted with the same conditions that now confront those of older States. Ten years have wrought wonderful changes here. Then it was considered nothing unusual to bag thirty or forty prairie chickens in an afternoon's hunt; now it is doubtful if a thousand of these birds exist on all of Grand Prairie. Ten years ago our veteran hunter, Dr. R. M. West, killed sixty-six deer; he was delighted last season over a score of fourteen. Ten years ago more than forty coveys of quail could be found around the outskirts of Clarendon; season before last I found but thirteen coveys, and last season I found only four on the same grounds. It is the same as regards other game. Only a few more years at the present rate will be required to complete the work of extermination. Whatever is to be done should be gone ahead with at once; delay would be to simply "lock the stable door after the horse had been stolen."

WM. E. SPENCER.

SPRINGFIELD, Vt., March 4.—*Editor Forest and Stream:* The sportsmen of Vermont are with you in your fight against the market-hunter. We'll take that plank of yours and with the aid of all intelligent voters in this country we'll close the entrance to that slaughter pen into which countless thousands of our game birds and animals are driven each year. Now don't imagine for a moment that I want to stop the market-hunter from killing fifty birds a day to support his wife and babies and allow the so-called sportsman to kill a hundred to give to his friends or rot in the garbage barrel. "H. C. S." in your edition of Feb. 24 touched the keynote to a theme that has run in my head for a long time when he said, "Count me one against the market-hunter, and when you get through with him, then there is another man who is just as bad, and I sometimes think worse, who wants looking after badly. He does not go round with a muzzle-loader and yaller dog." On the contrary he generally has the finest of outfits and is a good shot. He is the man who kills a hundred ducks a day and boasts about it." If some poor fellow breaks away from his weary round of toil and spends a day in the fragrant woods or pleasant fields, breathing God's pure air and getting in touch with all nature, then if he sells the contents of his bag to replenish his always slender purse, he is a "blamed pot-hunter," while the individual "H. C. S." describes may spend weeks afield, slaughter game right and left, and the world of sportsmen smiles its approval.

"Kelpie" comes in good and strong on the chorus in the

March 3 number when he writes, "But what business has any man, be he prince or peasant, with more than a dozen birds in a day, or with more than one, or at most two, deer in a season?"

I am very much pleased to hear these sentiments expressed in your columns, and I want to raise my voice in a loud amen. These few words may fall to earth before reaching their mark, but I have relieved my mind, anyway. I would like to know the opinions of brother readers of this paper on this theme. W. W. BROWN.

SALT LAKE CITY, Utah, Feb. 28.—*Editor Forest and Stream:* It is my opinion that no legislature of any of the United States or Territories will ever pass a law prohibiting the sale of game at all times. Instead pass a law prohibiting the selling or offering for sale any game (no matter where killed) at any time during the close season on such game, and making the having in one's possession any of such game *prima facie* evidence of guilt; and forbidding the shipping of game out of the State at any time, and you will have solved the game preservation question. Such a law, in case of arrest for its violation, would put the burden of proof on the offender; it would prevent the storage of game, to be sold during the close season; it would prevent the shipping of game out of the State at any time; and last, but not least, it would effectually shut off that old dodge "that it was killed in some other State." A. B. WITCHER.

NEW YORK, March 7.—*Editor Forest and Stream:* While out for lunch to-day I saw more evidence of the necessity of the prohibition of the sale of game, in the shape of a bunch of rabbits hung up in front of a game dealer's stall in Washington Market. If there is any way to bring these violators to justice I will do my share toward it. It is bad enough to have game pot-hunted in open season, but to do it when it is unlawful is worse yet. I have been told that they could not be prosecuted because they would prove that the game had been in cold storage. Will you please enlighten me on that point? On Monday afternoon my brother saw a deer landed at East New York station of the Long Island Railroad. It was done up in bagging as if it was a calf. It was immediately taken in charge by two policemen, who ordered it sent to the station house. I suppose they were notified by people who saw it shipped, as they were on hand when it arrived. Somebody did a good day's work against law breakers. Keep putting a new prop under the platform you have built and there will be more climbing on it all the time. OLD SQUAW.

[The New York law does not forbid the sale of rabbits even in close season. This is a defect which should be remedied.]

HUDSON, N. Y.—*Editor Forest and Stream:* Some years ago you waged a war against summer shooting. This was one of the many needed reforms in our game laws, and although your task at first appeared a hopeless one, thanks to your persistent and untiring efforts, the sportsman saw that you were right and to-day the shooting of woodcock in July is a thing of the past. Now you strike the keynote to another great protection when you say, "Stop the sale of game," and let me tell you right here that Columbia county has already anticipated you in this great reform, and last year our supervisors enacted the following law:

SEC. 9. No person shall, after the 1st day of May, 1893, catch or kill within the limits of said county of Columbia, any woodcock, quail, hare or rabbit, squirrel, ruffed grouse, commonly called partridge, meadow lark, snipe, rail, woodcock or speckled or brook trout, for the purpose of selling or marketing the same; nor take or receive any fee, hire, barker or reward from another for the catching or killing of any such bird, animal, game or fish for such other person; nor shall any person, company or corporation, market, sell, have in possession to sell, offer for sale or attempt to sell, any of the said mentioned birds, game, animals or fish, if caught or killed within the said county of Columbia.

SEC. 10. No person, company or corporation shall carry, ship or transport from one point to another, either within or without said county, any of said birds, animals, game or fish caught or killed within said county of Columbia; provided the same are being shipped, carried or transported for the purpose of selling or marketing, or when the same are not accompanied by the owner thereof.

SEC. 11. Any and every person, company or corporation violating any of the provisions or restrictions of this act, shall be liable to a penalty of \$25 for each violation thereof; and in addition thereto shall be liable to a penalty of \$10 for each of the foregoing mentioned and named birds, animals, game or fish had in possession, caught, killed, marketed, sold, attempted to sell, carried or transported contrary to or in violation of any of the provisions or restrictions of this act.

SEC. 12. All penalties provided for or imposed by this act may be sued for and recovered, judgment thereon had and executions enforced, and the proceeds or recovery applied or distributed as provided in Article 10 of Chapter 31 of the General Laws of 1892 of the State of New York, for the collection and enforcement of penalties provided for in said chapter; or as otherwise provided by law for the collection and enforcement of penalties.

This law went in effect May 1, 1893, and was a death blow to the market-shooters and fishers in this county. Heretofore it had been their custom to hunt and fish every day from the opening to the closing of the season, and peddle their game and fish from door to door. Now if this can be a success in Columbia county (as it has been) why can it not be in every county in this and other States. We know full well what you have to contend with, but don't let up. Keep the ball rolling, and as in the past, so will you have your reward in knowing that your efforts are appreciated not only by those of us who are sportsmen now, but also those who are to come after us. G. H.

COLT'S NECK, N. Y.—*Editor Forest and Stream:* I can truly say that the sentiments expressed through the columns of your paper in regard to market-shooting fully agree with mine, and I would be too glad if every State made or amended its game laws so as to put a veto on that business entirely, for I have noted the results of market-hunting in different places, and also of game protection. A. L. L.

An American contemporary, FOREST AND STREAM, advocates the forbidding of the sale of game at all seasons, on the ground that it has no longer any economic value as food, but "has become a luxury, is so regarded, and sold at prices which make it such. We can now supply food with the plow, reaper and cattle range cheaper than with the rifle or shotgun. We are no longer dependent for our sustenance on the resources and methods of primitive man." FOREST AND STREAM pleads for the game from the sportsman's point of view. Both ground and feathered game have certainly been entirely blotted out of wide areas, and unless legislation steps in, the American fauna will only exist in museums.—*The Echo, London, Eng.*

## ADIRONDACK FOXES.

The Lake Placid correspondent of the *Elizabethtown Post* has furnished his paper some interesting particulars on the length of time a fox can stay in his hole. In common with coons and bears, though to a much less extent, foxes seem to have the power of hibernating through the coldest winter weather. We doubt, however, if this record has ever been excelled:

"A young man from North Elba, whose name I will not disclose, took his gun and dog a few weeks ago and went fox hunting. After an exciting chase of several hours the fox was driven into a hole in the ground. When the young man arrived on the spot he discovered by examination that there were two foxes in the hole. He accordingly set a trap there, which he carried with him, and came home to await results. An old hunter with considerable experience told that nine days was the longest, to his knowledge, a fox had stayed in the ground. The young man watched his trap daily; soon the nine days were up and still no fox.

"At the end of the twelfth day, however, he found a fox in his trap. He set the trap over again and thought sure that a day or two more would be as long as the other fox could hold out, but in this he was mistaken, for he did not get the fox till the twenty-fifth day. It seems almost impossible that a fox could live in a hole twenty-five days without anything to eat, but such was the fact, and although very poor and weak he would have given a dog a good race when caught. In the meantime this young man was not idle with gun and dog, he went out again on a similar hunt, and strange to say similar was the result. The fox could not stand it to run long in the deep snow and soon went into a hole where also another fox had gone in the morning; making two foxes in that hole. When the hunter came to the hole he set a trap, and as there was nothing handy to fasten the chain he stepped some twenty feet from his trap to cut a stick; in so doing he discovered another hole, and immediately began to stop it up with a small tree, when to his surprise he heard his trap snap. He ran quickly to the other hole, but was too late, as the trap had gone beyond sight and reach. The young man, however, was not discouraged. He stopped up both holes and returned home. The writer was sojourning at the home of the hunter at that time and volunteered to go with him and dig out the trap if not the foxes.

"If any of the readers of this article ever helped dig out a fox in the winter in the Adirondacks, they know without explanation what a job we had. We chopped frozen ground and shoveled dirt five hours steady, getting a hole down some 6 or 8 ft. We were rewarded at last by getting hold of the chain of the trap and pulled out of the hole a nice fox caught by the lower jaw, the trap having a good firm hold. Have any of my readers ever heard before of the wily fox being caught by the jaw in a No. 1 1/2 trap, uncovered, unfasted, and a man within 20 ft. at the time? No, I do not think you ever did, but such is a fact. By the time we had this fox dispatched darkness had overtaken us. We had quite a strip of woods to go through, say nothing of the long stretch of clearing to reach home, and we decided it was time to start, for staying all night in the woods in winter is not very pleasant, as many will undoubtedly imagine. We stopped up the holes securely as we supposed and wended our way homeward. The next morning we went after the other fox; but the crafty fox had got out during the night and left for parts unknown."

## ON IOWA PRAIRIES.

VINTON, Ia.—*Editor Forest and Stream:* It has been an excellent winter for game in this State so far. In this section there was snow in November, but it was not deep, and it melted off before Christmas, and there has been but little snow since and but little zero weather. In consequence of the early snow a good deal of corn was not husked until January, and the chickens visited these fields every day, and they must be in fine condition to go through the rest of the winter.

It was an unusually good season during the past spring and summer for ground birds of all kinds to hatch and raise their young. It was dry throughout the season, there were occasional rains but no flood spells, yet I am disappointed as to the amount of game this season in this immediate vicinity, but I know what the trouble is. One mile west of my place are some low hills, used mostly for grass, with no buildings near them. A creek runs from the hills by my place, and the land along this creek is used for grazing, and since I came to this State, eleven years ago, there has always been a chicken roost in those hills, and in the fastnesses near them. Last winter a flock of chickens would, nearly every day, come down the creek, and would frequently alight in the trees around my buildings, and when spring came and the flock broke up there were 150 chickens in it, and during the summer the little broods of chickens were quite numerous.

A covey of sixteen quail wintered with me, and I put out grain and every day I would see them. There was a severe spell of weather and deep snow during the latter part of the winter and the little flock was somewhat reduced in numbers, yet during the summer I would frequently see the young coveys and knew that some of the quail that had wintered with me had done well, yet I have not heard or seen one since early in the fall, and no member of the family has shot one, or a chicken during the past season.

A few weeks before the open time commences sportsmen from the city are accustomed to scour the country with their dogs, not to spot the coveys, but "just to give their dogs a little practice." There would always be more or less shooting, "not at game, but at blackbirds and crows, so as to get their hands in." Well, they get their hands in all right.

It was so dry here during the fall that dogs could not do good work and some chickens escaped, and I think others have come in from other parts of the country, for there is a flock of 125 chickens here now and only 25 in the flock early in the winter. One year ago the flock of chickens began with about 25 and kept increasing all winter.

One of our local sportsmen, William Brown, is spending the winter in the South. He is at the present time at Lake Charles, Louisiana, and is having great sport. We here in Iowa knew that he was making a good deal of disturbance down there, because on Jan. 13 a flock of 50 geese and a flock of less size passed over here going northwest, and on the 28th or 29th ducks were flying in

the same direction, while to-day a flock of 23 geese went over. All went in the same direction and all were hustling right along as though they wished to get away from something behind them mighty quick. Mr. Brown ought to be ashamed, he knowing what cold weather we have here in Iowa. Mr. Tom.

## A NEW JERSEY PHEASANTRY.

*Harper's Weekly* gives this account of Mr. Vernier De Guise's pheasantry in New Jersey:

The fields are all fenced in with wire netting with 2 in. meshes, and from the surface in which it is securely embedded, it rises to a height of 10 ft. In the summer time one can hear the musical "peeping" of the little fledglings, and the answering "clucking" of the mother hen, with an occasional cry from the cocks in the breeding pen as something startles them. The noise they make sounds like the first tentative efforts of a young rooster, except that whereas the latter flaps his wings and crows afterwards, the former "drums," and then sounds his note. In drumming they move their wings so rapidly that they seem like gauze.

The laying season begins about the middle of April, and before that time all the birds that are wanted for this purpose are caught from the field, where they have run all winter, and put in huge pens. These are 18 ft. square, or thereabouts, and are arranged in one large rectangle, with alleys between each alternate double row, so that access can be had to them through doors or gates left in the wire meshing for that purpose. The corners are darkened with water-proof hoods smeared with a disinfecting mixture, as indeed is everything about the place. These retreats are for the birds to lay under. The pens being in an apple orchard, the leaves afford shade and worms and larvæ also, for the insatiable crops beneath. Clumps of grass are left to grow about in spots, the rest of the ground loosened to encourage "bathing" and scratching. Five hens are put in with one cock, and unless they do not get along well together, the family is not disintegrated until the end of the season—and not then, for all are kept in one field. Birds one year old are preferred for laying, the older ones being sold off to preserves where they will be less confined. Two or three years in such small quarters make a difference in their powers of propagation, but they recuperate rapidly in the woods. Great care is exercised in choosing healthy birds, but if a weak one should be discovered—and they are rare—his neck is wrung on the spot, for Mr. De Guise has no hospital for contagious diseases. Sickness, to reiterate, is not frequent enough to require one. The manner of catching the birds to put in the pens is simple. They are driven into a large box commodious enough to allow two attendants to get inside comfortably, with the top and sides covered with bagging to prevent injury to the captives in their efforts to escape. Wide "wings" of wire netting extend out into the field from the entrance to the box, and when a man is sent to walk slowly towards the birds all within the radius of the wings run wildly to their fate. They do not try to fly unless startled, but their legs carry them along very fast. Once inside they are handed out one at a time to have a wing clipped. Even in this condition they make strenuous attempts to fly when alarmed in the pens, turning ludicrous somersaults in the air, only to come down unceremoniously and try again.

The average hen will lay about forty eggs in the interval from the beginning of the season to the middle of July, when it is practically over. During this period the birds are fed twice a day—in the forenoon on a mixture of cracked dog-biscuit, meal and pulverized oyster-shells softened with milk, and in the afternoon the diet is changed to grain. With the appearance of the first eggs attendants begin to go around in the late afternoon, near sunset, with flat-bottomed baskets in which to collect them. This is done every day as regular as clock work, for the hatching is not done by the pheasants, but by common barn-yard hens.

Several weeks before the first eggs are laid the farmers in the neighborhood are notified that sitting hens will be needed at the pheasantry, and soon after All-Fools day they begin to bring in all their surplus stock. These are purchased at market prices and confined in ventilated boxes arranged in tiers inside the barn the hens being satisfied to sit on porcelain eggs until needed for actual utility. When the pheasants have supplied enough eggs, the work of putting the latter down is begun. Back of the barn, on a gentle slope, are long rows of oblong coops, each one consisting of a closed box with a removable lid for the nest, and a diminutive yard a few feet in area for the hen to exercise in. This is inclosed by wire netting, and provided with a separate drinking-pan of earthenware. From fifteen to eighteen eggs are set in each nest, the number depending upon the size of the hen, which may be a bantam or a Plymouth Rock. When she is very large she may take twenty, for they are smaller than their own, light green in color, and so rich that only their expensiveness precludes their coming into general use for salads and mayonnaises. Each one is tested to see that it is not cracked, and the date of the setting is marked on the top of the nest box. The period of incubation is twenty-four days, and should, in the daily inspection, any hen show a disposition to shirk her duties, she is promptly disqualified, and another is substituted. But generally they are assiduous, and remain at their posts till the end.

When the young birds begin to appear before June 1, the constantly increasing duties of the attendants reach their maximum. Every evening the coops are examined to collect the little peepers, from whence they are transferred in baskets to one of the inclosed fields, in which light wooden coops are set down in regular rows in the grass. Around each of them is a little space fenced in with boards, and while the foster-mother is secured inside, the chicks can run out between the slats into the yard. By the time they have become strong enough to leap the low walls of their prison, they have also learned to know the "cluck" of their protector, and where to come back at nightfall. Six times a day they are fed on a sort of custard, made of cracked pheasant eggs and milk, from which the whey has been expressed. When two months old they are trapped and removed to another field, having no further need for the shelter of their mother's wings. The number of feedings is gradually reduced in the mean time to three a day, and the food becomes more substantial by the addition of grain. They grow wilder every day, and it is difficult to get more than a momentary glimpse of them as they dart through the grass, rustling the blades like a summer breeze. By

October the early birds have attained to full growth, passing the winter undisturbed and with need for little care. The only discomfort they undergo is in the traps when their wings are clipped.

## A GAME REFUGE.

*Editor Forest and Stream:*

Having quite a tract of woodland in one of the Eastern States that had been gunned and gunned over by parties who sold their game, so that scarcely a partridge could be found on it, some six years since forbade hunting there and have kept the land well posted ever since, and prevailed on several of the neighboring farmers to see that the order was carried out, so that but very little hunting has been done on the tract during the time. Now, mind, I did it not for my own special benefit, for I have not shot a partridge nor any other kind of game there during the past twenty years, but to keep the grounds as a preserve or breeding place so as to prevent the game from being nearly or quite exterminated, since other suitable lands for breeding purposes are getting very scarce in these parts. And now for the result of my prohibiting shooting there.

Last August I took several strolls over the grounds and saw in one covey not less than fifteen partridges, and perhaps even more, and quite tame at that. At other places I saw two, three, four or more together; sometimes I could almost have hit them with a stone. I was greatly surprised, as one might well be, since I could scarcely travel for a distance in almost any direction without seeing them or hearing their *quit, quit*. How I would have liked to take a few snap shots at some of those groups with a camera.

Being asked with some show of hard feeling by one of the local gunners why I forbade hunting there since I was not living near so as to shoot over the grounds myself, I told him in reply that as long as game was well protected on that land it would spread in more or less quantities over adjacent grounds, so that he as well as others could always have from fair to good gunning in the vicinity. And I also said to him that instead of his feeling aggrieved about my posting the land, he and other hunters would thank me in after years for doing it; and he even admitted as much himself before we parted.

I really think that if every township had one or more suitable tracts of land on which game was fully protected at all seasons, the result would be more than satisfactory, and am fully persuaded that many of my fellow sportsmen will agree with me there. A. L. L.

## HERE IS A BEAR RECORD.

*Editor Forest and Stream:*

Several months ago there was an allusion in your columns to an old gentleman 74 years of age who had killed 74 bears, one for each of his 74 years. This was considered by his friends an achievement of large proportions. Our most famous bear hunter in this region is Mr. R. E. Bobo, who was the first white child born in Coahoma county, and is now about 45 years old. Mr. Bobo is a substantial cotton planter and a prominent citizen of the county, whose veracity is not questioned by those who know him. I met him yesterday on the train and mentioned the above matter to him. He said he had no correct idea as to the number of bears he had killed altogether; that he had kept a record for some years, but it was burned several years ago with his dwelling. He stated, however, that he and Mr. F. A. Payne in 1884 killed 151 bears. They made that number of successful runs without losing a bear. From September, 1873, to September, 1874, were killed by the parties who followed his dogs, white and negroes, 304 bears. On one occasion he and Mr. "Nels" Harris (present sheriff of this county) went out one day and returned the next, bringing in 13 bears. On a similar occasion they brought in 9, all large ones. During last Christmas holidays he hunted five days and killed 9 bears. There is no reason to doubt these statements, which, I presume, can be easily verified. COAHOMA.

CLARKSDALE, Miss., March 6.

## American Testing Institution.

PURSUANT to a call, the members of this institution met on Thursday, March 1, at No. 10 Murray street, New York, for the purpose of effecting an organization of the institution and for discussing the question as to a fixed plan upon which work should be conducted hereafter. Mr. Wm. Edward Carlin was called to their chair and Mr. Justus von Lengerke was asked to act as temporary secretary.

After a liberal exchange of views, it was resolved to delay the permanent organization for three months, and meanwhile prepare a prospectus and formulate a basis of operation, for which purpose a committee on organization was appointed consisting of Messrs. J. A. Dressel, John Dannefeler and C. H. Slater.

The following gentlemen consented to serve on a committee for the purpose of drafting a suitable prospectus: Mr. Armin Tenner, D. Kirkwood and J. von Lengerke. Armin Tenner was elected temporary manager and offered to operate the institution for three months at his own risk financially to prove to the members that the same would be self-sustaining.

The committee on organization agreed to act as provisional executive committee until the institution should be permanently organized.

## Winter Notes from Ontario.

The first wild geese of the season were seen flying over the city this morning. The deer reported to have been killed in Prince Edward proved to have been a yearling, which was killed by dogs that got after it. A large doe that wintered near the city has been driven off by fox-hounds that got on her track and chased her twice.

A large number of partridges perished in the snow in which they were imprisoned by a heavy crust that formed during one night in January.

Fox hunters have had many good runs, but their sport for the season is ended.

Many hares have been shot out of season in this district owing to a misunderstanding as to the distinction between hares and rabbits.

Mr. H. K. Smith, our game warden, is an active officer and has done his duty faithfully. R. S. B.

Schuylkill County League.

POTTSVILLE, Pa., March 7.—*Editor Forest and Stream:* The Schuylkill County League of Game and Fish Protective Associations met in Bensinger's Hall, Mahanoy City, yesterday in semi-annual convention, with the following representatives:

Pottsville—Col. J. M. Wetherill, Capt. H. J. Hendler, George Dewald, Edward G. Faust, Charles Parkin, F. L. Palmer.

Tremont—D. P. Faust, W. E. Moody, Elias Dillfield, Jacob Lauks and D. L. Mellon.

Schuylkill Haven—P. F. Baur, Willis Bryant and Dr. D. Dechert.

Mahanoy City—E. L. Silliman, W. A. Bensinger, S. S. Miller, H. K. Smith, Wallace Haldeman, J. J. Coyle, T. H. B. Lyon and Frank Wentz.

The following officers were elected for the ensuing year: President, Col. J. M. Wetherill; Vice-President, E. S. Silliman; Secretary, F. C. Palmer; Treasurer, D. P. Faust; Solicitor, T. H. B. Lyon. Messrs. J. M. Wetherill, E. S. Silliman, C. W. Parkin, P. F. Baur and D. P. Faust were appointed warden committee. The committees will meet in the Pennsylvania Hall, Pottsville, at 9 A. M. to arrange a conference with the County Commissioners, the object being to have five wardens appointed at the counties' expense. This is in a line with the views of the *Miners' Journal* published last fall. An effort will also be made to discriminate in the tax rate of dogs, and the Commissioners will be asked to fix the tax at 50 cents a head, regardless of sex.

Mr. Faust in a forceful speech pointed out the importance of all the co-ordinate branches, being represented at the annual convention of the State Sportsmen's Association, to be held in Altoona next August. This subject will be considered by the Association. The next convention will be held at Schuylkill Haven, Sept. 4. The thanks of the Association were tendered Mr. Bensinger of the Grand Central Hotel, for hospitalities, and to the Mahanoy City Game and Fish Protective Association for kind and cordial treatment.

The following resolutions were unanimously adopted:

Whereas, The extermination of game and game birds in our State seems to be threatened, and

Whereas, One of the most potent causes of the threatened evil is the action and work of the "market sportsmen," therefore be it

Resolved, By the League of Game and Fish Protective Association of Schuylkill county, at this, the semi-annual convention, assembled at Mahanoy City, Pa., that it is the sense of these associations that the sale of all dead game birds and animals should be prohibited by law.

Secretary Palmer writes: "I doubt if there is any county in the United States which can boast of five well-organized game and fish protective associations. Last winter (1892-1893) destroyed almost all our quail and rabbits, but this winter hasn't hurt what remained. The grouse were fairly plentiful this winter. Some of us think with fair weather and a little stocking we will have good shooting next season. Violations of game and fish laws are few in our coal mining county of Schuylkill."

Manitoba is Hospitable.

WINNIPEG, Man.—*Editor Forest and Stream:* Writing in your issue of Feb. 17, "Saint Lawrence" condemns the game laws of Ontario and Quebec for discriminating between Canadian and American hunters. Let me, as a Canadian, enter my protest too. If the New York laws prohibited the Canucks from enjoying the pleasure of that State's hunting grounds the action of the Provinces would be justifiable; but as it stands now, they are ill repaying that debt of gratitude they owe to the States for their courtesy in throwing open their hunting grounds to the world.

Manitoba, the youngest Province in the Dominion, can teach them all a lesson in true sportsman's hospitality. Her hunting fields—and they cannot be surpassed in the world for feathered game—are open to all; provided, of course, that they adhere to the laws concerning the seasons; and the right hand of good fellowship is always extended to visiting shooters from the States. Let "Saint Lawrence" and his friends journey westward in the fall and we can give them either duck or prairie chicken shooting, the like of which they never saw before, and all without the \$25 license.

I hope that the "irresponsible and marauding parties" from the neighboring Dominion, whose habitual disregard of their own protective laws is an encouragement to piracy on this side of the border," that your correspondent refers to, are not taken as typical Canadian sportsmen. The lovers of the field, forest and stream are the same fine set the world over; and those on this side of the border are no exception.

ROD. RANDOM.]

Doing Without "Forest and Stream."

I TRIED it a few years ago for two weeks; my excuse for so doing was to economize; when I received the last paper of the year I told my newsdealer that I should discontinue it. Two weeks later I happened in the news room when the package of *FOREST AND STREAM* arrived. I picked up a copy and while looking it through saw something that interested me, and bought the paper, paying ten cents. After reading it through I found that there was a missing link and that I must have the back number, which I ordered the newsman to procure. This also cost me ten cents. And so it went on for a whole year, when I concluded that it was no economy in not subscribing for the *FOREST AND STREAM*. I have now every copy for the past thirteen years and do not know how to get along without it.

J. L. DAVISON.

The Coming of the Birds.

PERTH AMBOY, N. J., March 5.—Song sparrows and purple grackles (crow blackbirds) were heard and seen here to-day. There are a good many whistlings in Raritan Bay, but rather wild. No ducks have yet arrived from the South.

J. L. K.

CENTRAL LAKE, March 5.—Robins reported seen and heard March 3. Crows heard March 4. Chipmunks out in force for the last three day. March 10.—Spring weather.

KELPIE.

California.

VENTURA, Cal., March 4.—Our game season was up March 1 for shooting quail, ducks, etc. Quail shooting has been very good the past season, but ducks were not so plentiful. Our fishing season begins April 1.

M. E. B.

Deer Hunting Ethics.

*Editor Forest and Stream:*

I am an old-time subscriber and reader of *FOREST AND STREAM* and have come to have abounding faith in its judgment and wisdom. A good many times during the years that I have been reading it I have thought that it was wrong, but as time went on events proved the wisdom of its course, and so my faith has grown strong.

If it were not for this, I should be disposed to criticize very strongly your wisdom in printing in your issue of March 10 the horrible brutal story of water killing deer by a party of Canadians, which publication, it seems to me, can serve no good purpose. Perhaps it may have been well to print it for the simple reason that it will horrify a good many people and increase their detestation of this so-called sport, but on the same principle you might justify the publication of an account in which all the hunters made beasts of themselves with liquor. However, as I say, I have faith in your judgment, and I do not wish to criticize; but I may say that a more brutal story of cold-blooded butchery I have never seen in your columns.

OLD MAN.

Another Lost Bear Trap.

*Editor Forest and Stream:*

The late "Uncle" Wm. Chase, of Moro, Me., one of the most successful of hunters and woodsmen in that region, had a trap carried off by a bear, which all the close search by himself and his two boys and a few neighbors failed to find. This happened, if I recollect aright, along in the sixties. About ten years later a chopper in a lumber camp six miles from where the trap was taken, set his axe in the snow against a tree while he lighted his pipe. The axe gave forth a metallic sound, and on searching, the lost trap was found. The woods of Maine contain many lost traps carried off by bears, and so seldom is one recovered that the occurrence is interesting, to hunters at least.

PINE TREE.

Long Island Ducking Season.

NO CHANGE has been made in the New York ducking law this year. The open season throughout the State closed March 1, but on Long Island it will not close before May 1. Possession is forbidden in the State after March 1, except on Long Island, where possession is forbidden after May 1.

Camp-Fire Flickerings.

"That reminds me,"

My cousin and I were sauntering down the bank of the Ouachita River one bright Sunday afternoon, taking a rest from our week's work, enjoying the fresh air and having a little chat about various matters. We were both fond of hunting and were, perhaps, talking on that very subject, when my cousin noticed something make its disappearance in the hollow of a tree that had been blown down and lodged in another tree. I did not see it but he said it looked like a coon, and on approaching the tree and looking into the hollow we could see a pair of bright eyes peering through the darkness at us. I told my cousin that if he would stay there I would go to the boat and get my rifle and we would have some fresh meat, for we had been living on salt meat a good while and a little coon fixed up right would go fine. In a few minutes I was back, prepared to make war on those two balls of fire, but the eyes were no longer to be seen; and as the sentinel declared that the animal had not gotten away we proceeded to smoke him out with moss and leaves. The tree was dry inside, and as it had a hole in the upper end the scheme worked like a charm, and we soon had smoke enough going through the hollow to smoke out any living thing with nostrils and eyes. Directly we heard a rumbling noise in the upper end, and a terrific *meow*, which had it been at night under the bed room window, would have brought forth a bootjack, pair of boots, trousers and all. Then out popped a house cat and disappeared through the woods with a suddenness that would have rivalled a Nancy Hanks gait. We looked in amazement at our disappearing dish of fresh meat, and turning to my cousin I said, "You are a fine fellow, aren't you? Don't know a cat from a coon."

MISSISSIPPI.]

—PLUMB-BOB.

PUBLISHER'S DEPARTMENT.

The '94 catalogue that Wm. Mills & Son, 7 Warren street, New York, will shortly issue will be unusually instructive to anglers.

B. C. Millam & Son, Frankfort, Ky., manufacture a reel with a reputation for lasting. Reels of their manufacture made fifty years ago and constantly used are in good working order still.

The T. H. Chubb Rod Company, of Post Mills, Vt., will not issue a new catalogue for 1894, as their '93 catalogue is very complete. They will, however, issue from time to time special circulars describing new products.

The new rust preventive called "Gunoleum," which has recently been put upon the market, seems to meet the requirements of sportsmen in all respects. The manufacturers show letters from some of the principal gun manufacturers and sporting goods dealers commending their product.

The total losses upon insured property resulting from the recent fire in the Colts factory at Hartford have been placed at \$72,386.94. The appraisers appointed to estimate the loss to the buildings were Watson H. Bliss and John R. Hills, of Hartford. The appraisers of the loss to stock and machinery were Wm. Winchester, of the Winchester Repeating Arms Company, and L. C. Glover, of the Colts Fire Arms Company. Insurance was carried to the amount of \$187,000.

William Wood, of 25 West 125th street, New York, is showing this early in the season a very large and superior line of St. Lawrence skiffs, boats, canoes, both sailing and paddling; also new and second-hand naphtha, steam and oil-burner launches. Mr. Wood is perhaps the oldest living oarsman and trainer in the country, having been first in 48 professional races out of 54 starts. He was also trainer to Yale College during the years 1893-4-5 and in each year gained a victory; hence is fully competent to judge what a boat should be. A new and handsome illustrated catalogue will be mailed free.

Go to the Mountains of Western North Carolina.

WHERE will you spend the month of March? A more delightful spot cannot be found than Asheville and Hot Springs, in the mountains of western North Carolina. You find in the air a brain and mind tonic that cannot be purchased in bottles or absorbed in powders. Where the mountains rear their lofty peaks against Italian blue skies in an atmosphere fairly filled with electrical brain shocks. The air of the mountains must be like a balm at this season, for it is like wire in winter. It is a paradise for the invalid, tourist and pleasure seeker, and can be reached within twenty-four hours' ride from New York, over the Pennsylvania and Richmond & Danville R. R., in an elegantly equipped vestibuled train carrying Pullman drawing-room sleeping cars from New York to Asheville and Hot Springs without change.

An attractive book, "The Land of the Sky," can be had upon application to Alex. S. Thwaites, Eastern Passenger Agent R. & D. R. R., 229 Broadway, New York.—*Adv.*

Sea and River Fishing.

NETS AS NUISANCES.

SUPREME COURT OF THE UNITED STATES.

No. 203.—OCTOBER TERM, 1893.

George W. Lawton et al.,  
Plaintiffs in Error,  
vs.  
William N. Steele.

In error to the Supreme  
Court of the State of  
New York.

[March 5, 1894.]

This was an action at law instituted in the Supreme Court for the county of Jefferson by the plaintiffs in error against the defendant in error, together with Edward L. Sargent and Richard U. Sherman, for the conversion of fifteen hoop and fyke nets of the alleged value of \$525. Defendants Steele and Sargent interposed a general denial. Defendant Sherman pleaded that he, with three others, constituted the "Commissioners of Fisheries" of the State of New York, with power to give directions to game and fish protectors with regard to the enforcement of the game law; that defendant Steele was a game and fish protector, duly appointed by the governor of the State of New York, and that the nets sued for were taken possession of by said Steele, as such game and fish protector, upon the ground that they were maintained upon the waters of the State in violation of existing statutes for the protection of fish and game, and thereby became a public nuisance.

The facts were undisputed. The nets were the property of the plaintiffs, and were taken away by the defendant Steele and destroyed. At the time of the taking most of the nets were in the waters of the Black River Bay, being used for fishing purposes, and the residue were upon the shore of that bay, having recently been used for the same purpose. The plaintiffs were fishermen, and the defendant was a State game and fish protector. The taking and destruction of the nets were claimed to have been justifiable under the statutes of the State relating to the protection of game and fish. Plaintiffs claimed there was no justification under the statutes, and if they constituted such justification upon their face, they were unconstitutional. Defendant Sherman was a State Fish Commissioner. Defendant Sargent was president of the Jefferson County Fish and Game Association. Plaintiffs claimed these defendants to be liable upon the ground that they instigated, incited, or directed the taking and destruction of the nets.

Upon trial before a jury a verdict was rendered, subject to the opinion of the court, in favor of the plaintiffs against defendant Steele for the sum of \$216, and in favor of defendants Sargent and Sherman. A motion for a new trial was denied, and judgment entered upon the verdict for \$216 damages and \$166.09 costs. On appeal to the General Term this judgment was reversed, and a new trial ordered, and a further appeal allowed to the Court of Appeals. On appeal to the Court of Appeals, the order of the General Term granting a new trial was affirmed, and judgment absolute ordered for the defendant. (119 N. Y. 226.) Plaintiffs thereupon sued out a writ of error from this court.

Mr. Justice BROWN delivered the opinion of the court.

This case involves the constitutionality of an act of the legislature of the State of New York known as chapter 591, Laws of New York of 1880, as amended by chapter 317, Laws of New York of 1883, entitled "An act for the appointment of game and fish protectors."

By a subsequent act enacted in 1886:

"SECTION 1. No person shall at any time kill or take from the waters of Henderson Bay or Lake Ontario, within one mile from the shore, between the most westerly point of Pillar Point and the boundary line between the counties of Jefferson and Oswego, . . . any fish of any kind by any device or means whatever otherwise than by hook and line or rod held in hand. But this section shall not apply to or prohibit the catching of minnows for bait, providing the person using nets for that purpose shall not set them, and shall throw back any trout, bass, or any other game fish taken, and keep only chubs, dace, suckers or shiners.

"Sec. 2. Any person violating any of the provisions of this act shall be guilty of a misdemeanor, and liable to a penalty of \$30 for each offence."

By the act of 1880, as amended by the act of 1883:

"Sec. 2. Any net, pound, or other means or device for taking or capturing fish, or whereby they may be taken or captured, set, put, floated, laid, found, or maintained, in or upon any of the waters of this State, or upon the shores or islands in any of the waters of this State, in violation of any existing or hereafter enacted statutes or laws for the protection of fish, is hereby declared to be, and is, a public nuisance, and may be abated and summarily destroyed by any person, and it shall be the duty of each and every protector aforesaid and of every game constable to seize and remove and forthwith destroy the same, and no action for damages shall lie or be maintained against any person for or on account of any such seizure and destruction."

This last section was alleged to be unconstitutional and void for three reasons: 1, as depriving the citizen of his property without due process of law; 2, as being in restraint of the liberty of the citizen; 3, as being an interference with the admiralty and maritime jurisdiction of the United States.

The trial court ruled the first of the above propositions in plaintiffs' favor, and the others against them, and judgment was thereupon entered in favor of the plaintiffs.

The constitutionality of the section in question was, however, sustained by the General Term and by the Court of Appeals, upon the ground of its being a lawful exercise of the police power of the State.

The extent and limits of what is known as the police power have been a fruitful subject of discussion in the appellate courts of nearly every State in the Union. It is universally conceded to include everything essential to the public safety, health and morals, and to justify the destruction or abatement, by summary proceedings, of whatever may be regarded as a public nuisance. Under this power it has been held that the State may order the destruction of a house falling to decay or otherwise endangering the lives of passersby; the demolition of such as are in the path of a conflagration; the slaughter of diseased cattle; the destruction of decayed or unwholesome food; the prohibition of wooden buildings in cities; the regulation of railways and other means of public conveyance, and of interments in burial grounds; the restriction of objectionable trades to certain localities; the compulsory vaccination of children; the confinement of the insane or

those afflicted with contagious diseases; the restraint of vagrants, beggars and habitual drunkards; the suppression of obscene publications and houses of ill fame; and the prohibition of gambling houses and places where intoxicating liquors are sold. Beyond this, however, the State may interfere wherever the public interests demand it, and in this particular a large discretion is necessarily vested in the Legislature to determine, not only what the interests of the public require, but what measures are necessary for the protection of such interests. (*Barbier v. Connolly*, 113 U. S. 27; *Kidd v. Pearson*, 128 U. S. 1.) To justify the State in thus interposing its authority in behalf of the public, it must appear, first, that the interest of the public generally, as distinguished from those of a particular class require such interference; and, second, that the means are reasonably necessary for the accomplishment of the purpose, and not unduly oppressive upon individuals. The legislature may not, under the guise of protecting the public interests, arbitrarily interfere with private business, or impose unusual and unnecessary restrictions upon lawful occupations. In other words, its determination as to what is a proper exercise of its police powers is not final or conclusive, but is subject to the supervision of the courts. Thus an act requiring the master of a vessel arriving from a foreign port to report the name, birthplace and occupation of every passenger, and the owner of such vessel to give a bond for every passenger so reported, conditioned to indemnify the State against any expense for the support of the persons named for four years thereafter, was held by this court to be indefensible as an exercise of the police power, and to be void as interfering with the right of Congress to regulate commerce with foreign nations. (*Henderson v. Mayor*, 92 U. S. 259.) A similar statute of California, requiring a bond for certain classes of passengers described, among which were "lewd and debauched women," was also held to show very clearly that the purpose was to extort money from a large class of passengers, or to prevent their immigration to California altogether, and was held to invade the right of Congress. (*Chy Lung v. Freeman*, 92 U. S. 275.) So in *Railroad Co. v. Husen*, (95 U. S. 465,) a statute of Missouri which prohibited the driving of Texas, Mexican, or Indian cattle into the State between certain dates in each year was held to be in conflict with the commerce clause of the Constitution, and not a legitimate exercise of the police powers of the State, though it was admitted that the State might for its self-protection prevent persons or animals having contagious diseases from entering its territory. In *Rockwell v. Nearing* (35 N. Y. 302), an act of the Legislature of New York, which authorized the seizure and sale without judicial process of all animals found trespassing within private inclosures, was held to be obnoxious to the constitutional provision that no person should be deprived of his property without due process of law. See also *Austin v. Murray* (16 Pick. 121); *Watertown v. Mayo* (109 Mass. 315); *The Slaughter-house cases* (16 Wall. 36); *In re Cheesebrough* (78 N. Y. 232); *Brown v. Perkins* (12 Cr. 89). In all these cases the acts were held to be invalid as involving an unnecessary invasion of the rights of property, and a practical inhibition of certain occupations harmless in themselves, and which might be carried on without detriment to the public interests.

The preservation of game and fish, however, has always been treated as within the proper domain of the police power, and laws limiting the season within which birds and wild animals may be killed or exposed for sale, and prescribing the time and manner in which fish may be caught, have been repeatedly upheld by the courts. Thus in *Smith v. Maryland*, (18 How. 71,) it was held that the State had a right to protect its fisheries in Chesapeake Bay by making it unlawful to take or capture oysters with a scoop or drag, and to inflict the penalty of forfeiture upon the vessel employed in this pursuit. The avowed object of the act was to prevent the destruction of the oysters by the use of particular instruments in taking them. "It does not touch," said the court, "the subject of the common liberty of taking oysters save for the purpose of guarding it from injury to whom it may belong and by whomsoever it may be enjoyed." It was held that the right of forfeiture existed, even though the vessel was enrolled for the coasting trade under the act of Congress. So in *Smith v. Levinson*, (8 N. Y. 472,) a similar act was held to be valid, although it vested certain legislative powers in boards of supervisors, authorizing them to make laws for the protection of shell and other fish. In *State v. Roberts*, (59 N. H. 256,) which was an indictment for taking fish out of navigable waters out of the season prescribed by statute, it was said by the court: "At common law the right of fishing in navigable waters was common to all. The taking and selling of certain kinds of fish and game at certain seasons of the year tended to the destruction of the privilege or right by the destruction consequent upon the unrestrained exercise of the right. This is regarded as injurious to the community, and, therefore, it is within the authority of the Legislature to impose restriction and limitation upon the time and manner of taking fish and game, considered valuable as articles of food or merchandise. For this purpose fish and game laws are enacted. The power to enact such laws has long been exercised, and so beneficially for the public that it ought not now to be called in question." (*Commonwealth v. Chapin*, 5 Pick. 199; *McCreedy v. Virginia*, 94 U. S. 391; *Vinton v. Welch*, 9 Pick. 92; *Commonwealth v. Essex Co.*, 13 Gray, 248; *Phelps v. Racey*, 60 N. Y. 10; *Holyoke Co. v. Lyman*, 15 Wall. 500; *Gentile v. State*, 29 Ind. 409; *State v. Lewis*, 33 N. E. R. 1024.)

As the waters referred to in the act are unquestionably within the jurisdiction of the State of New York, there can be no valid objection to a law regulating the manner in which fishing in these waters shall be carried on, (*Hooker v. Cummings*, 20 Johns. 91.) The duty of preserving the fisheries of a State from extinction, by prohibiting exhaustive methods of fishing, or the use of such destructive instruments as are likely to result in the extermination of the young as well as the mature fish, is as clear as its power to secure to its citizens, as far as possible, a supply of any other wholesome food.

The main and only real difficulty connected with the act in question is in its declaration that any net, etc., maintained in violation of any law for the protection of fisheries, is to be treated as a public nuisance, "and may be abated and summarily destroyed by any person, and it shall be the duty of each and every protector aforesaid and every game constable to seize, remove and forthwith destroy the same." The Legislature, however, undoubtedly

possessed the power not only to prohibit fishing by nets in these waters, but to make it a criminal offense, and to take such measures as were reasonable and necessary to prevent such offenses in the future. It certainly could not do this more effectually than by destroying the means of the offense. If the nets were being used in a manner detrimental to the interests of the public, we think it was within the power of the Legislature to declare them to be nuisances, and to authorize the officers of the State to abate them. (*Hart v. The Mayor*, 9 Wend. 571; *Meeker v. Van Rensselaer*, 15 Wend. 397.) An act of the Legislature which has for its object the preservation of the public interests against the illegal depredations of private individuals ought to be sustained, unless it is plainly violative of the Constitution, or subversive of private rights. In this case there can be no doubt of the right of the Legislature to authorize judicial proceedings to be taken for the condemnation of the nets in question, and their sale or destruction by process of law. Congress has assumed this power in a large number of cases, by authorizing the condemnation of property which has been made use of for the purpose of defrauding the revenue. Examples of this are vessels illegally registered or owned, or employed in smuggling or other illegal traffic; distilleries or breweries illegally carried on or operated, and buildings standing upon or near the boundary line between the United States and another country, and used as depots for smuggling goods. In all these cases, however, the forfeiture was decreed by judicial proceeding. But where the property is of little value, and its use for the illegal purpose is clear, the Legislature may declare it to be a nuisance, and subject to summary abatement. Instances of this are the power to kill diseased cattle; to pull down houses in the path of conflagrations; the destruction of decayed fruit or fish or unwholesome meats, or infected clothing, obscene books or pictures, or instruments which can only be used for illegal purposes. While the Legislature has no right arbitrarily to declare that to be a nuisance which is clearly not so, a good deal must be left to its discretion in that regard, and if the object to be accomplished is conducive to the public interests, it may exercise a large liberty of choice in the means employed. (*Newark, &c. R'y Co. v. Hunt*, 50 N. J. Law, 305; *Blasier v. Miller*, 10 Hun. 435; *Mouse's case*, 13 Coke, 62; *Stone v. The Mayor*, 25 Wend. 178; *Am. Print Works v. Lawrence*, 21 N. J. Law, 248; *Same v. Same*, 23 Id. 590.)

It is not easy to draw the line between cases where property illegally used may be destroyed summarily and where judicial proceedings are necessary for its condemnation. If the property were of great value, as, for instance, if it were a vessel employed for smuggling or other illegal purposes, it would be putting a dangerous power in the hands of a custom officer to permit him to sell or destroy it as a public nuisance, and the owner would have good reason to complain of such act as depriving him of his property without due process of law. But where the property is of trifling value, and its destruction is necessary to effect the object of a certain statute, we think it is within the power of the Legislature to order its summary abatement. For instance, if the Legislature should prohibit the killing of fish by explosive shells, and should order the cartridges so used to be destroyed, it would seem like belittling the dignity of the judiciary to require such destruction to be preceded by a solemn condemnation in a court of justice. The same remark might be made of the cards, chips, and dice of a gambling room.

The value of the nets in question was but \$15 apiece. The cost of condemning one, (and the use of one is as illegal as the use of a dozen,) by judicial proceeding, would largely exceed the value of the net, and doubtless the State would, in many cases, be deterred from executing the law by the expense. They could only be removed from the water with difficulty, and were liable to injury in the process of removal. The object of the law is undoubtedly a beneficial one, and the State ought not to be hampered in its enforcement by the application of constitutional provisions which are intended for the protection of substantial rights of property. It is evident that the efficacy of this statute would be seriously impaired by requiring every net illegally used to be carefully taken from the water, carried before a court or magistrate, notice of seizure to be given by publication, and regular judicial proceedings to be instituted for its condemnation.

There is not a State in the Union which has not a constitutional provision entitling persons charged with crime to a trial by jury, and yet from time immemorial the practice has been to try persons charged with petty offenses before a police magistrate, who not only passes upon the question of guilt, but metes out the proper punishment. This has never been treated as an infraction of the Constitution, though technically a person may in this way be deprived of his liberty without the intervention of a jury. (*Callan v. Wilson*, 127 U. S. 540, and cases cited.) So the summary abatement of nuisances without judicial process of proceeding was well known to the common law long prior to the adoption of the Constitution, and it has never been supposed that the constitutional provision in question in this case was intended to interfere with the established principles in that regard.

Nor is a person whose property is seized under the act in question without his legal remedy. If in fact his property has been used in violation of the act, he has no just reason to complain; if not, he may replevy his nets from the officer seizing them, or, if they have been destroyed, may have his action for their value. In such cases the burden would be upon the defendant to prove a justification under the statute. As was said by the Supreme Court of New Jersey in a similar case, (*Am. Print Works v. Lawrence*, 21 N. J. Law, 248, 259:) "The party is not, in point of fact, deprived of a trial by jury. The evidence necessary to sustain the defense is changed. Even if the party were deprived of a trial by jury, the statute is not, therefore, necessarily unconstitutional." Indeed, it is scarcely possible that any actual injustice could be done in the practical administration of the act.

It is said, however, that the nets are not in themselves a nuisance, but are perfectly lawful acts of manufacture, and are ordinarily used for a lawful purpose. This is, however, by no means a conclusive answer. Many articles, such, for instance, as cards, dice, and other articles used for gambling purposes, are perfectly harmless in themselves, but may become nuisances by being put to an illegal use, and in such cases fall within the ban of the law and may be summarily destroyed. It is true that this rule does not always follow from the illegal use of a harmless article. A house may not be torn down because

it is put to an illegal use, since it may be as readily used for a lawful purpose, (*Ely v. Supervisors*, 36 N. Y. 297,) but where minor articles of personal property are devoted to such use the fact that they may be used for a lawful purpose would not deprive the legislature of the power to destroy them. The power of the legislature to declare that which is perfectly innocent in itself to be unlawful is beyond question, (*People v. West*, 106 N. Y. 293,) and in such case the legislature may annex to the prohibited act all the incidents of a criminal offence, including the destruction of property denounced by it as a public nuisance.

In *Weller v. Snover* (42 N. J. Law, 341), it was held that a fish warden for a county, appointed by the Governor, had a right, under an act of the Legislature, to enter upon land and destroy a fish basket constructed in violation of the statute, together with the materials of which it was composed, so that it might not again be used. It was stated in that case that "after a statute has declared an invasion of a public right to be a nuisance it may be abated by the destruction of the object used to effect it. The person who, with actual or constructive notice of the law, sets up such nuisance cannot sue the officer whose duty it has been made by the statute to execute its provisions." So in *Williams v. Blackwall* (2 H. & C. 33), the right to take possession of or destroy any engine placed or used for catching salmon in contravention of law was held to extend to all persons, and was not limited to conservators or officers appointed under the act.

It is true there are several cases of a contrary purport. Some of these cases, however, may be explained upon the ground that the property seized was of considerable value—(*Leck v. Anderson*, 57 Cal. 251, boats as well as nets; *Dunn v. Burleigh*, 62 Me. 24, teams and supplies in lumbering; *King v. Hayes*, 80 Me. 206, a horse)—in others the court seems to have taken a more technical view of the law than the necessities of the case or an adequate protection of the owner required. (*Lowry v. Rainwater*, 70 Mo. 152; *State v. Robbins*, 124 Ind. 308; *Ridgeway v. West*, 60 Ind. 371.)

Upon the whole, we agree with the Court of Appeals in holding this act to be constitutional, and the judgment of the Supreme Court is, therefore, *Affirmed*.

#### SUPREME COURT OF THE UNITED STATES.

No. 203.—OCTOBER TERM, 1893.

George W. Lawton et al.,  
Plaintiffs in Error,  
vs.  
William N. Steele.

In error to the Supreme  
Court of the State of  
New York.

[March 5, 1894.]

Mr. Chief Justice FULLER with whom concurred Mr. Justice FIELD and Mr. Justice BREWER dissenting.

In my opinion the legislation in question, so far as it authorizes the summary destruction of fishing nets and prohibits any action for damages on account of such destruction, is unconstitutional.

Fishing nets are in themselves articles of property entitled to the protection of the law, and I am unwilling to concede to the legislature of a State the power to declare them public nuisances, even when put to use in a manner forbidden by statute, and on that ground to justify their abatement by seizure and destruction without process, notice, or the observance of any judicial form.

The police power rests upon necessity and the right of self-protection, but private property cannot be arbitrarily invaded under the mere guise of police regulation, nor forfeited for the alleged violation of law by its owner, nor destroyed by way of penalty inflicted upon him, without opportunity to be heard.

It is not doubted that the abatement of a nuisance must be limited to the necessity of the occasion, and as the illegal use of fishing nets would be terminated by their withdrawal from the water and the public be fully protected by their detention, the lack of necessity for the arbitrary proceedings prescribed seems to me too obvious to be ignored. Nor do I perceive that the difficulty which may attend their removal, the liability to injury in the process, and their comparatively small value ordinarily, affect the principle, or tend to show their summary destruction to be reasonably essential to the suppression of the illegal use. Indeed, I think that that argument is to be deprecated as weakening the importance of the preservation, without impairment in ever so slight a degree, of constitutional guaranties.

I am, therefore, constrained to withhold my assent to the judgment just announced, and am authorized to say that Mr. Justice FIELD and Mr. Justice BREWER concur in this dissent.

#### Megantic Club.

BOSTON, March 12.—The first meeting of the newly elected directors of the Megantic Fish and Game Club was held at Young's Hotel, Wednesday, March 7, and the following were elected officers for the coming year: Pres., Alexander Taylor, Jr., New York; Vice-Presidents, Walter C. Prescott and Chas. A. Kilham, Boston; Sec'y, Arthur W. Robinson, Boston; Treas., L. Dana Chapman, Boston.

The most important business of the evening was the election of Dr. Heber Bishop a life member of the club. Mr. Kilham made the motion and made a very complimentary address in bringing the matter before the directors, praising Dr. Bishop for the many services he had rendered the club, and further stated that the club owed its existence to him and that he had done more for its success than any one else.

Another vote raising the salary of Supt. Phillips will be pleasant news to the club members, who realize and appreciate the hard work and faithful services of Mr. Phillips.

The new board of directors propose to make many improvements this season, to build two open fireplaces at the club house, and in short to make the preserve so attractive that visitors going there will be so pleased with the benefits and conveniences derived from membership that they will immediately, in order to avail themselves of the privilege, buy stock in the corporation.

Mr. Fred Viles, who is well known to all sportsmen, has been engaged for steward for the coming season, and under his management the directors feel confident that satisfaction will be given to all.

ARTHUR W. ROBINSON, Sec'y.

ANGLING NOTES.

Big Speckled Trout in Canada.

IN FOREST AND STREAM of Feb. 24 I quoted from a letter written to me from Quebec by an English gentleman traveling in this country, as follows: "I thought our Kentish Stour trout, which run up to 8½ and 9lbs., were large, but those here scale 10lbs." He did not say what kind of trout they were, but I assumed that they were our *fontinalis*, and if so I thought 10lbs. rather large even for Canada at carnival time, therefore I wrote to my friend, Mr. E. T. D. Chambers of Quebec, to ask about the species and the weight, and whether it was carnival weight or old-fashioned *avordupois*. Mr. Chambers writes me: "Your last letter interested me very much, particularly as I happened to have seen and know all about the big trout therein referred to. They were monsters, no doubt, and all *fontinalis* at that. But they played the same trick upon the visual contemplation of Mr. H., that really good fish always do with the weights and measures department of even the best balanced mind of the enthusiastic angler. The heaviest one of the lot weighed within a trifle of 8lbs. But everything looked large up here in carnival week, and at times even the inhabitants felt big over the success of the carnival and the general good time. Sorry you were not here and sorry that I did not meet your friend, though naturally pleased that I should have been the means through sending you the carnival programme of bringing him up here. But to return to our trout. They were caught in January in the waters of the Triton that are comprised within the limits of the Triton Fish and Game Club. Of course they were taken upon lines set through holes in the ice, and by special permission of the Crown Lands Department, seeing that fishing through the ice is now prohibited here. I suppose that from three to four dozen were brought to town, weighing from over 2 to between 7 and 8lbs. I saw them all. Part were displayed at the Garrison Club and part at the Chateau Frontenac during carnival week, and one I dissected at table. To be exact, I have inquired of Seaton, superintendent of the club, who brought the fish to town, what the heaviest one weighed, and he frankly admits that it was barely 8lbs. But he believes, and so do I, that the 10lbs. trout are there where the 8-pounders came from, and the 7-pounders in plenty. And seven or eight of the heavy hooks such as held the 7 and 8lbs. trout were broken through by the big 'uns that escaped. Shall we go up there together this year and try to find them? These fish, particularly when frozen, do look, if ever fish did, as if there was something wrong with the scales that weighed them. So symmetrical, and yet so plump and finely conditioned! And despite their freezing their livery of crimson and fine gold is wonderfully lustrous, and they must during life have fared sumptuously every day.

"The unfortunate that I subsequently carved looked a six pounds fish. So I guessed before weighing him, but he turned the scale at five. Others had similar experiences, so Mr. H.'s was not a solitary one."

Ouananiche Spawning.

Having in mind what I wrote about the spawning of ouananiche or landlocked salmon in Maine and New Hampshire waters, as related to me by Mr. Atkins and Dr. Quackenbos, I asked Mr. Chambers about the habits of the fish in the Lake St. John waters, as he has made a special study of the fish of that region. This is his reply: "Now about the spawning habits of the ouananiche. I know many of them run up stream to spawn, and I know the streams they ascend for the purpose. But from the immense quantities of young fry seen in parts of the Grand Discharge, I am inclined to believe that some of them run down; just as you say of the Schoodic variety. This is a matter worthy of careful study and I am still investigating it, though for years past I have been collecting all available information on the subject."

To be successful in stocking new waters with landlocked salmon it is highly important that their spawning habits should be fully understood and the plants be made to accommodate them if possible. It is really of no special moment if the salmon do run down from the waters in which they are planted to spawn in the streams below, provided the fry get back into the water in which the plant is made for the purpose of establishing them therein, but the outlet stream of some lakes, admirably suited for salmon, are of such a character that it would seem impossible for young, or even old fish to return if once carried down.

As Mr. Chambers says, the matter is worthy of careful study as I imagine that many thousands of salmon fry have been planted with but little thought as to suitable conditions existing for their welfare.

"Game" and "Gamy."

We often read that a fish is gamy (and sometimes the word is incorrectly spelled gamey) or that one is gamier than another, or that still another is gamiest of all. To-day I read a report of a State Fish Commission that "the pike-perch is a very gamy fish"; and again, "Mr. M. says he cannot speak too highly of this handsome and gamy fish (brown trout)." Another State report records: "They (black bass) have no superior among fresh-water fish in point of gaminess." That may be a misprint, but a newspaper clipping on my desk, in which is quoted something that I wrote about landlocked salmon, makes me say "gamier" where I wrote *gamest*. In a local-newspaper when I wrote that "the Loch Leven trout is one of the handsomest and gamest of the trout of Great Britain," the printer made *gamest* into "gamier," and when I read proof I corrected it, but as the printer had the last whack at it he let it stand gamier, but the word appeared in quotation marks, as though he protested in the most emphatic manner of "Yours truly, Slug Two."

An authority upon the proper use of words says: "Game is an adjective, meaning pertaining to certain animals or birds that a sportsman hunts, as game animals, game birds. It also means having a plucky spirit like such creatures. Comparison: Game, gamer, gamest, like tame, tamer, tamest. There is another adjective gamy, which describes the flavor of a grouse hung by the leg till he drops! Gamy is sometimes, though *only colloquially*, used in the sense of plucky. It runs: Gamy, gamier, gamiest. A good writer would use it *only* with reference to flavor."

How Smelt are Transported.

Since writing the reply to the Philadelphia correspon-

dent who wished to obtain the eggs of fresh-water smelt, I have hunted up the details of the experiments in smelt-hatching conducted by Mr. George Ricardo, to which I referred in FOREST AND STREAM, Feb. 24. The report of Mr. Ricardo's operations in hatching the smelt of the Hackensack and Raritan rivers, is found in the report of the New Jersey Commissioners for the years 1884-85. Apparently Mr. Ricardo had less trouble in handling smelt eggs during the process of hatching than did Mr. Marten, although he does not give the percentage of fry hatched.

But it is to the transportation of the fry that I now refer. Mr. Ricardo says: "It has been an open question, whether the young smelt fry could be transported with any degree of success on account of their apparent delicacy and infinitesimal size, as it is almost impossible to change the water in the cans without a great loss of fish, for it seems that they can pass through anything that water will run through. I have tried a number of experiments last year in the transportation of smelt fry. I sent them all over the State in cans and bottles, without the loss of a fish. They will live for ten days without any change of water, and may easily be sent from New Jersey to California by express without requiring any attention en route."

"At the last meeting of the American Fish Cultural Association at Washington, D. C., I gave to Prof. H. J. Rice a number of smelt fry to be exhibited at that meeting. I put them in a bottle of water, and he placed them in his satchel and carried them to Washington without giving them any air. He reported to me that he did not lose a fish; a result showing beyond doubt that the young fry are very hardy and easy to transport."

In FOREST AND STREAM, Dec. 2, 1893, under "Angling Notes," will be found an account of transporting trout fry in air-tight vessels as practiced in New South Wales. Quite a number of people are desirous just at this time of stocking inland waters with smelts, and for this reason I have given Mr. Ricardo's experiment as to fry, and the fry may be obtained of the United States or New York Fish Commissions, as both are hatching the fish, but, if the adult fish are used, as I advised in a former note, the mistake should not be made of trying to transport them in the manner suggested by Mr. Ricardo for the fry. The adult smelts are found in cold water and they must be kept in fresh, cold water until they are planted in their new home. A marked change of temperature will prove fatal to them. Doubtless they will accustom themselves to a change if the change is brought about very gradually, but in the summer I have found in catching smelts for landlocked salmon bait that drawing them from the cold depths of a lake to the warmer surface water will kill them, and it required rapid movements to get a smelt from the bottom, transferred from the smelt hook to the salmon hook, and back again to the bottom as bait, and not kill it in the operation.

A Changed Heart.

A few years ago a man was arrested in northern New York for breaking the game law. He had been rather pronounced in his declarations that he should catch fish when he wanted them and he was not particular about the means employed to this end. He was not considered a bad man except in his disregard of the game laws, and those he regarded as infringing upon his rights as a citizen and a taxpayer. A game protector finally caught him red-handed with fish that he had taken illegally, but he "gave the law a tussle," and the law got the best of it and the man was landed in jail. There he had time for reflection, evidently, for so far as is known he never again put himself in a position to "have a tussle" with the game law. A few days ago I was talking with the officer who arrested this man and he told me that the one conflict with the law and the result had completely changed the man, and he was now a strong advocate of the game law and was active in enforcing it in the community where he lived.

With that he took from his pocket a letter which he gave me to read, and it proved to be from the foreman of the last grand jury of the county in which the ex-poacher lives. It certified, privately, that the writer of his own knowledge knew that the ex-poacher had learned that deer had formed a "yard" on the side of a mountain near his house, and fearing that they would be killed by crust hunters he had watched the yard for five days when the crust was hard and had thus been the means, probably, of saving the deer from destruction, for it had been discovered that some one was watching the yard, and men who might have a weakness in that direction had not dared to go near it. As privately as the letter was sent to the officer, the officer sent a letter to the ex-poacher, saying that he had learned by the underground line that he had watched the deer yard for five days and he commended him for his action, and as proof that he was in earnest in his commendation he inclosed \$5 as part payment of five days of good work well done. I wish that I was at liberty to give the name of the officer who contributed \$5 from his own pocket to encourage an ex-lawbreaker in his change of heart regarding game laws.

A. N. CHENEY.

Florida Tarpon Fishing.

PUNTA GORDA, Florida, March 5.—The tarpon fishing here is ahead of last season and the regular warm weather which has prevailed has made it almost a certainty to get a strike any day. The following is the record to date:

SEASON OF 1894.		ft.	in.	lbs.
Dec. 27, '93, A. F. Comacho, New York.....		5	5	150
Jan. 5, A. F. Comacho, New York.....		5	6	80
" 6, G. B. Magoun, New York.....		5	8	95
" 6, A. F. Comacho, New York.....		6	3	130
" 8, C. A. Dean, Boston.....		6	2	138
" 8, G. B. Magoun, New York.....		5	5	90
" 10, G. B. Magoun, New York.....		5	2	78
" 12, L. P. Magoun, New York.....		6	0	90
" 21, J. N. Camden, Jr., W. Va.....		8	3½	135
" 25, G. B. Magoun, New York.....		5	0	75
Feb. 22, R. N. Johnson, New Jersey.....		5	9	106
" 26, W. Y. M. Ripley, Vermont.....		6	8	103

Mr. F. A. Brown caught two beautiful tarpon last week in one day. When we do not care for such large fish, we enjoy ourselves from the hotel pier catching trout and sheephead. Mr. J. C. McCoy, of New York, who is here with Geo. B. Magoun, on board the Oriole, caught a monster jewfish here the other day, weighing 380lbs., and measuring 6ft. Mr. Cecil Hayter, of England, shot a seven-foot alligator here last Friday. So the variety of sport would suit any possible inclination. The average temperature here in February at 6 A. M. was 67°.

H. B. W.

BOSTON NOTES.

THE wonderfully pleasant weather the first twelve days of March has taken away a good deal of the snow and ice, and an early spring is promised. So far the season is certainly two weeks ahead of a year ago. Early trout fishing is promised. Boston fishermen who go down on the Cape are very much interested. Some of them have already been down to the streams and ponds to look after the trout that may be caught in Massachusetts after the first of April. Artist Mark Hollingsworth, than whom no man loves to fish for trout any better, will be one of the earliest on the ground. Charles Sias will go down to the trout preserve, belonging chiefly to himself and brother, as soon as the law is off.

There is yet some hope that the dreaded Gilbert trout bill may again be defeated. The House amendments have not yet been concurred in by the Senate. The measure is to come up again early this week. Through the energy of Mr. Charles F. Chamberlayne the following circular has been issued and thoroughly distributed:

BOSTON, March 8, 1894. Dear Sir: The "Gilbert Trout Bill" of 1894 can still be defeated by instant effort. Otherwise it is likely to become a law. Are you willing to assist in preventing the threatened destruction of wild trout for the profit of a few individuals? If so, there is but one thing to do. Write at once to your Senator and Representatives in the General Court, urging them to use their best efforts to prevent the enactment of the bill. If you see these fail, write the Governor. Write at once, and write strongly. I send this circular at the request of certain friends of trout preservation. Very respectfully, Charles F. Chamberlayne. (No. 60 Devonshire st.)

A good many letters have been written to Senators and Representatives, the result of the above circular, but I have not great confidence in the final defeat of the bill. Senators and Representatives have been approached and urged to vote against the measure. Gov. Greenhalge is also being urged with the necessity of vetoing the measure, but to me it is extremely doubtful as to his taking the interest in sporting matters sufficient to cause him to stop the measure.

Mr. Ireland has a letter from W. S. Hills, the blind fisherman, who is now in Florida, and is having a grand time and enjoying it greatly. He goes bluefishing nearly every day and takes some days as many as seventeen fish. This is early bluefishing, but it must be remembered that the fishing ground is far south. I have very little news of success of Boston sportsmen with the silver king this spring. Mr. Richard C. Harding is on a vacation at present in the vicinity of Ossipee, New Hampshire. He went away with the intention of doing some pickerel fishing, but the extreme thickness of the ice had hindered him at last accounts. Mr. Geo. B. Appleton, who had the misfortune to slip on the ice and break his leg some weeks ago, is out again, though on crutches still. He says that the recent spring days in March brought him out, though contrary to the advice of his physician and his best friends. His firm does not propose to make their usual show of live trout in the window on the first day of April this year; they are satisfied that the show of live trout attracts the rabble rather than the sportsmen.

Capt. Fred C. Barker, the well known camp and steam-boat proprietor of the Rangeleys, is on his way home from his trip to Southern California. He was in Boston on Saturday, and appears to be much improved in health. I honestly believe that his greatest trouble is overwork. There is not a man in the business of catering to sportsmen and taking care of them who puts in so much hard labor and personal attention as Capt. Fred. Everybody who has ever had to deal with him has a good word for him. Would that there were more like him in the same business. If he agrees that his boat shall be at a certain landing, in season, the storm must be a terror that can hinder it. Whatever he agrees to do, or that coupon ticket calls upon him to do, that is just what is going to be done.

Some amendments are being tacked on to the bill now before the Massachusetts Legislature to prevent the seining of smelt at any season in the streams and bays along the South Shore and the Cape. The smelt seiners are loth to give up their practices, though ruinous to hook and line fishing. The close time on smelt begins, in this State, on March 15. The fish dealers accede to the requirements of this law cheerfully, and all the smelt disappear from their places of business before that day. They are either disposed of or are shipped out of the State. New York evidently gets some of them. But the local smelt fisherman along the South Shore streams and on the Cape does not yield to the requirements of the law very willingly. He is in fact likely to cause the fish protectors a good deal of trouble.

SPECIAL.

SHE DIDN'T LIKE FISHING.

I FEAR that I can claim for myself no immunity from the rule that the old angler invariably grows uneasy on the approach of spring, and I am reminded of this by a letter lately received from a settlement in Ohio, in which the writer mentions sixty-three waters, or thereby, which he desires to fish during the coming season.

Finding myself in better health and spirits than I have enjoyed for some years past, I am reminded that I have laid up in memory sundry waters to be explored whenever I could manage to look them up.

As I write, the memories of old fishing days come crowding in upon my brain. I recollect that I one day surprised the echitelka, who was not fond of fishing. Nevertheless, she said that she would like to go out with me when convenient, in my boat. She didn't feel very well, and it might do her good. I replied that I should be pleased to accommodate her, and would leave my fishing tackle at home, as I had heard that she didn't enjoy the sport. She said that it was true—she didn't like to see the poor fish taken off the spear, nor to have them thrashing about in the boat; yet she insisted that I should make no change in my arrangements. So we went, and had a pleasant row, but did no fishing until on our return, while off the mouth of a brook where in former days the bass had the habit of interfering with my tackle (though none had been taken there for some time), I thought I would try a cast.

"I did not think that your line was so long, and I don't see how you can throw it so far," remarked the lady, with some appearance of interest. "What makes it act so? Is there a fish there?"

"Truly" I replied, "I am forced to the conclusion that there is some creature of that nature, for the reel sang a tune which meant a 8-pounder."

"Well, I thought maybe they would bite at your tackle, it looks so nice. See the pole bend. Does he pull?"

"If this court understand herself, he do."

"Can't you pull him in?"

"I should not like to try it just now; besides, you don't like to see the fishes flapping in the boat."

"It seems queer that I cannot see him at all. What sort of a fish is it?"

"It is a big-mouthed bass, and they do not always show themselves until compelled to do so, but you will probably see him soon."

The bass was growing weary, and I reached for my landing net.

"Oh, I do believe I can see it—it is a bass, sure enough."

The fish gradually approached, the net slid softly under the gleaming form, and it lay in the bottom of the boat with never a single flap. The lady drew a long breath, for despite previously conceived ideas, she had been following the proceedings with much interest; and a certain gratified expression lighted up her countenance.

"Oh, I never saw fish caught like that before."

"How do you like my way of angling?"

"Why, it is a great deal better than I expected."

There is much satisfaction in finding fish where you expect only water. I made a few more casts, and was successful in landing three. The fourth broke away, and the ochitelka seemed quite disappointed. Then I boated another—this time a 3½-pounder, and said: "I believe that is about enough for ourselves and the neighbors, isn't it?"

"Don't you think Mrs. W. would like one? She will be here this evening."

"Perhaps she would." And in obedience to the implied command I placed upon my hook a frog (which I had previously killed for the purpose), and taking a stroke or two of the bowfacer, sent my line to a little cluster of lily pads, which I had for some time had in view as the possible lurking place of a "buster."

The frog alighted just outside the lily leaves, and as it descended the water broke to the rise of a rousing bass, and the reel sang in sympathy with his movements.

"Now," said I, "there's business ahead; and if we can manage to land that fellow I think that Mrs. W. will tomorrow have fish enough for more than one meal."

It was a very large small-mouth, and when he felt the steel and sprang clear from the water the lady clapped her hands in astonishment.

"My! Why, he hopped right up in the air."

My tackle had shown signs of being a little tender, and having much sympathy for Mrs. W., who is an honest, hard-working woman, but though fond of bass, possesses not the art nor tackle requisite to the beguilement thereof. I felt that it was incumbent upon the ochitelka and myself to see to it that she had this particular fish for her breakfast.

Out leaped the bass—once, twice, thrice; and at every spring there was a subdued exclamation from the stern of the boat. At last the great fish floated alongside, over the net, was safe, and we each drew a long breath. It weighed—whatever you choose. (I may here state that I never use more time in playing a fish than the circumstances seem to justify.) When I had reeled in my line, laid the rod in the boat and assumed the oars, the lady said: "I never liked to go fishing before, but I have very much enjoyed the trip. I think that I should like to go again some day."

And so Mrs. W. had her fish.

KELPIE.

## CALIFORNIA CASTING TOURNAMENT.

SAN FRANCISCO, Cal.—*Editor Forest and Stream*: Following are the rules adopted for the fly-casting tournament which will be held here May 4 and 5:

### Rules to Govern the Contests.

1. *Officers*.—Each contest shall be under the direction of a referee, two judges, a timekeeper and a clerk. The clerk shall see that each contestant is properly registered and that his tackle conforms to the rules governing the particular contest in which he is about to engage. The clerk should keep the records of the contest for which he is clerk. The timekeeper shall indicate by means of a flag the beginning and the ending of the period of time allotted to each contestant. The judges shall determine the degree of excellence of each performer and shall make the awards. The referee shall decide cases in which the judges disagree or when a contestant shall appeal from the decision of the judges. The referee shall interpret the rules in case of a misunderstanding. In matters not covered by the rules, the referee shall decide. The decision of the referee shall be final.

2. *Fee*.—The entrance fee for each contest shall be \$2.

3. *Who May Compete*.—The contests are open to all, there not being as yet sufficient basis for a separation into classes, but the executive committee may, for cause, decline to receive the entrance fee of any person, and may decline to admit him as a contestant.

4. *Medals*.—For each event there shall be a first medal of gold, a second medal of silver and a third medal of bronze. The medals shall be awarded in the order of averages, the highest average takes the Pacific Coast championship; but in events 1, 4 and 5 the longest cast shall be the Pacific Coast record.

5. *Hooks, Lines and Reels*.—Each fly-caster may use one, two or three flies. The kind of reel is not prescribed and the kind of line is not prescribed. The leader for events 1, 2 and 3 shall be of single gut and shall not be less than 6ft. nor more than 9ft. in length. The line shall be free from knots or any device to add weight to the line. For events 1, 2 and 3 the hooks shall not be larger than No. 5, for event 4 the hooks shall not be larger than No. 4-0. To prevent fouling the measuring line or the buoys, and to prevent possible injury to the spectators, all hooks shall be broken just below the barb.

6. *Rods*.—For event 1 the rods shall not exceed 11ft. in length. The weight is not limited. For event 2 the rod shall not exceed 11ft. in length and shall not exceed 8oz. in weight. For event 3 the rod shall not exceed 10ft. in length and shall not exceed 5oz. in weight. For event 4 the rod shall not exceed 18ft. in length. For event 5 the rod shall not exceed 10ft. in length. The weight of rod in events 4 and 5 is not limited.

7. *Style of Casting*.—For events 1, 2, 3 and 5 the casting shall be single-handed. For event 4 the casting may be double-handed.

8. *Time Allowance*.—The time allowed each contestant to extend his line and make his casts is 10 minutes. No time shall be allowed for the replacing of lost flies, but the judges in their discretion allow time for the rejoining of a rod or the replacing of a broken section. No cast in which the leader flies is missing shall be scored. Each contestant shall, after beginning the 10 minutes allotted to him, inform the judges when he desires the scoring to begin, calling score to designate that he is ready.

9. *Buoys and Scoring*.—In casting for distance and accuracy (Event No. 5), there shall be two buoys distant 50ft. and 60ft. from the edge of the casting platform, and there shall be made ten casts at each buoy. The leader fly is missing shall be scored. The total number of the dexterity, 10 being considered perfect. The total number of points both for accuracy and dexterity at both buoys shall be added together and be divided by 4 to get the percentage of each contestant.

10. *The Platform* shall be at least 8ft. square and its surface shall not be more than 1ft. above the surface of the water.

11. *The Lure Casting* shall be done on land on a court 30ft. wide and 300ft. long, through the main axis of which shall run a tape marked off in feet. The casting shall be done single-handed from one extremity of the court. The weight shall be a ½-oz. lead sinker. The line shall run from the reel and the rod shall not exceed 10ft. in length. Three preparatory casts shall be made and then five casts for record. To determine the record of a cast, subtract from the actual distance the number of feet, less one, that the weight falls from the tape, the

sum of the credits divided by five shall determine the score upon which the championship and the medals are awarded, but the greatest single cast shall constitute the Pacific Coast record.

It was also decided that in matters not covered by these rules, the rules of the Chicago Fly-Casting Club shall govern. NANCYOTT.

## NIAGARA COUNTY ANGLERS' CLUB.

LOCKPORT, N. Y., March 5.—*Editor Forest and Stream*: The Niagara County Anglers' Club held their annual meeting Friday, March 2, and the reports show a healthy growth of the club. We number 130 members—101 in good standing, dues paid to date—at \$2 a year. The club has prosecuted and convicted three for illegal fishing.

We offered a reward last year of \$25 for the detection and conviction of all persons caught fishing in violation of the game laws. This year we pay \$10, and as much as the fine is in addition, and propose to assist the game protector, James Ripson, to drive the devils out of the land. We paid \$75 in rewards last year, and having \$500 in the treasury we are better prepared to prosecute the work.

Half a million trout fry had been placed in Lake Ontario in April, 1893. Dynamiters and illegal fishermen had been prosecuted and punished, and \$75 paid in rewards to informers.

The public as well as the law breakers had recognized the sincerity and firmness of the organization in carrying out the objects which it was formed to promote. The past year has been a very successful one for the club. It has 129 members, with \$500 in the treasury, and the coming year is likely to add to its strength and usefulness. Including the 500,000 whitefish and the same number of trout fry expected within a few days, the club will have placed 3,000,000 fish in Lake Ontario, which will in time greatly improve the fishing there.

The prizes offered a year ago for the highest count of fish taken during the season were awarded as follows: First, silk umbrella from A. L. Smith, to William Hart, Gasport. Second, silk line from C. W. Hatch, to W. H. Case. Third, vest pattern from J. W. Peuss, to W. E. Huston. Mr. Hart's catch was 332 fish or 5,048 points, W. H. Case, 258 fish or 4,594 points, and W. E. Huston's, 49 fish, or 1,342 points.

The election of officers resulted as follows: President, W. H. Case; Vice-President, J. F. Little; Secretary, F. K. Sweet; Treasurer, G. W. Weaver; Directors, W. A. Williams, Jos. Dumville and John A. Merritt.

In view of the large amount of work performed by the secretary, a salary of \$25 per year was voted that officer. Mr. Sweet has been secretary before and there is no more active member of the club.

Mr. W. H. Case, the new president, is as good a selection as could have been made, and he will keep the boys awake this year. The meeting adjourned until Tuesday, April 3. F. K. S.

### Death of William S. Miniszek.

MEMBERS of the fishing tackle trade, particularly in the West, will be pained to learn of the death of Mr. William S. Miniszek at his residence in this city on Tuesday of last week. Mr. Miniszek was the representative of the well-known fishing tackle firm of William Mills & Son, of New York, having traveled for them through the West and on the Pacific Coast, since 1886. He had an extensive acquaintance with the trade, and not only was he extremely popular, but was held in high esteem for his sterling qualities as a man.

## Fishculture and Fish Protection.

### Planting and Growth of Landlocked Salmon.

CHARLESTOWN, N. H., Feb. 7.—*Editor Forest and Stream*: My friend Cheney's last letter on the habits of the wannanish (or wannanish, as Mr. Brewer tells me they pronounce it in Canada) recalls the fact that the plant of them which I made at the Connecticut Lakes in 1880 followed the habits of their Grand Lake progenitors and went down stream to spawn. When I was up there in '82 and inquired for them "Uncle Tom Chester" told me that one about 11in. long had been taken near the outlet of Second Lake, in which the first plant was made. I have never heard of another one being seen in that lake, but two or three years ago they began to appear in First Lake, and last year quite a number were taken there.

It is impossible for them to get up stream into Second Lake again, as the crest of the dam overhangs the pool below, which is very rocky and turbulent. There is also a log chute at the falls half-way down which pours its water out through a trough in the same manner, and it would be impossible for any fish to scale it. On the other hand, at the outlet of First Lake there is a sawmill, with a rack, or strainer, through which they could not go down, and it is two miles away from the place where they entered the lake, if the first lot spawned, as I think they did in the stream between the two lakes, where there is plenty of good spawning ground.

There is no such ground for at least half a mile below First Lake, as the channel is there a steep rocky gorge, and any fish which might have escaped at the outlet would have to keep on down the river to more quiet waters.

I have taken lake trout (*Salmo namaycush*) in the little pool where the sawmill wheel discharges, but that pool is not more than 15 or 20ft. in diameter; and they had probably been swept down when small and could not get back again.

SAM. WEBBER.

*Postscript*.—Further thought on what I have said about the spawning habits of the wannanish leads me to make the suggestion that the position of the first plant may have some effect on the future migration.

As I remember, the first, and certainly the subsequent ones at Sunapee, were made in the waters of Pike Brook, on which the hatching house now stands; and the young fry were brought up and educated in those waters, and naturally returned to them to spawn themselves.

On the other hand the fry I took to the Connecticut Lakes were planted in the lake at a point where a strong spring broke out on the shore of the lake and spread itself over a bed of loose stones and coarse gravel, under which the young fish found shelter instantly. It was late in the day, our ice was exhausted, and we did not dare to risk the pull of a mile in a boat and another mile tramp in the woods to find a suitable place to plant the fry in one of the inlets. The place where we did put them was on the same side of the lake as the inlet and not very distant from it, and probably their distinct—or in other words their inherited—experience led them to the outlet as the nearest running water.

I think this may have been the case also in the plant in some lake in central or western New York, of which I cannot recall the name, though it has been often spoken of, where I think the plant was directly in the lake, but where the fish were afterward found to have gone down to a lower one.

In the Sunapee case the fish from their own experience went up to the waters in which they were bred; and in the other cases, relying on their inherited experience, went down.

I offer these as possible explanations of the difference, and would like to know if my friend A. N. Cheney thinks them plausible and probable.

SAM. WEBBER.

PORTNEUF, Quebec.—*Editor Forest and Stream*: In your issue of Jan. 27, Mr. A. N. Cheney had a communication respecting the growth of landlocked salmon. My experience has been as follows:

On the 4th of June, 1890, I placed about 8,000 fry of those fish (hatched by me from eggs obtained from the U. S. Hatchery, at Grand Lake Stream) in a fine stream or large brook flowing into a lake of about 10 square miles in superficies and connecting with other lakes on nearly the same level with about as much more.

Nothing was seen or known of these fish (except that some lumbermen reported that they had seen some of them dead the following spring—which report I do not consider very reliable), until last summer, when one was taken in a river flowing into the first named lake, which might weigh a trifle over 2½lb.

The fish must have been one of those I planted, since none are known to exist in any waters directly or indirectly connecting, or nearer than the Lake St. John region, some 135 miles away.

I am not surprised that no more fish have been taken, but am rather surprised at their slow growth. The extent of water area is too great and too little fished for any results to be looked for by the occasional fisherman in so short a time, but the late Col. Hodge, of New Hampshire, told me that they might be expected to weigh from 2 to 3lbs. in three years, although he did not think they would breed under five years. Consequently the contents of Mr. Cheney's letter vary so widely from my experience that I take the liberty of calling attention to it. The fish caught was some three miles (or more) from where the fry were placed and in a rapid half a mile above a high and steep fall. Another fish was heard and one seen to leap out of the water of the lake, in which there are no other leaping fish, only the gray trout (touriil), perch and minnows.

I put some 12,000 fry into another brook falling into a lake of the same water system but several miles away, and only connected with the first through eight or nine small lakes and their connecting streams. None of these have ever been heard from, but we go anywhere near them very rarely indeed.

In 1891 several thousand fry were (through mischance, for I intended to put them elsewhere) put into waters quite close to our favorite trout lake, which is fished more or less almost every day in the open season; but none of them have ever been discovered. Some hundreds, at least, of the 1890 eggs and fry must also have been spilled out of our hatching trough into the same waters, and as the lake would seem to be a place in every way favorable for them, I think it surprising that not one has been seen. There are no fish in that lake except speckled trout (in abundance) and minnows. I did not want the ouananiche in it, preferring to leave all the food for the trout.

*Postscript*.—Since I wrote the foregoing I have received some further information. Having seen the man who actually caught the one landlocked salmon mentioned I find it was only a very small one, perhaps some 7in. long, which makes me suspect that it was of a second generation, the product of the fry I planted in 1890.

I fail to see how it can be otherwise, and the fact puts a very encouraging aspect on my experiment.

That little fellow sprang at the fly directly out of white foam in a boiling rapid, into which the line was drawn to prevent it from getting entangled in some branches.

I shall hope for further developments next summer.

G. DE MONTAUBAN.

CENTRAL LAKE, Mich., Feb. 28.—A man living on the shore of Torch Lake (about four miles from this village) tells me that he saw a fish taken from that lake recently which he believes to have come from a plant of landlocked salmon made by the Fish Commission six or seven years ago. He has never heard of any other result from this plant, though he saw the superintendent, Mr. Marks, some three years ago, at a time when they were netting, in order to secure evidence, if possible, that these fish had lived.

This specimen weighed about 3lbs., had no spots, was white or silvery on the sides, but darker on the back. My informant tried to buy it, in order to send it to the Commission, but was unsuccessful.

KELPIE.

### A Disease of Embryo Salmon.

*Editor Forest and Stream*:

The fry of Salmonidae at the Craig Brook Station have suffered occasionally from quite a list of diseases, the most of which have, however, inflicted but slight injury. The two most serious attacks were experienced in 1890 and 1893, during the sack stage, and their ravages were so extensive that I wish to consult other fishculturists with reference to any similar experience they may have had. I have considered the two attacks as coming from the same disease, though there are some reasons for thinking this point doubtful.

When the disease first made its appearance about the middle of April, 1890, the fry attacked were approaching the middle of the sack stage. The first symptoms observed was a blotched appearance of the sack, which arose from the presence of numerous small white spots just under the surface, scattered all over the sack, but most numerous near the tip. These spots increased in size and ran together somewhat, especially in the tip, which soon became quite white. Meanwhile the subjects of the disease appeared to lose the instinct to hide, became indifferent to light, and instead of clustering in the corners lay scattered about on the bottom of the trough, resting on their sides. The breathing now became weaker, and after a while ceased altogether. The heart continued to beat a little longer, but finally this ceased also and the fish was dead. After the first deaths in a trough, the mortality would rapidly increase until, in some of the worst cases, twenty per cent. or more would die in a single day, and the lot be almost annihilated before the completion of the absorption of the sack.

About thirty per cent. of the fry of all kinds succumbed to this epidemic in 1890. It began with the Atlantic salmon, but was more deadly that year with the landlocked salmon and saibling, and attacked all other kinds to some extent.

In 1891 there was no trace of this disease among any of the fry, but in 1892 it re-appeared and was even more destructive to the Atlantic salmon than in 1890, but no other sorts were attacked, though we were rearing landlocked salmon and brook trout under exactly the same conditions as the Atlantic salmon.

The epidemic was generally prevalent among the Atlantic salmon in 1892, but in 1890 it attacked only certain lots, not appearing to be infectious, but running in families. That is, there was evidence tending to prove that the descendants of certain parents were subject to the disease while the descendants of other parents were exempt. There was also evidence in favor of the view that the cause of the disease was local and not general. In some cases lots of eggs were divided and parts of them shipped to other stations, with the result that while those retained at Craig Brook suffered from the disease, those hatched and reared in other waters escaped entirely.

If other fishculturists have had experience with any such disease as I have described, they could render an important service by reporting the facts they have observed in full, and offering any suggestions they may be able to, as to causes and remedies.

C. G. ATKINS.

CRAIG BROOK STATION, East Orland, Maine.

The Kennel.

All those who love a dog because it is a dog, and not merely a medium for the accumulation of dollars and cents, are invited by the editor to consider this department as one in which they can discuss amicably any subject that is of interest to the canine fancy, without fear of their communications being subjected to personal comment or ridicule.

FIXTURES.  
DOG SHOWS.

March 27-30.—Philadelphia Kennel Club, at Philadelphia, Pa., Dr. D. B. Darby, Sec'y. Entries close March 16.  
April 17 to 20.—New England Kennel Club, at Boston, Mass. D. E. Loveland, Sec'y. Entries close March 31.  
April 18 to 21.—Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.  
May 1 to 4.—Special show of St. Bernard, Collie, Spaniel and Fox-Terrier clubs, in connection with the Hempstead Farm show, Madison Square Garden.  
May 15.—Portland Kennel Club, at Portland, Ore. D. L. Williams, Sec'y.

FIELD TRIALS.

Sept. 5.—Manitoba Field Trials Club, at Morris, Man. R. J. Gallagher, Winnipeg, Sec'y.  
Nov. 6.—International Field Trials, at Chatham, Ont. W. B. Wells, Sec'y.

DETROIT DOG SHOW.

THE members of the City of the Straits Kennel Club are to be congratulated on the successful conclusion of their second dog show, held March 7 to 10. It is always a pleasant duty to chronicle such a success, for it always augurs well for even a better show next time. Hitherto Detroit has not been considered good soil for such an enterprise. Although the club's initial show last year paid its way, this year was considered to be a crucial test as to whether such ventures would continue in popularity. There is little doubt of it now in Detroit. Popular prices ruled and crowded aisles resulted. On Thursday there were 2,500 paid admissions. On Friday 4,000 and on the last day about 3,000 people turned the stile. Saturday morning was devoted to Young America and there are probably several hundred budding fanciers and many worried fathers in the city this Sunday morning.

Although the bench show committee is composed of several whose names are familiar in show catalogues, the management of the dog show they have had little experience with. Still, all things considered, the show was fairly well managed, and the experience gained this year should stand them in good stead when another year comes round. The committee is composed of Geo. M. Hendrie, Louis Hilsen-deger, W. Howie Muir, Thos. C. Onelleite, C. A. Parkinson, Chas. Thurman, Guy D. Welton, the secretary, and Thos. Blake, whose experience in such affairs must prove a great help. Mr. Welton was the superintendent as well as secretary and stuck to his duties well, and while we are compelled to draw the attention of the club to a very few undesirable features, we trust they will be taken in all kindly spirit. Mr. Backus, the treasurer, was also an active worker during the week.

The judging was expeditiously gone through, most of the regular classes being judged the first day, and, considering the average show, with an entry of 469 dogs, this may be termed good work, especially as the three rings placed on an extended stage at one side of the hall were not very conveniently situated for quick ring service. The different members of the committee threw themselves heart and soul into the work during the whole week. The puppies were shown against the A. K. C. rule. Dogs not entered were allowed to be brought in for sale. The hours for exercising the dogs were too limited, consequently the exercising ring was at times entirely too crowded with a romping lot of dogs of all sizes; a menace to human and canine limbs.

The aisles were kept well swept, and the feeding and benching being under the experienced care of Mr. "Spratts" Ehrman and "Capt." Murphy, no fault can be found in this respect. During the show Jas. H. Burton's dog circus performed several times a day on the stage and proved a great drawing card, as the programme was a good one.

Everyone was delighted with the grand quality of the dogs on exhibition. In fact the best we have were there, and strong teams from the East stopped off on their way to the Windy City's show this week. The prize list shows the kennels represented, but we may mention that pointers, setters, spaniels and collies were particularly strong, both in numbers and quality. Spaniels were better than at New York, most of the other breeds show that the best were present, though not in such numbers as those named, which subject is treated of in a more detailed manner in the criticisms.

Among those present we noticed C. A. Pratt, Dr. L. Young-husband, C. W. Lougest, J. B. Lewis and father, A. Froem-bling, A. Bousfield, J. E. Dager, John Long, H. Jarrett, F. P. Dole, T. G. Davey, Hes. Milkins, F. C. Stone, W. B. Wells, Geo. Kime, R. Merrill, F. L. Moe, G. Douglas, C. M. Nelles, A. Laidlaw, J. R. Oughton, R. McEwen, J. A. Spracklin, Messrs. Hay & Alexander, George Thomas, W. Turner, C. Davison, R. W. Armstrong, "Sef" and Tom Hallam, B. F. Lewis, Donald Munroe, James Green, S. H. Sliper, T. A. Howard, etc.

The catalogue, while well arranged as far as entries in the different classes went, contained a number of typographical errors, which should be more closely scrutinized another year, as it is very important that the dogs' names should be correctly spelled; some had lost all identity. A marked catalogue was issued on Friday, and contained but two very unimportant mistakes, a very good achievement indeed. Dr. S. Breimon was the veterinarian, but he was difficult to find.

MASTIFFS (James Mortimer, Judge).—Although there were no challenge entries it would be difficult to find an exhibit of mastiffs more even in type and quality than appeared at this show. In open dogs Prince Cola headed the procession. This dog has improved, filled out in body and skull and although he has light chocolate markings and his muzzle, though deep, could be broader, there is little other fault to find with him. The well known Emperor William runs him close, Prince in muzzle, but looked light and tucked up; Emperor Maximilian, third, loses in size and is a trifle straight in hocks, his head is very typical; Beau-fort, Prince seemed under the weather and looked a bit thin, his feet are faulty, too open in toes, and his hind legs should be more bent. Cardinal Beaufort was absent. In bitches there were only two that could be considered, the well known Minna Minting beating Lady Diana in head, chest and shoulders, but not in carriage of ears. The former moved better than last year at Chicago. Zenobia was the only poor one shown, long faced. In puppies a very promising one in Kimball had little trouble in beating Campana, mentioned at New York. Frederick the Great unfortunately succumbed to the excitement of travel, dying on the way to the show.

Dr. Lougest took the special for best kennel and Prince Cola that for best mover, and with Minna Beaufort won the brace prize. None of the Mastiff Club specials were competed for, Dr. Lougest we should think would be a member of the club and adorn his sideboard with some of the handsome trophies they offer.

ST. BERNARDS (James Mortimer, Judge).—Some of the best we have were represented, but though numbers far ex-

ceeded those in the mastiff division, the quality was not nearly so even. Sir Bedivere, looking if anything better than at New York, had only Fernwood Bruce to beat in the challenge class; both were looking well. The massive fo had no competition on her first appearance in the challenge class; she looked much sprightlier and better than at Chicago. In open dogs, the handsome Eboracum was placed over Lord Dante, who is better behind, but not so well-shaped or marked in head. Eboracum is undershot slightly, but it does not detract from his appearance. The massive and handsome American Caesar, I believe, had been in better condition, would have pressed the others close; his head needs a little more stop, but for bone and general massiveness he excels the others. Sir William Wallace is a very nice small dog, with little fault to find in him except lack of collar; well-formed head, good bone, legs and body, and flat, rich-colored coat; pity there is no more of him. Earl Douglass, while a handsome dog as a pet, is too fine in muzzle; his coat is his chief attraction. In bitches, the beautiful-headed Rustic Beauty charmed all by her intense quality and typical expression, while her massive, deep head made a marked contrast to the others; it is a pity her coat is not flatter. Lying alongside Sir Bedivere, the couple made a charming object lesson in what St. Bernard expression and quality should be. A word of praise would not be amiss here if given to Arthur Trickett for his splendid work in getting these two dogs in the condition they are at present. Rustic Beauty was a wreck at Chicago, and Sir Bedivere was not anything too lively, but now, barring a little more coat, he looks as well as he ever has done in this country, and does not require to be lifted on his bench. The fact has been brought home to him that he is but a dog after all, and he eats with the rest now. While a dog may be a crack in his class, his internals are pretty much the same as any of his kind, and owners and kennelmen should remember this. The good-bodied Sunray, improving in head with age, came second to Beauty; while Uarda, third, a little plain-faced and light-colored, is well formed in body and legs, her head requires more depth and squareness. Arline, reserve, is a smart-moving bitch that well deserved her letters; nice type of head, but not enough of it. Lady Taylor might have done better had she not been shown in whelp; she has lots of quality, but is not massive enough in head. The others require no mention. In puppies Sir Havelock is a bit straight-faced and snipy, other parts good. Little Dorrit, second, while a pretty little thing, should be squarer in muzzle and not so full in eye; her skull is fair. Belle Isle Napoleon, though too long cast, might have had some letters; he has a better head than the second winner; his ribs are very flat, though.

In smooths Scottish Leader bested Alton II., both were well shown. The latter has a little the best in expression, but not in depth of muzzle and skull. No challenge bitches. In open dogs St. Augustine wins from Lawrence Garza in size and massiveness of head; both are faulty in hocks, the winner more so, and though better than at Toronto, still is a little thin. The bitch class saw a win for Pratt's Belle, a new face to me, a nice headed one, nearly all white in body, faulty tail, good legs. Sunol, second, is of better color, on the small side, fair head and nice type all through. Fern-wood Goldie, third, has been described before, just a fair bitch. The Argyle Kennels took the kennel special.

BLOODHOUNDS (James Mortimer, Judge).—This was a repetition of New York almost, excepting the winner, Kawena, who has just come over the sea. She is a bitch of excellent parts; while I don't think she can beat Belhus in head, being shorter in skull and muzzle and not so well defined in peak she scarcely has Belhus's nobility of expression, but she excels, although a bitch, in body formation and bone, and was shown in excellent condition. Vigilant, that promising young bitch we noticed at New York, was vhc. Alchemist was a little under the weather after his voyage and will not appear till Boston.

WOLFHOUNDS (C. H. Mason, Judge).—This was a repetition of New York as far as the dogs go, but awards were reversed in some cases. Argoss and Leekhof and Vinga and Zerry were again the order in challenge classes. In open dogs Odrooska, winner at New York, losing flesh a little, had to give way to Col. Dietz this time, who was vhc. at New York. The latter loses to the other in loin, front and head. Leekhof II. was reserve; he was also at New York where he took third money. In bitches the order was again Rega and Ermina; Lady Dietz took a step higher, this time being placed over Gypsy Queen, but as stated at New York she is a good sort, and especially in Lady's present thin condition should get the better position. Seacroft Kennels took the kennel special, but the Marlboro Kennels, taking condition and evenness of type, to say nothing of wins, should have won.

GRAT DANES (James Mortimer, Judge).—A very light exhibit, but some dogs of good type were shown, Mrs. Glynn getting most of the plums. In open dogs, there being no challenge entries, Senta's Brutus, first, a blue dog, has made up into a strong, well made dog since the fall of last year, excelling Stanley in formation of skull, cleanness of neck and face, bone and carriage of stern; losing a trifle at present in arch of loin, a splendid mover, ears should be neater. Sirius, third, should be more bent in hocks, is cheeky, and should be stronger in muzzle, best headed son of Melac yet seen. Pedro, vhc., is a coarse common looking black dog, light of eye, but good legs and bone; not a typical great Dane. In bitches Senta's Rheda has made up into a nicish sort in body and legs, beating Senta's Mascot, her litter sister, this time, but the latter scores in head and is a nicely formed bitch all through, with a good head of proper length. Rheda is sort of down-faced and not square enough in muzzle and is lighter in bone. The puppies were not good, the winner's head will not do, but is better in body and legs. Mrs. Glynn took the kennel and brace special.

DEERHOUNDS (James Mortimer, Judge).—Lochiel, looking more symmetrical than at New York, won nicely from Bruce II. in head and bone and loin, but loses in texture of coat, this dog should be shown as light in flesh as possible, consistent with dog show condition. In bitches we saw our old friend Olga once more; she keeps up wonderfully well, had a good coat on and was as hard as nails, in fact all these dogs were well muscled and hard. There were no specials.

GREYHOUNDS (James Mortimer, Judge).—The entries, with one exception, are so familiar to our readers that criticism is not necessary. Gem of the Season easily won from Pious Pembroke in challenge dogs, leaving Master Rich in the cold. Pretty Bestwood Daisy had things to herself in challenge bitches. In open bitches—no dogs were entered—Southern Beauty had no difficulty in winning over Idlewild.

SPANIELS (C. H. Mason, Judge).—The collection here was one that could scarcely be excelled and must have occasioned, especially in the cocker classes, no little trouble to the judge, who, however, gave the exhibitors little, if any, cause to grumble. In challenge fields Newton Abbott Torso was alone and looked fairly well. In open black dogs Beauty R.'s curly coat and snipy head placed her with a second only to her credit. Bitches saw Rose an easy winner from Daisy R.; her head is a bit wedge-shaped, however, short of coat, but good body and legs. Daisy's coat should be much flatter. In liver dogs first went without competition to Queen, first here last year; a bit plain in muzzle, otherwise will bear careful criticism. Any other color, the Toronto winner, Workman, was alone; he is not long enough in body and is "cockery" in head.

Challenge cocker dogs brought out a gay lot and that good one Black Duke, excelling in muzzle and body, was placed over champion Middy, who would do with more flesh. Jay Kay, Red Doe, Othello and Red Roland were out of it. In bitches first went to the popular Miss Waggle, who beats Black Duchess in head and condition, though her coat was

a bit stary. In open dogs (11) Jumie II., unnoticed at New York, won first; his head is a fairly good one, a little too full in brow, his body needs filling out, is not straight in front and is very low to the ground, good bone, flat coat. Pickpania, taking the same type, has a better head and is better in body. Woodlawn Prince, third, is a nicely made one, head a trifle long, but well shaped, better front than winner, good bone and body. Douglass, reserve, is too small and ultra cobby, but a smart little chap, nice head, little out at elbows. Donovan, vhc., is coarse in head and leggy to the others; another type of dog, and has made himself famous for some time to come; he won at New York. Woodland Count, vhc., was described at Newark. King Kole, vhc., is too high and broad in skull, but deserved his letters. Wild Fire is coarse in head. Amado has too much stop, otherwise a nice sort. Brantford Jet went way down this time with hc. In the ladies (17) first went to a sweet-headed one in Baby Ruth, but she is out at elbow when standing naturally and is light in body yet. Rideau Reine we have frequently spoken of and also Lady Fidget, who hardly stands true enough in front. Dart, reserve, I could not find. Among the six vhc.'s were Woodland Jude; rather long-headed, but good bone and body, with fair front. Nellie S. has a nice head, but is a little bowed in front; Nellie deserved her letters. Fashion is high in skull and struck me as rather a nice type all over, though she has a rather plain profile, is a cobby sort. Miss Helyett, hc.; nice head and front, but light in body. Woodstock Dora found competition too warm and Lady Constance's crooked front and full, broad skull put her out.

In any other color dogs, first went to St. Lawrence Prince, whose round coarse skull is offset by good legs. Brantford Rufus, second, is well known, described at New York. Brantford Redstone, won last year, is full in eye and brow, stands up well. Brown Lad, vhc., should have darker eye and not be so full in brow; good otherwise. Duke B., hc., is too full in muzzle, and so is Gold Ring. Dandy S. is faulty in head, but a good workman-like looking dog. In bitches, Red Rose, second, a little out before the eye but well shown. Ruth S. is also faulty before the eye, but a nice sort, described before. Woodland Polly, reserve; is a trifle plain in muzzle, but little fault elsewhere, in fact, so many of these shown had but one or two prominent faults that criticism becomes a repetition. Keeps should be shorter in muzzle, but body and legs pass muster.

There were no Clumbers entered. In Irish water spaniels there was not one with a proper tight curled coat, most of those shown were open and flat headed. Patsy B. won in dogs, was poorly shown and is light in body, coat open. Garry Owen shown better in condition and coat, and had the best head on the bench, legs well clothed. The well known Biddy Malone won in bitches, but her curl is all "wilted," bests Kitty of Cork in length of head and coat such as it is. Erin, reserve, has a thick coarse head and poor coat for ice water work.

COLLIES (James Mortimer, Judge).—A fine lot of dogs, the best from Canada and the States. In challenge dogs Wellesbourne Charlie and Roslyn Wilkes fought their battle again, and victory lay with the former, as at New York; neither are in full bloom. Flurry III. had a nice win from the rather plain-faced Jaky Dean, especially in the carriage of ears, though a bit ragged in coat, particularly in brush. Open dogs (21) must have been a puzzler after picking the winner, Sefton Hero, who looked very fit, though more coat would improve him. Yardley Fox came next, he is plain in quarters, too short bodied, good type of head and gets his ears up nicely; excellent coat all through. Orme, third, is a nice sort, head fair length, good ear, coat soft. Blizzard, reserve, a white-coated one, has a good flat skull, but is light in body and out of coat. Among the vhc. there were Rhod-erick Dhont, coarse in head, good length of coat but open. Finsbury Dude is soft in coat and head is not fine enough. Ightewhell Chief is a rather pleasing dog that can beat his fellow card dogs; good length of head, bit cheeky, well coated but not dense enough, good legs, ears a bit heavy but carried well, falls away behind too sharp, should be darker in eye. In bitches the winner proved to be Charlton Phyllis again; she was described at Saratoga, but stands better behind now than she did then, she looks well. Lady Fidget, from the same kennel, came next; she is out of coat and heavy in ear. Lassie, third, turns her feet out, but her head is very pretty; dips in back a little. Helena, reserve, has a sweet head, nice length with good body and coat, and might have gone higher up. Bertha II. was outclassed in head. Nora is too high in brow, but a nice face, heavy ears detract however. I liked Lady Christopher the best of the two lettered ones. Cragston Kennels took the kennel special, and Lassie the special for best owned in Michigan.

POODLES (C. H. Mason, Judge).—With the Meadowmere Kennels supplying all but two entries, the winners have been written of very recently. Dinah, alone in challenge bitches, scored her first win then; Chloe being marked absent, Sidi won in open curly dogs, followed by Yankee, a nice smart sort. Diablo, reserve, loses in coat and muzzle to winner. In bitches the New York second winner Cybele, lost first prize to her kennel mate Bess and sustaining the opinion I expressed in the New York report that she is the better bitch, though beaten there, she beats in muzzle, rib and loin. Bismarck was the only corded one and a separate class was made.

BULLDOGS (C. H. Mason, Judge).—The three shown are all well known and were described in the New York report. Romance won over Wal Hampton, beating in head and condition considerably. The Graven Image was alone in her class.

BULL-TERRIERS (C. H. Mason, Judge).—In their game of see-saw, Starlight and Attraction made another appearance; this time the weight of the judge's opinion made the former score. Then Cordona won in dogs, followed by Top-sparkle, some distance apart though, Bellerby King coming in for what he deserved, the reserve card; he is not true in front, faulty in head and eye, too light, cheeky, fairly good body. Edgewood Tipsey and Edgewood Topsey, wrongly entered as Modesty, furnished the bitch class winners and the New York decision was sustained.

DACHSHUNDS (John Davidson, Judge).—There was little work here, for Jay scores well over Plethysaurus, though losing in condition he scores so much in head and front and length. Tapstur Horst, reserve, loses in feet, stop, ears and stern. In the next class Jargonelle again had it her own way, as the other is not approaching in type, head, front, length or skin.

BEAGLES (John Davidson, Judge).—With the extended classification I expected to see a bigger entry. Most of the winners are well known. Doctor led in lonely state in challenge dogs, then June M., excelling Snow in type of head, scored another blue ribbon, and was in much better shape than at Chicago three months since. Open dogs, large size, Joe, described at New York, won, better in head, but not in skull than Pomp. Pomp runs him close. In bitches the New York winner, Oracle, was alone, traveling is not doing her much good. In dogs under 13in. the well known Adam scored. He is plain-faced, but a good working sort of dog. I liked Baby Deane for first in bitches over Superba, slightly better head; neither are good, better bone and cobbier body. Guy D. Welton won the kennel prize and Oracle the special for best in show, somewhat easily.

FOX-TERRIERS (James Mortimer, Judge).—A nice lot of these dogs, though competition was not very brisk, the New York winners sticking to the front. Raffle, in the absence of Ripon Stormer, had a walkover in challenge dogs, and so had Grouse II. in her class; she looked exceedingly well, too. The New York winner, Warren Safeguard, had an easy win in open dogs, beating Baby Pailisy in skull and muzzle, a more punishing head. Baby Pailisy looked well and is a nice ter-

rier, but was out of coat. Arrandale Mixture is light in bone, fair head, he and Laundowne Poverino have occupied the same relation before. Hillsdale Royal is light in body and weak in muzzle. That capital sort, improving, too, Warren Caution beat Warren Duty, and properly, in length of head and strength of muzzle and coat; both are nice of stamp, though a little more "varmint" expression would add to their appearance. Lady Rosebery, third, is a little coarse in head to the winner, but has more bone, she is well known. Richmond Jesmine, vhc., should be stronger in muzzle, is a bit leggy, good body.

In wires first went to Undercliffe Comet, whose wide front and coarse shoulders rather spoil the effect of his good head. Dark Eye, second, is well known, and so is Ebor Larchmont, while Adwood Jim II. is a campaigner of the old sort. In bitches, Jess Frost, with two sores on her stern, should have given place to Raper's Rosanna, a better-headed one but leggy and out of coat; Jess should not have been shown. Glenmore Belle loses in length of head to both. The Rutherford Kennels took both kennel prizes, which included a \$100 trophy. The best in show owned in Canada fell rightly enough to Ruby Pallissy, which pleased his new owners mightily. With this also went the cigars for the best owned in Wayne and Essex counties.

**IRISH TERRIERS (James Mortimer, Judge).**—There was only one strikingly good fresh face, the others, excepting one, are old campaigners. In the challenge class Jack Briggs scored again over Jackanapes, and in the absence of Bill Briggs, Brickbat, Jr., claimed a blue ribbon in the open dog class; pity this dog is so much on the large size; he is well formed. The bitch class introduced us to a new one from Dr. Niven's kennel, Glenary Donagh, a ten months' old terrier, quite large enough but of excellent type, long clean head well formed; she should do some winning. Blue Ribbon, second, is quite a coarse-headed one in comparison.

**DANDIE DINMONTS (C. H. Mason, Judge).**—Only King o' the Heather and Ainstey Daisy from the same kennel, but with positions reversed from New York as they should be.

**SKYE TERRIERS (C. H. Mason, Judge).**—A nice lot, but all well known and reported fully at New York.

**BEDLINGTON TERRIERS (C. H. Mason, Judge).**—Mount Vernon Tibbie won; nice size. Second went to a capital made one in Doctor A.; rather large size but excellent and well shaped body. Professor looked very thin and smaller than ever; muzzle too snipy and soft coated.

**BLACK AND TAN TERRIERS (C. H. Mason, Judge).**—In challenge class three were put down, Broomfield Sultan getting the verdict, with Gypsy Girl reserve; Prince Regent, a better-tanned dog, looking on. In open dogs, Glenwood won nicely; he was at New York; beats Rochelle Turk in head, though a bit coarse, eye and bone and body. Rochelle Oolah, reserve, described before; a poor one. In bitches, Rosette scored nicely in general type and character, though tan could be better, over Rochelle Moll; Betsy, also well known, getting reserve.

**YORKSHIRE TERRIERS (C. H. Mason, Judge).**—Only three, and not a good one in the lot. And the same may be said of the toy terriers, though Tiny has a larger head than is generally met with; tan too light, and only got second.

**SCOTCH TERRIERS (C. H. Mason, Judge).**—Three and Kilroy were placed as before in challenge class, and Kilree again beat Wankie Tam; both looked well. Culebrian this time beat Wankie Daisy; better head, ears and general type. Merry Coll, reserve, loses in coat, front and head to the winners.

**PUGS (C. H. Mason, Judge).**—Curtis and Vega furnished the challenge winners, and were well shown. In open dogs, Finsbury Duke won nicely; should be a little cobbler in body, but a nice sort all through. Andy D., with his long face and shelly body, was lucky to get second over Drummer, vhc., in spite of the latter's bent leg and smutty coat; one is a pug in general formation, the other not. But Ochmar, reserve, should be spoken of first; he is too flat in skull, long-faced and light in body, no trace and tail. Al Von was absent. In bitches, Haughty Madge, a bitch of excellent type and general formation, scored easily from Lady Clover. Miss Decima, reserve, scores over La Belle Petit and the second winner in head and substance and general type. Diamond Bessie, a nice little sort, excels Baby S. also, the other vhc., very much in head; latter is too long and also shelly in body; Bessie's open feet are against her. Rustic Queen II. is too light in body and should have more skull. The Italian greyhounds are all well known.

**MISCELLANEOUS CLASS (C. H. Mason, Judge).**—Equal firsts were given to the smooth sheepdog Blue Belle and the bobtail Herdman II., described last week. In the small dogs, Dewr, the Welshman; Mieke, the Schipperke, and Sheffield Lad divided.

H. W. LACY.

**FOXHOUNDS (John Davidson, Judge).**—The three classes provided had a total of nine entries. Rosemary, a fine bitch, won easily over Ranger II. in the challenge class, and in open dogs, Denmark won quite as easily over his three competitors. Second went to Clinker, light in body and poor in head and hound character. Herberty Jack, vhc., was ordinary compared to the winners. The three bitches were not remarkable for merit. Torment, a small bitch won first, while second went to Maud, light in body, short of leg and long cast.

**POINTERS (John Davidson, Judge).**—The pointer classes were quite good in quality, the kennel teams being remarkably good ones. The Hempstead Farm Co. won the special for the best kennel and also the special for the best kennel of four with field trial records, these two specials having a very even lot of competitors, the Hempstead Farm having Robert le Diable, Duke of Hessen, Sanford Druid and Hempstead Duke. Mr. Davey had a very strong kennel in competition, but they were lacking in sortness and average quality as compared with the Hempstead Farm dogs. In the heavy weight challenge class, Count Graphic took first over Tempest. In the corresponding bitch class Woolton Game got the decision over Josie Brackett. In light-weight challenge dogs Duke of Hessen easily won over Rush of Lad. There were three well-known competitors in the challenge bitch class for light-weights. Lady Gay Spanker, first, Miss Rimmer, the reserve; Wild Lilly was the other competitor. There were five competitors in the open class for heavy-weight dogs. First went to Sandford Druid. He is a little straight in stiles and shows throatiness. He has a good head, body, legs and feet. Second went to Molton Banner, described recently, and third went to Dandy, a long-cast dog, coarse in head, straight in stiles and shoulders, body well ribbed and well shaped. The reserve, Count Graphic's Pat, stands high on legs and his head is coarse. In the heavy-weight bitch class Hempstead Pearl, winner of first, has quite a good head, though somewhat narrow in muzzle. She stands squarely on good legs and feet, has a uniform good muscular development and good symmetry. Lady Graphic, second, is plain in head, and the expression of her face is marred by prominent, full eyes. She has good legs and feet and fair symmetry of form. Brighton Leda, third, carries her ears badly sometimes, and she is a shade heavy in limbs. Abess of Kent, the reserve, is heavy in shoulders, throaty, and ordinary in quality.

In light-weight dogs Ridgeview Tenny, in excellent condition, won first in a class of eight competitors, second going to Ridgeview Comet, well made aside from some faults of head and neck. Third was won by Hempstead Duke, ordinary in head and deficient in symmetrical finish. The reserve, Sport of Hessen, is long cast and coarse. Trim, vhc., is light in muscles, neck too widely spread on shoulders, long body and ordinary symmetry. The open bitch class had seven entries. First prize was won by a fairly good small bitch, throaty and light in head. Hempstead Blossom, second, is not clean cut in head, but well built though lacking a
